Tragoudas, Spyros, Professor and Chair, Ph.D., University of Texas at Dallas, 1991; 1999. Design and test automation for VLSI, embedded systems, computer networks.

Viswanathan, Ramanarayanan, Professor, Emeritus, Ph.D., Southern Methodist University, 1983; 1983. Detection and estimation theory, spread spectrum communication, communication theory, signal processing.

Wang, Haibo, Professor, Ph.D., University of Arizona, 2002; 2002. Mixed-signal VLSI design and testing, digital VLSI, VLSI design automation.

Weng, Ning, Associate Professor, Ph.D., University of Massachusetts at Amherst, 2005; 2005. High performance routers, network processors, system-on-a-Chip, computer architectures.

Engineering

The College of Engineering offers graduate programs leading to the Master of Science degree in civil engineering, electrical engineering, mechanical engineering, mining engineering, and quality engineering and management and a Doctor of Philosophy degree in engineering science and electrical and computer engineering. To support these graduate programs, the college has well equipped laboratories and computer facilities that are housed in a modern engineering complex. Additional research opportunities and funding are provided through the Advanced Coal and Energy Research Center, the Materials Technology Center, and the Office of Sponsored Projects Administration.

Doctor of Philosophy in Engineering Science

The Doctor of Philosophy degree in engineering science is available for five concentrations in five engineering departments. The areas of concentration are as follows:

Areas of Concentration

Civil and Environmental Engineering. Course offerings and research activities include: water and wastewater treatments, hazardous and industrial waste treatment, geotechnical and geoenvironmental engineering, hydrologic and hydraulic engineering, sediment transport, water resources engineering, steel and concrete design, structural analysis, seismic design and analysis, and engineering materials.

Electrical and Computer Engineering. Course offerings and research activities include antennas, circuits and systems theory, electromagnetics, robust and adaptive control, robotics, embedded control, MEMS, nanoelectronics, energy conversion, power systems, power electronics, pattern recognition, image processing, biomedical engineering, neural networks, optical computing, stochastic modeling, wireless communications, detection and estimation theory, communication networks, mobile ad hoc networks, sensor networks, digital systems, programmable ASICs design, bioengineering, computer architecture, CMOS VLSI, fault tolerance, mixed signal testing and design, low power system design, hardware/software co-design, synthesis and verification of digital systems, physical design automation, and VLSI testing.

Industrial and Quality Engineering. Course offerings and research activities include: quality assurance, statistical process control, six sigma, lean enterprise, service quality, reliability analysis, quality function deployment, design of experiments, project management, human safety, risk management, management of information technology resources, energy management and conservation.

Mechanical Engineering and Energy Processes. Course offerings and research activities include: mechanics, mechanical systems, fractional calculus and their applications, fluid/thermal systems, material
and chemical systems, air pollution control, mass and heat transfer, coal conversion, electrochemical processes, catalysis, thermal science, thermal systems design, combustion, internal combustion engines, chemical and biochemical processes, dynamics and vibrations, mechanical systems control, computational modeling and simulations, composite materials and ceramics, tribology, and micro- and nano-technology, electro-hydrodynamics, computational multiphase flow and heat transfer, microfluidics, bio-fluidics, CFD, computations of phase change phenomena and capillary driven flows.

**Mining and Mineral Resources Engineering.** Course offerings and research activities in this area of concentration include: rock mechanics and ground control, geological engineering, mineral and coal processing, surface and underground mining systems performance optimization, mine design innovative mining systems, surface mine reclamation, in-situ mining, mine environment and ventilation, coal mine dust control, coal bed methane reservoir engineering, carbon dioxide sequestration, and coal combustion byproduct utilization and management.

**Cooperative Ph.D. Program**

The College of Engineering at SIU-Carbondale and SIU-Edwardsville have entered into a cooperative Ph.D. program in Engineering Science which enables students to do work on both campuses. Additional information may be obtained at [https://siue.edu/engineering/programs-departments/doctoral.shtml](https://siue.edu/engineering/programs-departments/doctoral.shtml).

**Admission and Retention**

Regular Admission. Admission to the doctoral program requires a master’s degree in engineering or its equivalent. Applicants for the doctoral degree must meet Graduate School admission requirements and be approved by the college graduate studies committee. This program requires a $65 application fee that must be submitted with the application for Admission to Graduate Study in Engineering Science.

In addition to Graduate School and other college requirements, the committee ordinarily requires a grade point average of 3.25 (4 point scale) in graduate level work. Applicants are required to submit GRE scores in support of their application for admission. Except for persons from English-speaking countries, international students are required to have a minimum TOEFL score of 550 (paper score) or 213 (computer score) or 80 (internet score) or an IELTS score of 6.5 or higher for admission.

Admission to the doctoral program also requires the identification of an initial graduate adviser for each student. For students seeking admission to the Cooperative Ph.D. Program, both an initial SIU-Edwardsville advisor along with an initial SIU-Carbondale co-advisor must be identified. This advisor will be responsible with the student for planning the student’s course work. The college graduate studies committee will be kept informed of the student’s program of study.

Retention is governed by the rules of the Graduate School. Students should avoid the accumulation of incomplete grades. No student with more than two incomplete grades can be awarded a graduate assistant appointment, and a student holding a graduate assistant appointment is subject to having the appointment terminated upon acquiring two or more incomplete grades.

**Accelerated Entry.** After at least two semesters in residence in an engineering M.S. program and after completing a minimum of 18 hours of approved coursework with a minimum GPA of 3.75, a student may request for an accelerated entry into the Ph.D. program. Such entry is permitted only to superior students who have exhibited evidence that they are prepared to begin the research activities of doctoral-level study. In addition, the student must have GRE scores that are at or above the 50th percentile for both verbal component and analytical essay component and 80th percentile for the quantitative component or a combined total percentile score of 180 or higher. In case of a domestic student, an undergraduate GPA of 3.5 or higher is also a requirement. For an international student, a TOEFL score of 550 (paper score) or an IBT score of 80 or an IELTS score of 6.5 is an additional requirement. In exceptional cases, to substitute for the abovementioned GRE and TOEFL score requirements, the student's current faculty advisor, with the approval of the department chair, may submit a letter of recommendation for his/her student's accelerated entry into the PhD program.

The student, having an accelerated entry into the Ph.D. program, may not write a M.S. Thesis. In addition, six credit hours of course work of 500-level completed prior to his/her entry into the Ph.D. program may be counted toward the Ph.D. course requirement. In the rare event that the student getting an accelerated entry into the Ph.D. program fails to pass the Ph.D. qualifying exam in two attempts, he/she will be allowed to complete a MS degree in his/her respective discipline.
Computer Science. Based on a memorandum of understanding signed between the College of Engineering and the College of Science, the Department of Computer Science can participate in the Engineering Science Ph.D. program. The College of Engineering Ph.D. Committee reviews the applications and approves admissions. One of the participating Computer Science faculty serves on the Committee. An M.S. in Computer Science will be considered as a degree equivalent to an M.S. in Engineering for admission purposes. The student’s Ph.D. committee will determine any makeup work that may be required.

Curriculum

A minimum of 26 semester hours of course work, including two hours of seminar, and 24 semester hours of dissertation research is required. The course work must be completed in two areas: area of concentration and program core. A student must complete a minimum of 15 hours of course work relevant to an area of concentration. The course work in the area of concentration is intended to provide depth in the student’s area of research. The program core consists of 11 hours of course work. A dissertation must be completed in the student’s area of research interest with the approval of the dissertation committee.

Program Core

The program core consists of 11 hours of course work: six hours in math, three hours in engineering or science and two hours of seminar. The math courses to choose from are: all 400 and 500, except MATH 400, MATH 411, MATH 412, MATH 480, MATH 483, MATH 511, MATH 513A-I, and MATH 516A, AMTH 516B. The engineering courses to choose from are: ENGR 530 Engineering Data Acquisition: Theory and Practice, ENGR 540 Design of Engineering Experiments, ENGR 545 Advanced Numerical Methods in Engineering, ENGR 521 Probability and Stochastic Processes for Engineers. The science course could be any 400- or 500-level course in Computer Science, Physics, Chemistry or Geology, as approved by the student’s advisor. The seminar course, ENGR 580, must be taken in two separate semesters, each time as one-hour course.

It is recommended that the seminar classes be taken after the initiation of doctoral research or after candidacy is granted. Guide for Core and Concentration Courses

- Only two 400-level courses (typically six hours) can be counted towards the minimum required 26 semester hours of course work.
- Special Investigation course can be taken under ENGR 590—Special Investigations in Engineering Science, and only three hours can be counted towards the minimum required 26 semester hours of course work.
- Transfer credit will normally be given for some of the graduate level courses suitable to the program upon review by the college Ph.D. Committee. Proficiency examinations may be authorized by the committee for areas in which questions of transfer credit arise. No credit will be given for industrial experience. A maximum of six hours of course work can be transferred in all cases due to residency requirement, which states that every student must complete at least 24 semester hours of approved course work at SIU prior to taking the candidacy examination. Of the 24 hours of dissertation research (ENGR 600) only six hours can be completed before candidacy.
- A student transferring credits from a master’s program must have earned those credits over and above the required course work to obtain the M.S. degree in his/her institution. Credit cannot be transferred from master degrees obtained from international institutions.

Candidacy

A Ph.D. student must satisfy all Graduate School requirements to become a candidate. Acceptance to Ph.D. candidacy is contingent upon the completion of all courses, excluding the seminar, with A or B grades and successful completion of a written and an oral examination in the student’s area of concentration.

The examination in the area of concentration is organized and administered by the student’s academic advisor. The candidacy examination committee consists of at least three faculty chosen by the advisor in consultation with the student. The committee has to be approved by the program director before it conducts the examination. Normally, the examination can be conducted at any time during the year when classes are in session. In the written examination, the student is tested in at least two major topics of the area of concentration with an appropriate number of questions prepared by the members of the
student’s candidacy committee. Each student has to score at least 70 percent in each major topic test in order to successfully complete the written part of the candidacy examination. If a student fails to pass any topic test of the written examination, a second chance is given for the failed topic test. If a student does not successfully complete the written examination after two attempts, he/she will not be accepted to candidacy in the engineering science Ph.D. program. A student is qualified to take the oral examination only after successfully completing the written examination.

The oral examination is conducted within two weeks of the successful completion of the written examination. In the oral examination, the student is tested again in the area of concentration by the candidacy committee members. If a student fails to pass the oral examination in the first attempt, a second chance is given. If a student does not successfully complete the oral examination after two attempts, he/she will not be accepted to candidacy in the engineering science Ph.D. program.

After the completion of the concentration examination, copies of the graded tests, along with signoff sheets for both the written and oral examinations are submitted to the director of the Ph.D. program.

**Dissertation**

A dissertation must be written under the direction or codirection of an engineering faculty member and approved by a dissertation committee consisting of a minimum of five members, one of whom must be from outside the College of Engineering. For students with a computer science background, the committee will be made up of at least six members, three cross-appointed Computer Science faculty members and three Engineering faculty members, with a chair from Computer Science and a co-chair from Engineering. For students enrolled in the cooperative Ph.D. program, the committee will be made up of at least six members, three SIUC faculty members and three SIUE faculty members, with a chair from SIUE and a co-chair from SIUC.

The dissertation adviser must be chosen by the end of the student’s first academic year. The dissertation committee should be formed after successful completion of the candidacy examination. The members of this committee need not be the same as the members of the candidacy examination committee.

A dissertation research proposal must be approved by the dissertation committee. Candidates will be required to present an acceptable dissertation describing original research performed with minimal supervision.

Dissertation approval is based on a successful oral defense of the dissertation research and approval of the dissertation. This requires approval of at least 80 percent of the dissertation committee.

**Graduation**

1. All requirements of the Graduate School must be met.
2. A minimum of 26 hours of doctoral level course work must be completed with a minimum grade point average of 3.25.
3. An acceptable dissertation must be completed within five years after admission to candidacy or the student will be required to repeat the candidacy examinations.

**Doctor of Philosophy in Electrical and Computer Engineering**

See [Electrical Engineering](#).

**Master of Science Programs**

See [Civil Engineering](#), [Electrical Engineering](#), [Quality Engineering and Management](#), [Mechanical Engineering](#), or [Mining Engineering](#).

**Engineering Courses**

**ENGR521 - Prob & Stochastic Processes** 521-3 Probability and Stochastic Processes for Engineers. (Same as ECE 551) Axioms of probability, random variables and vectors, joint distributions, correlation,
conditional statistics, sequences of random variables, stochastic convergence, central limit theorem, stochastic processes, stationarity, ergodicity, spectral analysis, and Markov processes. Restricted to graduate student status. Project-based fee: $20 to help defray cost of software licenses.

**ENGR522 - Intel Prop & Commercial** 522-3 Intellectual Property and Commercialization. (Same as BA 537, LAW 633) Course teaches substance & practice of commercializing products of scientific & technical research. Provides a basic understanding of intellectual property laws in commercialization context & how those laws are applied in various fields of technology. Will learn how to value intangible assets, taking into account their commercial potential & legal status. Course will consider the legal & business issues surrounding marketing of products of research. Will prepare & negotiate license agreements. Will analyze legal & business issues surrounding whether & how to enforce intellectual property rights. Content & methods of course delivery & evaluation has been approved for provision by distance education.

**ENGR530 - Engineering Data Acquisition** 530-3 Engineering Data Acquisition: Theory and Practice. (Same as ECE 530) Theory of data acquisition and measurement systems. Criteria for selection of data acquisition hardware and software, instruments, sensors and other components for scientific and engineering experimentation. Methods for sampled data acquisition, signal conditioning, interpretation, analysis, and error estimation. Lab fee: $60 to help defray cost of software licenses and equipment.

**ENGR540 - Design Engr Experiments** 540-3 Design of Engineering Experiments. Planning of experiments for laboratory and field studies, factorial designs, factorial designs at two levels, fractional factorial designs, response surface methods, mixture designs. Prerequisite: MNGE 417, or MATH 483, or equivalent, or consent of instructor.

**ENGR545 - Adv Numerical Methods** 545-3 Advanced Numerical Methods in Engineering. Engineering applications of linear and nonlinear equations, eigenvalue problems, interpolation and approximating functions and sets of data, numerical solutions of ordinary and partial differential equations. Prerequisite: ENGR 222 or equivalent, ENGR 351 or equivalent, and MATH 305 or consent of instructor.

**ENGR580 - Seminar** 580-1 Seminar. Study and presentation of research topics from students' own specialty areas within engineering and science. Graded S/U only. Restricted to enrollment in the Ph.D. in engineering science program or consent of instructor.

**ENGR590 - Spec Inves Engr Science** 590-1 to 3 Special Investigations in Engineering Science. Investigation of individual advanced projects and problems selected by student or instructor. Restricted to admission into Ph.D. in engineering science program or consent of instructor.

**ENGR592 - Engineering Co-op** 592-1 to 3 Engineering Cooperative Education. Supervised work experience in industry, government or in a professional organization. Work must be directly related to student's program of study. Student works with on-site supervisor and faculty advisor. Activity report is required from the student and performance report is required from the employer. Enrollment requires Chair's approval. Hours do not count toward degree requirements. Mandatory Pass/Fail. Restricted to graduate standing.

**ENGR593 - Special Topics in Engineering** 593-3 Special Topics in Engineering. Studies of various special topics in the area of engineering science. Special approval needed from the instructor.

**ENGR600 - Doctoral Dissertation** 600-1 to 24 (1 to 16 per semester) Doctoral Dissertation. Dissertation research. Hours and credit to be arranged by director of graduate studies. Graded S/U only. Restricted to admission to Ph.D. in engineering science program.

**ENGR601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**ENGR699 - Postdoctoral Research** 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.
Engineering Faculty

Civil and Environmental Engineering (CEE) Faculty:

Bravo, Rolando, Associate Professor, Ph.D., University of Houston, 1990; 1991. Surface and subsurface hydrology, hydraulics and fluid mechanics.

Chevalier, Lizette R., Professor, Associate Provost for Academic Programs, Ph.D., Michigan State University, 1994; 1995. Environmental restoration of groundwater aquifers, experimental investigation of immiscible flow, and numerical modeling of subsurface transport.

DeVantier, Bruce A., Associate Professor, Ph.D., University of California-Davis, 1983; 1983. Water quality modeling, sediment transport, turbulence modeling, finite element methods.

Hsiao, J. Kent, Professor, Ph.D., University of Utah—Salt Lake City, 2000; 2001. Structural earthquake engineering, structural reliability, structural design of buildings and bridges using steel, reinforced or prestressed concrete, masonry, and wood.

Kassimali, Aslam, Professor and Distinguished Teacher, Ph.D., University of Missouri, 1976; 1980. Structural engineering, nonlinear structural analysis, structural dynamics and stability.

Kumar, Sanjeev, Professor, Distinguished Teacher and Chair, Ph.D., University of Missouri-Rolla, 1996; 1998. Dynamic soil-structure interaction, piles under lateral loads, settlement prediction of landfills, hydraulic conductivity of clay barriers, seismic analysis and design of landfills, ground motion amplification in soils, liquefaction of silts and sands and machine foundations.

Liu Jia, Assistant Professor, Ph.D., University of Houston, 2014; 2015. Environmental Engineering, renewable energy production, microbial fuel cell, water/wastewater treatment and groundwater/soil remediation, material development for energy safety and environmental pollution detection.

Puri, Vijay K., Professor, Ph.D., University of Missouri-Rolla, 1984; 1986. Geotechnical engineering, soil dynamics, machine foundations, liquefaction of soils.

Tezcan, Jale, Professor, Ph.D., Rice University, 2005; 2005. Non-linear structural behavior, neural networks in system identification and structural control, rehabilitation, and retrofitting of structures damaged by earthquakes.

Warwick, John J., Professor and Dean of Engineering, Ph.D., Penn State University, 1983; 2011. Environmental engineer, surface water hydrology, surface water quality simulation.

Electrical and Computer Engineering (ECE) Faculty:

Although ECE has its own PhD program, prospective students continue to have ECE concentration available if they want to pursue their PhD degree in Engineering Science.

Anagnostopoulos, Iraklis, Assistant Professor, Ph.D., National Technical University of Athens, Greece, 2014; 2015. Many-core embedded systems, run-time resource management, embedded systems architectures.

Aruma Baduge, Gayan L. A., Assistant Professor, Ph.D., University of Alberta, 2013; 2016. Wireless communication systems, communication theory, information theory, detection and estimation theory, probability and stochastic processes, and statistical signal processing.

Asrari, Arash, Assistant Professor, Ph.D., University of Central Florida, 2015; 2017. Power systems operation and planning, power systems optimization, smart grid.

Chen, Kang, Assistant Professor, Ph.D., Clemson, 2014; 2015. Computer networks, cloud computing, connected vehicle.

Chen, Ying (Ada), Associate Professor, Ph.D., Duke, 2007; 2007. Biomedical imaging, image reconstruction, digital tomosynthesis, image quality analysis, signal and image processing, simulation and computing.

Harackiewicz, Frances J., Professor, Ph.D., University of Massachusetts-Amherst, 1990; 1989. Electromagnetics, antenna theory and design, microwaves, microstrip phased arrays and anisotropic materials.

Hatzidoulias, Konstantine, Professor, Ph.D., West Virginia University, 1987; 1987. Power systems modeling, simulation and control, high voltage DC transmission, power electronics, power systems transient.

Kagaris, Dimitrios, Professor, Ph.D., Dartmouth College, 1994; 1995. VLSI design automation, digital circuit testing, communication networks.

Komae, Arash, Assistant Professor, Ph.D., University of Maryland, College Park, 2008; 2015. Control systems, microelectronics, signal processing, estimation theory.

Lu, Chao, Assistant Professor, Ph.D., Purdue University, 2012. VLSI system, energy harvesting, H.265/HEVC video encoding, emerging device-circuit co-design and optimization, power management IC.

Montemagno, Carlo, Professor and Chancellor, Ph.D., University of Notre Dame, 1995; 2017. Biotechnology, nanotechnology.

Qin, Jun, Assistant Professor, Ph.D. Duke University, 2008. Medical device development, instrumentation and sensors, medical data acquisition and analysis, medical acoustics, therapeutic ultrasound, haptics.

Sayeh, Mohammad R., Professor, Ph.D., Oklahoma State University, 1985; 1986. Neural networks, optical computing, image processing, stochastic modeling, quantum electronics.

Tragoudas, Spyros, Professor and Chair, Ph.D., University of Texas at Dallas, 1991; 1999. Design automation for VLSI, testing and verification of digital circuits, computer networks.

Wang, Haibo, Professor, Ph.D., University of Arizona, 2002; 2002. Mixed-signal VLSI design and testing, digital VLSI, VLSI design automation.

Weng, Ning, Associate Professor, Ph.D., University of Massachusetts at Amherst, 2005; 2005. High performance routers, network processors, system-on-a-Chip, computer architectures.

Industrial and Quality Engineering (IQE) Faculty:

Crosby, Garth, Associate Professor, Ph.D., Florida International University, 2007; 2008. Wireless networks, wireless sensor networks, ad hoc networks, network security and trust modeling.

DeRuntz, Bruce, Professor, Ph.D., Southern Illinois University Carbondale, 2005; 1998. Technical leadership development.

Dunston, Julie K., Associate Professor and Interim Chair, Ph.D., Florida State University, 1995; 1995. Intelligent manufacturing; process modeling and control; quality improvement through integration of artificial intelligence and statistical methods.

Savage, Mandara, Associate Professor, Ph.D., Iowa State University, 1999; 1999. Machine tool dynamics, manufacturing systems and processes; lean manufacturing systems design.

Spezia, Carl J., Associate Professor, Ph.D., Southern Illinois University Carbondale, 2002; 2005. Power systems design, power systems protection, power market development, electric motor controls and applications; energy management and conservation; industrial automation.

Velasco, Tomas, Associate Professor, Ph.D., University of Arkansas, 1991; 1993. Quality assurance, reliability, six sigma and artificial intelligence applications in manufacturing environments.

Mechanical Engineering and Energy Processes (MEEP) Faculty:

Abrate, Serge, Professor, Ph.D. Purdue University, 1983; 1995. Impact, penetration, structural dynamics, composites.

Agrawal, Om, Professor, Ph.D., University of Illinois-Chicago, 1984; 1985. Computer-aided analysis and design of rigid/flexible multibody systems, numerical analysis, finite element methods, and continuum mechanics; CAD/Simulation of mechanical systems.

Chowdhury, Farhan H., Assistant Professor, Ph.D., University of Illinois at Urbana-Champaign, 2011; 2015. Cellular Biomechanics and Mechanobiology.
Chu, Tsuchin P., Professor, Ph.D., University of South Carolina, 1982; 1990. CAD/ CAM, imaging systems, mechanical vibrations, computer graphics, machine vision, optical methods in experimental mechanics and manufacturing, image processing.

Esmaeeli, Asghar, Professor, Ph.D., University of Michigan, 1995; 2000. CFD, two-phase heat transfer.

Farhang, Kambiz, Professor, Ph.D., Purdue University, 1989; 1990. CAD/CAM, controls, vibrations, kinematics, dynamics, control and stability of flexible and rigid-body mechanical, electromechanical, mechanical-drive systems; manufacturing processes and process control.

Kim, Dal Hyung, Assistant Professor, Ph.D., Drexel University, 2013; 2017. Robotics, brain imaging, microscope design, optimal control, microrobotics.

Koc, Rasit, Professor and Chair, Ph.D., University of Missouri-Rolla, 1989; 1994. Ceramic materials, powder processing, nonstoichiometry of oxides; sintering of oxide and non-oxide ceramics, methods preparing high purity oxides from organometallics, perovskies for use as high temperature electrodes, synthesizing submicron carbide, nitride and boride powders.

Mathias, James A., Associate Professor, Ph.D., Ohio State University, 2001; 2003. Nanotechnology, microchannels, heat transfer, thermodynamics, energy utilization.

Mondal, Kanchan, Professor, Ph.D., SIU, 2001; 2006. Electrochemistry, energy from coal, catalysis, reactor systems and design.

Nsofor, Emmanuel C., Professor, Ph.D., Mississippi State University, 1993; 1999. Experimental and computational flow and heat transfer, advanced energy systems, HVAC & R, energy storage, environmental engineering, thermodynamics and combustion.

Suni, Ian I., Professor and Director of the Materials Technology Center, Ph.D., Harvard University, 1992; 2013. Application of electrochemistry and electrochemical engineering to technology advancement in thin film growth and dissolution, including both photovoltaic thin films and ULSI materials; electrochemical biosensors, including the use of electrochemical impedance spectroscopy (EIS) for detecting antibody-antigen recognition; and nanotechnology, including the use of nanoporous template materials for alternative energy development and biosensing.

Wiltowski, Tomasz, Professor and Director of the Advanced Coal and Energy Research Center, Ph.D., Institute of Catalysis and Surface Chemistry, Cracow, Poland, 1982; 2003. Coal transformation and characterization, coal gasification, alternative energy sources, hydrogen production from coal, catalytic conversion of hydrocarbons and alcohols to hydrogen, fuel cells, nanomaterials synthesis and characterization.

Mining and Mineral Resources Engineering (MMRE) Faculty:

COLLEGE OF ENGINEERING—SIU Edwardsville Faculty participating in the Engineering Science Ph.D. Program (see below):

Graduate Faculty (SIU Edwardsville):

Benjankar, Rohan, Ph.D., Assistant Professor, University of Idaho, 2009.

Bouvier, Dennis J., Ph.D., Associate Professor, University of Louisiana at Lafayette, 1994.

Celik, Serdar, Ph.D., Associate Professor, Southern Illinois University Carbondale, 2007.

Chen, Xin, Ph.D., Assistant Professor, Purdue University, 2009.

Cho, Sohyung, Ph.D., Associate Professor, Pennsylvania State University, 2000.

Crk, Igor, Ph.D., Assistant Professor, University of Arizona in Tucson, 2010.

Cross, Brad, Ph.D., P.E., S.E., Professor, Johns Hopkins University, 1992.

Darabi, Jeff, Ph.D., Professor, University of Maryland, 2000.

Eneyo, Emmanuel S., Ph.D., Professor, Purdue UniversityWest Lafayette, Indiana, 1991.

Ercal, Gunes, Ph.D., Assistant Professor, University of California, Los Angeles, 2008.
Fries, Ryan, Ph.D., P.E., Associate Professor, Clemson University, 2007.
Fujinoki, Hiroshi, Ph.D., Associate Professor, University of Southern Florida, 2001.
Gordon, Chris, Ph.D., Associate Professor, Carnegie Mellon University, 2006.
Gu, Keqin, Ph.D. Professor, Georgia Institute of Technology, 1988.
Huang, Jianwei, Ph.D., Assistant Professor, Syracuse University, 2010.
Karacal, Seref C., Ph.D., Professor and Associate Dean, Oklahoma State University, 1991.

LeAnder, Robert W., Ph.D., Associate Professor, University of Illinois at Chicago, 2002.
Lee, Heungsoon F., Ph.D., Professor, University of Michigan, 1989.
Lozowski, Andy G., Ph.D., Associate Professor, University of Louisville, 1999.
Luo, Albert, Ph.D., Professor, University of ManitobaWinnipeg, 1996.
Mayer, Gary R., Ph.D., Assistant Professor, Arizona State University, 2009.
McKenney, Mark, Ph.D., Assistant Professor, University of Florida, 2008.
Molki, Majid, Ph.D., Professor, University of Minnesota, 1982.
Morgan, Susan, Ph.D., P.E., Professor, Clemson University, 1995.
Noble, Brad, D.Sc., Associate Professor, Washington University, 2000.
Onal, Sinan, Ph.D., Assistant Professor, University of South Florida, 2014.
Osouli, Abdorreza (Reza), Ph.D., Assistant Professor, University of Illinois at Urbana-Champaign, 2009.
Qi, Yan, Ph.D. Assistant Professor, Louisiana State University, 2010.
Umbaugh, Scott E., Ph.D., Professor, University of Missouri Rolla, 1989.
Wang, Fengxia, Ph.D., Assistant Professor, Purdue University, 2008.
Wang, Xin, Ph.D., Associate Professor, Marquette University, 2011.
Weinberg, Jerry B., Ph.D., Professor, Vanderbilt University, 1996.
Werner, Anne, Ph.D., Assistant Professor, University of Illinois at Urbana-Champaign, 2004.
White, William W., Ph.D., Professor, Ohio State University, 1989.
Yan, Terry, Ph.D., Professor, University of California at Davis, 1993.
York, Tim, Ph.D., Assistant Professor, Washington University, 2015.
Yu, Xudong W., Ph.D., Associate Professor, Vanderbilt University, 1994.
Zhou, Jianpeng (Jim), Ph.D., P.E., Associate Professor, University of British Columbia, 2003.

---

**English**

The Department of English offers programs leading to the Master of Arts and the Doctor of Philosophy degrees with a major in English and to the Master of Fine Arts in Creative Writing. Students enrolled in a program leading to the Master of Science in Education degree in secondary education or higher education may take courses in English to satisfy requirements for the teaching specialty. Students enrolled in the Ph.D. degree in education program may take courses in English for the elective portion of the program when permitted by the specific department participating in the degree.

**Admission**

Students seeking admission to the graduate program in English must first be admitted by the Graduate School before they can be admitted to the Department of English.

Students seeking admission to the M.A. and Ph.D. degree programs may submit scores for the general tests of the Graduate Record Examination. MFA applicants are strongly advised to submit these scores
as well. Information about admission may be obtained by calling 618-453-5321 or by writing: Director of Graduate Studies, Department of English, Southern Illinois University Carbondale, Carbondale, IL 62901-4503. Email: gradengl@siu.edu.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in English. Applicants must pay this fee by credit card.

Transfer Credit

Within limits imposed by the Graduate School, transfer credits will be accepted by the Department of English subject to the following restrictions:

The student must petition the Director of Graduate Studies giving the following information: the number and level of hours being submitted for credit, where and when the work was done, the grade received, and course descriptions and syllabi. As nearly as possible, the course to be transferred should be equated with a course offered by the SIU Department of English. An appropriate faculty member will recommend whether the transfer credits should be accepted and whether the course satisfies the course distribution requirements of the department. The Director of Graduate Studies will forward a recommendation to the proper authorities.

Retention

In the entire graduate program, the student may accumulate up to three hours of work below B, so long as a 3.0 M.A. or 3.25 Ph.D. average is maintained. If the student has accumulated more than three hours, but fewer than 10 hours, of grades below B, these must be replaced by an equal number of hours of A or B in addition to maintaining the required average. That is, the minimum number of semester hours of course work may be increased from 30 to a maximum of 36. A student who accumulates more than nine hours of C will be dropped from the program.

A student who is granted a deferred or incomplete grade must complete the work by the end of the next term in residence. Exception to this rule will be made only in a very special case and must be made through petition to the Graduate Studies Committee. A student who has accumulated more than six hours of such work will not be allowed to register for more course work until the total of deferred work is reduced to not more than three semester hours. Deferred or incomplete work will be regarded as finished when a student has submitted all examinations, papers, etc., to the instructor. Deferred or incomplete grades in ENGL 595, ENGL 600, and ENGL 601 are not included in the above regulations.

Course Work

Students may offer work from outside the department (in a single field or in two or more related fields) toward the Master of Arts, the Master of Fine Arts, or the Ph.D. degree provided that the work does not interfere with regular requirements of the Department of English and has relevance to their program.

Master of Arts Degree

The English Department offers three areas of concentration at the master's level: 1) Literature, 2) Rhetoric and Composition, and 3) English Studies. The Master of Arts degree in English with a concentration in Literature or Composition and Rhetoric requires satisfactory completion of 30 semester hours, of which at least 15 must be earned in 500-level courses at Southern Illinois University Carbondale.

All students must satisfy the following requirements:

1. Core courses:
   Four literature courses: two from Group I, representing two different historical periods; and two from Group II, representing two different historical periods - 12 hours.
   
   Group I:
   (a) Old and Middle English literatures
   (b) Renaissance and 17th Century English literature
   (c) Restoration and 18th Century English literature
   (d) 19th Century English literature
   
   Group II:
(a) American literature before 1900
(b) American literature since 1900
(c) Modern British literature
(d) Modern Continental literature

2. **Concentrations:** Satisfactory completion of one of the concentrations detailed below.

3. **Foreign Language:** This requirement may be satisfied by completing, with an average not less than \( B \), two years of college-level work in one foreign language or CLAS 488 or FR 488 or GER 488 or SPAN 488 or ENGL 402 plus ENGL 506 (Beowulf), or the equivalent. Equivalent work will be judged on an ad-hoc basis by the Director of Graduate Studies.

4. **Research paper/thesis:** This requirement may be satisfied either by submitting to the Director of Graduate Studies two copies of a research paper which has received a grade of not less than \( B \) in a 500-level English course (a rhetoric/composition course for students in that concentration), or by taking ENGL 599 (three hours) and writing an acceptable thesis.

5. **Final examination:** This requirement must be satisfied as specified below.

**Literature Concentration**

1. ENGL 401 or ENGL 402 or ENGL 403 - three hours
2. Two additional literature courses so that a student has covered three periods in Group I and three periods in Group II - six hours
3. Electives should include a literary criticism/theory course and may include ENGL 599 - six hours
4. Satisfactory completion of a written examination over four historical periods and a reading list. A student who fails the examination may take it a second time. A third examination may be allowed, but only by special permission of the Director of Graduate Studies. If the examination committee deems it useful an oral examination may be scheduled after the written examination to determine the grade for the examination. Any student choosing to take the MA qualifying examination must also file with the Graduate School a clean and properly formatted research paper which has earned the grade of \( B \) or better in a 500-level English course or a completed MA thesis.
5. Students may write an MA thesis, provided they submit an application (including thesis topic and title, signatures of committee members, and a letter or support from their thesis director) and it is approved by the Graduate Studies Committee.

**Rhetoric & Composition Concentration**

1. ENGL 401 - 3 hours
2. ENGL 596 - 3 hours
3. ENGL 597 - 3 hours
4. One of the following (3 hours): ENGL 501, ENGL 581, ENGL 490, ENGL 491, or an appropriate special topics course (this decision is to be made in consultation with the Area Head of Rhetoric & Composition).
5. ENGL 599 (3 hours)
6. Satisfactory completion of either: 1) a research portfolio and oral portfolio defense, or 2) a thesis and oral thesis defense. In either case, the student will follow specific guidelines established by the Rhetoric and Composition faculty.

**English Studies Concentration**

The Master of Arts degree in English with a concentration in English Studies requires satisfactory completion of 36 semester hours, of which at least 18 must be earned in 500-level courses at Southern Illinois University Carbondale.

All students in the English Studies concentration must satisfy the following requirements:

1. **Core Courses:**
   At least one course from seven of the following areas:
   (a) Language and Grammar Studies
   (b) Old/Medieval English Literature
   (c) Renaissance/17th Century British Literature
   (d) Restoration/18th Century British Literature
   (e) 19th Century British Literature
   (f) Early American Literature
   (g) Modern American Literature
Students in the English Studies concentration may request a graduate assistantship provided they receive all GA training required by the English Department. Priority, however, is given to students in the other two areas of concentration because those areas of concentration are designed to meet the specific needs of students preparing to teach at the college or university level.

Master of Fine Arts Degree

The Master of Fine Arts in Creative Writing requires satisfactory completion of 48 semester hours, of which at least 24 must be earned in 500-level courses at Southern Illinois University Carbondale.

All students must satisfy the following requirements:

1. Core courses:
   ENGL 592 - 20 hours
   ENGL 594 - 4 hours

2. Recommended and elective courses: As prescribed by the creative writing faculty - 15 hours

3. Candidacy Review: In the spring semester of a student's second year in the MFA program, all students undergo a formal candidacy review. By April 10, faculty in each subspecialty (fiction and poetry) will submit to the director of creative writing a synopsis of each student’s progress to date, as well as a finalized thesis committee. In those instances where the faculty finds that a student has not demonstrated satisfactory creative or professional progress and/or cannot form a thesis committee, the student will meet with the Director of Graduate Studies and all faculty members in the student’s subspecialty to determine the nature of the deficiency. The faculty may recommend to the Director of Graduate Studies at this meeting that the student be required to complete remediation, that the student be allowed to continue in the program without sanction, or that the student be removed from the program. In the last case, the creative writing faculty will then submit a written recommendation for removal from the program to the Director of Graduate Studies and the graduate studies committee. Within five working days of receiving this recommendation, the Director of Graduate Studies will request a written response from the affected student. The student will have five days to respond in writing. Within five days of receiving this response, the director will convene a meeting of the graduate studies committee. Should the graduate studies committee concur with the creative writing faculty’s recommendation, the student will be removed from the program. This decision will then be subject to the Graduate School's academic grievance policy detailed herein.

4. Thesis: ENGL 599 - 6 hours

5. Final oral examination: Over thesis and coursework. The oral examination/thesis defense is open to the public.

Doctor of Philosophy Degree

Students must apply formally for admission to the Doctor of Philosophy degree program, including students who have earned a master's degree at SIU. Admission to the Ph.D. program is decided by the Graduate Studies Committee, which makes its decision according to the following criteria:

1. An M.A. degree in English or its equivalent
2. Appropriate grade-point average (normally, a 3.25 is the acceptable minimum)
3. Quality of the submitted writing sample and the compatibility of a student’s proposed area of focus with faculty expertise

A full-time student holding a master's degree can complete the doctoral program in two years, though most prefer three. Students are considered Ph.D. candidates when they have: (1) completed the prescribed course of study, (2) satisfied the research-tool requirements, (3) passed preliminary
examinations, and (4) been recommended by the English graduate faculty. The Graduate School recognizes students as Ph.D. candidates after it receives notification that the students have passed preliminary examinations. Students must be admitted to candidacy at least six months prior to the final examination on the dissertation.

**Accelerated Entry into the Ph.D. Degree Program**

A student enrolled in the M.A. degree program may petition the Graduate Director after two semesters in residence for waiver of the requirement of the M.A. degree as prerequisite for admission to the doctoral program and for direct entry into the Ph.D. in accordance with the following conditions: first, the student must be an exceptional graduate student whose outstanding academic achievements must be supported by a wide range of conclusive evidence including, but not restricted to, the G.P.A., G.R.E. scores, M.A. degree research tool requirement, and evaluative letters from graduate instructors; second, the student must present one graduate research paper of outstanding quality, or a published article of appropriate quality, or the equivalent for the departmental files. The petition shall be presented to the Graduate Studies Committee for approval. If accelerated entry is granted, the student will proceed toward the Ph.D. degree in accordance with the established rules of the department and the Graduate School. Students admitted into the Ph.D. program under the accelerated entry option will have to fulfill all M.A. degree requirements as part of the Ph.D. degree work, but will not receive the M.A. degree.

**Course of Study**

The Ph.D degree in English requires, at minimum, 30 hours of coursework (of which at least 15 should be earned at the 500 level at Southern Illinois University Carbondale), and 24 credit hours of dissertation at Southern Illinois University Carbondale. Required courses are as follows:

1. A pro-seminar to be taken in the first year of doctoral study;
2. Two graduate courses in literary theory or rhetorical theory or cultural studies;
3. Any courses prescribed by a student’s advisory committee to ensure appropriate knowledge of a major area and two minor areas, normally with at least one 500-level course completed for credit, with no grade lower than B, in each minor area.

**Research Tool Requirements**

A student may satisfy the research tool requirement by fulfilling one of the two options listed below. The choice of option and languages selected must be approved by the student’s advisory committee.

1. Command of one language demonstrated by examination in the Foreign Language Department. International students may specify their native language as long as they demonstrate fluency in English as well, or
2. Reading knowledge of one foreign language demonstrated by a minimum three years course work (or its equivalent) at the college level in one language with a grade no lower than a “B.” Students who take research courses in any language are required to take at least two more courses at the 300- or 400-level in the same language.

The department has expanded its Ph.D. program into interdisciplinary studies on a cooperative basis with departments that deal with one pertinent subject matter and which are interested in such interdisciplinary cooperation, e.g., the Departments of Philosophy, Foreign Languages and Literatures, History, Cinema and Photography, Speech, Theater, Sociology, etc. Permission for an interdisciplinary minor must be approved by the student’s committee and the Graduate Studies Committee.

**The Preliminary Exam Advisory Committee and the Program of Study Proposal**

Following admission to the Ph.D. program, and before the completion of the second year (i.e., fourth semester) in doctoral residence, a Ph.D. student is required to form an academic advisory committee (hereafter referred to as the Preliminary Examination Committee) and to prepare a Program of Study Proposal. The Preliminary Examination Committee will consist of four members of the graduate faculty in English. The Chair of the Committee and one other member will normally represent the student’s major area of interest; each of the remaining two members will normally represent one of the minor areas of interest. Within the limits of this distribution, the student may, usually upon consulting the Chair of
the Preliminary Examination Committee, change the particular membership of the committee at any point. Normally the Preliminary Examination Committee will compromise the nucleus of the Dissertation Committee. As soon as the Preliminary Examination Committee is formed, it becomes the responsibility of all its members to oversee the student’s program and academic progress.

If a student has not formed a preliminary exam committee by April 15 of the fourth semester in the program, then the student will undergo the formal candidacy review process detailed herein. The director of graduate studies will first consult the student in question to determine the reason for the delay in constituting the preliminary exam committee. In those instances where the director finds that the delay is the result of a simple deadline mismanagement, she will take no action. In those instances where the director finds that a student as not demonstrated satisfactory scholarly or professional progress and/or cannot form a thesis committee, the student will meet with the director of graduate studies and all faculty members in the student’s area (“area” means either historical period or conceptual focus) to determine the nature of the deficiency. After the meeting, the faculty in the student’s area may recommend to the director of graduate studies that the student be required to complete remediation, that the student be allowed to continue in the program without sanction, that the student be granted an extra semester to complete the program of study, or that the student be removed from the program. The faculty in the student’s major area will submit a written recommendation to the director of graduate studies. If the faculty recommend removal, this recommendation will go to the graduate studies committee. Within five working days of receiving this recommendation, the director of graduate studies will request a written response from the affected student. The student will have five days to respond in writing. Within five days of receiving this response, the director will convene a meeting of the graduate studies committee. Should the graduate studies committee concur with the faculty’s recommendation, the student will be removed from the program. This decision will then be subject to the Graduate School’s academic grievance policy.

Preliminary examinations

Students on a fellowship or a graduate assistantship will be expected to take preliminary examinations no later than two or three years, respectively, after receipt of their M.A. degree.

Preliminary examination covering three areas are prepared and graded by the student’s advisory committee. A major examination may consist of one six-hour written exam or one take-home literature review essay. A minor area examination may consist of a three-hour written exam or a comparable take-home literature review essay. Regardless of format, all preliminary exams conclude with an oral defense. The committee may require the student to complete further work or testing for any minor section receiving a “Low Pass” grade. The committee must require further work or testing for any entire examination that receives a “Low Pass” grade. A student who fails the preliminary examination may request to take it a second time.

English Courses

ENGL401 - Modern English Grammars 401-3 Modern English Grammars. Survey of the structure of English, with emphasis on phonetics and phonology, morphology, syntax, semantics, pragmatics, grammar instruction, stylistics and language variation. Specifically designed to meet the needs of prospective teachers of composition and language arts at the secondary and college levels.

ENGL402 - Old English Lang & Lit 402-3 Old English Language and Literature. Introduction to the language, literature and culture of Anglo-Saxon England, with emphasis on Old English heroic and elegiac poetry, exclusive of Beowulf.

ENGL404A - Medieval Allegory and Romance 404A-3 Medieval Allegory, History and Romance. Three popular Medieval genres as represented by major texts of the early through the late Middle Ages, exclusive of Chaucer, including works such as Dream of the Rood, Sir Orfeo, Sir Gawain and the Green Knight, Piers Plowman, The Book of Margery Kempe and selections from Lawman's Brut and Malory's Le Morte Darthur.

ENGL404B - Medieval Lyric, Ballad, Drama 404B-3 Medieval Lyric, Ballad and Drama. Lyric, ballad and drama from the early through the late Middle Ages, including translations of the Old English Wife's
Lament, Husband's Message, Wanderer, and Seafarer, as well as Middle English religious and love lyrics and the Robin Hood ballads, with special emphasis on the great plays of the fifteenth century and the rebirth of drama in the Western World.

ENGL405 - Middle English Lit: Chaucer 405-3 Middle English Literature: Chaucer. Major works including Troilus and Criseyde and selections from The Canterbury Tales.

ENGL412 - Non-drama Lit Renaissance 412-3 English Non-Dramatic Literature: The Renaissance. Topics vary, but usually lyric poets, especially 17th-century metaphysical poets such as Donne, Herbert and Marvell.

ENGL414 - Nondrama Lit Later 18th Cent 414-3 English Non-Dramatic Literature: The Later Eighteenth Century. Major poets from Thomson to Blake, and major prose writers, with emphasis on Johnson, Boswell and their circle.

ENGL421 - English Romantic Literature 421-3 English Romantic Literature. Wordsworth, Coleridge, Byron, Shelley, Keats, and other writers of the era.

ENGL423 - Modern British Poetry 423-3 Modern British Poetry. Major modernists (Yeats, Eliot, Pound), with selected works of Auden, Owen, Thomas, Heaney and others.

ENGL424 - Native American Verbal Art 424-3 Native American Verbal Art. (Same as ANTH 424) This class examines the oral traditions (story-telling, poetry, song, chant, etc.) of Native American Peoples. This class focuses on the ways that Native American verbal art has presented/represented by outsiders as well as on formal features and forms of Native American verbal art. Attention is paid to the place and structure of verbal art in Native societies. This class focuses on the broad spectrum of verbal art in North America.

ENGL425 - Modern Continental Poetry 425-3 Modern Continental Poetry. Representative poems by major 20th century poets of France, Italy, Germany, Spain, Russia, and Greece.

ENGL426 - American Poetry to 1900 426-3 American Poetry to 1900. Trends and techniques in American poetry to 1900.

ENGL427 - American Poetry: 1900-Present 427-3 American Poetry from 1900 to the Present. The more important poets since 1900.

ENGL433 - Religion & Literature 433-3 Religion and Literature. Introduce students to the study of religious meaning as it is found in literature.

ENGL436 - Major American Writers 436-3 Major American Writers. Significant writers from the Puritans to the present. May be repeated only if topic varies, and with consent of the department.

ENGL437 - American Literature to 1800 437-3 American Literature to 1800. Representative works and authors from the period of exploration and settlement to the Federal period.

ENGL445 - Backgrounds of Western Lit 445-3 Cultural Backgrounds of Western Literature. (Same as CLAS 445) A study of ancient Greek and Roman literature, Dante's Divine Comedy, and Goethe's Faust, as to literary type and historical influence on later Western writers.

ENGL446 - Caribbean Literature 446-3 Caribbean Literature. Representative texts from drama, poetry, and fiction that have shaped black diaspora aesthetics in the Caribbean, with special reference to black literature of the North American continent.

ENGL448B - Irish Literature 448B-3 Irish Literature. Major works, authors, genres, periods, or movements within Irish Literature. Topics will vary (i.e., Irish Women Writers, Joyce and Yeats, The King Tales, 19th Century Irish Writers, the Celtic Twilight, Contemporary Irish Poets, etc.), providing in-depth study in particular areas within the 16 centuries of Irish Literature.

ENGL451 - 18th Century English Fiction 451-3 Eighteenth Century English Fiction. The novel from Defoe to Austen, including works by Fielding, Richardson and others.

ENGL452 - 19th Century English Fiction 452-3 Nineteenth Century English Fiction. The Victorian novel from 1830, including works by the Brontes, Dickens, George Eliot, Thackeray and others.

ENGL453 - Modern British Fiction 453-3 Modern British Fiction. Major writers (including Conrad, Joyce, Woolf and Lawrence), with selected fiction from mid-century and later.

ENGL455 - Modern Continental Fiction 455-3 Modern Continental Fiction. Selected major works of Europe and authors such as Mann, Silone, Camus, Kafka, Malraux, Hesse.

ENGL458 - American Fiction to 1900 458-3 American Fiction to 1900. Trends and techniques in the American novel and short story.

ENGL459A - American Prose 1900-Mid-century 459A-3 American Prose from 1900 to Mid-Century: The Modern Age. Representative narratives from the turn of the century to the post-World War II period.

ENGL459B - American Prose Midcent-Present 459B-3 American Prose from Mid-Century to the Present: The Postmodern Age. Representative narratives from the post-World War II period to the present.

ENGL460 - Elizabethan/Jacobean Drama 460-3 Elizabethan and Jacobean Drama. Elizabethan drama excluding Shakespeare: such Elizabethan playwrights as Greene, Peele, Marlowe, Dekker; and Jacobean drama: such Jacobean and Caroline playwrights as Jonson, Webster, Marston, Middleton, Beaumont and Fletcher, Massinger, Ford, Shirley.

ENGL462 - English Restoration/18th C Drama 462-3 English Restoration and 18th Century Drama. After 1660, representative types of plays from Dryden to Sheridan.

ENGL464 - Modern British Drama 464-3 Modern British Drama. Major writers (including Shaw and Synge), with selected works of later dramatists such as Churchill and Bond.

ENGL465 - Modern Continental Drama 465-3 Modern Continental Drama. The continental drama of Europe since 1870; representative plays of Scandinavia, Russia, Germany, France, Italy, Spain and Portugal.

ENGL468 - American Drama 468-3 American Drama. The rise of drama, with emphasis on the 20th century.

ENGL469 - Contemporary Topics in Drama 469-3 Contemporary Topics in Drama. Varying topics on cross-national and cross-cultural 20th-century drama with focus on theoretical issues.

ENGL481 - Young Adult Literature 481-3 Young Adult Literature in a Multicultural Society. Introduction to the evaluation of literary materials for junior and senior high school, with emphasis on critical approaches and the multicultural features of schools and society. Restricted to enrollment in English degree program or consent of department.

ENGL485A - Teaching Writing & Lang Sec Sc 485A-3 Teaching Writing and Language in the Secondary School. Introduction to strategies for teaching English in the secondary school with emphasis on writing and language. Introduction to assessment of writing perception and skills. Assessment and tutoring of child from the community in writing. Ideally, course should be taken two semesters prior to student teaching. Restricted to: Admittance to Teacher Education Program through CoEHS.

ENGL485B - Teaching Reading & Lit Sec Sch 485B-3 Teaching Reading and Literature in the Secondary School. Introduction to strategies for teaching English in the secondary school with emphasis on critical reading skills and various genres of literature, including contemporary adolescent literature. Introduction to assessment of reading perception and skills. Assessment and tutoring of child from the community in reading. Ideally, course should be taken the semester prior to student teaching. Restricted to: Admittance to Teacher Education Program through CoEHS.

ENGL489 - One-to-One Teaching 489-3 One-to-One Teaching Practice and Theory. Perspectives on one-to-one teaching practices and collaborative theory in hands-on Writing Center experience. Prerequisites: Minimum grade of "B" in both ENGL 101 and ENGL 102 (or their equivalent). Special approval needed from the instructor.

ENGL490 - Expository Writing 490-3 Expository Writing. Advanced composition with emphasis on a variety of rhetorical strategies. Prerequisite: ENGL 290, 390 or equivalent.

ENGL491 - Technical Writing 491-3 Technical Writing. Introduction to technical communication across the curriculum; open to entire university community. Prerequisite: At least one of the following: ENGL 290, 291, 391, or equivalent.

ENGL493 - Special Topics: Lit/Lang 493-3 to 9 (3 per topic) Special Topics in Literature and Language. Topics vary and are announced in advance; both students and faculty suggest ideas. May be repeated as the topic varies.

ENGL493H - Special Topics Honors 493H-3 Special Topics in Literature and Language. (Same as ENGL 493) Topics vary and are announced in advance; both students and faculty suggest ideas. May be repeated as the topic varies. Prerequisites: ENGL 101 and 102 or ENGL 120H (undergraduates) with a grade of C or better.

ENGL494 - Cultural Analysis & Cinema 494-3 Cultural Analysis and Cinema. Cultural Studies exploring various and selected topics in European and American Cinema. A $10 screening fee is required.

ENGL495 - Survey of Literary Criticism 495-3 A Survey of Literary Criticism. Introduction to the history of criticism and major recent schools of literary criticism and theory.

ENGL498 - Internship 498-3 to 9 Internships. For English majors only. Student may take up to nine semester hours to receive credit for internships that may be available at SIU Press, Special Collections, University Museum, Coal Center, Writing Center, Computer Lab and other faculty or unit-sponsored projects. Prerequisite: Written approval from department & academic unit and enrollment in English degree program or consent of department.

ENGL499 - Readings in Lit & Language 499-1 to 6 (1 to 3) Readings in Literature and Language. For English majors only. Prior written departmental approval required. May be repeated as the topic varies, up to the maximum of six semester hours. Restricted to enrollment in English degree program or consent of department.

ENGL500 - Proseminar 500-3 Proseminar. Research methodology involved in writing a critical or scholarly work on literary topics for doctoral students in literature. Restricted to enrollment in English graduate degree program.
ENGL501 - Research in Composition 501-3 Research in Composition. Seminar in qualitative and quantitative research methods in composition and its teaching. Restricted to enrollment in English graduate degree program or consent of department.

ENGL502 - Teach College Composition 502-3 Teaching College Composition. An introduction to methods and materials related to the teaching of basic compositional skills on the college level. This course is required of all graduate assistants who have no previous college teaching experience or no familiarity with basic research techniques.

ENGL503 - Professional Development 503-2 Professional Development. Theory and practice for teaching composition in teacher-centered, workshop, discussion, and computer courses (Fall). Scholarly publication, course development, professional trends (Spring). Restricted to enrollment in English graduate degree program.

ENGL504 - Prof Development CW 504-1 Professional Development in Creative Writing. Practicum in preparation and submission of creative work for publication, and in preparation for and application for writers’ conferences, fellowships, and internships in creative writing. Restricted to and required for first-semester MFA candidates.

ENGL506 - Old & Middle English Studies 506-3 to 12 Old and Middle English Studies. Seminars on various topics from Old and Middle English literature. May be repeated only with different topics and the consent of the department. Restricted to enrollment in English graduate degree program or consent of department.

ENGL510 - Renaissance Studies 510-3 to 12 Renaissance Studies. Seminars in varying topics concerned with the literature of the 16th and 17th centuries and the drama of Shakespeare. May be repeated only with different topics and the consent of the department. Restricted to enrollment in an English degree program or consent of department.

ENGL516 - Restoration & 18th C Studies 516-3 to 12 Restoration and 18th Century Studies. Seminars in varying topics concerning the literature of the period. May be repeated only with different topics and the consent of the department. Restricted to enrollment in an English degree program or consent of department.

ENGL530 - 19th Century English Lit 530-3 to 12 19th Century English Literature. Seminars in various topics concerning the literature of the Romantic and Victorian periods. May be repeated only with different topics and the consent of the department. Restricted to enrollment in an English degree program or consent of department.

ENGL533 - American Lit Before 1900 533-3 to 12 American Literature Before 1900. Seminars in varying topics. May be repeated only with different topics and the consent of the department. Restricted to enrollment in English graduate degree program or consent of department.

ENGL539 - American Lit After 1900 539-3 to 12 American Literature After 1900. Seminars in varying topics. May be repeated only with different topics and the consent of the department. Restricted to enrollment in English graduate degree program or consent of department.

ENGL550 - Modern British Lit 550-3 to 12 Modern British Literature. Seminars in varying topics concerning Modern British literature. May be repeated only with different topics and the consent of the department. Restricted to enrollment in an English degree program or consent of department.

ENGL555 - Irish Studies 555-3 to 12 Irish Studies. Seminars on varying topics in Irish and Irish immigration studies; interdisciplinary/cultural studies approaches. May be repeated only with different topics and the consent of the department. Restricted to enrollment in English graduate degree program or consent of department.

ENGL579 - Studies in Modern Lit 579-3 to 12 (3 per topic) Studies in Modern Literature. May be repeated only if the topic varies, and with consent of department. Restricted to enrollment in an English degree program or consent of department.
ENGL581 - Problems: Teaching English 581-3 to 9 (3 per topic) Problems in Teaching English. May be repeated only if the topic varies, and with consent of department. Restricted to enrollment in an English degree program or consent of department.

ENGL582 - Issues in WPA 582-3 Issues in Writing Program Administration. Seminars in varying topics concerning writing program administration. May be repeated only with different topics and the consent of department.

ENGL583I - WPA Internship 583I-3 Internship in Writing Program Administration. An internship in WPA builds on four components: readings, activities or job tasks, written tasks, and a portfolio of artifacts and reflections representing the experience. These internships provide opportunities for interested students to implement practically what they are learning through research and reading.

ENGL588 - Comp Exam Readings 588-3 Comprehensive Exam Readings. Preparatory for MA comprehensive exam. May be taken once only; grade of S/U. Restricted to enrollment in English program or consent of department. Restricted to MA students in English.

ENGL589 - Readings in Lit & Lang 589-3 to 12 Readings in Literature and Language. For English graduate students only. Prior written departmental approval required. May be repeated as the topic varies. Restricted to enrollment in an English degree program or consent of department.

ENGL591 - Seminar Literary Nonfiction 591-3 to 9 Seminar in Literary Nonfiction. Critical reading and analysis of one of the major forms of literary nonfiction (biography, autobiography, popular science, the essay, literary journalism, and travel narratives). May be repeated only with different topics and the consent of the department. Special approval needed from the instructor.

ENGL592 - Creative Writing Seminar 592-4 Creative Writing Seminar. Advanced workshops offered in both fiction and poetry. Class content derives primarily from student's work. Genre announced in advance. May be repeated with consent of department. Restricted to enrollment in English MFA program or consent of department.

ENGL593 - Special Topics 593-3 to 12 Special Topics. Seminars in varying topics concerning language and literature. May be repeated only with different topics and the consent of the department. Restricted to enrollment in an English degree program or consent of department.

ENGL594 - Contemporary Literature 594-4-8 Contemporary Literature Seminar. Advanced seminars offered in both contemporary poetry and contemporary fiction. Taught by creative writers and designed for students concentrating in creative writing. Restricted to enrollment in English MFA program or consent of department. May be repeated for credit with different section numbers.

ENGL595 - Independent Readings 595-1 to 9 Independent Readings. Preparatory for preliminary examinations for doctoral students in English. May be taken once only, grade of S/U, according to the result of the preliminary examination.

ENGL596 - Language Studies 596-3 to 12 Language Studies. Seminars in varying topics concerning rhetoric, grammar and literacy. May be repeated only with different topics and the consent of the department. Restricted to enrollment in English graduate degree program or consent of department.

ENGL597 - Composition Theory 597-3 Composition Theory. Historical and analytical approaches to theories of discourse, theories of composing and theories of pedagogy. Prerequisite: ENGL 502 or equivalent.

ENGL598 - Literary Theory 598-3 to 12 Studies in Issues of Literary Theory. Seminars on various issues of literary theory. May be repeated only with different topics and the consent of the department. Restricted to enrollment in an English degree program or consent of department.

ENGL599 - Thesis 599-3 Thesis. For Masters' students who elect to write a thesis in lieu of one three hour graduate course. Prerequisite: successful completion of 15 hours of graduate work on the Master's degree. Special approval needed from the thesis director. Restricted to enrollment in an English degree program or consent of department.
ENGL600 - Dissertation 600-1 to 36 (1 to 16 per semester) Dissertation.

ENGL601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

ENGL699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Little, Judy R., Professor, Emerita, Ph.D., University of Nebraska, 1969; 1969.
Environmental Resources and Policy

The Graduate School offers the Doctor of Philosophy degree in Environmental Resources and Policy. This degree provides students with an interdisciplinary education in natural resource and environmental processes with a perspective on public policy and social institutions that shape societal and individual reactions to environmental issues. The education will prepare students to work with multifaceted environmental problems and enable them to carry out interdisciplinary scientific research and be qualified for high-level administration positions in academia, government (e.g. U.S. Geological Survey, U.S. EPA, U.S. Forest Service, Illinois Dept. of Natural Resources, U.S. Department of Agriculture), and the private sector (e.g. environmental consulting firms, electric and water utilities, mining and solid waste firms). This will enable graduates to address the most compelling and daunting challenge in natural resource and environmental issues—identifying and solving problems that cross disciplinary boundaries.

The Environmental Resources and Policy Ph.D. is organized by the School of Earth Systems and Sustainability (Geography and Geology Programs). The Colleges of Sciences, Agriculture, and Engineering along with the School of Law cooperate in the program (Agribusiness Economics, Civil and Environmental Engineering, Forestry, Plant, Soil, and Agricultural systems, and Zoology).

Areas of Concentration

Climatology

Students who take the Climatology concentration will study the past, present, and future of Earth’s atmospheric system that, in interaction with the land and the hydrosphere, generate long-term weather patterns—that is climate. Methods for investigating paleoclimates such as dendrochronology, ice and sediment cores, will be emphasized along with use of Atmospheric-Oceanic General Circulation Models for the investigation of future climate change.

Earth and Environmental Processes

Students who select this specialization combine elements of the modern, process-oriented geology curriculum (sedimentology, geomorphology, petrology, basin analysis, seismology, potential-field geophysics, organic and water geochemistry, tectonics, and paleo-environmental analysis) with allied disciplines to prepare for research into a broad range of environmental studies. This concentration emphasizes the geological process approach to analysis of such problems as flooding, earthquake hazards, land-use practices, aquifer degradation, and mine site remediation.

Ecology

Students who take the ecology concentration will work with faculty from the Center for Ecology. Ecology studies the complex relationships between organisms, populations, communities, ecosystems, biomes
and the biosphere, which are deeply affected by human decisions, actions and policies—actions and policies which are themselves influenced by the environment. ER&P-ecology students will focus on the ecosystem-society relationship, such as the provision and management of ecosystem services. As the human footprint widens, and active management of ecosystems becomes more policy-relevant, understanding these connections is a vital component of training the next generation of scientists.

**Energy and Mineral Resources**

Energy and mineral resources include hydrocarbons (oil, natural gas, coal, and their naturally-occurring and manufactured derivatives), and both metallic and non-metallic (industrial) mineral and rock deposits. This specialization comprises studies of the origins and physical occurrences of these resources, together with technologies and policies concerning their extraction and use.

**Environmental Policy and Administration**

Making and administering environmental policy has become an exceedingly complex arena where science interacts strongly with law and the political process. Students enrolled in this concentration will examine these interactions and complexities with a focus on the socioeconomic driving forces that generate resource use and attendant environmental problems, and the political and legal frameworks through which societies make and implement public policy in the environmental field.

**Forestry, Agricultural, and Rural Land Resources**

Many environmental problems, challenges and policies take place on rural landscapes where forestry and agricultural land uses are intermingled with non-farm rural residents and others. Many rural land uses contribute to environmental problems and the development of environmentally benign and sustainable methods of production are goals of environmental policy. Consequently, through this concentration, students will examine the interaction among environmental quality, production, and the process and institutions of public policy.

**Geographic Information Systems, Remote Sensing and Environmental Modeling**

Modern environmental sciences, management and planning rely on acquisition, analysis and integration of large data bases using remote sensing, digital image processing, geographic information systems and environmental modeling. The purpose of this concentration is to enable students to develop high skills in these areas and to apply them to one or more natural resource domains (e.g., hydrogeology, forest inventory, spatial decision support systems, environmental modeling).

**Water Resources**

As a critical flow resource, water is of central importance to society and, through hydrologic processes, is involved in many environmental issues from water shortages in populous arid regions to ground water quality concerns associated with agri-chemical use. Through this concentration, students will examine the interaction among hydrologic processes, environmental quality, water resource use, and the processes and institutions of the private sector and public policy that govern water resources.

**Required Courses:**

- ERP 502  Environmental Decision Making (3)
- ERP 598  Applied Environmental Resources and Policy (1 credit each year in residence)

One Methodology class listed below:

- SOC 512  Sociological Research Methods & Design (4)
- ECON 567A  Econometrics I (3)
- QUAN 507  Multiple Regression (4)
- Quantitative Biophysical Science
- GEOL 513  Quantitative Methods in Earth Sciences (3)
- GEOG 512  Applied Geographic Statistics (3)
One Science class listed below:

- ZOOL 557 Biostatistics (4)

Admission and Retention

Students will be admitted to the program on the basis of academic merit, statement of interest, and the availability of a willing Ph.D. advisor. Ph.D. students will be selected on a national and international competitive basis. Admissions will not be rationed by concentration.

Students must have a Master’s Degree or a J. D. Students with a Bachelor’s Degree may be admitted conditional upon completion of a master’s degree from one of the participating departments.

Admission and financial aid are competitive on the basis of Master’s-level GPA, professional work experience, and GRE scores, as well as letters of recommendation. Applicants must have a Master’s-level GPA of at least 3.25, and meet one of the following:

1. a combined verbal and quantitative GRE score of at least the 50th percentile.
2. three years of successful professional experience in the environmental/natural resources field.

Highly qualified applicants will be nominated for Doctoral Fellowships and Morris Fellowships.

Students must remain in good standing with a GPA of 3.0 or higher and be making good progress toward identification and completion of a dissertation project. Students in good standing who have qualified for assistantships will be offered funding for at least three nine-month academic years.

This program requires a nonrefundable $65 application fee that must be submitted with the application for admission to Graduate Study in Environmental Resources & Policy. Applicants must pay this fee by credit card.

Candidacy and Dissertation

By the end of their second semester in residence, students must have chosen a concentration and formed a graduate committee to oversee their dissertation research. The graduate committee may have a maximum of three of the five members from one department. Completion of research tools will be determined by committee. Written and oral preliminary examinations consist of two parts: one based on the program core material, and one on the student’s chosen concentration. When the student has passed prelims and a dissertation proposal is accepted by the committee, students are admitted to candidacy.

If prelims are not passed, they must wait a minimum of three months for the second and final attempt to pass the exam.

Candidates will be required to present an acceptable dissertation describing original research. Dissertation approval is based on a successful oral defense of the dissertation research and approval of the dissertation by the graduate committee. The dissertation research must also be presented in ERP 598.
Curriculum

Prerequisites: Students must have at least three of the seven courses listed below to be admitted and must have five upon completion of the program. It is anticipated that most students will fulfill many of the prerequisites through their previous work at the undergraduate and Master’s level and will have working facility with micro-computers. For those students without adequate background, identified courses are required to provide students with the background necessary to successfully participate in the program.

Prerequisites for ERP

Core: 36 Credits (including 24 in ERP 600)
Concentration: 24 Credits Minimum
Total: 60 Credits

Core Curriculum for all Concentrations

Required Courses:

- ERP 500     Physical and Biological Environmental Systems (3)
- ERP 502     Environmental Decision Making (3)
- ERP 598     Applied Environmental Resources and Policy (1 credit each year in residence)

One Methodology class listed below:

- Qualitative Social Science
  - SOC 512     Sociological Research Methods & Design (4)

- Quantitative Social Science
  - ECON 567A     Econometrics I (3)
  - QUAN 507     Multiple Regression (4)

Quantitative Biophysical Science
  - GEOL 513     Quantitative Methods in Earth Sciences (3)
  - GEOG 512     Applied Geographic Statistics (3)
  - ZOOL 557     Biostatistics (4)

Curriculum for Concentrations

Each concentration will require mastery of one or more research tools. Specific courses and research tools will be determined by the student and the research supervisor in consultation with the student’s faculty advisory committee. The multidisciplinary curriculum for each concentration is customized to meet the student’s individual interests and career goals.

Climatology Concentration
The curriculum may include courses in Geography and Environmental Resources, Geology, Physics, Mathematics, and other areas relevant to the atmospheric processes.

Earth and Environmental Processes Concentration
The curriculum may include courses in geology, biological science, physical science areas other than geology, geography (GIS and cartography), environmental law, remote sensing, soil science, mining and civil engineering, computer science and statistics.

Ecology Concentration
The curriculum will include PLB 589A and other courses in Zoology, Plant Biology, Forestry, Geology, Geography and Environmental Resources, and other areas relevant to ecology.

Energy and Mineral Resources Concentration
The curriculum may include courses in geology, biological science, physical science areas other than geology, geography (GIS and cartography), environmental law, remote sensing, soil science, mining and civil engineering, computer science and statistics.

Environmental Policy and Administration Concentration
The curriculum may include courses in environmental law, political science, geography, forestry, agribusiness economics, economics, anthropology, zoology, and statistics. Emphasis is on the processes of public policy formulation and implementation.

Forestry, Agricultural, and Rural Land Resources Concentration
The curriculum may include courses in agribusiness economics, plant, soil, and agricultural systems, animal science, geography, remote sensing and GIS, human dimensions of natural resource management, plant biology, zoology, and statistics. Emphasis is on the processes of changing land uses of rural landscapes and the implications for the environment and adjacent land uses.

Geographic Information Systems, Remote Sensing and Environmental Modeling Concentration
Students may elect from several specializations within this concentration including Geoprocessing, Biometrics, Environmental Modeling, and Geological Modeling.

Water Resources Concentration
The curriculum should include courses in Water Policy and Planning and Hydrological Sciences.

Environmental Resources and Policy Courses

**ERP500 - Physi Biol Enviro Syst** 500-3 Physical and Biological Environmental Systems. Application of principles of systems analysis, including chaos and complex adaptive systems, to Earth biogeochemical cycles (e.g. energy, carbon, water, nutrients), inter-relations among them and disruptions to them. Topical focus will vary among: the analysis of how contaminants travel, especially through ground water, and become dispersed in the environment; the origin of soils and the movement of nutrients among plants, water and soils; the origin and distribution of natural resources such as metals and fossil fuels and of natural hazards such as flooding, earthquakes, landslides and volcanism; the global carbon cycle, especially its role in global climate change.

**ERP502 - Environmental Decision Making** 502-3 Environmental Decision Making. (Same as ABE 502) The objective of the course is twofold. The first part of the class will be devoted to case studies of environmental decision making which use a variety of approaches to environmental policy. Topics to be covered include market-based environmental management versus regulatory approaches, climate change, conservation and floodplain management policy. The second part of the class will focus on the challenges of interdisciplinary communication and collaboration, methodological research issues and the role of integrated modeling. We will consider different issues such as qualitative and quantitative evidence, validation, and the role of values and objectivity in the scientific process.

**ERP590 - Readings in ER&P** 590-1 to 8 Readings in Environmental Resources and Policy. Readings in a specialized topic under the direction of an approved graduate faculty member. Graded S/U only.

**ERP598 - Applied Env Res Policy** 598-1 Applied Environmental Resources and Policy. Invited speakers from federal, state, or local agencies; nongovernmental organizations; academic institutions; and Environmental Resources and Policy faculty will present case studies on the conduct of environmental research, the development of environmental laws and regulation, and the implementation of environmental policies. Additionally, students will present dissertation proposals and defend their dissertations. Taken for one credit each year in residence in the Environmental Resources and Policy program. Restricted to enrollment in the Environmental Resources and Policy program.

**ERP599 - Individual Research** 599-1 to 3 Individual Research in Environmental Resources and Policy. Individual investigation under faculty guidance in environmental resources and policy other than that
for the dissertation. Only three hours may be credited toward the degree. Restricted to admission to Environmental Resources and Policy Program.

**ERP600 - Dissertation** 600-1 to 24 (1 to 12 hours per semester) Dissertation. Research for and writing of the doctoral dissertation. Special approval needed from the instructor.

**ERP601 - Continuing Enrollment** 601-1 Continuing Enrollment. For those graduate students who have not finished their degree and who are in the process of working on their dissertation. The student must have completed a minimum of 24 hours of dissertation research before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

### Environmental Resources and Policy Faculty

**Environmental Resources & Policy Faculty**
Please see the departmental web pages (erp.siu.edu/faculty-staff) for detailed information on the research activities of individual faculty members. Please also see the departmental entries in this catalog.

### Agribusiness Economics:

**Altman, Ira,** Renewable Energy Industries, Organizational, Rural and Regional Economics  
**Moon, Wanki,** Consumer Economics and Food Marketing  
**Rendleman, Matthew,** Agricultural Policy  
**Sanders, Dwight,** Futures and options, Risk Management, Price Analysis

### Forestry:

**Akamani, Kofi,** Human Dimensions of Natural Resource Management  
**Carver, Andrew,** Land Use Planning, GIS  
**Ruffner, Charles,** Forest ecology  
**Schoonover, Jon,** Watershed Management and Hydrology  
**Williard, Karl,** Hydrological Modeling, Watershed Management  
**Zaczek, James,** Ecology

### Geography and Environmental Resources:

**Duram, Leslie,** Agricultural Conservation Policy, Public Lands Policy, Organic Agriculture  
**Li, Ruopu,** GIS-based Land Use Modeling, Water Resources Planning and Management, Groundwater Modeling  
**Remo, Jonathan,** ER&P Director, Hydrology, Water Resources Management, Fluvial Geomorphology, and Natural Hazards.  
**Schoof, Justin,** Climatology  
**Wang, Guangxing,** Remote Sensing, Spatial Statistics and GIS

### Geology:

**Anderson, Ken,** Organic Geochemistry  
**Conder, James,** Seismology, Plate Boundary Processes, Geodynamics and Seismotectonics  
**Esling, Steven,** Hydrogeology, Environmental Modeling  
**Harvey, Henson,** Science Education, Geology, and Applied Geophysics  
**Hummer, Daniel,** Mineralogy  
**Ishman, Scott,** Marine Micropaleontology  
**Lefticariu, Liliana,** Stable Isotope Geochemistry/Aqueous Geochemistry/Radiation chemistry  
**Potter-McIntyre, Sally,** Sedimentology
Plant, Soil and Agricultural Sciences:

Bond, Jason, Hematology and Plant Pathology
Meksem, Khalid, Agronomy and Soil
Taylor, Bradley, Fruit Production
Walters, Alan, Horticulture

A partial listing of other SIU faculty active in environmental research and teaching:

Gibson, David, Plant Biology, Plant Population and Community Ecology
McCubbin, Patricia, School of Law, Environmental Law, Advanced Environmental Litigation, Environmental Law for Business Transactions

Food and Nutrition

*Enrollments in Food and Nutrition, concentrations in Nutritional Sciences and Hospitality and Tourism Administration (M.S.), have been suspended indefinitely.

The School of Human Sciences offers a Master of Science degree in Food and Nutrition with three concentration options: community nutrition, hospitality and tourism administration, and nutritional sciences. For program details not included in this description, prospective students may visit coas.siu.edu.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Food and Nutrition. Applicants may pay this fee by credit card if applying electronically. Applicants submitting a paper application must pay by personal check, cashier’s check, or money order made out to SIU, and payable to a U.S. Bank.

Community Nutrition Concentration

The Master of Science Degree in Food and Nutrition with a concentration in community nutrition is coordinated with the Dietetic Internship Program. The curriculum is designed to provide advanced study in community nutrition and public health/nutrition policy and provide 1200 hours of supervised practice (dietetic internship). Students who successfully complete the master’s degree coursework and the 1200 hours of dietetic internship must be verified by the program director to then be eligible to write the registration examination for dietitians. In addition to master’s degree work, students complete an accredited dietetic internship that qualifies them to take the registration examination for dietitians. The Accreditation Council for Education in Nutrition and Dietetics (ACEND®) sets Standards of Education for entry-level dietetics education. ACEND® is the only accrediting agency for dietetics education programs recognized by the United States Department of Education (USDE). Continued recognition by the USDE since 1974 affirms that ACEND® is a reliable authority as to the quality of dietetics education program that it accredits. Programs accredited by ACEND® meet the education requirements established by Commission of Dietetic Registration (CDR). The Dietetic Internship program at SIU has been granted accreditation through 2020 by ACEND. In addition to admission requirements below, students need a Verification Statement for having completed a Didactic Program in Dietetics issued by a ACEND-accredited program director.

Admission

Applicants must meet the following criteria to be considered for admission to the program. Everyone, United States citizens and non-citizens alike, must complete a Didactic Program in Dietetics (DPD) accredited by ACEND. ACEND establishes and enforces “Eligibility Requirements and Accreditation Standards” for nutrition/dietetics education. It accredits education programs (including bachelor’s and
graduate level *Didactic Programs in Dietetics*) that prepare students for careers as “Registered Dietitians”. More information about ACEND is available online at eatright.org/acend.

1. A baccalaureate degree from a regionally accredited college or university (completed within the last 10 years)
2. Completion of a Didactic Program in Dietetics (DPD) as accredited by the Accreditation Council for Education in Nutrition and Dietetics. Students should supply appropriate documentation (Verification Statement) from their DPD Directors that is to be submitted with their application.
3. DICAS. If you have completed a minimum of a bachelor’s degree at a US regionally accredited university or college and course work accredited by ACEND, you are eligible to participate in the Dietetic Internship Match. Applicants to SIU combined MS/DI program must submit their application through the Dietetic Internship Centralized Application System at [https://www.portal.dicas.org](https://www.portal.dicas.org) (DICAS Portal).
4. D&D Matching. Applicants to Dietetic Internships (DI) must register for matching with D&D Digital to create/modify their prioritized list of dietetic internships for computerized matching at D&D Digital ([https://www.dnddigital.com](https://www.dnddigital.com)). There is a $50 registration fee for matching that is due with prioritized program rankings. SIU’s Match Number is 438. SIU matches only during the spring. Students who match with SIU through the spring matching process are enrolled in SIU’s program in August (fall semester).
5. A grade point average of 3.0 or higher (where 4.0 = A) is required.
6. The Graduate Record Exam (GRE) is required for all applicants within the last 5 years.
7. A score of 300 or higher on combined verbal and quantitative portions of GRE is recommended.
8. Desire to complete a Master of Science Degree in Food and Nutrition with a concentration in community nutrition combined with a 7 and ½ month dietetic internship with community nutrition emphasis.
9. International Students who have had their education, training and credentials completed outside of the United States or have not completed a Didactic Program in Dietetics should refer to the following resource: The Academy of Nutrition and Dietetics
10. International students whose native language is not English are required to pass the TOEFL examination with a score of 550 or above. For questions related to education and credentialing requirements for international students, more information is available at International Admissions

**Program Completion Requirements**

Unless otherwise stated, policies of the University and Graduate School shall establish the minimum requirements for retention in and graduation from the program. This includes a minimum grade point average for graduation of 3.0 (4.0 point scale).

The *Community Nutrition* concentration requires 39-44 credit hours from the following: FN 540, FN 574, FN 585, ANS 500, FN 530, PH 583, PH 585, HED 593, or HED 583, QUAN 506, FN 581, PH 598, HND 495, FN 580A, FN 580B, FN 580C, FN 599 and/or electives. At least 50% of coursework must be at the 500 level. The thesis option requires a committee composed of at least two program faculty members and one faculty member from outside of department. The research paper option will require a committee composed of at least three faculty members and an additional three credits of elective coursework. The Master’s degree candidates in the thesis or research paper options must pass an oral examination conducted by their committee. The professional track option will require an additional six credits of elective coursework.

**Hospitality and Tourism Administration Concentration**

Students applying to the *hospitality and tourism administration* concentration are expected to have an undergraduate degree in hospitality and tourism, business, or closely related field. Students are also expected to have strong academic, analytical, and communication skills. Students applying to the *hospitality and tourism administration* concentration without a hospitality and tourism degree must pass a comprehensive exam or take three 400-level foundation courses related to their chosen career path.

**Admission**

Admission is competitive and requires a bachelor’s degree with a minimum 2.75 GPA, GRE, GMAT, or MAT, three letters of recommendation, and a personal statement. Selection for the program is
Program Completion Requirements

Unless otherwise stated, the policies of the University and of the Graduate School shall establish the minimum requirements for retention in the graduation from the program. This includes a minimum grade point average for graduation of 3.0 (4.0 point scale).

The hospitality and tourism administration concentration requires 31 credit hours from the following: FN 521A, FN 521B, FN 521C, QUAN 506, FN 531, FN 535, FN 561, and either FN 599 or FN 593. At least 50% of coursework must be at the 500 level. The graduate committee will assist with the selection of an additional six credit hours of graduate coursework appropriate for their field of study. This concentration requires a minimum of 36 credit hours to graduate. The graduate student's committee will be composed of at least two departmental faculty members and one faculty member from outside of department. Master's degree candidates must pass a comprehensive oral examination conducted by their committee, covering all graduate work including their thesis or research paper.

Nutritional Sciences Concentration

Students applying to the nutritional sciences concentration are expected to have an undergraduate degree in biological sciences, such as nutrition, physiology, zoology, or a related field. Students are also expected to have strong academic and analytical skills.

Admission

A grade point average of 3.0 or higher (4.0 = A) is recommended for program entrance. The Graduate Record Exam (GRE) is required for all applicants. Students should submit a statement of career goals and interest in completing the master's degree, as well as three letters of recommendation from former professors or employers.

Program Completion Requirements

Unless otherwise stated, the policies of the University and of the Graduate School shall establish the minimum requirements for retention in and graduation from the program. This includes a minimum grade point average for graduation of 3.0 (4.0 point scale). The nutritional sciences concentration requires 12 to 16 credit hours from the following: FN 581, QUAN 506, QUAN 508 or WED 561, FN 599, or FN 593. At least 50% of coursework must be at the 500 level. The graduate committee will assist with the selection of an additional 14 to 18 credit hours of graduate coursework appropriate for their concentration. This concentration requires a minimum of 32 credit hours to graduate. The graduate student's committee will be composed of at least two departmental faculty members and one faculty member from outside of department. Master's degree candidates must pass a comprehensive oral examination conducted by their committee, covering all graduate work including their thesis or research paper.

Food and Nutrition Courses

FN515 - Energy Protein Utilization 515-3 Energy and Protein Utilization. (Same as ANS 515) Energy and protein utilization including digestion, absorption, and metabolism as related to mammalian physiology. Prerequisite: course in organic chemistry.

FN516 - Minerals and Vitamins 516-3 Minerals and Vitamins. (Same as ANS 516) Basic and applied principles of mineral and vitamin metabolism. Emphasis on metabolic functions, reaction mechanisms and interrelationships. Prerequisite: course in organic chemistry.

FN521A - Readings-7-9 Year Lit Review 521A-3 to 9 (3 per topic) Readings in Hospitality and Tourism-7-9 Year Literature Review. Advanced seminar class and nine-year historical literature review of issues affecting the hospitality and tourism industry. Sections (A) through (C) may be taken only once each.

FN521B - Readings-4-6 Year Lit Review 521B-3 to 9 (3 per topic) Readings in Hospitality and Tourism-4-6 Year Literature Review. Advanced seminar class and nine-year historical literature review of issues affecting the hospitality and tourism industry. Sections (A) through (C) may be taken only once each.

FN521C - Readings-Current-3 Yr Lit Rvw 521C-3 to 9 (3 per topic) Readings in Hospitality and Tourism-Current to 3 Year Literature Review. Advanced seminar class and nine-year historical literature review of issues affecting the hospitality and tourism industry. Sections (A) through (C) may be taken only once each.

FN530 - Adv Nutr Assessment & Educ 530-3 Advanced Nutritional Assessment and Education. Community assessment methods, specifications or particular tools used and how these tools can be applied to particular conditions of concern in community nutrition. The methods of education for individuals and populations using dietary, biochemical, anthropometrics and physical assessment data will be taught. Restricted to major or consent of instructor.

FN531 - Hospitality ACCT 531-3 Hospitality Managerial Accounting. Theory and practice of managerial accounting techniques in the hospitality industry.

FN535 - Hospitality MKTG 535-3 Advanced Hospitality Marketing Management. Analysis of marketing processes within hospitality, tourism and related organizations. Focus is on design and implementation of marketing research and analysis, as well as creation of the strategic marketing plan.

FN540 - Nutrition Policy 540-3 Nutrition Policy, Programs and Services. The study of policies, programs and services concerned with prevention and treatment of nutrition problems in the population. Prerequisite: HND 480 with a grade of C or better. Restricted to Food and Nutrition majors or consent of instructor.

FN545 - Sustainable Tourism 545-3 Economics of Sustainable Tourism Development. Development of sustainable tourism destinations will be examined. Introduction to research methods involved in conducting economic impact studies, feasibility studies and conversion studies.

FN551 - Destination MGMT 551-3 Strategic Destination Management. Responsibilities of destination management organizations from an international perspective will be examined. Primary focus is destination product development and management. Destination competitiveness and marketing, specifically branding and positioning will also be discussed.

FN560 - Advanced Foods MGMT 560-3 Advanced Food Service Management. Course will provide opportunities in food service facility management to demonstrate leadership, financial management skills, food safety initiatives, contingency planning, and marketing techniques. Topics include sustainable food service practices, human resource management, culinary techniques, HACCP planning and theories. Graduate students will experience a supervisory role while managing undergraduate students at food service facilities.

FN561 - SVC Organization MGMT 561-3 Service Organization and Management. Covers topics such as motivation, group dynamics, leadership, organization structure, decision making, conflict resolution, and Organizational Development. Focus is on strategic leadership to prepare individuals and organizations to excel within a changing environmental landscape toward delivery of a quality service relationship.

FN565 - Convention Mgmt 565-3 Advanced Convention Management and Service. Strategic relationships between meeting planner, client, facility and suppliers will be examined. Focus will be on a practical approach to convention planning and management. Students will be required to participate in planning as well as attending regional meetings.
FN574 - Adv Medical Nutrition Therapy 574-3 Advanced Medical Nutrition Therapy. In-depth study of the application of nutrition to the management of disease states with emphasis on current treatment and complex metabolic abnormalities. Prerequisite: HND 470.

FN580A - Nutr Pract-Comm Clinicl Rotatn 580A-3 Nutrition Practicum in the Community-Clinical Rotation. Designed to provide practicum experiences in dietetics for students completing the Master's in Food and Nutrition. Restricted to Food and Nutrition majors or consent of instructor.

FN580B - Nutr Pract-Comm-Mgmt Rotatn 580B-3 Nutrition Practicum in the Community-Management Rotation. Designed to provide practicum experiences in dietetics for students completing the Master's in Food and Nutrition. Restricted to Food and Nutrition majors or consent of instructor.

FN580C - Nutr Pract-Comm Pblc Health Rot 580C-3 Nutrition Practicum in the Community-Public Health Nutrition Rotation. Designed to provide practicum experiences in dietetics for students completing the Master's in Food and Nutrition. Restricted to Food and Nutrition majors or consent of instructor.

FN581 - Graduate Seminar 581-1 to 2 (1,1) Graduate Seminar in Community Nutrition. A discussion of current topics and literature in community nutrition and community nutrition programs. Provides a forum for student and faculty presentation, and review of current research efforts. Encourages integration of the knowledge gained from the didactic and experiential learning prior to food service management, medical nutrition therapy, and community nutrition practicum experiences. Restricted to major or consent of instructor. Maximum of one hour per semester. Course fee: $10.

FN585 - Adv Community Nutrition 585-3 Advanced Community Nutrition. A presentation and examination of issues and programs in food and nutrition programs. Elements including the organization and management of quality nutrition services for the prevention of disease and promotion of health will be identified and applied to community programs.

FN590 - Readings in Food & Nutrition 590-1 to 3 Readings in Food and Nutrition. Individual readings in food and nutrition under graduate faculty guidance. Special approval needed from the instructor.

FN592 - Global Research in Agriculture 592-1 to 3 Global Research in Agriculture. Research interest in animals unique to certain regions of the world is a growing field to graduate students interested in world sustainable agricultural practices. This class is designed for students interested in taking research based information and skills from Southern Illinois University and applying it to projects with animals native to certain regions of the world to improve productivity and sustainability. This course provides graduate students interested in global and sustainable research the opportunity to conduct their research and training on regional animals not traditionally found in North America (eg. camels, water buffalo, kangaroo, etc).

FN593 - Individual Research 593-1 to 3 Individual Research. Investigation of a problem in food and nutrition under the supervision of an approved graduate faculty member. Graded S/U only.

FN599 - Thesis 599-1 to 6 Thesis. Credit is given for a Master's thesis when it is accepted and approved by the thesis committee. Graded S/U only.

FN601 - Continuing Enrollment 601-1 Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Food and Nutrition Faculty

Apgar, Gary A., Associate Professor, Ph.D., Virginia Polytechnic Institute, 1994; 1998. Monogastric nutrition, swine production.

Ashraf, Hea-Ran Lee, Professor, Emerita, Ph.D., Iowa State University, 1979; 1980.

Banz, William J., Professor and Chair, Ph.D., University of Tennessee, 1995; 1995. Human nutrition, nutritional physiology.
Davis, Jeremy., Assistant Professor, Ph.D., Iowa State, 2008; 2008. Molecular nutrition and physiology.
Endres, Jeannette M., Professor, Emerita, Ph.D., St. Louis University, 1972; 1975.
Girard, T.C., Associate Professor, Emerita, M.S., University of Wisconsin-Stout, 1992; 1993.
Smith, Sylvia F., Associate Professor, Ph.D., University of Tennessee 2007; 2007. Food Service Management, Culinary Tourism.
Welch, Patricia, Professor, Emerita, Ph.D., Southern Illinois University, 1982.

Forestry
The School of Agricultural Sciences offers advanced courses for the Master of Science degree with a major in forestry. In addition, curricula are available which permit graduate students with an interest in forestry to pursue their interest in Doctor of Philosophy degree programs in other units, including Agricultural Sciences.

Admission
In addition to requirements set forth by the Graduate School, the Master of Science in Forestry requirements are:

1. A minimum grade point average of 2.7 is required for admission \((A = 4.0)\). A grade point average of 2.7 or higher is required for stipend eligibility when available.
2. The student is required to provide proof of proficiency in technical writing. Normally an expository essay is required to evaluate whether the student should have remedial grammar or writing courses.
3. Three letters of recommendation from former professors, employers, or other responsible individuals are required.
4. Each applicant must complete the statement of interest form. This form indicates the student’s area of interest in forestry and the faculty member with whom the student desires to study. All correspondence should be directed to the program.
5. This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Forestry. Applicants must pay this fee by credit card.

Retention and Completion Requirements
Upon the graduate student’s arrival on campus, an advisory committee of three-five members of the graduate faculty will be formed to guide the student’s work. The same committee will be responsible for preparation and administration of thesis exams and also for the review and evaluation of the thesis. The advisory committee chair and at least one other member of the committee shall be members of the program. The other members may be selected from any academic unit including forestry.

Summary of Events

1. The deadlines for receipt of applications and official transcripts in the office of the Graduate School are: (a) the second Saturday in July for admission to the fall semester (b) the last Saturday in November for admission to the spring semester (c) the last Saturday in March for admission to the summer term.
2. Letters of recommendation should reach the Forestry program by the same dates as above.
3. Acceptance by the program and Graduate School should be announced one month or earlier than the desired matriculation date. A thorough review will be made by a screening committee of Forestry graduate faculty and the program adviser. Students rejected for admission will also be notified.

4. Registration for first semester’s work after student’s acceptance by the department.

5. Appointment of advisory committee chair, written plan for course work, and selection of tentative thesis areas all within first two months of residence.

6. Preparation of formal written thesis outline and preparation of research proposal by the eighth week of the second semester.

7. Completion of final, typed or reproduced review copies of thesis and submission of advisory committee at least three weeks in advance of oral defense of thesis.

8. Oral exam to be followed by completion of required approval forms. If thesis requires modifications, this should be accomplished immediately to reach the graduate dean’s office in due time set by the Graduate School. One bound copy of the thesis will be provided for the department, one for the chair of the advisory committee in addition to the electronic copy required for the Graduate School and a copy for the author. Additional copies may be required for projects sponsored by outside agencies.

**Master of Science Programs**

The Forestry program offers Master of Science students the opportunity to tailor their program to address their interests and career aspirations. Individual programs of study and research are developed by students in consultations with their faculty advisor to ensure timeliness and feasibility.

Concentrations include: forest resource management, ecological restoration, fire science, recreation ecology, human dimensions of natural resource management, wildlife habitat management, watershed management, hydrology, and soil science. Interdisciplinary research is encouraged. Prospective students should review the description of departmental graduate courses described later in this document. Also, please visit the program’s website for a current description of faculty interests and expertise.

**Assistantships and Fellowships**

Research assistantships are sponsored each year by the McIntire-Stennis Cooperative Forest Research Act and through several externally funded research projects. Teaching assistantships funded by the School of Agricultural Sciences are also available.

In addition to general awards made through the Graduate School, stipends for research studies are available from the U.S.D.A. Forest Service, the U.S. Department of Interior, other federal and state agencies, and private corporations.

**Requirements**

Since the normal minimum requirement for graduation is 32 semester hours, the completion of degree work for students holding assistantships should be accomplished within four semesters (including summer) which is also the normal maximum span for financial aid.

Per Graduate Program Guidelines for the Master of Science degree in Forestry at least 16 hours of the approved academic program must consist of 500 level courses; and, at least three of the 500 level courses must be formally structured.

The student must attain a grade of B or better for all courses specifically required in the student’s academic program and which are offered by the Department of Forestry.

To gain teaching experience, graduate students are expected to assist in the classroom or laboratory for at least one academic semester (20 hours per week) during their tenure with the Department of Forestry. The remaining semesters will also involve either research or teaching at the rate of 20 hours a week.

Per Graduate Program Guidelines for the Master of Science degree in Forestry, at least 16 hours of the approved academic program must consist of 500 level courses; and, at least three of the 500 level courses must be formally structured.
Staff

In addition to the faculty listed in the Graduate School Catalog, several adjunct professors also hold appointments with the Department of Forestry. These professors are assigned to various natural resource agencies and can serve on graduate guidance committees.

Research Facilities Land

SIU is well endowed with a number of different forest types and agricultural land which are available to the Forestry Program for teaching and research purposes. In particular, we are conducting or planning research and demonstration programs on forest plots and experimental fields of the 3000 acres of the University and its experimental farms. We also have access to wooded lands of the 600 acres of the Touch of Nature Environmental Center, 400 acres at the Pine Hills Field Research Station, and other forests.

Through various memoranda of understanding and special use permits we have use of forested lands and plots on the 43,000 acres of the Crab Orchard Wildlife Refuge, the 270,000 acres of the Shawnee National Forest, and the 4000 acres of the Trail of Tears State Forest, all of which are within an hour’s drive of Carbondale. A number of research projects are also ongoing on private lands in southern Illinois. Graduate research has also been conducted throughout the country through agreements with the U.S. Forest Service Experiment Stations and the U.S. Department of Interior, as well as internationally.

Physical Facilities

A variety of laboratories are housed within the department, including those specializing in historical ecology and fire, GIS, human dimensions, and water quality. A research greenhouse operated at the Tree Improvement Center on the western side of the campus is in operation for research and graduate teaching. Greenhouses and growth chamber facilities in the agriculture greenhouses in conjunction with the other programs in the School of Agricultural Sciences are also available.

Forestry Courses

FOR401 - Fundmntls Environmental Educ 401-3 Fundamentals of Environmental Education. (Same as AGRI 401 and REC 401) A survey course designed to help education majors develop an understanding of environmental education principles and teaching both inside and outside the classroom. Prerequisite: ten hours of biological science or ten hours of recreation and/or education, or consent of instructor. Requires field trip transportation fee not to exceed $25 per course registration.

FOR402 - Wildland Hydrology 402-3 Wildland Hydrology. Fundamentals of hydrology as related to forest and wildland water resources will be emphasized. Considerations will include the hydrologic cycle with emphasis on soil and groundwater regimes, evapotranspiration, surface and subsurface runoff, and the quantity and timing of water yield. Offered spring semester even years.

FOR403 - Agroforestry 403-3 Agroforestry. This course examines the deliberate integration of forestry and related land management practices within agricultural landscapes, primarily addressing wildlife habitat, water quality, crop yield, and animal production enhancement and sustainability. Emphasis is placed on systems successfully implemented in North America, particularly the Midwest, but international examples will also be discussed. Prerequisite: FOR 201 or coursework in forest ecology or consent of instructor.

FOR405 - Forest Wildlife 405-3 Forest Management for Wildlife. This course is designed to familiarize students with a scientific understanding of the theory and practice of forest management for wildlife. Students will gain knowledge of basic forestry management principles as they apply to wildlife; ecology and management of different types of forests for wildlife; and habitat requirements of forest birds, mammals, and herps and applicable forest management techniques.
FOR409 - International Forestry 409-3 International Forest Resources Decision-Making. Examines management planning decision-making for multiple-use forests around the world. Reviews concepts useful for analyzing flow-resource problems, emphasizing systems approaches, introduces use of modern quantitative and qualitative methods to evaluate resource use alternatives. Case studies from around the world. Prerequisite: FOR 411.

FOR411 - Forest Resources Economics 411-3 Forest Resources Economics. Application of micro and macro economics principles to forest timber and non-timber production: capital theory, benefit-cost analysis; and economics of conservation. Prerequisites: ABE 204 or ECON 240, FOR 310 and FOR 351, or consent of instructor.

FOR412 - Tree Improvement 412-2 Tree Improvement. Basic theories and techniques of obtaining genetically superior trees for forest regeneration. Restricted to senior standing.

FOR414 - Information Management 414-3 Information Management. The collection of physical, biological, and social variables in the field of forestry through sampling survey. The procedures of data manipulation and calculation and the presentation of graphs and tables.

FOR415 - Prescribed Burn Planning 415-2 Prescribed Burn Planning. FOR 415 provides a practical overview of planning, mapping, and execution of prescribed burns for ecological restoration efforts in woodland and prairie habitats or other wildland areas. Emphasis will be placed on writing burn prescriptions, laying out burn units, planning and executing burns, and long term monitoring efforts. This will be accomplished with weekly on-line reading assignments followed by Friday morning field trips to visit burn units, prepare control lines, record weather observations, and conduct fuel model assessments. Requires field trip transportation fees and supplemental course expenditures not to exceed $45 per course registration. Offered during spring semesters. Prerequisite: FOR 315-Fire in Wildland Management. Consent of instructor.

FOR416 - Forest Resource Management 416-4 Forest Resource Management. The application of business procedures and technical forestry principles to manage forest properties. Emphasis on integrated resource management for tangible and intangible benefits. Prerequisite: FOR 351, completion of Forest Resource summer camp series or consent of instructor. Requires field trip transportation fee and supplemental expenditures not to exceed $40 per course registration.

FOR417 - Forest Land-Use Planning 417-2 Forest Land-Use Planning. Principles of location theory as a basis for determining land use; supply of forest land; population pressure and demand; conservation principles; determination of forest land values; institutional factors influencing forest land-use; forest taxation; special taxes, and capital gains. Taught in alternate years. Prerequisite: FOR 411 or consent of instructor.

FOR418 - Marketing of Forest Products 418-2 Marketing of Forest Products. The role of marketing in the forest industries; review of economic principles; product policy, planning the product line, pricing, marketing channels, marketing programs, marketing organization, and marketing research as influences on the marketing of lumber, wood products, pulp, and paper. Taught in alternate years. Prerequisite: FOR 411 or consent of instructor.

FOR420 - Park Management 420-3 Park and Wildlands Management. The management of state and federal parks and recreation areas. A systems approach toward management and decision-making will be emphasized. Requires field trip transportation fees and supplemental expenditures not to exceed $50 per course registration.

FOR421 - Recreation Land-Use Planning 421-3 Recreation Land-Use Planning. Principles and methods for land-use planning of park and recreation environments with emphasis on human dimensions of natural resource research. Focus on planning process and types of information to gather and organize. Application in group field projects. Prerequisite: FOR 220, 420, or consent of instructor. Requires field trip transportation fee not to exceed $25 per course registration.

FOR422C - Forest Recreation Camp 422C-6 Park and Wildlands Management Camp. A study of park conditions, visitors, and management practices at selected county, state, and federal park systems in the U.S., including the federal wilderness preservation system. Prerequisite: FOR 220 or consent of instructor. Requires field trip transportation fees and supplemental expenditures not to exceed $750 per
course registration. Summer camp fees and costs are outlined in the Forestry major - Forest Recreation and Park Management Specialization.

**FOR423 - Environmental Interpretation** 423-3 Environmental Interpretation. (Same as AGRI 423 and REC 423) Principles and techniques of natural and cultural interpretation. Two hours lecture, three hours laboratory. Prerequisite: ten hours biological science or ten hours of recreation. Requires field trip transportation fee not to exceed $40 per course registration.

**FOR425 - Habitat Mgmt Wild Game** 425-3 Habitat Management for Wild Game. Introduction to the field of habitat management for wild game species in the Central Hardwood Forest Region of North America. Special emphasis will be placed on providing and manipulating the essential habitat requirements for trophy game including deer, turkey, and upland birds. A holistic approach to habitat management will be emphasized to identify how management of wild game habitat can satisfy other landowner goals and objectives. Restricted to junior level standing or above or permission of instructor.

**FOR428 - Urban Forestry** 428-2 Urban Forestry. An introduction to principles and practices useful in the management of trees and forests in populated settings. Emphasis is placed on the development of comprehensive management strategies consistent with the biological, physical, economic and social constraints of the urban environment. Restricted to junior or senior standing or permission of the instructor.

**FOR429 - Watershed Mgmt Field Lab** 429-2 Watershed Management Field Laboratory. A field intensive laboratory course focused on hydrological and biological methods used to manage watersheds and assess watershed health. Laboratory topics include stream gauging, soil water and ground water sampling, channel morphology, stream benthos measurements, and water quality analysis of stream and lake ecosystems. Requires field trip transportation fee not to exceed $30 per course registration.

**FOR430 - Wildland Watershed Mgmt** 430-3 Wildland Watershed Management. Emphasis is placed on the principles, technical problems, procedures, alternatives, and consequences encountered in managing wildland watersheds for the production of quality water in harmony with other uses.

**FOR431 - Regional Silviculture** 431-3 Regional Silviculture. This course examines prevailing management practices within each of the major forested regions of the United States. The course is primarily intended for students interested in wildlife habitat, wood production, or restoration. Emphasis is placed on understanding how underlying soils, silvics, climate, biotic agents, social forces, and past uses drive forestry differentially across the country. Prerequisite/Co-Requisite: FOR 310, or consent of instructor.

**FOR451 - Wildlife Habitat & Populations** 451-3 Wildlife Habitat and Populations. This course is designed to familiarize students with a scientific understanding of major topics in wildlife ecology and management, with a special focus on Forestry majors and natural resource inventory techniques. Students will gain knowledge of the history of the field of wildlife management, primary wildlife management principles and practices, ecological theory pertinent to wildlife populations and habitat, and current important issues/problems regarding wildlife management and natural resource inventory.

**FOR452 - Forest Soils** 452-3 Forest Soils. Forest Soils is designed to give the student a more comprehensive in-depth study of the patterns and processes of soil formation and their relation to forest productivity. Upon completion of the course, student will be familiar with soil/plant interactions, water relationships, and forest soil management for sustainable productivity and environmental quality. This course provides a sound basis for learning basic soils concepts specifically related to forest ecosystems which are beneficial to Forestry majors and those majoring/minoring in Soil Science or related natural science disciplines. Prerequisite: FOR 352 or consent of instructor. Requires field trip transportation fee not to exceed $25 per course registration.

**FOR452L - Forest Soils Laboratory** 452L-2 Forest Soils Laboratory. Companion laboratory for FOR 452. Emphasis is on methods to characterize and evaluate the chemical, physical, and biological properties of forest soils. Requires field trip transportation fee not to exceed $25 per course registration. Offered spring semester, even years.

**FOR453 - Environment Impact Assessment** 453-2 Environmental Impact Assessment in Forestry. Methods of assessing the environmental impact of land-use systems on forest resources and assessing
the impact of forest management systems on environmental quality are presented. Case studies culminating in the preparation of environmental impact statements are emphasized. Restricted to senior standing in a natural resource major. Requires field trip transportation fee not to exceed $25 per course registration.

**FOR454A - Forest Ecology: Boreal** 454A-2 Forest Ecology Field Studies-Boreal. A study of forest communities, soils, and site conditions. Course requires a field trip of about 10 days. Each trip is worth two semester credits; a maximum of 6 credits may be applied toward graduate credit. Restricted to senior standing in natural resources or biological sciences, courses in tree identification, forest ecology, and soils. Special approval needed from the instructor. Requires field trip transportation fee not to exceed $300 per course registration.

**FOR454B - For Ecology: Lake States** 454B-2 Forest Ecology Field Studies-Lake States. A study of forest communities, soils, and site conditions. Course requires a field trip of about 10 days. Each trip is worth two semester credits; a maximum of 6 credits may be applied toward graduate credit. Restricted to senior standing in natural resources or biological sciences, courses in tree identification, forest ecology, and soils. Special approval needed from the instructor. Requires field trip transportation fee not to exceed $300 per course registration.

**FOR454C - For Ecology: S Appalachians** 454C-2 to 8 Forest Ecology Field Studies-Southern Appalachians. A study of forest communities, soils, and site conditions. Course requires a field trip of about 10 days. Each trip is worth two semester credits; a maximum of 6 credits may be applied toward graduate credit. Restricted to senior standing in natural resources or biological sciences, courses in tree identification, forest ecology, and soils. Special approval needed from the instructor. Requires field trip transportation fee not to exceed $300 per course registration.

**FOR454D - For Ecology: Southern Pine** 454D-2 to 8 Forest Ecology Field Studies-Southern Pine. A study of forest communities, soils, and site conditions. Course requires a field trip of about 10 days. Each trip is worth two semester credits; a maximum of 6 credits may be applied toward graduate credit. Restricted to senior standing in natural resources or biological sciences, courses in tree identification, forest ecology, and soils. Special approval needed from the instructor. Requires field trip transportation fee not to exceed $300 per course registration.

**FOR460 - Forest Industries** 460-2 Forest Industries. Analysis of raw material requirements, the processes and the products of forest industries. The environmental impact of each forest industry will also be discussed.

**FOR470 - Wilderness Management** 470-2 Wilderness Management, Policy, and Ethics. Study of current management philosophy and practice in America's wilderness. Analysis of current wilderness policy and its historical evolution. Discussion of the evolution of the wilderness idea and the individuals that have influenced it. Weekend field trip required. Offered alternate (even) years. Restricted to senior standing. Required field trip transportation and materials fee not to exceed $80 per course registration.

**FOR480 - Natural Resource Conflict Mgt** 480-3 Natural Resource Conflict Management. Examines the role and methods of stakeholders in influencing natural resource policies. Emphasis on applied methods, techniques and strategies for conflict resolution, especially collaborative decision making and persuasion theory. Restricted to junior standing or consent of instructor.

**FOR486 - Invasive Plant Ecology & Mgmt** 486-3 Invasive Plant Ecology and Management. (Same as CSEM 486, PSAS 486) Ecology and evolution of invasive plant species, with a focus on land management, including characteristics and biology, introduction and spread, population dynamics, community impacts and ecological interactions, and invasive plant evolution and adaptation, as well as management techniques and considerations, including biological, chemical, and mechanical control. Prerequisite: BIOL 307 or consent of instructor. Restricted to junior standing.

**FOR494A - Practicum: For Env Assessment** 494A-1 to 6 Practicum-Forest Environmental Assessment. Supervised practicum in a professional setting. Emphasis on administration, supervision, teaching and program leadership in community, school, park, forest, institution, and public or private agencies. Students should enroll according to their curriculum specialization. Special approval needed from the instructor.
FOR494B - Practicum: Outdoor Rec Res Mgt 494B-1 to 6 Practicum-Outdoor Recreation Resource Management. Supervised practicum in a professional setting. Emphasis on administration, supervision, teaching and program leadership in community, school, park, forest, institution, and public or private agencies. Students should enroll according to their curriculum specialization. Special approval needed from the instructor.

FOR494C - Practicum:For Resources Mgmt 494C-1 to 6 Practicum-Forest Resources Management. Supervised practicum in a professional setting. Emphasis on administration, supervision, teaching and program leadership in community, school, park, forest, institution, and public or private agencies. Students should enroll according to their curriculum specialization. Special approval needed from the instructor.

FOR500 - Principles of Research 500-2 Principles of Research. Research philosophy, approaches to research; theory, hypotheses inference, and predicting; problem identification, project development and organization; methods of data collection, analysis and presentation; drawing conclusions and organizing results.

FOR501 - Graduate Seminar 501-1 Graduate Seminar. Presentation and critiques of current research project of faculty, graduate student and selected resource persons.

FOR502 - Adv Watershed Hydro Mgmt 502-3 Advanced Watershed Hydrology and Management. A study of current issues relating to hydrology and the management of water resources in forested and mixed land-use watersheds. Readings, discussions and projects will focus on research and management topics in water quality and quantity at regional, national and international levels. Prerequisite: FOR 402 or FOR 430 or equivalent or consent of instructor.

FOR504 - Tree Physiology 504-2 Tree Physiology Concepts and Applications. A study of physiological concepts and attributes of trees that underlies growth, ontogeny, and reproduction in the context of genotype, environment, and their interaction. Physiological concepts will be presented and discussed in a framework that relates their influence on forest stand management applications and activities such as regeneration, tree planting, silvicultural activities in native forests and plantations, and stand response to disturbance, and the development and maintenance of old growth. Prerequisite: PLB 200 or FOR 331 or a plant physiology course.

FOR506 - Advanced Landscape Ecology 506-3 Advanced Landscape Ecology. (Same as FOR 406) (FOR 506-3 will have an additional lab requirement) Review and evaluation of current research and concepts in landscape ecology management. Principles of landscape ecology in the context of forested systems will be presented and discussed. Emphasis on how spatial heterogeneity and human activities influence landscape patterns. Prerequisite: G.I.S. course or consent of instructor.

FOR508 - Historical Ecology 508-2 Historical Ecology. Introduction to the basic concepts and foundations of historical ecology, a discipline which joins traditional ecology with an investigation of human landscape transformation. Emphasis is placed on the interdisciplinary approach to historical ecology with readings in pollen analysis, dendrochronology, land-use history, archival and historical sources, and traditional vegetation surveys and reconstructions. Offered alternate years. Prerequisite: 300 level plant ecology course or equivalent or consent of instructor. Field trip cost approximately $35.

FOR510 - Adv Silviculture: Land Rehab 510-2 Advanced Silviculture: Landscape Rehabilitation. Current and emerging issues in silviculture and landscape-scale natural resource and agricultural sustainability are addressed at the individual manager/farmer or small community level. Case studies consider underlying physical and biological principles underlying successful rehabilitation practices across a wide range of social contexts and physical landscapes. Experimental methodologies and their application to management problems are critiqued. Water, grazing, food crop, wildlife/biodiversity conservation, and biofuels are emphasized with accommodations for students with related interests. This course is intended for students with undergraduate training or practical backgrounds in natural resource management or agriculture and who are seeking to integrate these disciplines toward developing actionable solutions. Special approved needed from the instructor.

FOR511 - Adv Forest Resource Econ 511-2 Advanced Forest Resources Economics. Application of microeconomic, macroeconomic and capital theory to forest resource problems; introductory econometric methods; long range supply and demand projections; international forest economics and policy problems
decision theory in forest resource management. Offered alternate years. Prerequisite: FOR 411 or equivalent or consent of instructor.

FOR512 - Tree Selection & Breeding 512-2 Tree Selection and Breeding. Quantitative methods of describing variation patterns of trees, testing genetic and environmental effects and interactions and evaluations of tree improvement program. Prerequisite: FOR 412 or consent of instructor.

FOR515 - Adv Urban Ecosystem Mgmt 515-3 Advanced Urban Ecosystem Management. An examination of concepts and processes associated with urban environments. Physical, chemical, and biological stresses associated with land use change and urban sprawl will be discussed and presented with a focus on water resources. Class discussion, readings, and projects will concentrate on current research in the urban environment. Restricted to graduate standing or consent of instructor.

FOR516 - Adv Forest Management 516-2 Advanced Forest Management. Case studies in forest land management, management planning, utilizing computer programming, CFI and TSI role in long range management planning. Offered alternate years-odd. Prerequisite: FOR 416, FOR 331 and summer camp or consent of instructor.

FOR520 - Adv Park Planning 520-2 Advanced Park Planning. Study of nature and functions of the recreation environmental planning process in theoretical and policy terms. Types of plans at local, regional and state levels. Evaluation of different types of planning approaches and their utility in particular situations. Offered alternate years. Prerequisite: FOR 421 or consent of instructor.

FOR523 - Advanced Resource Interpretatn 523-2 Advanced Resource Interpretation. Survey of theories and methods relating to resource interpretation planning and practice resulting from research in communication, education and marketing. Examines case studies and existing issues current to the profession of interpretation. Stresses relationship between theory and application. Prerequisite: FOR 423 or consent of instructor. Offered alternate years.

FOR528 - Urban Tree Management 528-3 Urban Tree Management. Establishment and maintenance of trees as beneficial components of urban environments. Tree functionality is addressed from biological, social, and economic opportunities and constraints commonly associated with cities and towns. Management of trees and wooded areas within ecological urban landscapes is addressed from the perspective of multiple constituencies. This course is primarily intended to be taken as part of the ecological urban landscapes graduate program and is offered Online Only. May be taken as a substitute for FOR 428. Students who have achieved a passing grade in FOR 428 are not eligible to take this course.

FOR530 - Forest Site Evaluation 530-2 Forest Site Evaluation. A discussion of the factors affecting site quality and their use in present site evaluation methods. Lectures will draw upon recently published scientific literature as well as forest research data collected and analyzed for southern Illinois forests. Laboratories will include sampling of forest sites and stands with subsequent analysis of data using graphic and statistical techniques and a computer to develop site evaluation models. Prerequisite: BIOL 307 or consent of instructor. Cost: $20.

FOR531 - Disturbance Ecology 531-2 Disturbance Ecology. Provide a historical overview and current perspective on major topics in forest ecology including natural disturbance, gap and patch dynamics, and relevant restoration ecology techniques. This is accomplished through a critical examination of the literature through reading, group discussions, and field trips. Two to three field trips will be organized during the semester to observe the effects of natural disturbance with an approximate total cost of $25 per student. Offered alternate years. Prerequisite: 300 level plant ecology course (or equivalent) or consent of instructor.

FOR551 - Wildlife Habitat 551-3 Wildlife-Habitat Relationships. Theory and practice of analyses pertaining to the study of wildlife-habitat relationships. Understanding of common data collection techniques in wildlife and forestry science. Use of computers, statistical programs, and other forms of
data analysis. Ability to work on practical and applied problems in wildlife conservation. Special approval needed from the instructor.

**FOR585 - Human Dimensions of NRM**  585-3 Human Dimensions of Natural Resource Management. Multidisciplinary study of influences and constraints on human-renewable natural resource interactions. Readings, discussion and problem solving to enhance appreciation of human dimensions as an integral component of natural resource management. Emphasis on diverse perspectives on forest, fisheries, and wildlife; conceptual frameworks and research methodologies. Offered alternate (odd) years.

**FOR588 - International Grad Studies**  588-1 to 6 International Graduate Studies. University residential graduate program abroad. Prior approval by the department is required both for the nature of program and the number of hours of credit.

**FOR590 - Readings:Forest Resources**  590-1 to 4 Readings in Forest Resources. Intensive consideration is given to current practices and problems in forestry. Special approval needed from the instructor.

**FOR591A - Dir Stdy Forest Res-Dendrology**  591A 1 to 4 Directed Studies in Forest Resources-Dendrology. Intensive study of disciplines fundamental to forestry. Study of the identification of native and exotic trees. Special approval needed from the instructor.

**FOR591B - Dir Stdy For Res-Autecology**  591B 1 to 4 Directed Studies in Forest Resources-Forest Autecology. Intensive study of disciplines fundamental to forestry. Study of the physiology of individual tree species in relation to their environment. Special approval needed from the instructor.

**FOR591C - Dir Stdy For Res-Comm Ecology**  591C 1 to 4 Directed Studies in Forest Resources-Forest Community Ecology. Intensive study of disciplines fundamental to forestry. Study analysis and integration of tree growth, forest structure and classification in relation to climate/edaphic factors as an ecological basis for forest management. Special approval needed from the instructor.

**FOR591D - Dir Stdy Forest Measurements**  591D 1 to 4 Directed Studies in Forest Resources-Forest Measurements. Intensive study of disciplines fundamental to forestry. Study of measurement, statistical and data processing concepts; volume, growth, yield of forest products and methods of sampling forest resources. Special approval needed from the instructor.

**FOR591E - Dir Stdy Forest Recreation**  591E 1 to 4 Directed Studies in Forest Resources-Forest Recreation. Intensive study of disciplines fundamental to forestry. Study of principles and methods for land-use planning of park and recreation environments. Special approval needed from the instructor.

**FOR591F - Dir Stdy For Res-Silviculture**  591F 1 to 4 Directed Studies in Forest Resources-Silviculture. Intensive study of disciplines fundamental to forestry. Study of concepts and techniques utilized in the silvicultural treatment of forests. Special approval needed from the instructor.

**FOR591G - Dir Stdy For Res-Wild Fire Mgt**  591G 1 to 4 Directed Studies in Forest Resources-Wildland Fire Management. Intensive study of disciplines fundamental to forestry. Study of all aspects of fire as a phenomenon in wildland management. Special approval needed from the instructor.

**FOR591H - Dir Stdy Forest Soils**  591H-1 to 4 Directed Studies in Forest Resources-Forest Soils. Intensive study of disciplines fundamental to forestry. An introduction to the characterization and fundamental concepts of forest soils and their relationships to forest communities and forest management practices. Emphasis is on the chemical, biological, and physical properties of forest soils as related to forests and forest management.

**FOR591I - Forest Mapping and GIS**  591I-3 Directed Studies in Forest Resources-Mapping and GIS. Integrate the use of mapping, orthophotographs, and field information to evaluate resources in the development of land management plans. Topics covered range from orthophoto interpretation, to GIS database management, and vegetation mapping. Course includes classroom presentation, field trips, and laboratory exercises. $50 Field trip fee.

**FOR593 - Individual Research**  593-1 to 4 Individual Research. Directed research in selected fields of forestry.
FOR599 - Thesis 599-1 to 6 Thesis. A Minimum of three and a maximum of six hours to be counted toward a Master's degree.

FOR601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Geography and Environmental Resources

The School of Earth Systems and Sustainability offers a program that leads to the Master of Science degree in Geography and Environmental Resources.

Geography and Environmental Resources is the study of how humans modify, impact, adapt to, monitor, and manage the natural environment they inhabit. Geography students study the dynamic relationship between nature and society in the field and the computer laboratory as well as in the traditional classroom. Students choose among three concentrations focusing on different aspects of geography and environmental resources: environmental sustainability, geographic information science (GIS), and climate and water resources.

Students take courses that give them a foundation in these dimensions of environmental resources through a core program, then develop a research focus. Students also develop the analytic and research skills appropriate to their research interest.

The graduate program stresses a problem-solving perspective, for which habits of critical analysis and dialogue are essential. Students take the initiative in designing and carrying out their programs with the guidance of an advisory committee and the departmental faculty. Geography maintains linkages with many other departments. Courses and faculty expertise in other departments complement those in geography, and students are encouraged to take advantage of this. Each student’s progress is assessed at regular intervals by the faculty, and the student is notified of the faculty’s assessment. The student is expected to show continued progress in carrying out the program of study, and in developing habits of scholarship and professionalism.
This program requires a $65 nonrefundable application fee that must be submitted with the application for Admissions to Graduate Study in Geography and Environmental Resources. Applicants must pay this fee by credit card when completing the online application. Questions regarding the program can be directed to geog@siu.edu.

Students interested in Environmental Sustainability or Climate and Water Resources concentrations delivered through distance education should contact the Chair or Graduate Program Director to discuss opportunities for transfer credits and flexibility in course requirements. Requirements for the Doctor of Philosophy Degree (See Environmental Resources and Policy Ph.D. program.)

Requirements for the Master of Science Degree

Advisement

Students newly admitted to the master’s degree program are advised by the graduate program director, with the assistance of departmental faculty. Students choose a permanent adviser at the end of the first semester in residence. The choice of permanent adviser and advisory committee is made in consultation with the graduate faculty, taking into consideration such matters as faculty expertise and faculty advisee loads.

Degree Requirements

To obtain the master’s degree, the student shall:

1. Complete all degree requirements specified by the Graduate School, and explained under degree requirements, master’s degree program in the Graduate Catalog. A total of 30 Graduate Credit Hours must be completed, with 50% of these hours at the 500 level or above.

2. Include as required courses the following: GEOG 500, Principles of Research, during the first fall semester in residence; GEOG 501, Seminar in Geography and Environmental Research, the following semester; GEOG 504, Spatial Analysis, or GEOG 512, Applied Geographic Statistics or equivalent, and one research seminar at the 500-level. GEOG 502, Geographic Information Systems is recommended depending on the student’s background.

3. In consultation with an adviser, develop a program of study, identifying courses to be taken, research skills to be developed, deficiencies to be rectified. This shall be approved by the faculty. The program of study shall include a core of substantive courses in geography and environmental resources, as explained in the policy statement on core curriculum for master’s degree students, available from the graduate program director. The program of study may include courses offered by other departments. The graduate faculty will meet to review and approve/disapprove the program of study of each master’s degree student enrolled in GEOG 500. An approved program of study will be filed with the graduate program director and department chair as part of GEOG 500.

4. Develop a thesis or research paper proposal. The thesis or research paper proposal must be approved by the student’s master’s advisory committee before the student registers for GEOG 599, Thesis, or GEOG 593A-C, Research in Geography and Environmental Resources. A total of six semester hours of GEOG 599 may be awarded for a thesis at the discretion of the advisory committee upon final examination on the thesis (see #5 below). A total of three semester hours may be awarded for a research paper.

5. Submit a thesis or research paper to the advisory committee at least two weeks before the defense. A student who writes a thesis will be examined by the committee at a meeting that may be attended by other faculty and students. A research paper may be evaluated and approved by the advisory committee with or without public presentation.

Certificate in GIS

The Graduate GIS Certificate enables students to focus on advanced geospatial techniques and analytical skills. This certificate meets the needs of the expanding job opportunities for Masters’ and Ph.D. students. Students must be admitted to an SIU graduate program or the SIU non-declared graduate
program and maintain a 3.0 GPA in the certification courses. This certificate ensures that the students understand advanced mapping technologies; know how to combine individual models and functions in ArcGIS to carry out a complicated spatial analysis task; master advanced digital image processing and analysis technologies; and obtain competence in designing, developing, and managing spatial databases. Further, they will demonstrate an understanding of GIS’s relationships with remote sensing, global positioning system (GPS), mathematics, statistics, and other sciences and obtain capacity in integrating multi-disciplinary methods for problem-solving. Finally, they will be competent in planning, developing, and implementing a complex GIS project. The program requires students to complete 18 credit hours of graduate level coursework from the following:

- GEOG 502(3) Geographic Information Systems
- GEOG 504(3) Spatial Analysis
- GEOG 506(3) Intro to Remote Sensing
- GEOG 508(3) Advanced Remote Sensing
- GEOG 520(3) Advanced GIS Studies
- GEOG 528(3) GIS Portfolio/GIS Capstone Project

Certificate in Sustainability

The Graduate Certificate in Sustainability enables students to expand their knowledge and understanding of the long-term sustainable use of the earth’s resources, including water, land use and food systems, climate change, urban sustainability, and “green” energy. This certificate meets the needs of the expanding job opportunities in environmental sustainability. Students must be admitted to an SIU graduate program or the SIU non-declared graduate program and maintain a 3.0 GPA in the certification courses. The program requires students to complete 18 credit hours of graduate level coursework, as follows:

- GEOG 521(3) Urban Sustainability
- GEOG 524(3) Sustainable Development
- GEOG 536(3) Natural Hazards
- GEOG 539(3) Global Climate Change
- GEOG 570(3) Contemporary Issues in Environmental Studies

Plus, one of the following:

- GEOG 502(3) Geographic Information Systems
- GEOG 512(3) Applied Geographic Statistics

Geography and Environmental Resources Courses

GEOG419 - Enterprise GIS Planning 419-3 Enterprise GIS Planning and Implementation. Students will gain both theoretical and practical understanding of the design process of enterprise GIS; be able to assess the scope of a system and address data and technology requirements of that system; become exposed to a host of the state-of-the-art tools and concepts in enterprise GIS; and learn skills for hardware, software and computer networking issues. Students are expected to have a basic working knowledge of ArcGIS and ArcIMS. Prerequisite: GEOG 401 or consent. Lab fee: $20.

GEOG430 - Environmental Systems Analysis 430-3 Environmental Systems Analysis. Exploration of the major environmental systems relevant to planning. Topics include concepts of systems and system behavior; basics of systems analysis and modeling environmental systems; environmental fluxes of energy and materials (e.g., hydrologic cycle, carbon cycle, energy budgets, erosion and sediment transport, role of biosphere in organizing fluxes); environmental variability.

GEOG452 - Environment & Population 452-3 Environment and Population. Introduction to population geography. Emphasis is on the relationships between population trends, resource use patterns and environmental impacts. Topics include methods and data used to describe and predict populations,
theories of population and policy issues that relate to the interaction between population, quality of life and environmental quality. Prerequisite: GEOG 320 or consent of instructor.

**GEOG454 - Environmental Movements** 454-3 Conservation and Environmental Movements. Emphasizes the ways in which humans view and interact with the environment. Conservation literature and the works of influential environmentalists are studied. Specific theories and environmental movements which help to explain society's current perception and use of the environment are studied.

**GEOG457 - American Environmental History** 457-3 American Environmental History. (Same as HIST 457) An exploration of the attitudes toward and the interaction with the natural resource environment of North America by human settlers. Coverage from the Neolithic Revolution to the present.

**GEOG458 - Applied GIS** 458-3 Applied GIS. This course provides practical GIS applications and draws from special topics in data visualization and environmental applications. The topic on data visualization includes an overview of techniques for visualizing large-scale datasets and is inspired by concepts from information visualization. Topics in environmental applications consist of risk assessment, digital elevation model processing, and watershed delineation and hydrological modeling. Students taking this course will distinctively learn: (1) how to visualize geographic data; (2) how to use different environmental risk assessment methods; (3) how to assess, detect, and characterize environmental risks and potential threats; and (4) how to create meaningful visualization scenes to support environmental decision-making. Active learning experiences will be achieved through the use of classroom lectures, lab exercises, group tasks, and presentations. Prerequisite: GEOG 401 or GEOG 310I or consent of instructor. Lab fee: $20.

**GEOG471 - Environmental Impact Analysis** 471-3 Environmental Impact Analysis. Techniques of assessing the impact of human activities on the environment, including weighting schemes, cost-benefit analysis, linear programming, ecological impact assessment. Emphasis is on placing NEPA and EIS writing in legal, economic, and environmental perspective.

**GEOG481 - Coop Work Exp Geography** 481-3 to 12 Cooperative Work Experience in Geography. Placement of advanced undergraduate or graduate student in private or public organization for one or more semesters in paid career-related position identified by student. Student gains professional experience, under faculty and on-site supervision. A report or professional poster on the work is required at the end of the semester. Three credit hours of either 480 or 481 may apply toward requirements for a Geography undergraduate major or graduate degree. Restricted to students majoring in Geography and Environmental Resources or minorin in Environmental Studies. Special approval needed from the department.

**GEOG500 - Principles of Research** 500-3 Principles of Research. This course teaches students the key components of graduate research: identify a research problem, determine research questions, structure a literature review, and develop research methods. Examples of geographic research are discussed and students work to identify independent research projects. The course culminates with students developing their own research proposals.

**GEOG501 - Sem Geog & Env Research** 501-3 Seminar in Geography and Environmental Research. Seminar approach to problems of completing background research design of project statements, identification of research methodology and completion of thesis/dissertation project statements. Restricted to graduate standing.

**GEOG502 - Geographic Information Systems** 502-3 Geographic Information Systems. This course will prepare students with comprehensive working knowledge and technical skills related to geographic information systems (GIS). It covers important topics in the context of GIScience, including coordinate systems and georeferencing, data structures (vectors and rasters), map principles and design, spatial analysis and modeling, GIS software, GPS, GIS data sources, and data uncertainty, which are critical to support the implementation of a GIS project. A series of GIS labs and a final class project will help equip students with necessary skills (e.g., mapping, spatial analysis, and geocoding) to fulfill the tasks of an entry-level GIS position. Recommended: GEOG 310I or CE 263. Lab fee: $20.

**GEOG504 - Spatial Analysis** 504-3 Spatial Analysis. This spatial analysis course is an introduction to statistical methods for geographers. The course provides an overview of the application of spatial statistical theories, concepts and approaches in the general contest of the emerging fields of geographic information system (GIS) and science (GISci). The main focus of this course is on how techniques for the
analysis of spatial data can effectively be applied in a GIS environment, with a particular emphasis on the study of spatial patterns, distribution, and associations. Prerequisite: GEOG 401 or GEOG 502, with grade of C or higher, or consent of instructor. Lab fee: $20.

**GEOG506 - Intro to Remote Sensing** 506-3 Introduction to Remote Sensing. An introduction to the fundamentals of remote sensing as applied to environmental management. This course will examine the theoretical and practical aspects associated with the use and analysis of aerial photography and satellite imagery. These include how remote sensing data are acquired, displayed, analyzed and how information on our environment can be extracted from such data. Students will be introduced to manual interpretation and digital image processing techniques of remotely sensed imagery. Students will have the opportunity to gain hands-on experience using image processing software. Lab fee: $30.

**GEOG508 - Advanced Remote Sensing** 508-3 Advanced Remote Sensing. Advanced techniques in the analysis of remotely sensed data. Emphasis is placed on digital image processing using state-of-the-art technology. Students will be expected to develop individual problem-driven projects that use the knowledge, tools, and techniques that are developed in this course. Prerequisite: GEOG 406 or GEOG 506, with grade of C or higher, or consent of instructor. Lab fee: $30.

**GEOG512 - Applied Statistics** 512-3 Applied Geographic Statistics. Introduction to basic statistical methods and skills related to the application of statistics to problems in geography. Lectures are supplemented with practical exercises to stress the applied nature of statistics in environmental decision making. Topics covered include descriptive statistics, time series, probability, point and interval estimation, hypothesis testing, correlation and regression, analysis of variance, and spatial statistics.

**GEOG516 - Cartographic Design** 516-3 Cartographic Design. Introduction to the concepts and principles of map design and automated cartographic techniques used to promote the understanding of a map as a powerful communication model. Examines techniques for the representation, manipulation, display, and presentation of spatial data using computer mapping techniques and graphics software. Team based projects will address a geographic problem and produce a professional final map. Prerequisites: GEOG 401 or GEOG 502, with grade of C or higher, or consent of instructor. Lab fee: $20.

**GEOG517 - GIS Programming** 517-3 GIS Programming and Customization. GIS programming trains students in customizing GIS applications and streamlining spatial analysis by assembling functions provided by the underlying GIS platforms. This course is an introduction to programming and scripting for intermediate GIS users who need to automate the geoprocessing of GIS datasets. This course focuses the most popular commercial platform, ArcGIS ModelBuilder and Python Scripting for ArcGIS. Through this course, students will understand the object-oriented programming principles, master the advanced skills of building a complex work flow for GIS analysis, and develop customized geoprocessing programs to edit, manipulate and analyze spatial data using ArcPy and Python. Prerequisite: GEOG 401 or GEOG 502, with grade of C or higher, or consent of instructor. Lab fee: $20.

**GEOG520 - Advanced GIS Studies** 520-3 Advanced GIS Studies. This course focuses on advanced conceptual and technical issues underlying GIS, including GIS data modeling, geodatabase model and structure, analytical methods and procedures associated with geospatial modeling, and the latest developments in geospatial sciences. Laboratory assignments include the analysis of digital geographic information of physical and social phenomena, emphasizing the use of standard GIS software to illustrate techniques of geodatabase, map digitization, spatial data exploration, spatial analysis/modeling, and GIS-based decision support. Students have the opportunities of designing, implementing and presenting a GIS project that takes full advantage of the advanced GIS theories and techniques to solve spatial problems chosen by students. Prerequisite: GEOG 401 or GEOG 502, with grade of C or higher, or consent of instructor. Lab Fee: $20.

**GEOG521 - Urban Sustainability** 521-3 Urban Sustainability. Sustainability of urban areas is viewed from a geographical perspective to focus on the complex relationships among environmental, sociocultural, economic, and political phenomena. Considerable time is devoted to identifying, analyzing and explaining selected urban problems and their sustainable solutions.

**GEOG522 - Environ & Energy Economics** 522-3 Environmental and Energy Economics. Economics of renewable and nonrenewable natural resources management and environmental policy. Topics covered include: static and dynamic efficiency, market efficiency and market failures (market power, externalities, and public goods), the economics of nonrenewable resource extraction, renewable resources
management (with a focus on forests and water), mechanism design choices and their implementation in the real world, and the role of the private and public sectors in research and development.

**GEOG524 - Sustainable Development** 524-3 Sustainable Development. Analysis of the human, economic, technological, environmental and political dimensions of sustainable development focusing on public and private sector institutions that manage renewable and non-renewable natural resources. Emphasis is sustainable development as applied to: (a) population, (b) energy and the atmosphere, and (c) agricultural impacts on soil and water resources.

**GEOG526 - US Environmental Policy** 526-3 US Environmental Policy. This course investigates the US system of environmental regulation: the background of social and environmental movements that influence US policy and the agencies involved in US environmental regulation. Emphasis is on US regulations and US participation in global environmental policies. Overall, the focus is on spatial variations in environmental regulations; or the geography of environmental quality.

**GEOG528 - GIS Portfolio/Capstone Project** 528-3 GIS Portfolio/GIS Capstone Project. Independent development and implementation of a major GIS project based on analysis of spatially referenced data sets to produce digital products and to solve real world problems. Data obtained from multiple sources, including downloads from online sources, field collected data, and published map data. A project portfolio and a poster approved by the instructor must be submitted for successful completion. Prerequisite: GEOG 401 or GEOG 502 and GEOG 406 or GEOG 506, with a grade of C or higher, or consent of instructor. Lab fee: $20.

**GEOG529 - Sem Geog Local/Organic Food** 529-3 Seminar: Geography of Local and Organic Food. A discussion of geographic topics in local and organic food and farming. This includes: spatial distributions, landscapes, policy influences, organic agricultural productivity, food safety, consumer concerns, organic farmers' decision making, organic marketing, local food systems, and organic certification. Restricted to graduate standing.

**GEOG531 - Climate Data and Analysis** 531-3 Climate Data and Analysis. This course focuses on identifying, locating, and applying appropriate climate data sets (e.g., station observations, atmospheric reanalyses, and climate model output), techniques for obtaining and processing these data sets, and methods commonly used for applied climate analysis. Student-lead, applied research projects provide students with the opportunity to utilize a variety of data sets and analytical tools introduced during the semester. The curriculum is organized around current practical problems from a variety of disciplines and identifying and analyzing appropriate data sets to address them. Students will become familiar with a range of computational packages, including Excel, SPSS, and Matlab. Students should have a basic understanding of climatology and statistics prior to taking this class.

**GEOG533 - Adv Field Methods Geography** 533-3 Advanced Field Methods in Geography. Quality geographic research depends on obtaining reliable data through an informed research design. Exploring both social and environmental processes, students will actively participate in developing and conducting investigations. Using the SIU Carbondale campus and surrounding region as a laboratory, lab exercises will include human geography, geomorphology, climatology and biogeography. Analytical techniques will include statistics and mapping. Lab fee: $20.

**GEOG534 - Water Resources Hydrology** 534-3 Water Resources Hydrology. This course covers the major components of the hydrologic cycle with emphasis on surface water and fluvial (stream) processes. Students will gain a detailed understanding of the major hydrologic processes and develop substantial experience in collecting, compiling, and analyzing hydrologic data for use in water resource analysis and management.

**GEOG536 - Natural Hazards** 536-3 Natural Hazards. This course introduces students to the geophysical and human dimension of natural hazards and focuses on five main areas: 1) characterization of natural hazards; 2) human dimensions of natural hazards; 3) natural hazard risk assessment; 4) natural hazard mitigation planning; and 5) the use of geospatial tools and models used in risk assessments and mitigation planning activities. Students will develop a fundamental understanding of both geophysical and human dimensions of natural hazards and an awareness of how natural hazards can develop into disasters.
**GEOG539 - Seminar Global Climate Change** 539-3 Seminar on Global Climate Change. This course examines the major environmental, social and policy issues relevant to global climate change, including natural and anthropogenic causes, environmental pollution, land use/land cover change, extinction and biodiversity issues, and potential climate change-related impacts on human health. Restricted to graduate standing.

**GEOG540 - Water Resources Management** 540-3 Water Resources Management. This interdisciplinary course is taught in a hybrid lecture/seminar style. Students review the physical science, biological science, and environmental policy which underpin water resource management. In addition, students explore human impacts on water resources and the role that water management plays in striking a sustainable balance between needs of humans and aquatic ecosystems.

**GEOG554 - Conservation and Environment** 554-3 Conservation and Environmental Movements. Emphasizes the ways in which humans view and interact with the environment. Conservation literature and the works of influential environmentalists are studied. Specific theories and environmental movements which help to explain society's current perception and use of the environment are studied.

**GEOG556 - Geographic Visualization** 556-3 Geographic Visualization. This course will provide an overview of geographic visualization with a concentration on theories, concepts and approaches of information visualization. Lectures and laboratory exercises will focus on the practical issues of exploratory data analysis (EDA), cartographic design process, web cartography, data quality and generalization, thematic mapping, map animation and multimedia applications. The course will provide students with a working knowledge of commercial software commonly used for graphic-based applications. Students are expected to utilize the hands-on experience gained from the lab exercises to further enhance their proficiency in graphic software. Two hours of seminar and classroom presentations, two hours of studio exercises each week. Lab fee: $30.

**GEOG570 - Contemp Issues Env Studies** 570-3 Contemporary Issues in Environmental Studies. Background, current, and future issues linking social responses to scientifically relevant environmental issues. Students learn about the multiple geographic, social and ecological factors that influence environmental citizenship and participation. Topics include conservation/preservation, green jobs, environmental non-governmental organizations, policy influences, and environmental education. Lectures, guest lectures, and seminar style discussions. Students develop and demonstrate skills in problem solving, communication, and professionalism.

**GEOG580 - Internship in Geography** 580-2 to 6 Internship in Geography. Supervised field work in private or public organizations dealing with environmental management or GIS. A report or professional poster on the work is required at the end of the semester. Special approval needed from the department.

**GEOG591 - Independent Studies** 591-2 to 4 Independent Studies in Geography. Restricted to graduate standing.

**GEOG593A - Research Environ Sustain** 593A-2 to 24 (2 to 6 per semester) Research in Environmental Sustainability. Restricted to graduate standing.

**GEOG593B - Research GIS** 593B-2 to 24 (2 to 6 per semester) Research in Geographic Information Science. Prerequisite: GEOG 500 and GEOG 501. Restricted to graduate standing.

**GEOG593C - Research Climate & Water** 593C-2 to 24 (2 to 6 per semester) Research in Climate & Water Resources. Restricted to graduate standing.

**GEOG596 - Field Course** 596-2 to 4 Field Course. Restricted to graduate standing.

**GEOG599 - Thesis** 599-2 to 6 Thesis. Restricted to graduate standing.

**GEOG601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their thesis or research paper. The student must have completed the minimum thesis or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF.
GEOG699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Geology

The School of Earth Systems and Sustainability offers programs leading to the Master of Science degree in Geology (thesis required), a Master of Arts degree in Earth Sciences (thesis not required), a Graduate Certificate in Earth Sciences, and a Doctor of Philosophy degree in Geosciences. Students may also pursue an interdisciplinary Ph.D. in Environmental Resource and Policy (see entry in this catalog).

All graduate programs require a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Geology. Applicants must pay this fee online by credit card.

Graduate Programs

The objectives of the graduate degree programs are to develop the student’s competence in the basic fields of earth science and to provide for specialization dependent on student and faculty interest. Facilities and staff are available for studies involving environmental geology, geomorphology, hydrogeology, paleontology, micropaleontology, paleoecology, coal petrology, coal geology, Pleistocene geology, environmental geochemistry, molecular organic geochemistry, solid earth geophysics, environmental geophysics, applied geophysics, geographic information systems, remote sensing, surface and subsurface mapping, structural geology, stratigraphy, sedimentation, sedimentary petrology, sedimentary environments, ore deposits, petrology, mineralogy, crystallography, energy resources, and petroleum geology. Many of the faculty are actively conducting research in which statistical and computer techniques are applied to problem solving in the earth sciences. Interdisciplinary research with other departments is encouraged.

SIU Geology faculty and graduate students conduct internationally-recognized research all over the globe. In North America, there are current and recent research efforts in locations ranging from Alaska to Florida, from Nova Scotia to the Sonoran Desert. Farther afield, SIU Geology researchers are active in Antarctica, Asia, South America, South Africa, and Europe. The Southern Illinois region itself offers a wide variety of geological conditions ideal for individual study and research.

Students must be admitted unconditionally to the Graduate School before they can be officially admitted to the graduate program in geology. Admission to the graduate program in geology is based on an
evaluation of the preparation, ability, and promise of the applicant. Prerequisites for admission include: 1) receipt of GRE test scores sent directly to the Department of Geology; 2) completion of the online application; and 3) receipt of at least three letters of recommendation from professors, academic advisers, former employers, or others familiar with the applicant’s academic performance, research, or other relevant work. The Department of Geology normally admits graduate students for entrance in the fall semester; however, applicants will be considered for spring admission.

A student admitted with course deficiencies may be required to complete or audit some undergraduate courses. First year teaching assistants are required to enroll in and complete GEOL 500. Other specific requirements will be determined by the student’s advisory committee. Students are evaluated on an individual basis. Their programs are determined by their career goals and the results of informal interviews with individual faculty members.

Assistantships

Teaching assistantships are awarded and supervised by the Department of Geology. Research assistantships are usually available only from research grants of individual faculty members and are supervised by the faculty member in receipt of the sponsoring grant. Research assistantship awards require prior approval of the assistantship committees of the department. Students in the Geology Master of Science program, the Geosciences Ph.D. Program, and the Environmental Resources and Policy Ph.D. program are eligible to apply for teaching and research assistantships from the Department of Geology.

As a matter of policy, the Department of Geology does not ordinarily provide any student working on a master’s degree financial support for more than two years, or four years for doctoral students. Requests for relaxation of this policy must be made in writing to the department chair.

Requirements for the Master of Science Degree (Thesis Option)

- A minimum of 50% of credit hours must be numbered 500 or above, and must be earned at SIU.
- Courses taken are determined by the student and an advisory committee. The student will not be allowed to apply more than eight hours of independent study or research courses toward the master’s degree (exclusive of thesis credits).
- A student majoring in geology may select a minor field. The minimum course work should then include 20 hours of geology and 10 hours in the minor field.
- A thesis subject must be approved by the chair of the advisory committee at least 20 weeks before the date of graduation.
- A final oral examination, primarily concerned with defense of the thesis is administered as the last step before graduation. The student may be asked any questions the committee feels are relevant.
- In order to pass the final oral examination, students must receive a favorable majority vote from their thesis committee meeting in formal session. Should the student fail the final oral examination, the student, upon concurrence of a majority of the committee, may arrange a time for a re-examination not less than 30 nor more than 120 days after the first examination. Students who fail the final orals on their second attempt will be ineligible for the master’s degree from the Department of Geology.
- Two copies of the approved thesis must be presented to the Graduate School at least three weeks prior to graduation, and a third copy must be presented to the Department of Geology.

Requirements for the Master of Arts Degree in Earth Sciences

The Master of Arts Degree in Earth Sciences is open to post baccalaureate students with degrees in earth science, geology, or related fields. Two fields of concentration are available: Geospatial Analysis and Environmental Geology. It is intended to expand the knowledge, skills, and specialized training in geological topics. The courses taken will be determined by interests of the individual student, but must be approved by the student’s three-person program advisory committee. At least three (3) credits of GEOL 591, Individual Research in Geology must be taken.

Recommended Courses for the Geospatial Analysis Concentration:

- GEOL 420 (3) Petroleum Geology
- GEOL 428 (3) Paleoecology and Environments of Deposition
- GEOL 435 (3) Solid-Earth Geophysics
- GEOL 466 (3) Tectonics
- GEOL 474 (3) Geomorphology
- GEOL 476 (3) Quaternary Geology
- GEOL 478 (3) Advanced Environmental Geology
- GEOL 481 (3) Sedimentary Basin Analysis
- GEOL 484 (3) Geologic Remote Sensing
- GEOL 526 (3) Advanced Topics in Applied Paleoecology
- GEOL 535 (3) Advanced Topics in Geophysics
- GEOL 536 (3) Earthquake Seismology
- GEOL 538A (3) Gravity
- GEOL 538B (3) Magnetism
- GEOL 576 (3) Coastal Geomorphology and Sedimentology
- GEOL 577 (3) Advanced Topics in Surficial Geology
- GEOL 578 (3) Fluvial Geomorphology
- GEOL 579 (3) Soil Geomorphology
- GEOL 591 (3) Individual Research in Geology
- GEOG 420 (3) Advanced Geographic Information Systems Studies

Recommended Courses for the Environmental Geology Concentration:

- GEOL 417 (3) Isotope Geochemistry
- GEOL 420 (3) Petroleum Geology
- GEOL 421 (3) Organic Geochemistry
- GEOL 428 (3) Paleoecology & Environments of Deposition
- GEOL 470 (3) Hydrogeology
- GEOL 471 (1) Hydrogeology Laboratory
- GEOL 474 (3) Geomorphology
- GEOL 476 (3) Quaternary Geology
- GEOL 478 (3) Advanced Environmental Geology
- GEOL 481 (3) Sedimentary Basin Analysis
- GEOL 484 (3) Geologic Remote Sensing
- GEOL 517 (3) Advanced Topics in Geochemistry
- GEOL 526 (3) Advanced Topics in Applied Paleoecology
- GEOL 527 (3) Micropaleontology
- GEOL 576 (3) Coastal Geomorphology and Sedimentology
- GEOL 577 (3) Advanced Topics in Surficial Geology
- GEOL 578 (3) Fluvial Geomorphology
- GEOL 579 (3) Soil Geomorphology
- GEOL 591 (3) Individual Research in Geology
- GEOG 420 (3) Advanced Geographic Information Systems Studies

Graduate Certificate

The Certificate in Earth Science with an optional concentration in Geospatial Analysis or Environmental Geology is open to post baccalaureate students with degrees in earth science, geology, or related fields. It is intended to expand the knowledge, skills, and specialized training in geological topics. The course work will include eighteen (18) graduate credit hours in Geology. While there are no specific courses required, the courses taken will be determined by the student and the departmental Coordinating Committee. For the concentrations in Geospatial Analysis and Environmental Geology, please refer to the recommended course lists above for the Non-Thesis Master’s program.

Students must maintain a B average in graduate courses and must follow the rules of the Certificate Policy established by the Graduate School. Maximum time allowed to complete the requirements for the certificate is five years.
Requirements for the Doctor of Philosophy Degree in Geosciences

The primary objective of the doctoral program in Geosciences is to develop a student capable of successfully conducting original research and the presentation of an acceptable dissertation describing the results, analysis, and implications of that research. To achieve this goal, the student must meet the criteria established by the University, the Graduate School, and the faculty participating in the doctoral program in Geosciences. The program of study will be flexible, to allow students to take courses offered by departments within the College of Science, and across campus. Each student is expected to take graduate level courses (excluding readings, independent studies, and internship) of at least 3 credits each from at least four different faculty members at SIU. The program requires a minimum of 48 semester hours, 24 of which may be 600-level dissertation credits.

Before the end of their second year in the program, students shall have:

1. established an advisory committee including their dissertation adviser and four additional members (any member of the graduate faculty in the University can serve on the committee, but at least one member must be from a department other than the Department of Geology);
2. demonstrated competence in at least one research tool (the student’s advisory committee will determine the requirements and research tool competence); and
3. presented themselves to the advisory committee for a comprehensive written and oral examination.

The format of the comprehensive examinations shall be established by the faculty participating in the doctoral program in Geosciences. Students who fail the comprehensive examinations and wish to remain in the program may, with faculty consent, retake the examinations. Students who fail the second written-oral examination will be dropped from the program. After successful completion of the comprehensive exams, the student must prepare and defend a dissertation proposal. If a student successfully defends the dissertation proposal, he or she is admitted to candidacy for the Ph.D. degree. The comprehensive examinations and dissertation proposal defense are part of the formal assessment process.

As a candidate for the degree of Doctor of Philosophy in Geosciences, the student is expected to make normal progress toward the successful completion and presentation of original research. Ordinarily, the doctoral student should expect to spend a minimum of two years beyond the Master’s degree, or its equivalent, in residence. Students will be required to present an acceptable dissertation describing original research performed with minimal supervision and deemed by the advisory committee to be of such quality as to merit publication in appropriate professional journals. A final oral examination will be held after completion of the doctoral dissertation. This examination will concentrate on the defense of the dissertation but is not restricted to the dissertation topic or area. The dissertation will be accepted provided the dissertation advisor and at least three of the other four members of the committee so agree.

Degree requirements, graduation, and time limits are subject to the general guidelines of the Graduate School.

Environmental Resources and Policy Doctoral Program

The central focus of the Environmental Resources and Policy Ph.D. is advanced interdisciplinary training and research on geological, physical, biological, and social processes responsible for natural resource and environmental problems facing contemporary society. Additionally, the ER&P Ph.D. focuses on assessing public policy alternatives to address those problems and create new opportunities.

Within the broad and flexible ER&P framework, a customized program is developed for each student, permitting him/her to conduct research in traditional and non-traditional earth science sub disciplines, under the direction of one or more Geology faculty members. The program is jointly guided by the Department of Geology, the Department of Geography and Environmental Resources, and the College of Agricultural Sciences (Departments of Agribusiness Economics; Forestry; and Plant, Soil, and Agricultural Systems), with support from the School of Law, the College of Engineering, other key faculty at SIU, and State of Illinois environmental agencies. Please see the Environmental Resources and Policy section of this catalog for detailed information and admission procedures.
Geology Courses

GEOL401 - Phys Earth for Teachers 401-3 Physical Nature of the Earth for Teachers. This is an online course that offers an overview of the materials that form the Earth and the dynamic processes that shape the Earth, including both surficial processes and plate tectonics. This course will cover content appropriate for science teachers preparing to teach Physical Geology as a Dual-Credit course in high schools. Topics include: components and processes that create rocks and the cycles that change one rock into another; how plate tectonics has shaped the Earth; surficial processes (weathering, landslides, movement of ice, water, and wind); hazardous processes (earthquakes, volcanoes, flooding); and resources such as water, soil, and mineral and energy sources. This course is designed to be taken in conjunction with GEOL 402, a 1-hr laboratory course. Only open to students in the Dual Credit Certificate for Teachers program.

GEOL402 - Phys Earth Lab Teachers 402-1 Physical Nature of the Earth Laboratory for Teachers. Through active learning activities, this course offers examination of the materials that form the Earth and the dynamic processes that shape the Earth, including surficial processes and plate tectonics. This course will cover content appropriate for science teachers preparing to teach labs associated with Physical Geology as a Dual-Credit course in high schools. This is offered as a hybrid distance education (online) class and includes both at-home and in-class laboratory assignments. For the in-class components, students will come to SIUC's campus for 2 half days (Saturdays) as indicated in the schedule. This course is designed to be taken in conjunction with GEOL 401, a 3-hr online course in which the students learn about earth materials and earth processes in greater depths. Only open to students in the Dual Credit Certificate for Teachers program.

GEOL403 - Hist Geol Teacher Enhancement 403-3 Historical Geology Teacher Enhancement. GEOL 403 is an online course designed to train science teachers to teach Historical Geology as a Dual Credit course in high schools. This course covers the basic principles involved in the study of geology and the history of the Earth preserved in the rock record. We begin with the large-scale components of Earth systems and geologic time, and then learn about the evolution of life recorded in the fossil record from the earliest life through the present. This course covers not just WHAT we know, but how we know it. This course is designed to be taken in conjunction with GEOL 404, a 1-hr laboratory course. Only open to students in the Dual Credit Certificate for Teachers program.

GEOL404 - Hist Geol Teacher Enhance Lab 404-1 Historical Geology Teacher Enhancement Lab. GEOL 404 is the laboratory section that accompanies the online Historical Geology Teacher Enhancement. This laboratory course offers hands-on activities to complement the online lectures and will provide teachers with a structure to teach labs in their own Dual Credit high school courses. This course covers the basic principles involved in the study of geology and the history of the Earth preserved in the rock record. We study sedimentary rocks, and learn how to read the clues to past environments and life preserved within samples. This course is done partially at home, but requires a six hour in house lab session. Only open to students in the Dual Credit Certificate for Teachers program.

GEOL405 - Science Writing 405-2 Science Writing and Scientific Communication. Course will teach "survival skills" in scientific reading, writing, communicating, and publishing for new graduate students. Topics will include database search, analysis of journal articles, abstracts, figures, and tables, Powerpoint presentations, proposals, posters, thesis writing, and preparation of journal submissions. Enrollment is open to graduate students in the sciences and is by permission of the instructor.

GEOL411 - Volcanology 411-3 Volcanology. Study of volcanoes, their distribution, forms, composition, eruptive products and styles of potential hazards. Relationship of magmatic characteristic, eruptive style, and depositional products to the geologic framework is examined. Prerequisite: GEOL 315.

GEOL412 - Advanced Petrology 412-3 Advanced Petrology. In-depth study of the rock forming processes. The relations of rock forming processes to petrographic analysis will be emphasized. Laboratories will deal with hand-specimen and thin-section analysis from selected rock suites with genetic modeling of the resulting data. Prerequisite: GEOL 310, 315.

GEOL413 - Quantitative Methods-Geology 413-3 Quantitative Methods of Geology. An introduction to quantitative methods in a geological and earth sciences context. Topics introduced include sampling plans for geologic studies, non-parametric test of geological data, comparisons of geological samples,
analysis of sequential geological data. Laboratories will deal with numerical examples from all areas of geology. Restricted to advanced standing. Special approval needed from the instructor.

GEOL415 - Optical Mineralogy 415-3 Optical Mineralogy. The optical properties of minerals and the use of the petrographic microscope for identification of crystals by the immersion method and by thin section. Lecture, laboratory. Prerequisite: GEOL 310, PHYS 203B or 205B.

GEOL416 - Geochem Natural Waters 416-3 The Geochemistry of Natural Waters. The purpose of this class is to provide students with a strong theoretical background in aqueous geochemistry, environmental geochemistry, and groundwater geochemistry for application in a wide range of research topics. The approach combines conceptual knowledge with quantitative skills in a cyclic fashion to build independent understanding and chemical intuition. Prerequisites: GEOL 310, CHEM 200, 201, 210, 211 or consent of instructor. Lab fee: $15.

GEOL417 - Isotope Geochemistry 417-3 Isotope Geochemistry. Isotope fractionation in natural systems containing D/H, carbon, oxygen, nitrogen, and sulfur. Application of stable isotope studies to environmental processes, paleoclimatology, and geothermometry. Stable and radioactive isotopes as tracers in hydrologic processes, ore deposits, sedimentology, and in crust-mantle differentiation processes. Prerequisite: GEOL 310, CHEM 200, 201, 210, 211, or equivalent.

GEOL418 - Low Temp Geochemistry 418-3 Low Temperature Geochemistry. The application of chemical principles to geologic processes that occur on and near the earth's surface. Lecture, laboratory. Prerequisite: GEOL 310, CHEM 200, 201, 210, 211 or equivalent.

GEOL419 - Ore Deposits 419-3 Ore Deposits. Overview of the occurrence, geology and origin of metalliferous mineral deposits. Geologic principles and research techniques important to the understanding of mineral deposits. Introduction to exploration and mining methods. Lectures, laboratories and field trips required. Prerequisite: GEOL 302, 315 or consent of instructor. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Field trip fee not to exceed $60.

GEOL420 - Petroleum Geology 420-3 Petroleum Geology. The geological occurrences of petroleum including origin, migration and accumulation; a survey of exploration methods, and production problems and techniques. Laboratory study applies geological knowledge to the search for and production of petroleum and natural gas. Prerequisite: GEOL 221, 224.

GEOL421 - Organic Geochemistry 421-3 Organic Geochemistry. The nature, origin and fate of natural and artificial organic materials in rocks and sediments. Topics include characterization of fossil fuels using biological marker compounds, petroleum source rock evaluation, and organic pollutants in the environment. Prerequisite: GEOL 325 or consent of instructor.

GEOL423 - Geomicrobiology 423-3 Geomicrobiology. (Same as MICR 423 and MBMB 423) The course will focus on the role that microorganisms play in fundamental geological processes. Topics will include an outline of the present understanding of microbial involvement of weathering of rocks, formation and transformation of soils and sediments, and genesis and degradation of minerals. Elemental cycles will also be covered with emphasis on the interrelationships between the various geochemical cycles and the microbial tropic groups involved. Prerequisite: Microbiology 301 and Chemistry 210 and 211. Recommended: GEOL 220, 221 or 222.

GEOL425 - Invertebrate Paleo & Paleoecol 425-3 Invertebrate Paleontology and Paleoecology. (Same as ZOOL 425) Concepts of paleontology and paleoecology. Emphasis on functional morphology, lifestyles and habitats of fossil invertebrates and algae. The nature and evolution of marine and coastal paleocommunities. The effects of extinction events on paleocommunities and biodiversity. Laboratory. Field trips required. Prerequisite: GEOL 325 or a biology course. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Field trip fee not to exceed $199.

GEOL430 - Planetary Geology 430-3 Planetary Geology. Study of the solar system and planet formation, focusing on formation, differentiation and secondary processes. Geologic histories and geological processes of other planets are examined and compared with our understanding of the Earth. Prerequisite: GEOL 310.

GEOL431 - Catastrophes & Consequences 431-3 Catastrophes and Consequences. Much has been written in recent years about the impact of human civilization on the environment. There has been much less discussion of the impact of the environment on human civilization, but the fact is that gradual or rapid changes in the environment can profoundly affect human populations-in both direct and indirect ways. This is an interdisciplinary course that reviews both the short term/short range and long term/long range effects of natural perturbations of the environment on the development of civilization and the course of history. We will review historical case studies of the consequences of various kinds of natural disasters which resulted in major disruptions to the environment from local and regional phenomena to those that affected the entire planet. Examples include major volcanic eruptions, earthquakes and climate change.

GEOL435 - Solid Earth Geophysics 435-3 Solid Earth Geophysics. Earth's size, shape, mass, age, composition, and internal structure are reviewed in detail as understood from its volcanism, gravity, magnetic fields, seismicity, and motion of continents and ocean basins; plate tectonics. Prerequisite: MATH 150 or MATH 151 with a C or better.

GEOL436 - Applied Geophysics 436-3 Applied Geophysics. Theory and practice of geophysics applied to exploration for natural resources including oil, minerals, coal, groundwater, and for archaeology, environmental, and meteorite impact sites and earthquake zones. Methods include seismic reflection, refraction, and surface waves also gravity, magnetic, and electrical. Up to 3 one-day field trips may be conducted on weekends. Recommend: GEOL 220 or 222, PHYS 203A/B or PHYS 253A/B. Prerequisite: MATH 150. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Field trip fee not to exceed $80.

GEOL437 - Field Course in Geophysics 437-3 Field Course in Geophysics. Use of geophysical equipment for collection, analysis and interpretation of seismic, gravity, magnetic, electrical, and other types of geophysical data. Field trips required. Prerequisite: GEOL 436 or consent. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Field trip fee not to exceed $199.

GEOL440 - Adv Topics Geological Sciences 440-1 to 9 Advanced Topics in the Geological Sciences. Individual study or research or advanced studies in various topics. Restricted to advanced standing. Special approval needed from the instructor.

GEOL445 - Museum Studies in Geology 445-3 Museum Studies in Geology. History, nature and purpose of geology in museums, relationships of geology to other museum disciplines, application of geologic methods to museum functions, preparation and preservation of specimens; nature, acquisition and utilization of geologic collections in museums; role of research in museums.

GEOL450 - Intro to Field Geology 450-3 Introduction to Field Geology. Introduction to field techniques, principles of geologic mapping and map interpretation. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Prerequisite: GEOL 310 with a grade of C or better.

GEOL451 - Field Experience in Geology 451-1 to 12 Field Experience in Geology. Preparation for and participation in academically rigorous field trips guided by faculty members. Trips will be to areas of geological interest and will occur during official breaks within or between semesters. Expense will vary in proportion to the distance traveled and duration of trip and will be determined before each trip. A student may only take a specific trip once for credit. Special approval needed from the instructor.

GEOL466 - Tectonics 466-3 Tectonics. Fundamentals of geodynamics applied to plate tectonics: mantle composition and rheology, deformation of the lithosphere, structural characteristics of plate margins, stability of triple junctions, diachronous tectonics, and orogenesis will be examined in detail. One 3-day field trip is required. Expense will vary in proportion to distance traveled and locations visited and will be
determined before each semester. Field trip fee not to exceed $150. Prerequisite: GEOL 302, MATH 150, or consent.

GEOL470 - Hydrogeology 470-3 Hydrogeology. Study of the distribution, origin, and movement of groundwater, and the properties of geologic materials that control groundwater flow and contaminant transport. Includes topics on the sustainable development of groundwater resources. Prerequisite: GEOL 220 or 222 with a C or better; or consent of instructor.

GEOL471 - Hydrogeology Laboratory 471-1 Hydrogeology Laboratory. Problem sets, laboratory experiments, and field exercises in hydrogeology. Includes projects on the sustainable development of groundwater resources. Field trips required. Prerequisite: GEOL 220 or 222 with a C or better; or consent of instructor. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Field trip fee not to exceed $150.

GEOL474 - Geomorphology 474-3 Geomorphology. Study of erosional and depositional processes operating at the earth's surface and landforms resulting from these processes. Relationship of processes and landforms to the geologic framework is examined. Laboratory. Field trips required. Prerequisite: GEOL 220 or 222; 223. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Field trip fee not to exceed $60.

GEOL476 - Quaternary Geology 476-3 Quaternary Geology. Methods used to identify, map, date and correlate Quaternary deposits and interpret Quaternary history. Covers glacial, fluvial, coastal, lacustrine and eolian chronologies, oxygen-isotope records from ocean sediments and continental ice cores, volcanic activity, and Quaternary climate change. Field trips required. Prerequisite: GEOL 220 or 222; 221, 223, 224; or consent of instructor; GEOL 474 recommended.

GEOL480 - Geology of Coal 480-3 Geology of Coal. Stratigraphy, sedimentation and structure of coal deposits; modern analogs; origin of splits and partings in coal seams; coal quality and rank; coal exploration and mining; methods of resource evaluation. Prerequisite: GEOL 220 or 222; 221, 223, 224; or consent of instructor.

GEOL481 - Sedimentary Basin Analysis 481-3 Sedimentary Basin Analysis. The use of stratigraphy, structure, sedimentology and geophysics to determine the paleogeographic evolution of sedimentary basins. Topics include the study of the relationships between host strata and both primary and post-depositional non-renewable resources, plate tectonics and basin evolution and subsurface geologic methods. Special approval needed from the instructor. Lab fee: $10.

GEOL482 - Organic Petrology 482-3 Organic Petrology. Petrology and geochemistry of coals and dispersed organics; emphasis on applications to the coal and oil industries; origin of coal and source rock constituents; geochemical and petrographic changes with increased maturation. Prerequisite: GEOL 220 or 222; 221, 223, and 224; or consent of instructor. Lab fee: $50.

GEOL483 - Forensic Geology 483-3 Forensic Geology. An introduction to the use of geological materials and techniques in criminal investigation. Details from actual criminal cases will be used as examples in all the topics covered which include rock and mineral types, geological and topographic maps, fossils, sand, soils, spores and pollen, geological building materials, art fraud and gemstones. Techniques covered will include optical microscopy, scanning electron microscopy and x-ray diffraction. Lab fee: $10.

GEOL484 - Geologic Remote Sensing 484-3 Geologic Remote Sensing. Applications of remote sensing using aerial photographs, multi-spectral imagery, hyperspectral imagery, thermal infrared imagery, and radar imagery, in structural geology, stratigraphy, geomorphology, oil and mineral exploration, geologic hazard analysis and planetary exploration. Prerequisite: GEOL 220 or consent of the instructor. Lab fee: $25.

GEOL490 - Internship 490-1 to 3 Internship. Credit for supervised practical experience with an external geological agency or company; prior approval of the sponsoring agency and the department is required. Restricted to advanced standing.
GEOL500 - Teaching:Geol Grad Student  500-1 to 2  Teaching for Geology Graduate Students. To help teaching assistants develop skills in conducting laboratory work and leading discussions. One hour required for all teaching assistants in geology. Graded S/U only.

GEOL510 - Advanced Sedimentology  510-2 Advanced Sedimentology. Basic principles of field observation, field and laboratory sampling, and data analysis of clastic sedimentary rocks; introduction to laboratory techniques; introduction to statistical, physical and empirical models in sedimentary geology. Field trips required. Prerequisite: GEOL 325 or GEOL 474.

GEOL513 - Quantitative Methods Earth Sci  513-3 Quantitative Methods in the Earth Sciences. An introduction to quantitative methods in an Earth Sciences context. Topics include sampling plans for geologic studies, non-parametric tests of geological data, comparisons of geological samples, analysis of sequential geological data. Course will deal with numerical examples from different areas of geology. Special approval needed from the instructor.

GEOL515 - Instrumental Analysis  515-3 Instrumental Analysis in Geology. An introduction to modern methods of instrumental inorganic geochemical analysis that are particularly important in the geology sciences. This includes both operational theory and practical application of methods for the analysis of minerals, rocks and aqueous solutions. Lecture, laboratory. Prerequisite: GEOL 310, CHEM 210 or equivalent; GEOL 418 recommended.

GEOL517 - Adv Topics: Geochemistry  517-2 to 9 (2 to 6 per semester) Advanced Topics in Geochemistry. Specialized topics in geochemistry. Topics covered might include thermodynamic modeling of mineral-solution equilibria, the role of kinetics in mineral-solution reactions, experimental hydrothermal geochemistry or other topics to be announced by the department. Maximum credit nine semester hours. Prerequisite: GEOL 418 or consent of instructor.

GEOL518 - Clay Mineralogy  518-3 Clay Mineralogy. Study of the structure, chemistry, origin, and geologic importance of clay minerals. Industrial and other applications of clays. Lecture, laboratory. Prerequisite: GEOL 310 or consent.

GEOL520 - Adv Topic:Igm/Metam Petrology  520-2 to 9 (2 to 6 per semester) Advanced Topics in Igneous and Metamorphic Petrology. Petrologic principles and their relationships and other selected topics to be announced by the department. Special approval needed from the instructor.

GEOL522 - Sed Petro:Siliciclastics  522-3 Sedimentary Petrology-Siliciclastics. The petrography and petrology of siliciclastic rocks, emphasizing sandstone. Microscopic studies of composition and components of detrital clastic rocks, their origin, provenance, characteristics, diagenesis, cementation and lithification. Special approval needed from the instructor.

GEOL523 - Sed Petro: Carbonates  523-3 Sedimentary Petrology-Carbonates. The origin, classification, diagenesis, and geochemistry of carbonate rocks, with emphasis on petrographic analysis. Study of recent carbonate depositional environments. Laboratory required. Prerequisite: GEOL 325; GEOL 418 recommended.

GEOL524 - Adv Topics in Sed Geology  524-2 to 9 (2 to 6 per semester) Advanced Topics in Sedimentary Geology. Topics may include clastic depositional environments, carbonate depositional environments; diagenesis of sedimentary rocks, and other topics to be announced by the department. Up to 3 one- or two-day field trips may be required on the weekends. Special approval needed from the instructor.

GEOL525 - Adv Topics:Invert Paleon  525-2 to 6 (2 to 3 per semester) Advanced Topics in Invertebrate Paleontology. Lectures, readings, field and laboratory studies, including techniques and quantitative methods of study. Preparation for research in paleontology. Topics may include corals, bryozoans, brachiopods, mollusks, echinoderms, biostratigraphy, tempo and mode of invertebrate evolution and other topics to be announced by the department. Maximum credit six semester hours. Prerequisite: GEOL 425 or consent of instructor.

GEOL526 - Adv Topics:Appld Paleoecology  526-3 Advanced Topics in Applied Paleoecology. Lectures, field, and laboratory studies, including techniques and quantitative methods. Preparation for
research in paleoecology. Emphasis on using fossil marine invertebrates and trace fossils to interpret ancient sedimentary environments. Prerequisite: GEOL 428 or consent.

**GEOL535 - Adv Topics: Geophysics** 535-1 to 9 (1 to 6 per semester) Advanced Topics in Geophysics. Specialized topics in geophysics. Examples include but are not limited to seismic stratigraphy, mid-continent seismicity, isotacy, data processing techniques. The topic to be covered is announced by the department. Maximum credit nine semester hours. Up to 3 one- or two-day field trips may be required on the weekends. Prerequisite: GEOL 435 or GEOL 436 or consent of instructor. Field trip fee: $85.

**GEOL536 - Earthquake Seismology** 536-3 Earthquake Seismology. Observational seismology. Topics include earthquake source mechanisms; propagation, reflection and refraction of elastic waves; ray theory; dispersion of surface waves; the effect of earth structure on the seismogram; and the seismograph. Research projects will be conducted using data from the SIU Geophysical Observatory. Up to 3 one- or two-day field trips may be required on the weekends. Prerequisite: GEOL 435 or GEOL 436, MATH 150 or consent of instructor.

**GEOL537 - Applied Seismology** 537-3 Applied Seismology. Study of the seismic reflection techniques, including theory and methods of collection and analysis of seismic reflection data, the seismic method, waveform analysis, and digital filtering with computer applications and seismic instrument characteristics. Up to 3 one- or two-day field trips may be required on weekends. Prerequisite: MATH 150 or consent.

**GEOL550 - Adv Economic Geology** 550-4 Advanced Economic Geology. In-depth examination of the geologic characteristics, classification and origin of metallic mineral deposits. Aspects of mineral exploration and mining techniques are also discussed. Laboratory exercises emphasize hand specimen and petrographic study of ore and host rock suites. Up to 3 one- or two-day field trips may be required on weekends.

**GEOL555 - Adv Topics in Econ Geol** 555-1 to 6 (1 to 3 per semester) Advanced Topics in Economic Geology. Advanced study in a specific area of economic geology to be determined by course participants. Course content may focus on a specific type of mineral deposit or such topical areas as field characteristics, mineral exploration techniques, stable isotope geochemistry, fluid inclusion studies and hydrothermal processes. Maximum six credit hours. Field trips may be required on up to 3 weekends and possibly over Spring vacation. Prerequisite: GEOL 550.

**GEOL566 - Topics in Structural Geology** 566-3 Advanced Topics in Structural Geology. Lectures, readings, and discussion of advanced aspects of rock deformation: dislocation theory and its applications to flow processes of rocks; experimental rock deformation; incremental and finite strain theory and analysis; and recent developments in structural geology. Special approval needed from the instructor.

**GEOL570 - Adv Hydrogeology** 570-3 Advanced Hydrogeology. A combination of lectures, seminars, and independent studies of advanced topics in hydrogeology, particularly geochemistry and the response of aquifers to stresses such as tides, recharge and saline intrusion. Prerequisite: GEOL 470.

**GEOL577 - Adv Topics: Surfical Geology** 577-2 to 9 (2 to 6 per semester) Advanced Topics in Surficial Geology. Studies of processes, landforms, and deposits in the surface or near surface geologic setting. Selected topics to be announced by the department. Maximum credit nine semester hours. Special approval needed from the instructor.

**GEOL578 - Fluvial Geomorphology** 578-3 Fluvial Geomorphology. Detailed study of fluvial processes and landforms within the context of major concepts in geology and geomorphology. Topics include drainage basins, hydro-climatological and surface water hydrology, channel processes, fluvial depositional systems, paleohydrology and changes in fluvial systems through time. Field trips required. Prerequisite: GEOL 474. Special approval needed from the instructor. Field trip fee: $35.
GEOL582 - Adv Coal Petrology 582-1 to 6 (1 to 3 per semester) Advanced Coal Petrology. Microscopy, source materials, coalification, constitution, and classification of peats, lignites, bituminous coal, anthracite; applications to industrial problems. Prerequisite: GEOL 482. Lab fee: $50.

GEOL584 - Adv Geol Remote Sensing 584-3 Advanced Geologic Remote Sensing. An advanced course covering the nature of electromagnetic radiation, the electromagnetic spectrum and the interaction between electromagnetic radiation and matter. Remote sensing systems will be presented and the fundamentals of digital image processing will be introduced from a theoretical and practical viewpoint. A series of case studies with applications ranging from mineral exploration to volcano monitoring will be covered. Field Trip fee: $40.

GEOL585 - Earth/Space Sci for Teachers 585-3 Earth and Space Science for Teachers. Class designed to help teachers gain an understanding of some of the earth science concepts they need to teach today's standards-based curricula. Develops an understanding of earth materials, how the earth works, earth resources, the causes of natural disasters, and the exploration of the bodies of our solar system. Prerequisites: A general physical science course or equivalent. Special approval needed from the department.

GEOL588 - Global Energy Resources 588-3 Global Energy Resources. Ready access to energy is essential to sustaining modern societies. This course will discuss the nature of the resources that have been, are, or potentially could be used to provide energy in the US and around the globe, including fossil fuels, nuclear energy resources, bioenergy resources and emerging energy resources such as geothermal, wind, tidal, and solar energy.

GEOL591 - Individual Research 591-1 to 6 Individual Research in Geology. Investigations in geology other than for theses or dissertations.

GEOL599 - Thesis 599-1 to 6 Thesis (1 to 8 hours per semester). Research for and writing of the master's thesis. Maximum of six hours to be counted toward a Master's degree.

GEOL600 - Dissertation 600-1 to 30 (1 to 16 per semester) Dissertation. Research for and writing of the doctoral dissertation. Special approval needed from the instructor.

GEOL601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

GEOL699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Geology Faculty

Conder, James, Professor, Ph.D., Brown University, 2001; 2008. Geodynamics, seismology.

Esling, Steven P., Associate Professor and Chair, Ph.D., University of Iowa, 1984; 1982. Hydrogeology, Quaternary stratigraphy, geomathematics.

Fifarek, Richard H., Associate Professor, Emeritus, Ph.D., Oregon State University, 1985; 1985.

Ishman, Scott E., Professor, Ph.D., The Ohio State University, 1990; 1999. Paleoecology, Cenozoic paleobiology, foraminifera.

Lefticariu, Liliana, Associate Professor, Ph.D., Northern Illinois University, 2004, 2007. Isotope geochemistry, environmental geochemistry.
Marzolf, John E., Associate Professor, Emeritus, Ph.D., The University of California, Los Angeles, 1970; 1982.

Potter-McIntyre, Sally, Associate Professor, Ph.D., University of Utah, 2013; 2013. Sedimentology and stratigraphy.

Rimmer, Sue, Professor, Emerita, Ph.D., Pennsylvania State University, 1985; 2009. Coal geology and petrology, source-rock geochemistry.

Sexton, John L., Professor, Ph.D., Indiana University, 1974; 1985. Geophysics, seismic reflection and refraction.

Gerontology

Certificate in Gerontology

The Graduate Certificate in Gerontology is open to post-bachelor level students who are interested in the area of gerontology. It is designed to provide knowledge, skills, and specialized training in programs and services for older persons. The certificate includes core courses on aging in the following areas: social work, rehabilitation, health, exercise and education. Courses within the certification program will include, but not be limited to: policy and program issues, psychosocial issues and health and fitness issues. Students must complete 15 semester hours of study including a minimum of three hours of capstone project, to earn the certificate.

For more information contact:
School of Human Sciences
Southern Illinois University
Mail Code 4310
Carbondale, IL  62901
Telephone: 618-453-3133
Email: siucgerontology@siu.edu

Gerontology Courses

GRON402 - Death Education 402-3 Death Education. (Same as PH 402) Designed to prepare educators to conduct learning experiences about death and dying in a variety of school, college, medical care, and community settings. Stress will be placed on developing brief, functional curricula and usable, imaginative, teaching-learning materials and on evaluating resource materials for use in educating at various levels of maturity.

GRON405 - Intro: Aging & Rehab 405-3 Introduction to Aging and Rehabilitation. (Same as REHB 405) Introduction to the field of aging. Including social, political, economic and legal issues pertinent to an aging society and rehabilitation.

GRON428 - Phys Act/Exercise-Older Adults 428-3 Physical Activity and Exercise for Older Adults. (Same as KIN 428) This course is designed to introduce the student to physical changes of the older person with reference to activity and exercise and to teach the student about rational activity and exercise programs for the older person with consideration of the care and prevention of typical injuries that may occur with such programs.

GRON440 - Health Issues in Aging 440-3 Health Issues in Aging. (Same as PH 440) Course content includes demographic trends; physiological changes associated with aging; health care and consumer challenges; cultural differences; psychological effects of aging; housing; long-term care; retirement; care giving; and formal, informal, and community-based support systems.
GRON440C - Therapeutic Recreation 440C-3 Therapeutic Recreation for Older Adults-Therapeutic Recreation for the Aged. Students will examine problems and characteristics of individuals with various disabilities. Emphasis is upon the role of therapeutic recreation with these specific populations in institutional and community settings. Prerequisites: REC 300, REC 301, REC 302, REC 304 or consent of instructor.

GRON446 - Psych Aspects of Aging 446-3 Psychosocial Aspects of Aging. (Same as REHB 446) Selected theories of psychosocial aspects of aging will be presented and the psychological and sociological processes of aging with the ensuing changes will be related to these conceptual frameworks. Included for discussion and related to field experience will be such concerns as stress reactions to retirement, physical disabilities, impact of reduced economic resources, and other personal-social changes in aging. Topics will address the knowledge base needed by students concerned with rehabilitation of aging clients in institutional, community and home settings. Therapeutic techniques to ameliorate these stresses will be an integral part of the course.

GRON500 - Seminar in Gerontology 500-1 to 3 Seminar in Gerontology. This course is designed to provide a multidisciplinary conceptual framework for the study of Gerontology and to assist Gerontology students to develop the skills and knowledge needed to understand major issues in theory, research, and practice. This course is designed to familiarize the student with the process of critical reading of gerontological research from multiple disciplines to solve practical problems.

GRON505 - Behavioral Gerontology 505-3 Behavioral Gerontology. This course examines the application of behavioral principles to problems associated with aging such as deficits in the activities of daily living and social skills, wandering, aggression, incontinence, depression and anxiety, and dementia among others. Environmental redesign and alternative performance strategies will also be addressed. Behavioral training and supervision of staff members who work with older individuals is also presented. Special approval needed from the instructor.

GRON517 - Aging, Memory & Cognition 517-3 Aging, Memory and Cognition. (Same as PSYC 517) A detailed survey of current methodology, research and theory dealing with cognitive and memory processes in later adulthood. Topics covered include attention, memory, reasoning and problem solving, language processing and inference and age-associated pathologies affecting cognition and memory. Special approval needed from the instructor.

GRON555 - Capstone 555-3 to 6 Capstone in Gerontology. The capstone project in the Graduate Certificate in Gerontology is designed as a culminating experience directly related to the students' intended employment or area of interest. It will, therefore, normally be taken after the predominance of course work is completed. The capstone experience may be a research project, practicum, professional development project, or any project approved by the Gerontology Advisory Board and faculty associated with the area of Gerontology. Graded S/U only.

GRON559 - Aging and Mental Health 559-3 Aging and Mental Health. (Same as SOCW 559) Examination of the nature and etiology of mental health problems facing older Americans. Review of research reports to build a theoretical basis for mental disorders.

GRON575 - Policy & Program Issues Aging 575-3 Policy and Program Issues of Aging. (Same as SOCW 575) Examination of public policies that impact on the quality of life of the elderly. Major programs are identified and analyzed. Future policy issues are discussed.

---

Health Administration

The Master of Health Administration (MHA) program is a comprehensive program that prepares students for administration roles in healthcare organizations. Courses are accelerated and offered in eight week formats to expedite completion. To earn the MHA, students must successfully complete:

1. 39 credit hours of the core MHA courses including:
MHA 510, MHA 511, MHA 520, MHA 531, MHA 536, MHA 551, MHA 555, MHA 556, MHA 566, MHA 575, MHA 580, MHA 582, and MHA 585

2. MHA 593 - Individual Research/Residency - 6 credit hours. Culminates in either a final scholarly work outlined by the SIU Graduate School or a Residency in a health care setting approved by the University and Instructor.

To facilitate completion of the program, the course of instruction will consist of 45 semester hours. As part of the 45 semester hours, students will complete a graduate residency (also known as a graduate internship) or research paper. The graduate residency will focus on one of the areas of healthcare management whereas students can apply coursework to real-world settings. The graduate residency is a six credit hour experience where one credit hour is equivalent to 50 contact hours. A total of 300 contact hours is required for successful completion.

Course material covers topics specific to the healthcare field including, but not limited to, effective organizational operations, healthcare systems, health policy, healthcare supply chain and inventory management or controlled substances, strategic leadership for differing healthcare settings, health promotion, legal and ethical foundations, managerial epidemiology and evidence based management, and financial issues specific to the healthcare industry such as charge masters and relative value units, etc. Upon completion of the program, students are expected to be equipped to operate effectively in administrative roles in healthcare organizations. Special project assignments, case readings, presentations, and journal article reviews are an integral part of the curriculum. Delivery will be via synchronous and asynchronous methods.

All students graduating from the MHA program will be required to meet the qualifications of the Graduate School at SIU. Students will be required to complete a culminating scholarly work which includes a research paper if not completing the graduate residency/internship option.

Students earning less than a B twice in any individual MHA courses are dropped from the MHA program due to poor academic performance. Students dropped due to poor academic performance will not be allowed re-entry into the MHA program at a later date.

Note: Not all healthcare organizations or facilities may act as residency sites due to the ability to meet achievable objectives of the program and/or residency course, state-to-state licensure/permissions, and/or upper SIU administrative approvals.

A 2.7 GPA from the student’s undergraduate program is required for admission to the MHA program. Students with a 2.5-2.7 undergraduate GPA may enter as a Non-Declared student, following Graduate School Policies, and will be allowed to take up to 9 credit hours of MHA courses. At the end of the 9 credit hours, the student must hold a 3.0 GPA to be then admitted to the MHA program. Students not meeting the 3.0 GPA at the end of the 9 credit hours will not be allowed to take any other MHA courses.

Students participating in a residency may be required to undergo a criminal background check and drug-screening. Students who do not satisfactorily pass the background check and/or drug screening may find it difficult to secure a residency in the field of health care and may be removed from the MHA program or administratively required to complete the individual research project included in MHA 593 instead.

Certificate in Clinical Leadership

The Certificate in Clinical Leadership is open to post-bachelor level students who hold a license in a clinical specialty. It is designed to provide the knowledge and skills specialized for roles in clinical leadership and/or as a preparatory certificate for graduate education. Courses in the certificate are specific to patient care environments and will include, but not be limited to: strategic planning, operations, human resource planning, health information, and evidence based managerial decision making specific to patient care environments. Students must complete 18 semester hours of graduate level study, all at SIU, with a C or above in all required courses which includes:

- MHA 510, 3 - Effective Health Care Operations (same as MHI 531)
- MHA 531, 3 - Human Resources in Healthcare (same as MHI 531)
- MHA 536, 3 - Strategic Leadership in Healthcare (same as MHI 536)
- MHA 566, 3 - Managing Health Information (same as MHI 566)
- MHA 580, 3 - Managerial Epidemiology and Evidence Based Management (same as MHI 580)
• MHA 585, 3 - Financial Issues in Healthcare (Same as MHI 585)

Students earning a grade lower than a C may retake individual courses only once. If a grade of C or higher is not received on the second attempt of an individual course, the student is removed from the certificate program due to academic performance.

For more information contact:
Robert Broomfield
Allied Health Specialist
phone: 618-453-7287
e-mail: broomr@siu.edu

Health Administration Courses

MHA510 - HC Operations 510-3 Effective Healthcare Operations. An investigation of the functions of HCOs compared to other business operations including logistics and supply chain control. Addresses excessive resource spending focusing on support systems and ineffective operational issues within constraints of highly regulated healthcare sector. eCommerce, hospital materials supply, inventory control of medical supplies/controlled substances, vendor collaboration, purchasing/receiving, and total value analysis explored with PERT/CPM, mathematical programming and quality controls. Restricted to School graduate majors.

MHA511 - Fundamentals HC Systems 511-3 Fundamentals of Health Care Systems. This course provides a multi-disciplinary analysis and is designed to provide students with information pertaining to the issues surrounding access to care, medical technology, and the complex financial structures of the healthcare system. Students will extensively examine aspects of the complex healthcare system such as managed care, Medicare, Medicaid, pharmaceuticals, health promotion and disease prevention, and the quality of care. Restricted to School graduate majors.

MHA520 - Healthcare Policy 520-3 Healthcare Policy. Explores the public policy interventions within the varying healthcare domains and defines the theoretical reasons for pursuing policy development in the presence of intense political, bureaucratic, and social environments within the healthcare industry. The effects, consequences, and social implications of policy decisions are evaluated through real-world case analysis of actual public health policies. Focus is placed on how policies impact patients and medical providers. Restricted to School graduate majors.

MHA531 - Human Resources in Health Care 531-3 Human Resources in Health Care. (Same as MHI 531) Describes the key human resource functions that play a significant role in the healthcare environment and focuses specifically on how those functions support management initiatives and Joint Commission accreditation and/or regulatory compliance. Extensive review of how the failure to systematically apply effective human resource strategies can result in organizational demise is conducted. Explores the dynamic legal and regulatory environment and carefully examines how legislative changes influence the healthcare organization overall focusing particularly on those functions that are linked to patient satisfaction and balanced scorecards and/or benchmarking of provider performance.

MHA536 - HC Leadership/Strategy 536-3 Strategic Leadership in Healthcare. This course provides students with an examination of nature, function, and techniques of administration and supervision in HCOs. Topics include the ever-changing healthcare environment and trends impacting leadership competencies. Specific healthcare factors that influence organizing managing of varying health systems such as hospitals vs. ambulatory care. Focus will be given on the professional bureaucracy that is complex given regulatory issues, political factors, and the era of the informed patient. Restricted to School graduate majors.

MHA551 - HC Legal/Ethics 551-3 Legal & Ethical Fundamentals in Healthcare. This course provides students with an analysis of the legal and ethical environment of the healthcare industry. Focused on the healthcare environment, the course closely examines the judicial process pertaining to torts, contracts, antitrust, corporate compliance, access to care, negligence, and professional liability. The nature of ethics...
in the multi-cultural healthcare environment is examined with analysis of the moral issues in healthcare. Restricted to School graduate majors.

**MHA555 - HC Promotion and Evaluation** 555-3 Theories of Health Promotion and Evaluation. An exploration of the concepts, theories, and status of research in health promotion and disease prevention emphasizing varying methods used to modify the health-related behaviors of groups and individuals. This course examines methods of ascertaining health behaviors, the design and interpretation of behavioral intervention programs to modify behaviors, and current trends in the study of how lifestyle and preventive health practices the field of health care. Restricted to School graduate majors.

**MHA556 - HC Research** 556-3 Individual Research in Healthcare. This course requires students to complete a research project in the field of healthcare based upon student interest and instructor approval. Each project will have a written paper as a final product and this paper will be submitted for publication, as approved by the instructor, in one of the professional journals within the field of healthcare. Restricted to School graduate majors.

**MHA566 - Managing Health Information** 566-3 Managing Health Information. A detailed review of the components of an information system as utilized for the capture of health information. Focus is on EHR, HIPAA, and implementation of information systems in healthcare organizations. Classification systems, clinical terminology, and use of health information in terms of operational management and decision making will be explored. Emerging technologies related to the security of health information management are explored. Restricted to School graduate majors.

**MHA575 - Current Events in HC** 575-3 Current Events Seminar in Healthcare. A current issues seminar course for the field of healthcare where students identify and analyze legislative changes/mandates, healthcare reform, governmental oversight, etc. Students conduct presentations and may participate in discussions with healthcare professionals via a variety of potential classroom methods including, but not limited to, live video conferencing, podcasts, and/or discussion postings, etc. Restricted to School graduate majors.

**MHA580 - Epidemiology and EBM** 580-3 Managerial Epidemiology and Evidence Based Management. Epidemiological principles pertinent to the delivery, management, and marketing of healthcare services. Examines evidence- and population-based decisions which are critical to effective delivery of patient care. Utilizes evidence-based theories to prepare the students to identify management problems and develop related paths of focused inquiry. Restricted to School graduate majors.

**MHA582 - Healthcare Economics** 582-3 Healthcare Economics. Covers micro-economic theory focusing on patient demand for services and supply of services based on the complex regulatory environment in healthcare organizations. Students will learn to analyze health policies, as well as the behaviors of patients, insurers, and physicians in varying HCOs. Issues will be explored such as fee structuring; controversial policy issues, such as access to care and/or the medically under-insured or uninsured; the demand and mandate of health insurance; and the increased presence of governmental control that impacts healthcare economics. Restricted to School graduate majors and School advisor.

**MHA585 - Financial Issues in Healthcare** 585-3 Financial Issues in Healthcare. A macro-examination of the role of finance in healthcare. Emphasis is not on financial formulas, but rather on the application of financial information within the healthcare sector. Discussion of charge-masters, healthcare payment systems and sources of revenue, profit vs. duty, regulatory issues and profit maximization, provider payments and pricing in capitated-managed care markets, and IDS, etc. Case principles specifically related to the healthcare field are completed. Restricted to School graduate majors.

**MHA593 - Adv Research/Residency** 593-6 Advanced Research/Residency. Students choose research project or residency. Research option includes special project related to administration in the student's chosen field which meets Graduate School guidelines. Students selecting residency option must notify the academic advisor one year PRIOR to enrolling in MHA 593 to complete MOU process. Research option is the only available option if residency deadline missed. Residency sites are in healthcare facilities only and subject to approval of the instructor and University. 1 credit = 50 contact hours. 300 contact hours required. Hours/credit arranged individually. Restrictions may apply based on state-to-state rules. Restricted to School graduate majors and School advisor.
MHA601 - Continuing Enrollment 601-1 Continuing Enrollment. This course is required to satisfy the Graduate School's requirement of continuous enrollment and is intended for those students who are enrolled in the program but cannot take a core academic course during a given semester. Consent of SAH Academic Advisor.

Health Administration Faculty

Aydin, Serdar, Assistant Professor, Ph.D., University of South Carolina, 2018.
Collins, Sandra K., Professor, Ph.D., Southern Illinois University Carbondale, 2010.
Shaw, Thomas A., Associate Professor, Ph.D., Southern Illinois University Carbondale, 2005.

Health Informatics

The Master of Health Informatics (MHI) program is a comprehensive program that prepares students for professional roles in the field of health informatics within the healthcare organizations. To earn the MHI, students must complete:

1. 39 credit hours of the core MHI courses including: MHI 510, MHI 511, MHI 515, MHI 525, MHI 531, MHI 536, MHI 551, MHI 566, MHI 580, MHI 581, MHI 583, MHI 584, and MHI 585
2. MHI 593 - Individual Research/Residency - 6 credit hours. Culminates in either a final scholarly work outlined by the SIU Graduate School or a Residency in a health care setting approved by the University and Instructor.

To complete the health informatics program, the course of instruction consists of 45 semester hours. As part of the 45 semester hours, students have the choice of selecting a research project or graduate residency/internship. If the graduate residency/internship is selected students must notify the program's residency/internship coordinator that they intend to complete the residency/internship 1 year prior to the semester they will enroll in the residency/internship. This length of time is necessary to allow for the proper authorizations to be obtained between the supervising site and the university. Students who do not notify the residency/internship coordinator that they intend to participate in the residency/internship by this deadline will only have the option of completing the research project. Residency/internship are completed only in healthcare facilities excluding veterinary and animal care facilities.

The Residency is a six-credit hour experience where one credit hour is equivalent to 50 contact hours for a total of 300 credit hours at the time of successful completion.

Course material covers topics specific to the healthcare field including, but not limited to, healthcare systems, knowledge management, personnel development and oversight, electronic health records, strategic leadership and marketing, legal and ethical foundations, health promotion and evaluation, systems design, modeling, database management, security, privacy, health information exchange, and health economics. Upon completion of the program, students are expected to be equipped to operate effectively in administrative roles in healthcare organizations. Special project assignments, case readings, presentations, and journal article reviews are an integral part of the curriculum.

A 2.7 GPA from the student's undergraduate program is required for admission to the MHI program. Students with a 2.5-2.7 undergraduate GPA may enter as a Non-Declared student, following Graduate School policies, and will be allowed to take up to 9 credit hours of MHI courses. At the end of the 9 credit hours, the student must hold a 3.0 GPA to be then admitted to the MHI program. Students not meeting the 3.0 GPA at the end of the 9 credit hours will not be allowed to take any other MHI courses.

All students graduating from the MHI program will be required to meet the qualifications of the Graduate School at SIU. Students will be required to complete a culminating scholarly work which includes a research paper if not completing the Residency option.
MHI students will initiate and complete the processes involved with residency/internship site and preceptor selection as well as applicable university approval processes. Students participating in a residency/internship may be required to undergo a criminal background check and drug screening. Students who do not satisfactorily pass the background check and/or drug screening may find it difficult to secure a residency/internship in the field of healthcare and would then be required to satisfactorily complete the graduate research project instead of the residency/internship. Residency/internship hours cannot begin until all approvals have been obtained from the faculty member overseeing the residency/internship processes, the internship site, and the university. The internship coordinator and/or university may decline any residency/internship site or preceptor selected by the student. Any contact hours students participate in prior to the residency/internship being appropriately approved cannot be counted toward the required 300 contact hours. Not all healthcare organizations or facilities may act as residency sites due to the ability to meet achievable objectives of the program and/or residency course, state to state licensure/permissions, and/or University approvals.

Students earning a failing grade for a residency/internship can repeat the MHI 593 Advanced Research/Residency course once, but they are required to choose and successfully complete the graduate project for the second time they are enrolled. If the graduate project is not successfully completed on the repeat enrollment, the student cannot enroll in MHI 593 a third time and will be removed from the MHI program due to academic performance. The residency/internship cannot be repeated.

Students earning less than a $B$ twice in any individual MHI courses are dropped from the MHI program due to poor academic performance. Students dropped due to poor academic performance will not be allowed re-entry into the MHI program at a later date.

On-campus MHI courses are restricted to on-campus students in the graduate programs within the School. Online MHI courses are restricted online students in the graduate programs within the School. The MHI program strictly prohibits students from changing delivery formats unless there is a well-documented medical reason presented to the Program Director to do so.

**Certificate in Healthcare Informatics**

The Certificate in Healthcare Informatics is open to post-bachelor level students holding a degree in healthcare management/administration (or closely related field) and/or a bachelor’s level degree and license in a clinical specialty. It is designed to provide the knowledge and skills as germane to healthcare informatics in patient care environments. Well suited as a graduate preparatory certificate, courses are specific to the collection, analysis, and interoperability of data in patient care environments for the purposes of improving operations, patient care delivery, and supporting regulatory expectations specific to the field of healthcare. Students must complete 18 semester hours of graduate level study, all at SIU, with a $C$ or above in all required courses which includes:

- MHI 510, 3 - Effective Healthcare Operations (Same as MHA 510)
- MHI 515, 3 - Systems Analysis, Design, and Database Management in Healthcare
- MHI 525, 3 - Health Informatics Applications and Project Management
- MHI 566, 3 - Managing Health Information (Same as MHA 566)
- MHI 581, 3 - Health Information Exchange
- MHI 584, 3 - Consumer Informatics

Students earning a grade lower than a $C$ may retake individual courses only once. If a grade of $C$ or higher is not received on the second attempt of an individual course, the student is removed from the certificate program due to academic performance.

**For more information contact:**

**Health Informatics Courses**

**MHI510 - Effective Healthcare Operation** 510-3 Effective Healthcare Operations. An investigation of the functions of HCOs compared to other business operations including logistics and supply chain control. Addresses excessive resource spending focusing on support systems and ineffective operational issues within constraints of highly regulated healthcare sector. eCommerce, hospital materials supply, inventory control of medical supplies/controlled substances, vendor collaboration, purchasing/receiving, and total value analysis explored with PERT/CPM, mathematical programming and quality controls. Restricted to School graduate majors.

**MHI511 - Fundamentals HC Systems** 511-3 Fundamentals of Health Care Systems. This course provides a multi-disciplinary analysis and is designed to provide students with information pertaining to the issues surrounding access to care, medical technology, and the complex financial structures of the healthcare system. Students will extensively examine aspects of the complex healthcare system such as managed care, Medicare, Medicaid, pharmaceuticals, health promotion and disease prevention, and the quality of care. Restricted to School graduate majors.

**MHI515 - Systems Design/Analysis** 515-3 Systems Analysis, Design, and Database Management in Health Care. Students explore methods for designing and managing health care organization databases and their use in computer based information systems. Focus is given on the impact that health care information systems have on administrative functions, data security and integrity, and business processes. Use of relational database management software, network hardware technologies, data modeling, clinical data warehousing and mining are explored, as well as, the tools necessary for successful system implementation and human computer interfaces. Restricted to School graduate majors.

**MHI525 - HI Apps and PM** 525-3 Health Informatics Applications and Project Management. Course designed to explore the history of health information. Students learn how to integrate the clinical, financial and administrative data needed to resolve managerial and patient care problems. Explores the strengths and limitations of health information systems and principles of computer science. Focus is given on project planning, project management tools. Students will develop a workflow project plan for a health informatics project and conduct biomed simulations. Restricted to School graduate majors.

**MHI531 - HC Human Resources** 531-3 Human Resources in Health Care. (Same as MHA 531) Describes the key human resource functions that play a significant role in the healthcare environment and focuses specifically on how those functions support management initiatives and Joint Commission accreditation and/or regulatory compliance. Extensive review of how the failure to systematically apply effective human resource strategies can result in organizational demise is conducted. Explore the dynamic legal and regulatory environment and carefully examines how legislative changes influence the healthcare organization overall focusing particularly on those functions that are linked to patient satisfaction and balanced scorecards and benchmarking of provider performance. Restricted to School graduate majors.

**MHI536 - HC Leadership/Strategy** 536-3 Strategic Leadership in Healthcare. This course provides students with an examination of nature, function, and techniques of administration and supervision in HCOs. Topics include the ever-changing healthcare environment and trends impacting leadership competencies. Specific healthcare factors that influence organizing managing of varying health systems such as hospitals vs. ambulatory care. Focus will be given on the professional bureaucracy that is complex given regulatory issues, political factors, and the era of the informed patient. Restricted to School graduate majors.

**MHI551 - HC Legal/Ethics** 551-3 Legal & Ethical Fundamentals in Healthcare. This course provides students with an analysis of the legal and ethical environment of the healthcare industry. Focused on the healthcare environment, the course closely examines the judicial process pertaining to torts, contracts, antitrust, corporate compliance, access to care, negligence, and professional liability. The nature of ethics in the multi-cultural healthcare environment is examined with analysis of the moral issues in healthcare. Restricted to School graduate majors.

**MHI566 - Managing Health Information** 566-3 Managing Health Information. A detailed review of the components of an information system as utilized for the capture of health information. Focus is on EHR, HIPAA, and implementation of information systems in healthcare organizations. Classification systems, clinical terminology, and use of health information in terms of operational management and decision making are explored.
making will be explored. Emerging technologies related to the security of health information management are explored. Restricted to School graduate majors.

MHI580 - Epidemiology and EBM 580-3 Managerial Epidemiology and Evidence Based Management. Epidemiological principles pertinent to the delivery, management, and marketing of healthcare services. Examines evidence- and population-based decisions which are critical to effective delivery of patient care. Utilizes evidence-based theories to prepare the students to identify management problems and develop related paths of focused inquiry. Restricted to School graduate majors.

MHI581 - HI Interoperability 581-3 Health Information Interoperability. Addresses issues related to the exchange of clinical data across multiple healthcare environments. Special focus is placed on health IT standards, privacy and security issues specifically related to the protection of patient information. Provides an overview of health information system standards and the types of products available to facilitate the use of data exchanges. Students will work in virtual groups to discuss current trends and challenges, best practices for health information systems, and health information standards pertinent to the field of healthcare. Restricted to School graduate majors.

MHI583 - Methods Medical Informatics 583-3 Methods of Medical Informatics. Study of algorithms and programming languages for healthcare informatics purposes. Tailored for the use of non-professional programmers and specifically for the healthcare industry. Provides methods to utilize medical information contained in clinical and research datasets and explores the common computational tasks of medical informatics. Overview of access to data, assessment, nomenclatures, and programming scripts. Restricted to School graduate majors.

MHI584 - Consumer Informatics 584-3 Consumer Informatics. Course focusing on consumer driven healthcare and their greater access to health information. Explores the health care related information available by federal and state agencies and direct consumer-to-consumer communications. Focus is given to consumer perspectives of their own health and the overall evolution of the patient/physician relationship. Students will explore the impact of technology in patient treatment areas, personalized medicine, assessment methods and tools, as well as, the potential impact of future technology on the delivery of healthcare services. Restricted to School graduate majors.

MHI585 - HC Finance 585-3 Financial Issues in Healthcare. A macro-examination of the role of finance in healthcare. Emphasis is not on financial formulas, but rather on the application of financial information within the healthcare sector. Discussion of charge-masters, healthcare payment systems and sources of revenue, profit vs. duty, regulatory issues and profit maximization, provider payments and pricing in capitated-managed care markets, and IDS, etc. Case principles specifically related to the healthcare field are completed. Restricted to School graduate majors.

MHI593 - Adv Research/Residency 593-6 Advanced Research/Residency. Students choose research project or residency. Research option includes special project related to administration in the student's chosen field which meets Graduate School guidelines. Students selecting residency option must notify the academic advisor one year PRIOR to enrolling in MHA 593 to complete MOU process. Research option is the only available option if residency deadline missed. Residency sites are in healthcare facilities only and subject to approval of the instructor and University. 1 credit = 50 contact hours. 300 contact hours required. Hours/credit arranged individually. Restrictions may apply based on state-to-state rules. Restricted to School graduate majors and School advisor.

MHI601 - Continuing Enrollment 601-1 Continuing Enrollment. This course is required to satisfy the Graduate School's requirement of continuous enrollment and is intended for those students who are enrolled in the program but cannot take a core academic course during a given semester. Consent of SAH Academic Advisor.

Health Informatics Faculty

Aydin, Serdar, Assistant Professor, Ph.D., University of South Carolina, 2018.
Collins, Sandra K., Professor, Ph.D., Southern Illinois University Carbondale, 2010.
Higher Education

The Department of Educational Administration and Higher Education provides graduate study leading to the Master of Science in Education degree in higher education.

The graduate program in higher education offers students an opportunity to study and explore the concept of higher education as a field of study. The faculty of this program encourages and assists students in developing a lifetime commitment to the study of higher education. They also provide preservice and inservice preparation for persons who are teaching or serving as administrators or who expect to teach or serve as administrators in two-year and four-year colleges and universities, and related post-secondary educational institutions and agencies.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Higher Education. Applicants must pay this fee by credit card.

Master of Science in Education Degree

The Department of Educational Administration and Higher Education offers a program in higher education leading to the Master of Science in Education degree. The emphasis of this degree is to provide individuals with the background and skills important to accepting a wide range of teaching and administrative positions in higher education. Concentrations in community college teaching and college student personnel are offered.

Students applying for admission are encouraged to have some leadership experience prior to starting graduate study. Students who expect to complete a program to prepare them for teaching in a community college are expected to have an undergraduate major in a subject area commonly taught in a community college.

Community College Teaching (32 semester hours, minimum)

Students who wish to teach in a community college must complete at least 20 semester hours in their teaching specialty and at least 12 hours in specified courses in educational administration and higher education, for a minimum of at least 32 semester hours. Students in this program must secure prior to admission a subject matter adviser from the faculty of the subject area who will agree to help plan the student’s academic program.

The common core of courses required of students in this program includes the following:

- EAHE 516-3 College Students and College Culture
- EAHE 518-3 College Teaching
- EAHE 524-3 Curriculum Design and Policy
- EAHE 526-3 The Community College

Students must also complete a minimum of 20 semester hours in their teaching specialty. Recommended courses beyond the minimum requirements are as follows, and must be taken unless waived by the program coordinator:

- EAHE 500-3 Educational Research Methods
- EAHE 598-2 to 6 Internship or
- EAHE 599-3 Thesis/Individual Research 593A-L

College Student Personnel (42 semester hours)

This program is designed to prepare new professionals to work as student affairs administrators and educators within institutions of higher education. Students must complete a minimum of 42 semester hours of courses designed to prepare them as higher education generalists. Through internships,
electives, and professional development seminars, students individualize their programs to acquire specialized emphasis in various student affairs units, including admission and recruitment, student development, student activities and programming, alumni relations, career planning, financial aid, orientation, placement, and residence life.

**College Student Personnel Common Core (12 hours):**

- EAHE 510-3  Higher Education in the United States
- EAHE 513-3  Org. and Administration in Higher Education
- EAHE 515-3  Student Affairs Administration
- EAHE 516-3  College Students and College Culture

**Educational Research (3 hours):**

- As selected with advisor.

**Cognate (12-18 hours):**

- Students will work with advisor to construct a cognate, which is compatible with their academic and professional interests. Possible cognates include, but are not limited to: Administration, Cultural Contexts, and Student Affairs.

**Professional Development (3 to 9 hours):**

- EAHE 591-1 to 6  Individual Study
- EAHE 598-3 to 6  Higher Education Internship

**Capstone (3 hours):**

- EAHE 547-3 Evaluating Educational Research
- EAHE 593L-3 Research Paper
- EAHE 599-3 Thesis

**Electives (3 to 6 hours):**

- As selected with advisor.

**Waiver for Internship Requirement**

Each student must complete or obtain a waiver for the required internship in addition to any paid assistantship that the student may secure. Internships must be in a setting different from the student’s assistantship or professional work environment. Internship opportunities exist through most areas of Student Affairs on the SIU Carbondale campus; other locations or settings might be eligible; each student must obtain approval from his/her advisor before initiating any internship. Students with non-assistantship based, professional experience in higher education may seek a waiver of the internship requirement. All waivers must be in writing and require advisor approval. Students permitted to waive the internship requirement must complete an additional three units of independent study to satisfy the credit requirements needed to obtain the degree.

**Research Requirements**

Community College Teaching master’s students shall demonstrate research competencies through writing an acceptable research paper or master’s thesis (which involves original research); College Student Personnel concentration students also have an option, in lieu of a research paper or thesis, to complete EAHE 547, Evaluating Educational Research. Students who select the thesis option must have an approved prospectus on file at least six months in advance of the anticipated graduation date; they must enroll for three hours of EAHE 599 (Thesis); and they must have a committee of at least three faculty members. Students who elect to write a research paper must have a committee of two faculty members, and they must enroll in three hours of EAHE 593 (Research Paper). Students who choose the thesis or research paper option are required to complete successfully a final examination, which usually consists of a presentation and defense of the research paper or thesis; this exam may be written, oral, or both.
Master of Science in Education Degree/J.D.

This concurrent degree in higher education and law helps to provide students with an academic foundation in areas where the two fields intersect. Specifically, this joint program allows students to acquire knowledge and develop problem-solving skills applicable to both areas. Participants in this program will develop an understanding of legal matters, history, foundations, theories, policies, and processes that influence postsecondary institutions. Students completing this joint degree will attain unique qualifications preparing them for careers such as higher education administrators, postsecondary counsel, policymaking, student advocacy, and other areas where law and postsecondary institutions intersect. Prospective students must meet the admissions requirements and gain acceptance separately to Higher Education and the School of Law. Students concurrently enrolled in either degree program must attain a minimum GPA and grading scales. Students interested in Higher Education portion of this concurrent program should consult with the Director of the Higher Education Programs. Students will need to take a minimum of 21 hours of Higher Education courses and nine hours of electives through the School of Law as selected with the appropriate advisors.

College Teaching Certificate

The program will offer a postsecondary focused teaching certificate to any graduate student enrolled in or who has completed at least a master’s degree. The program will operate within a cohort format as a way of streamlining course scheduling, promoting intergroup socialization and development, and supporting routine, consistent, and timely completion. To establish and maintain cohort delivery, the program will offer all students the following courses:

<table>

</table>

All of these courses are 500-level courses. Refer to Appendix A for a title and description of each course.

Admission

To gain admission to the program, prospective students must hold or be enrolled in a graduate degree program and maintain a minimum 3.0/4.0 GPA. Applications for admission must include the following: a completed departmental application, three letters of references attesting to the applicant’s potential for success as a postsecondary instructor, and a teaching statement. Higher Education faculty members will review applications and select students for admission to the certificate program.

Higher Education Faculty
Colwell, William Bradley, Professor, Ph.D. and J.D., University of Illinois at Urbana-Champaign, 1996. Education law and policy, collective bargaining.

Dilley, Patrick, Professor, Ph.D., University of Southern California, 2000; 2001. History of higher education, gender studies, and qualitative research.

Donahoo, Saran, Professor and Program Director, Ph.D., University of Illinois at Urbana-Champaign, 2004; 2004. Higher education administration and educational administration.

---

**History**

The Department of History offers graduate programs leading to the Master of Arts and Doctor of Philosophy degrees.

**Research Facilities**

Morris Library on the campus is the fourth largest library in Illinois. Housed in a modern seven-story building, it contains more than two million volumes. Morris Library acquires current scholarly publications not only from United States but also from Latin America and European publishers. The long-term use of highly specialized materials is afforded by the affiliation of Morris Library with the Center for Research Libraries in Chicago.

The holdings in history and related areas amount to more than 500,000 volumes. To these must be added 20,000 reels of microfilm containing printed secondary works and 6,000 volumes of printed source material and 30,000 volumes of early American imprints prior to 1800 on microtext. Among the materials in the process of acquisition is a microtext edition of all newspapers published in the United States prior to 1820.

The library also possesses substantial holdings in the form of microfilm editions of presidential papers, dispatches and instructions of the state department since 1789, massive holdings in consular records, and the Adams family papers. The library has been a complete repository of United States government documents since 1954 and holds a large collection of earlier documents, including a virtually complete Congressional set.

Following the acquisition of the 7,000-volume library of Jose Morgrovejo Carrion of Ecuador in 1960, the library has systematically expanded its holdings in Latin American history, government, literature, and anthropology. The papers of Francisco Vásquez Gómez, Mexican political leader (1907–1919), Peruvian diplomat and business tycoon, Federic Barreda and Samuel Putnam, American expert on Latin American affairs, provide rich research opportunities. Extensive files of serial publications from Argentina, Bolivia, Paraguay, Uruguay, Cuba, and Mexico also contain diverse sources for investigation. Many of the above materials are unavailable elsewhere in the United States.

Holdings in European history include the standard documentary publications, as well as scholarly serials and journals. The materials to support research are strongest in modern German and English history.

**Admission**

Graduate work in history is offered at both the master’s and the doctoral levels. Admission to programs administered by the Department of History must be approved by the department, with approval dependent upon the preparation, ability, and promise of the individual student.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in History. Applicants must pay this fee by credit card.

**M.A.:** for the Master of Arts degree major in history, applicants are expected to have an undergraduate GPA of 3.0. Applicants with GPAs of below 3.00 may be granted conditional admission. Applicants must also provide three letters of recommendation, and a personal statement in which the applicant expresses professional goals. Conditional admittances must earn a 3.00 GPA in graduate coursework in the first semester. The department reserves the right to terminate from the history program a student who does not establish and maintain a 3.00 GPA in history courses.
Ph.D.: for admission to the doctoral program, each applicant should submit to the department, in addition to the material required by the Graduate School, the following: three letters from former teachers, preferably at the graduate level; a letter in which the applicant expresses professional goals and a writing sample.

In rare instances, accelerated entry into the Ph.D. program is possible for exceptionally qualified M.A. students who have made an early commitment to doctoral study. Such students may petition after two semesters in the M.A. program for accelerated entry. The petitioner must demonstrate the ability to perform at the Ph.D. level. This includes a GPA of at least 3.7 (A = 4.0) in graduate history courses, exemplary letters from SIU professors, and the submission of a seminar paper or published article for evaluation by the Graduate Studies Committee. The student must have completed one colloquium or seminar, HIST 500, HIST 501 and the research tool required for the M.A. Upon approval, the History Department will recommend to the Graduate Dean direct admission to the Ph.D. program. Direct entry into the Ph.D. program from baccalaureate studies is possible for students of exceptional ability. This can be demonstrated through extensive undergraduate course work of superior quality, proficiency in research tools, previous research experience, and letters of recommendation. Students who have taken course work after the undergraduate degree may not petition for direct entry. Upon approval of the petition, the Department of History will recommend to the Graduate Dean direct admission into the Ph.D. program.

Assistantships and Fellowships

Fellowships and teaching assistantships are available to qualified graduate students. All carry stipends and remission of tuition. Application for these awards should be submitted by January 10 in order to be considered for the following academic year.

Additional information concerning rules governing the graduate program in history may be obtained by writing to the director of graduate studies, Department of History.

M.A. in History, Thesis Track

The thesis track should be selected by those students who plan to continue on for a doctoral degree in history, either at SIU or elsewhere. The thesis track provides students with the necessary historiographical and methodological skills to complete a significant, original research project, and to be prepared for the rigors of a Ph.D. program. The decision to opt for the thesis track ought to be made in consultation with the student’s assigned advisor and/or the director of graduate studies during the first semester of the first year of the M.A. The thesis track M.A. consists of 33 credit hours of coursework (including six thesis hours), the completion of a research tool (usually proficiency in a foreign language), and the writing and oral defense of a thesis. A sample program of study for the thesis track is below:

<table>
<thead>
<tr>
<th>Semester 1 Courses</th>
<th>Semester 2 Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td>HIST 500 (3 credits)</td>
<td>HIST 501 (4 credits)</td>
</tr>
<tr>
<td>Colloquium or Seminar (4 credits)</td>
<td>Colloquium or Seminar (4 credits)</td>
</tr>
<tr>
<td>Research Tool (3 credits)</td>
<td>Research Tool (3 credits)</td>
</tr>
<tr>
<td><strong>Total credit hours: 10</strong></td>
<td><strong>Total credit hours: 11</strong></td>
</tr>
</tbody>
</table>

Thesis track students should, in consultation with their advisor, select elective History courses, (400-level, or HIST 490 / HIST 590 independent readings courses) or courses outside the History program (400-level or higher) on topics or themes that will support or complement their thesis research and writing. A maximum of 10 credit hours of 400 level course work and/or coursework external to the History Department will count toward the required 33 hours. Thesis students are highly encouraged to complete their research tool in their first year.

M.A. in History, Thesis Track

<table>
<thead>
<tr>
<th>Semester 1 Courses</th>
<th>Semester 2 Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td>HIST 599 (thesis - 3 credits)</td>
<td>HIST 599 (thesis - 3 credits)</td>
</tr>
<tr>
<td>Elective (3 credits)</td>
<td>Elective/Colloquium or Seminar (3-4 credits)</td>
</tr>
<tr>
<td>Elective/Colloquium or Seminar (3 credits)</td>
<td></td>
</tr>
</tbody>
</table>
In consultation with their advisor, a thesis track M.A. student should begin the research for his/her thesis in the spring or summer of the first year in the program, ideally enrolling in a readings (HIST 490 / HIST 590) course with their advisor for an introductory survey of historiography and pertinent issues in their field of interest. Research and writing of the thesis continue in the fall, so that the thesis is ready for distribution to the thesis committee (three faculty, at least two of whom are full-time faculty in the History Department) in the early spring (prior to March 1) of Year 2. The defense of the thesis will be an oral defense, during which the examining faculty will consider the content, methodology, conclusions, style, and historiography of the work, and ask the student to place his/her work within the larger context of his/her program of study, including the historiography of the thesis’s field and especially HIST 500 and HIST 501.

M.A. in History, Two Research Paper Track

The two paper track should be selected by students who envision careers as high school and community college educators, and those seeking to develop their interests in a historical field. The two paper track requires the completion of 36 credit hours of coursework and the completion of a research tool (usually proficiency in a foreign language, or a nonlanguage option). Rather than a thesis, the capstone activity of the two paper track is the completion of two research papers in conjunction with two seminar courses, and one field exam in the geographical/chronological area of the student’s choice. The two paper track should provide students with a basic understanding of historiography and historical methods, give the student some experience in historical research and writing at the graduate level, and provide in-depth knowledge of the history and historiography of their selected area of interest. A sample program of study is below:

M.A. in History, Two Research Paper

<table>

<td>Total credit hours: 11</td>
</tr>
</tbody>
</table>

Two paper track students should, in consultation with their advisor, select elective History courses, (400-level, or HIST 490 / HIST 590 independent readings courses, and 2 colloquium/seminar), or courses outside of the History program (400 level or higher) on topics or themes relevant to their interests. A maximum of 10 credit hours of 400 level course work and/or coursework external to the History Department will count toward the required 33 hours. Students are highly encouraged to complete their research tool in their first year.

</tbody>
</table>

By the spring of their first year, two paper track students should have identified their field of study, and in conjunction with a faculty member who specializes in that field, begun to assemble a reading list of required works for the student’s examination. Students must complete at least one course (500-level colloquium/seminar sequence, 400-level elective or HIST 490 / HIST 590 independent reading) with the faculty member who will oversee their exam field. Students should plan to take this exam either late in semester one or early in semester two of their second year in the program. The examining committee will consist of the field professor, and at least one of the professors who taught the students’ two colloquium/seminar sequences. The oral defense will consist of discussion of the student’s overall program of study, and include assessment of seminar papers and written responses to the field exam.
Accelerated M.A. Program in History

Students already on track to earn a bachelor’s degree in History at SIU will be eligible to start the preliminary phase of the accelerated M.A. curriculum if they have earned a cumulative 3.20 GPA by the end of the Spring semester of their junior year and received departmental approval to take HIST 500 and HIST 501 during their senior year. Qualified students can initiate the approval process by submitting a written statement to the Chair of the History Department and the Director of Graduate Studies in History expressing their interest in the accelerated M.A. program and requesting permission to begin the curriculum. Approval to begin the accelerated M.A. curriculum does not guarantee admission to the graduate program, though it is required as a preliminary step toward completing the accelerated M.A. program. Students approved to begin the accelerated M.A. curriculum during their senior year must also apply to the two-year M.A. program and satisfy the usual deadlines and requirements for admission to the two-year M.A. program for the following academic year in order to be formally admitted into the accelerated M.A. program as a graduate student eligible to earn a Master’s degree. Additionally, all requirements for completing the accelerated M.A. program are the same for completing the two-year M.A. program. Students who begin the accelerated M.A. curriculum while finishing the undergraduate curriculum must complete the undergraduate curriculum and graduate from SIU before entering the graduate program as graduate students.

Approval to begin the accelerated M.A. curriculum includes the completion of a memorandum of interest (MOI) that indicates the agreement of the student to complete HIST 500 (The Historian’s Craft - 3 hours), HIST 501 (Recent Historiography - 4 hours), and HIST 490 (Special Readings in History - 2 hours with the anticipated graduate faculty advisor of the student to begin research for the thesis) during the senior year. Enrollment in HIST 500 and HIST 501 requires approval from the department and the Graduate School following the procedure indicated in the “Request for 500-Level Course by an Undergraduate” form. The 9 credit hours earned for these courses count toward the bachelor’s degree when completed. The same 9 credit hours from HIST 500, HIST 501, and HIST 490 will count toward the M.A. degree once the student has been formally admitted to the graduate program following the completion of the B.A./B.S. in History. The MOI with the signatures of the student, the Chair of the History Department, and the Director of Graduate Studies in History will be sent to the Graduate School for approval.

Once admitted to the graduate program, students in the accelerated M.A. program complete the established requirements for either the thesis-track M.A. or non-thesis M.A., depending on which track the student pursues. Students following the thesis track are encouraged, but not required, to complete one colloquium and research seminar combination as part of their coursework. Students following the non-thesis track must complete two colloquium and research seminar combinations to produce the two required research papers. In addition to transferring 9 hours in HIST 500, HIST 501, and HIST 490 from their undergraduate studies, accelerated M.A. students must complete 24 graduate-level credit hours in two semesters to finish the degree in one additional year.

The Doctor of Philosophy Degree

A student seeking the Ph.D. degree in historical studies must pass preliminary examinations and submit a satisfactory dissertation based on independent and original research. In preparation for preliminary examinations, the doctoral student must complete at least 24 graduate credit hours. These hours must be completed during a period of not more than four calendar years. The courses and hours of credit necessary for a doctoral student to prepare for preliminary examinations will be determined by the student’s advisory committee. All Ph.D. students must include in their 24 hours six 500 level courses (not including HIST 500, HIST 501, or HIST 597) with grades of A or B. The goal is to develop high competence in the selected fields in which the student will be examined. Students are responsible for preparing three fields in which they will be examined. Two of the three fields will be selected from the following list of general fields:
• United States to 1877
• United States since 1865
• Latin America, Colonial
• Latin America, National
• Europe, medieval
• Europe, early modern
• Europe, modern
• Britain, modern
• East Asia, modern
• Africa and African Diaspora
• Middle East

The third field is a focused field of study defined in consultation with the student’s examination committee. Examples of focused fields are available on the history department website.

The student’s advisory committee may require the student to take a diagnostic examination. All Ph.D. students must complete at least six hours of graded graduate work in a field outside North America and Western Europe.

Two research tools are required by the Graduate School. At least one research tool must be a foreign language. Information on requirements for two research tools may be found on the department website.

Students may undertake an internship program under the direction of their advisory committees. More specific information is available on file in the department office and on the website. After completing the course work, fulfilling the research tool requirements, passing the preliminary examinations, and presenting an acceptable dissertation prospectus, the student will be recommended for Ph.D. candidacy and will devote full time to the dissertation. Dissertation subjects must be chosen from either United States history, Latin American history, European history, African history, or history of Asia/the Middle East. The final oral examination will cover the field of the dissertation and related matters.

Cooperative Ph.D. Program

The Departments of History at SIU-Carbondale and SIU-Edwardsville have entered into a cooperative Ph.D. program in Historical Studies which enables students to do work on both campuses. Additional information may be obtained at siue.edu/academics/graduate/degrees-and-programs/historical-studies-phd/.

Graduate Certificate in Women, Gender and Sexuality Studies

The History department participates in a graduate certificate in Women, Gender and Sexuality Studies. History graduate students interested in pursuing a certificate in Women, Gender and Sexuality Studies (WGSS) should contact the WGSS director and/or cross-listed faculty for the required courses and guidelines. See the Graduate Certificate Requirements for more information. This certificate recognizes the important interdisciplinary nature of Women, Gender and Sexuality Studies and History.

History Courses

HIST401 - Atlantic History 401-3 Atlantic History. This course examines the origins and development of the Atlantic basin as an intercommunication zone for African, European and American societies from the mid-15th century through the early-19th century. Themes include transformation of environments, forced and voluntary migrations, emergence of distinct Atlantic culture communities, development of Atlantic economics and formulation and implementation of Atlantic revolutionary ideologies.

HIST403 - American Indians & US Empire 403-3 American Indians and U.S. Empire. Use historical analysis to investigate sovereignty issues involving American Indians and the United States. The course looks critically at the relationship between Native people and dominant U.S. society in terms of colonialism. Students will read academic scholarship and write papers on related cultural, economic,
political, and social topics. The course is designated as Writing Across the Curriculum (WAC).
Prerequisite: None, HIST 366 recommended.

**HIST406A - Gender/Family/Sex Pre-Mod Eur** 406A-3 Gender, Family and Sexuality in Pre-Modern Europe. (Same as WGSS 406A) A discussion of the history of the family, creation of gender roles and importance of sexuality from medieval times to the French Revolution.

**HIST406B - Gender/Family/Sex in Mod Eur** 406B-3 Gender, Family, and Sexuality in Modern Europe. (Same as WGSS 406B) A discussion of the history of family, creation of gender roles, and importance of sexuality from the French Revolution to the present. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**HIST407 - History of Latinos in the US** 407-3 History of Latinos in the United States. This course examines the history of Latino/a and Latin American peoples in the United States from the Colonial Era to the present. Themes to be addressed in the course include early imperialism and commercial expansion, the social construction of race, the formation of "borderland" communities, Latino immigration and assimilation, the centrality of work and labor within Latino history, and contemporary Latino culture and politics.

**HIST408 - History of Mexico** 408-3 History of Mexico. This course surveys the history of Mexico from the earliest human inhabitation to the present. It will present different interpretations of the major themes and developments in Mexican history. A goal is to understand Mexico from the perspective of the Mexicans rather than from the point of view of the United States. Themes to be included in the course include the diversity of pre-Columbian indigenous societies; Spanish conquest; colonialism and anti-colonialism; Mexican independence; the historiography of the Mexican Revolution; and the place of Mexico within the world-economic system.

**HIST409 - Food and History** 409-3 Food and History. Food is fundamentally about survival-it was for our ancestors millennia ago, and continues to be so, not only for the millions of undernourished worldwide, but for all of humanity as we confront the impact of obesity, globalization and environmental change. Because food is essential to our survival, its history is long, varied, and rich, and touches on themes including (but not limited to) politics and government; gender, race, and ethnicity; the family, religion and culture; health and the environment, and business, industry, and advertising. This class will explore these themes of global food history.

**HIST410 - 19th Century Europe** 410-3 Europe in the Long Nineteenth Century, 1789-1914. This course offers a topical examination of the history of Europe from the French Revolution to World War I, mainly focusing on the French Revolution, industrialization, nationalism and nation building, and imperialism. There will also be some focus on European intellectual and cultural transformations during this period. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**HIST412A - Empire & Conflt Roman Republic** 412A-3 Empire and Social Conflict in the Roman Republic. The social, political and cultural consequences of Roman expansion during the Republican period (c. 700-44 BCE). Focus on reading and analyzing primary sources. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**HIST412B - Religion/Society Imperial Rome** 412B-3 Religion and Society in Imperial Rome. Religious, social, and cultural conflict and change in the Roman Empire, first through third centuries. Focus on reading and analyzing primary sources. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**HIST413 - Christ Power Socty Late Antqty** 413-3 Christianization of Power and Society in Late Antiquity. An investigation into the political and social changes involved in the rise of Christian leadership in Western Europe following the fall of the Roman Empire. The course will focus on reading and analyzing primary sources from the fourth through the eighth centuries. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**HIST415 - Tudor and Stuart Britain** 415-3 Tudor and Stuart Britain. Course focuses on the political, cultural, and religious worlds of early modern Britain under two momentous, though short-lived dynasties,
the Tudors (1485-1603) and the Stuarts (1603-1714). Considerable attention will be paid to Henry VIII and the Henrican Reformation, the English Civil War, and the Glorious Revolution.

HIST417 - Ritual Revolt Early Mod Europe 417-3 Ritual and Revolt in Early Modern Europe. This course examines political practices on different levels of European society from the later middle ages through the Enlightenment: court ritual, popular revolts, patronage networks, representative assemblies and family politics are among the topics covered. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST417H - Ritual/Revolt Early Mod Europe 417H-3 Ritual and Revolt in Early Modern Europe. This course examines the social and political processes of ritual and revolt on different levels of European society from later middle ages to the French Revolution: court ritual, lifecycle rituals, religious rituals, popular protests, and revolution are among the topics covered. Honors students will select a topic to research during the course of the semester. Each student will lead the class in a discussion of his/her topic during the semester, and write a research proposal and annotated bibliography on that topic due at the end of the semester.

HIST418 - The Renaissance Exchange 418-3 The Renaissance Exchange. Course employs the traditional Renaissance themes of economic, political and cultural developments in Italy and Europe from 1300-1550 as the framework for detailed examination of European interactions - economic, ideological, religious - with Asia, the Middle East and the Americas. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST420 - Reformation 420-3 Reformation. Concentrates on the movement of religious reforms in the 16th Century. Emphasis on its roots in the past, particularly in earlier expressions of popular piety and to the wider social and political effects in the 16th and 17th centuries. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST421 - The French Revolution 421-3 The French Revolution. This course will consider the causes, events and outcomes of the French Revolution and Age of Napoleon (1789-1815) and situate the revolution in a global context. Themes to be considered include the influence of the American Revolution and the Enlightenment, democracy and human rights, forms of popular and female protest, revolutionary culture, French imperialism and the fight for freedom in Haiti and the legacies of the revolution.

HIST425A - 20th Cent Europe: 1914-1945 425A-3 Twentieth Century Europe 1914-1945. Political, social, and economic development of the major European states during the present century.

HIST425B - 20th Cent Europe Since 1945 425B-3 Twentieth Century Europe Since 1945. Political, social, and economic development of the major European states during the present century.

HIST426 - City Culture Europe 1870-1914 426-3 Cities and Culture in Europe 1870-1914. Cultural and social history focusing on four European cities (Paris, Berlin, Vienna, St. Petersburg) in the Fin-de-Siecle period (1870-1914). Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST427 - World War I 427-3 World War I. The first World War (1914 - 1918) from a variety of perspectives, with emphasis on cultural, social and political. Seminar-type format with discussions of topics such as the war's causes, nature of trench warfare, the home front, and political and cultural impact of the war. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST429 - Political Violence Modern World 429-3 Political Violence in the Modern World. This course will look at various forms of state and political violence in the 19th and 20th centuries. We will start with the "Reign of Terror" in the French Revolution, then look at the rise of terrorism in the later 19th century. The course will also cover state violence in the 20th century such as WWI, the Shoah, and the Gulag. We will examine the "logic" and justification of both state and non-state political violence. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST437 - Lesbian and Gay History 437-3 Lesbian and Gay History in the Modern United States. (Same as WGSS 437) This course explores the social, political, and cultural history of lesbians, gay men, and other sexual and gender minorities in the United States from the turn of the twentieth century to the present. Themes to be taken up in the class include: the emergence of heterosexuality and homosexuality as distinct categories of identity; the intersection between sexual identity and identities
of race, class, gender, and ethnicity; the relationship between homosexuality and transgenderism; the
movement for gay liberation; the creation of lesbian and gay urban and rural subcultures; representations
of homosexuality in popular culture; anti-gay backlash; and AIDS.

HIST442 - Victorian Britain 442-3 Victorian Britain: Politics, Society, and Culture. An examination of
British politics, society, and culture examining political transformations from the Glorious Revolution to the
Great War, industrialization and the emergence of a class society, Ireland and the British Empire in British
culture, and Victorian culture. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST444 - The Holocaust 444-3 The Holocaust. An introduction to Nazi German's systematic mass
murder of Europe's Jews and other minorities. Using works of history, literature, and film, we will examine
such topics as anti-Semitism, the behavior of "ordinary Germans" during the 30s and 40s, Jewish
resistance, Holocaust denial and memory after the Holocaust.

This course introduces students to theories, concepts, and the history of crimes, criminals, and scientists
in Latin America. It will address the social construction of crime, criminals, and criminality to show the way
in which different Latin American societies, and their respective histories viewed, described, defined, and
reacted to "criminal" behavior.

HIST447 - Culture and the British Empire 447-3 Culture and the British Empire. This course will focus
on the culture of modern British imperialism. It will examine the impact that the people and commodities
of the empire as well as the practices of imperial rule had on modern British culture. The emphasis of the
course will be on the implications of "imperial culture" in mediating gender, race, and class relations within
the broader empire as well as contemporary Britain. Fulfills the CoLA Writing-Across-the-Curriculum
(WAC) requirement.

HIST448 - Gender/Family Modern US Hist 448-3 Gender and Family in Modern U.S. History. (Same as
WGSS 448) This course explores the history of gender and the family in the United States from the late
19th century to the present. Themes to be explored include: the family and the state, motherhood, race
and family life, and the role of the "family" in national politics.

HIST450A - Colonial America 450A-3 Colonial America. The evolution of American society from
European settlement through the Age of Jefferson, with special emphasis on social and political
institutions and thought.

HIST450B - American Revolution 450B-3 American Revolution. The evolution of American society
from European settlement through the Age of Jefferson, with special emphasis on social and political
institutions and thought.

HIST451 - Antebellum America 451-3 Antebellum America. The struggle to define the nation in the
polical, economic and social realms; the emergence of women's rights, slavery, sectional conflict from
1815 to 1860.

HIST452 - The Civil War & Reconstruction 452-3 The Civil War and Reconstruction. The study of the
background to the Civil War, the Civil War, Reconstruction, and the Gilded Age.

HIST455 - American Conservatism 455-3 The Conservative View in American History. Readings in
American conservative thought, from the eighteenth-century to the present day, including traditionalist,
neoconservative and libertarian writers. Fulfills the CoLA Writing-Across-the-Curriculum (WAC)
requirement.

HIST457 - American Environmental History 457-3 American Environmental History. (Same as GEOG
457) An exploration of the attitudes toward and the interaction with the natural resource environment of
North America by human settlers. Coverage from the Neolithic Revolution to the present.

HIST458 - Bantu Diasporas 458-3 Bantu Diasporas in Africa & the Atlantic World. (Same as AFR 458)
This course examines the origins and development of Bantu language and culture groups in Africa and
the Atlantic World from the first dispersal of Bantu-speaking people thousands of years ago through the
end of slavery in the Americas. Additionally, the course explores the multiple methods and disciplines
used to construct histories of Bantu language and culture groups.
HIST460 - Slavery & The Old South 460-3 Slavery and The Old South. (Same as AFR 460) This course examines slavery and southern distinctiveness from the colonial period to 1861. Discussion topics include the plantation system, race relations, women and slavery, and southern nationalism.

HIST461 - Black Ams on Western Frontier 461-3 Black Americans on the Western Frontier. (Same as AFR 461) This course examines the history of African Americans in the American West. Taking both a chronological and thematic approach, it begins with a discussion of early black explorers in the age of encounter, and ends with a focus on black western towns established in the United States by the 1880's.

HIST464 - American Capitalism 464-3 History of American Capitalism. This course examines the growth of the American economy, economic thought, the evolution of the firm, and the changing place of women and minorities in American business society. It also explores the intersection between business and other institutions in American life, including labor, law, literature, government, education and religion. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

HIST465 - History of Sexuality 465-3 History of Sexuality. (Same as WGSS 465) Comprehensive survey of sexuality from the early modern period to the present. Examines social trends, politics, and cultural debates over various forms of sexuality. Students will engage in discussion, research, and writing. Areas of emphasis vary by instructor.

HIST466A - Trans-Appalachian Frontier 466A-3 History of the American West-Trans-Appalachian Frontier. The American frontier and its impact on American society from the colonial period to the 20th century.

HIST466B - Trans-Mississippi Frontier 466B-3 History of the American West-Trans-Mississippi Frontier. The American frontier and its impact on American society from the colonial period to the 20th century.

HIST470 - Latin Amer-Continuity & Change 470-3 Continuity and Change in Latin America. An in-depth examination of major topics in the history of Latin America since pre-Columbian times, especially themes that have been prominent in recent scholarship. Lectures will be supplemented by outside readings and class discussion.

HIST471 - History of Modern Japan 471-3 History of Modern Japan. An examination of Japanese History from the early Tokugawa period to the present. Major topics include the creation of the Japanese bureaucracy, commercialization and industrialization, and cultural experimentation.

HIST473 - Comparative Slavery 473-3 Comparative Slavery. (Same as AFR 473) A comparative study of slavery from antiquity to its abolition in the 19th century with the differing socio-cultural, political and economic contexts; organized chronologically, regionally and thematically.

HIST478 - Southern Africa, 1650-1994 478-3 Southern Africa, 1650-1994. (Same as AFR 478) An examination of Southern African history with emphasis on South Africa from 1652 to 1994. Topics to be covered include conflicts and wars, migrations and state formations, the economics of minerals, industrialization and the Anglo-Boer War, intertwined histories of race relations, the politics of exclusion and apartheid, and the making of modern South Africa.

HIST480A - History of China 1350-1890 480A-3 History of China-Late Imperial China, 1350 to 1890. An in-depth examination of political, economic, social and cultural history of China from 1350 to 1890. Examines the imperial state, gentry and peasants, commercialization and social change in China from 1350 to 1890.

HIST480B - History of China 1890-Present 480B-3 History of China-Twentieth Century China, 1890 to the Present. An in-depth examination of political, economic, social and cultural history of China from 1890 to the present. Focuses on nation building, ideology and rural-urban culture in 20th Century China.

HIST481 - History African American Women 481-3 History of African American Women. This course examines the history of African American women. Topics include slavery and freedom, community building, leadership, education, politics, religion, and the establishment of African American women's organizations. Participation in the abolition, suffrage, feminist, gay and lesbian, civil rights and black
power movements are also topics of discussion. The course speaks to the resilience African American women showed despite the obstacles of race, class, and gender confronting them at every turn.

HIST485 - Revolutions Middle East 485-3 Revolutions in the Middle East. (Same as HIST 485H) This class examines aspects of revolutions and revolutionary attempts in the history of the modern Middle East. Recognizing revolution as a global phenomenon, it begins by considering a variety of historical and theoretical approaches to understanding revolutions. It asks questions such as what constitutes a revolution, what contexts and causes lead to revolutions, and what effects revolutions engender. It then examines revolutions in the modern Middle East more closely by focusing on several specific cases such as the Ottoman and Iranian constitutional revolutions, the secular revolutionary experiment in early twentieth-century Turkey, attempts at a socialist revolution in the Arab world, the Islamic Revolution in Iran, and the Arab Spring. Not open to freshmen.

HIST485H - Revolutions Middle East 485H-3 Revolutions in the Middle East. (Same as HIST 485) This class examines aspects of revolutions and revolutionary attempts in the history of the modern Middle East. Recognizing revolution as a global phenomenon, it begins by considering a variety of historical and theoretical approaches to understanding revolutions. It asks questions such as what constitutes a revolution, what contexts and causes lead to revolutions, and what effects revolutions engender. It then examines revolutions in the modern Middle East more closely by focusing on several specific cases such as the Ottoman and Iranian constitutional revolutions, the secular revolutionary experiment in early twentieth-century Turkey, attempts at a socialist revolution in the Arab world, the Islamic Revolution in Iran, and the Arab Spring. Honors students will complete an extra project for the course. Not open to freshmen.

HIST486 - Arab-Israeli Conflict 486-3 Arab-Israeli Conflict. This course focuses on the background to, and current dimensions of, the continuing conflict between Israel, the Palestinians and the rest of the Arab world. Beginning with origins of Zionism in the late nineteenth century, it examines, the foundation of Israel, Palestinian responses, and relations between Israel and its Arab neighbors.

HIST487 - Civil Rights Movement 487-3 The U.S. Civil Rights Movement. (Same as AFR 497) This course provides an overview of the history of the Civil Rights Movement while engaging major debates in the field of Black Freedom Studies. Central themes will include the impact of the Cold War, the roles of women, and the relationship of civil rights to black power. We will also discuss the difference between popular memory and historical scholarship as well as the meaning of such discussions for contemporary issues of racial and economic justice.

HIST488 - Islamic Political Movements 488-3 Islamic Political Movements. This course examines the use of Islamic ideals and rhetoric in social and political movements in the Middle East from the nineteenth century to the present. It focuses on political parties such as the Muslim Brotherhood in Egypt, the Welfare Party in Turkey, and Hamas in Palestine.

HIST489 - Women State Relign in Mid East 489-3 Women, State and Religion in the Middle East. (Same as WGSS 489) Following an introduction to the question of women in Islamic law and Islamic history, this course will examine the changing status and experiences of women in a number of Middle Eastern countries in the 20th century, focusing on Egypt, Iran, and Turkey. Major themes will include legal, social and political rights, participation in social and economic life, cultural and literary production, and recent secular and Islamist women’s movements.

HIST490 - Special Readings in History 490-1 to 4 Special Readings in History. Supervised readings for students with sufficient background. Registration by special permission only.

HIST491 - Historiography 491-3 Historiography. Writings of historians from Herodotus to the present.

HIST493 - Topics in History 493-1 to 6 Topics in History. Topics vary with instructor. May be repeated for a maximum of six semester hours provided registrations cover different topics. Topics announced in advance.

HIST496A - Internship in History 496A-1-9 Internship in History. Supervised field work in public or private agencies or operation where history majors are frequently employed, such as archives and libraries, government offices, communications media, historic sites, and museums. Only three hours
may be applied to the major and six hours toward the M.A. degree. Special approval needed from the instructor.

**HIST496B - Internship in Local History** 496B-1-9 Internship in Local History. (Same as ARC 434) Field experience in research and preservation related to regionally and nationally recognized historic sites in southern Illinois. Special approval needed from the instructor.

**HIST497 - Restoration & Archives** 497-3 Historical Museums, Sites, Restorations and Archives. The development of museums from antiquity to the present, with emphasis on the United States. Additional topics include historical sites such as battlefields, historic buildings, restorations, monuments and archives. Also examines the purposes and functions of the museum and the tasks of professionals employed in museums or interpretative centers. Given in cooperation with the University Museum.

**HIST498 - Oral History and Media** 498-3 Oral History, Storytelling and Media. (Same as RTD 455) This course will develop an appreciation of the field of oral history, methodological concerns, and applications. Students will learn about the oral history process, including interview preparation and research, interview technique, the nature and character of evidence, transcribing, and legal and ethical concerns. Restricted to Junior or Senior standing.

**HIST500 - The Historian's Craft** 500-3 The Historian's Craft. Examination of historical methodology and recent trends in historiography. How historians conduct research and convey the results of it. Special treatment of selected topics of historiography. Required of M.A. degree students. Ph.D. degree students should consult graduate advisers.

**HIST501 - Recent Historiography** 501-4 Recent Historiography. Trends in historical writing and historical interpretation in the 20th Century. Required of M.A. degree students. Ph.D. degree students should consult graduate advisers.

**HIST522 - Colloquium in European History** 522-4-8 (4 per semester) Colloquium in European History. Group reading and discussion about major periods, subregions and themes in European history. May be repeated as instructors and topics vary.

**HIST523 - Research Sem in European Hist** 523-4 to 20 (4 per semester) Research Seminar in European History. Research and writing on selected topics in European history. Students will prepare a major paper. May be repeated as topics and instructors vary.

**HIST551 - Colloquium Middle East History** 551-4-8 (4 per semester) Colloquium in Middle East History. Group reading and discussion about major periods, subregions, and themes in the history of the Middle East and the Islamic world. May be repeated as topics vary.

**HIST552 - Seminar Middle East History** 552-4-8 (4 per semester) Research Seminar in Middle East History. Research and writing on selected topics in the history of the Middle East and the Islamic world. Students will prepare a major paper. May be repeated as topics vary.

**HIST554 - Colloquium in U. S. History** 554-4 to 8 (4 per semester) Colloquium in United States History. Group reading and discussion about major periods, subregions and themes in United States history. May be repeated as instructors and topics vary.

**HIST555 - Research Seminar in U.S. Hist** 555-4 to 20 (4 per semester) Research Seminar in United States History. Research and writing on selected topics in United States history. Students will prepare a major paper. May be repeated as topics and instructors vary.

**HIST570 - Research Sem in Latin America** 570-4 to 12 (4 per semester) Research Seminar in Latin American History. Research and writing on selected topics in Latin American history. Students will prepare a major paper. May be repeated as topics vary.

**HIST571 - Colloquium in Latin Amer Hist** 571-4-8 (4 per semester) Colloquium in Latin American History. Group reading and discussion about major periods, subregions and themes in Latin American history. May be repeated as instructors and topics vary.
HIST580 - Research Seminar in Asian History 580-4 to 12 (4 per semester) Research Seminar in Asian History. Research and writing on selected topics in Asian history. Students will prepare a major paper. May be repeated as topics vary.

HIST581 - Colloquium in Asian History 581-4-8 (4 per semester) Colloquium in Asian History. Group reading and discussion about major periods, subregions and themes in Asian history. May be repeated as instructors and topics vary.

HIST582 - Colloquium in World History 582-4-8 (4 per semester) Colloquium in World History. Group reading and discussion about major periods, subregions and themes in world history. May be repeated as instructors and topics vary.

HIST583 - Research Seminar World History 583-4 to 12 (4 per semester) Research Seminar in World History. Research and writing on selected topics in World History. Students will prepare a major paper. May be repeated as topics vary.

HIST584 - Colloquium Comparative History 584-4-8 (4 per semester) Colloquium in Comparative History. Group reading and discussion relating to cross cultural or other comparative approaches in history. May be repeated as instructors and topics vary.

HIST585 - Research Seminar in Comparative History 585-4 to 8 (4,4) Research Seminar in Comparative History. Research on selected topics employing cross-cultural or other comparative approaches. Students will prepare a major paper. May be repeated as topics vary.

HIST586 - Colloquium in African History 586-4-8 (4 per semester) Colloquium in African History. Group reading and discussion about major periods, subregions and themes in African history. May be repeated as instructors and topics vary.

HIST587 - Research Seminar African History 587-4 to 12 (4 per semester) Research Seminar in African History. Research and writing on selected topics in African history. Students will prepare a major paper. May be repeated as topics vary.

HIST590 - Readings in History 590-1 to 8 (1 to 3 per semester) Readings in History. Individual readings. Registration by special permission only. Student must obtain the consent of the faculty member involved. M.A. degree students are limited to a maximum of 4 hours toward the 30-hour requirement. Graded S/U only. Registration by special permission only.

HIST596 - Tutorial in History 596-3 Tutorial in History. Research and writing in history in close consultation with an instructor to produce a major paper on a selected topic. This course may count toward graduation as a seminar and the paper will be placed on file in the Department of History. Students may take this course only once at the M.A. level and once at the Ph.D. level. Special approval needed from the director of graduate studies.

HIST597 - Practicum Teaching College History 597-1 to 9 (1 to 3 per semester) Practicum in Teaching College-Level History. Students will learn how to lead discussion sections and/or to teach independent courses at the college level. M.A. or Ph.D. students assigned for the first time as a discussion leader must take this course. The course also is required for Ph.D. students who are teaching their own courses for the first time. Graded S/U only. Restricted to graduate students in history. Special approval needed from the director of graduate studies.

HIST598 - Graduate Internship in History 598-1 to 9 Graduate Internship in History. Supervised field work in occupationally related fields in public history, teaching, university publishing, historical editing. Programs of field work will be designated by students in consultation with their advisory committees. Students at the Ph.D. level can take as many as 9 hours in the course of their studies. Graded S/U or DEF.

HIST599 - Thesis 599-1 to 6 Thesis. Minimum of three hours to be counted toward a Master's degree.

HIST600 - Dissertation 600-1 to 30 (1 to 16 per semester) Dissertation.

HIST601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their
dissertation, thesis or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**HIST699 - Postdoctoral Research** 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

### History Faculty

**Allen, Howard W.** Professor, Emeritus, Ph.D., University of Washington, 1959; 1962.

**Allen, James Smith** Professor, Emeritus, Ph.D., Tufts University, 1979; 1991. European; Modern: France; social and cultural.

**Argersinger, Jo Ann E.** Professor, Emeritus, Ph.D., George Washington University, 1980; 1998; U.S. labor.

**Argersinger, Peter H.** Professor, Emeritus, Ph.D., University of Wisconsin, Madison, 1970; 1998. U.S. political, rural, Gilded Age.

**Batinski, Michael C.** Professor, Emeritus, Ph.D., Northwestern University, 1969; 1968.

**Bean, Jonathan J.** Professor, Ph.D., Ohio State University, 1994; 1995. U.S.: economic and business.

**Benti, Getahun** Professor, Ph.D., Michigan State University, 2000; 2001. Modern Africa, urbanization-migration.

**Brown, Ras Michael** Associate Professor, Ph.D., University of Georgia, 2004; 2006. Atlantic World.

**Carr, Kay J.** Associate Professor, Emeritus, Ph.D., University of Chicago, 1987; 1989. U.S. Social; 19th century; Illinois, frontier, environmental.

**Carrott, M. Browning** Professor, Emeritus, Ph.D., Northwestern University, 1966; 1967.

**Detwiler, Donald S.** Professor, Emeritus, Dr. phil., Goettingen University, 1961; 1967.

**Dotson, John E.** Professor, Emeritus, Ph.D., Johns Hopkins University, 1969; 1970.

**Fanning, Charles F.** Professor, Emeritus, Ph.D., Pennsylvania, 1972; 1993.

**Gold, Robert L.** Professor, Emeritus, Ph.D., University of Iowa, 1964; 1965.

**Haller, John S., Jr.** Professor, Emeritus, Ph.D., University of Maryland, 1968; 1991.

**Lieberman, Robbie** Professor, Emeritus, Ph.D., University of Michigan, 1984; 1991.

**Najar, Jose** Assistant Professor, Ph.D., Indiana University, 2012; 2014. Latin America, Brazil.

**O'Day, Edward J.** Associate Professor, Emeritus, A.M., Indiana University, 1956; 1962.

**Sramek, Joseph** Associate Professor, Ph.D., CUNY Graduate Center, 2007; 2007. Late modern Europe, imperial England, gender and sexuality.

**Stocking, Rachel** Associate Professor, Emeritus, Ph.D., Stanford University, 1994; 1994. European: Ancient and early medieval; cultural and political; Spain.

**Weeks, Theodore R.** Professor, Ph.D., University of California, Berkeley, 1992; 1993. Russia/USSR, East Central Europe: cultural and political; nationalism.

**Werlich, David P.** Professor, Emeritus, Ph.D., University of Minnesota, 1968; 1968.

**Whaley, Gray** Associate Professor, Ph.D., University of Oregon, 2002; 2006.

**Wilson, David L.** Professor, Emeritus, Ph.D., University of Tennessee, 1974; 1974.

**Yilmaz, Hale** Associate Professor, Ph.D., University of Utah, 2006; 2006. Islamic, Middle East, modern Turkey.

**SIU Edwardsville Cooperative Ph.D. Faculty:**

**Alexander, Erik B.** Assistant Professor, Ph.D., University of Virginia, 2011. 19th century U.S., Civil war and reconstruction.

**Cheeseboro, Anthony** Associate Professor, Ph.D., Michigan State University, 1993. History of development, agriculture, and slavery.

---

Kinesiology

Master of Science in Education

Graduate courses in Kinesiology are offered toward the Master of Science in Education degree with a major in Kinesiology.

Two study tracks are available:

1. **Sport Studies** (with specializations in Sport Management, Social Psychology of Sport)
2. **Exercise Science** (with specializations in Biomechanics, Exercise Physiology, Motor Behavior)

Options for Sport Studies Program (37 Hours)

Requires a minimum of 31 semester hours of credit plus one of the following six-hour options:

- Thesis - KIN 599, 6 hours
- Research Project - KIN 592, 3 hours
  Additional Class, 3 hours
- Professional Development Project - KIN 594, 3 hours
  Additional Class, 3 hours
- Internship - KIN 555, 6 hours

The following are required courses in Sport Studies: KIN 501, KIN 504, KIN 513, KIN 550, or approved substitutes that are 500-level coursework.
Options for Exercise Science Program (37 Hours)

Requires a minimum of 31 semester hours of credit plus one of the following six-hour options:

- Thesis - KIN 599, 6 hours
- Research Project - KIN 592, 3 hours
- Additional Class, 3 hours

The following are required courses in Exercise Science: KIN 511, KIN 520, KIN 525, KIN 530, or approved substitutes that are 500-level coursework.

Criteria for Unconditional Admission

1. Admission to the Graduate School which requires a 2.70/4.00 for the last 60 hours of coursework.
2. Three completed “Request for Recommendation” forms provided by the Graduate School.
3. A review of the application by the appropriate faculty and a willingness of a faculty member to serve as the program advisor for the applicant.
4. This program requires a nonrefundable $65 application fee that must be submitted with the online application for Admission to Graduate Study in Kinesiology. Applicants must pay this fee by credit card.

A degree in Kinesiology is not required for admission into the graduate program. An individual program in Exercise Science or Sport Studies will be developed for the student. Completed applications are reviewed as they are received. Up to but not exceeding 12 hours of B grade or higher transfer credits will be considered by the department for application to the course work requirement and, for advisement purposes, should be considered during the first semester in the program.

Requirements

All students are required to take KIN 500 (Techniques of Research) and a graduate class in statistical procedures. Additional requirements for the degree are specific to the respective areas of either Exercise Science or Sport Studies. All students not doing a thesis or other culminating projects must pass a comprehensive examination which may be taken after the major portion of the course work has been completed. If the research project option is selected, submission of the completed Research Project must comply with the rules of the Graduate School. If the thesis option is selected submission of the thesis will be electronic and must comply with the rules of the Graduate School.

Graduate Assistantships

A limited number of graduate assistantships are available on a competitive basis to students in a degree program. The Graduate Teaching Assistantships are for instruction in the undergraduate program and are available to applicants who have appropriate qualifications relevant to the teaching area. Applications may be obtained from the Director of the School of Human Sciences and they are reviewed by a committee independently of the admissions process. In order to hold a graduate assistantship, a student must be registered as a full time student (eight hours, fall/spring; three hours, summer) during the semester of appointment.

Kinesiology Courses

**KIN400 - Psychology of Injury** 400-3 Psychology of Injury. This course will explore the theory and research related to the psychological aspects of injury and injury rehabilitation. The focus is on theory and application. Case studies will be used to explore assessment and intervention approaches relevant for different levels of athletic training, sports medicine and sport psychology professionals.
KIN402 - Exer Prog Cancer Survivors 402-2 Exercise Programming for Cancer Survivors and Caregivers (Strong Survivors Staff Training). The primary goal of this course is to give both graduate and undergraduate students the necessary tools to successfully prescribe and administer safe and effective exercise programs and assessments for cancer survivors and caregivers as a staff member for the Strong Survivors Exercise and Nutrition Program for Cancer Survivors and Caregivers. The course will also give students a baseline of knowledge that will help prepare them to sit for cancer exercise trainer certification exams. Special approval needed from the instructor.

KIN408 - Advanced Exercise Prescription 408-3 Advanced Exercise Prescription. Advanced exercise prescription provides an analysis of physical fitness as it relates to the total well-being of the individual. The course contains specific units on fitness parameters, hypokinetic disease, stress, current levels of physical fitness, but emphasizes the creation of training programs. The course contains exercise prescription for healthy, at risk, overweight and chronically ill populations. Prerequisite: KIN 382 and KIN 320.

KIN416 - Team Building 416-3 Introduction to Team Building. The purpose of this course is to acquaint students, teachers, coaches and administrators with the "team building model". The course will focus on icebreakers, trust and communication initiatives, problem solving skills and processing. The goal of this introductory course is for the participants to become familiar and acquire team building skills, to develop a workable team building model and initiate the plan in the classroom or workplace.

KIN420 - Advanced Exercise Physiology 420-3 Advanced Exercise Physiology. The general physiological effects of motor activity upon the structure and function of body organs; specific effect of exercise on the muscular system. Prerequisite: PHSL 201 and KIN 320.

KIN428 - Phys Act/Exercise-Older Adults 428-3 Physical Activity and Exercise for Older Adults. (Same as GRON 428) This course is designed to introduce the student to physical changes of the older person with reference to activity and exercise and to teach the student about rational activity and exercise programs for the older person with consideration of the care and prevention of typical injuries that may occur with such programs.

KIN493A - Individual Research: Dance 493A-2 to 4 Individual Research-Dance. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN493B - Individl Research:Kinesiology 493B-2 to 4 Individual Research-Kinesiology. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN493C - Individl Research:Measurement 493C-2 to 4 Individual Research-Measurement. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN493D - Ind Research:Motor Development 493D-2 to 4 Individual Research-Motor Development. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN493E - Ind Res:Physiology of Exercise 493E-2 to 4 Individual Research-Physiology of Exercise. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN493F - Ind Res:History & Philosophy 493F-2 to 4 Individual Research-History and Philosophy. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.
KIN493G - Indiv Research:Motor Learning 493G-2 to 4 Individual Research-Motor Learning. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN493H - Ind Res:Psycho/Social Aspects 493H-2 to 4 Individual Research-Psycho-social Aspects. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN493I - Ind Res: Sport Management 493I-2 to 4 Individual Research-Sport Management. The selection, investigation, and writing of a research topic under supervision of an instructor. Written report required. Special approval needed from the instructor.

KIN494A - Practicum in Kinesiology 494A-1 Practicum in Kinesiology. Supervised practical experience at the appropriate level in selected kinesiology activities in conjunction with class work. Work may be in the complete administration of a tournament, field testing, individual or group work with special populations, administration of athletics or planning kinesiology facilities. Special approval needed from the instructor.

KIN494B - Practicum in Kinesiology 494B-1 Practicum in Kinesiology. Supervised practical experience at the appropriate level in selected kinesiology activities in conjunction with class work. Work may be in the complete administration of a tournament, field testing, individual or group work with special populations, administration of athletics or planning kinesiology facilities. Special approval needed from the instructor.

KIN500 - Techniques of Research 500-3 Techniques of Research. Study of research methods and critical analysis of research literature specifically applied to the areas of sport exercise and motor performance. Special approval needed from the instructor.

KIN501 - Foundations of Sport/Fitness Mgmt 501-3 Foundations of Sport and Fitness Management. An introduction to broad concepts and issues regarding the management of health clubs, corporate fitness programs; and various components of amateur and professional sport organizations. Students will investigate foundational aspects of sport and fitness management, examine requirements for operating successful programs, and gain insight into various career opportunities.

KIN502 - Interview Research 502-3 Methods of Interview Research. This course will familiarize students with the theory and techniques of interview research and demonstrate the application of this research method to practice. Students will engage in a group interview project focusing on a selected issue and an individual project utilizing interview research in their specialty area. No prerequisites required.

KIN503 - Seminar in Kinesiology 503-2 Seminar in Kinesiology. Making a systematic analysis of problems and issues encountered in the conduct of kinesiology. Selection of a problem or issue that is a concern to Kinesiology and suggestion of solutions.

KIN504 - Psychological Aspects of Sport 504-3 Psychological Aspects of Sport. This course presents the theoretical and empirical foundations of sport psychology. Operating from a conceptual rather than an applied framework, this class develops an understanding of social psychological phenomena and processes related to participation in sport and physical activity (e.g., personality, anxiety, arousal, achievement motivation, social facilitation, aggression, pro-social behavior, group dynamics).

KIN505 - Topical Seminar Kinesiology 505-3 to 12 (3 per topic) Topical Seminar in Kinesiology. Students may concentrate on different topics each semester dependent upon both the interests of the students and the expertise of the graduate faculty. Special approval needed from the instructor.

KIN506 - Medical Aspects of Exercise 506-3 Medical Aspects of Exercise. This course is a presentation/discussion style course in which students will examine and discuss the principles of exercise testing and prescription for individuals from a wide variety of disease/disability backgrounds. Discussion will include issues of caution/contradiction for various forms of exercise, the role of exercise as a therapeutic modality and exercise as a means of preventive medicine. Prerequisite: KIN 420.

KIN507 - Organizational Behavior in Sport 507-3 Organizational Behavior in Sport. This course provides students with an examination of fundamental theories and practices related to behavior of individual and groups in sport organizations. The focus will be on the practical application of the theories to the actions
of sport and physical activity managers. Special emphasis will be on: ethics in organizations, leadership, managerial decision making, motivation, organizational commitment, and managing a diverse work force.

**KIN508 - Administration of Athletics** 508-3 Administration of Athletics. Designed to present a broad view of the role, structure and governance of interscholastic and intercollegiate athletics programs. This course will enable students to develop and comprehend current knowledge, theories and practices in athletic management which operate within a framework of state and national governance policies and rules.

**KIN510 - Motor Development** 510-3 Motor Development. In-depth study of the development of gross motor skills from infancy through adolescence, the biological and environmental variables that affect motor development, and individual differences in attaining motor proficiency. In addition, selected current issues in motor development will be examined. No prerequisite.

**KIN511 - Biomech Analysis Hum Mov** 511-3 Biomechanical Analysis of Human Movement. Biomechanical concepts will be reviewed, as well as discussion concerning tissue mechanics, and the integration of the neural control of movement. Importance will be placed on application of mechanical principles when analyzing basic human movements. Includes completion of a topical research paper. Prerequisite: KIN 321 or equivalent.

**KIN512 - Biomechanic:Human Motion** 512-3 Biomechanics of Human Motion. Methods of data collecting and analyzing the biomechanics of human motion under normal and pathological conditions are covered. Students complete a biomechanical study for a one segment motion.

**KIN513 - Social Aspects of Sport** 513-3 Social Aspects of Sport and Physical Activity. This course presents the theoretical and empirical foundations of sport sociology. It is a survey course designed to introduce you to a variety of topics concerned with sociological aspects of sport and physical activity. A research-based approach is used to explore the relationship of sport to various social institutions, as well as the role of social processes in sport and physical activity contexts.

**KIN514 - Res/Practice Appl Sport Psyc** 514-3 Research and Practice in Applied Sport Psychology. This course examines current research and practice in applied sport psychology. Emphasis will be placed on moving from theory into practice on sport-specific individual differences, motivational approaches, and interventions.

**KIN515 - Body Composition & Performance** 515-3 Body Composition and Human Physical Performance. Physical dimensions of the human body as they influence motor performance and are modified by protracted physical exercise. Prerequisite: KIN 420 or equivalent.

**KIN517 - Athletic Facility Design** 517-3 Athletic and Kinesiology Facilities Design, Construction, and Maintenance. This course examines the principles and states of planning to manage an Athletic and Kinesiology facility. Basic principles of design, construction, maintenance and how to manage facilities based upon program characteristics.

**KIN520 - Metabolic Analys: Hum Activity** 520-3 Metabolic Analysis of Human Activity. Metabolic principles pertinent to human physical performance with emphasis on sport, exercise and occupational activity analysis. A detailed study of oxygen utilization, oxygen debt, mechanisms of oxygen transport as they relate to physiological homeostasis in localized and total body motor activity. Emphasis on the laboratory study of aerobic and anaerobic performance. Prerequisite: KIN 420 or equivalent.

**KIN525 - Motor Learning** 525-3 Motor Learning-Theories of Research. This course will provide a theory and research foundation for understanding motor skill acquisition and factors that influence the learning of motor skills. This foundation is important to develop research that will increase understanding of motor skill learning, and to design effective practice conditions that enhance learning. Various topics related to the cognitive and motor processes influencing motor skill learning will be discussed.

**KIN530 - Exercise Psychology** 530-3 Exercise Psychology. This course explores the theory and research related to the psychological and social aspects of exercise and how exercise may impact the individual's psychological health and behavior. The focus is on theory and application. It covers theories and models of exercise behavior, psychosocial outcomes of exercise, social factors in exercise behavior, and physical activity interventions.
KIN540 - Sport Promotions 540-3 Sport Promotions. This course provides the theoretical foundation of promotions specific to the sport industry. It will include professional applications to profit and non-profit sport organizations.

KIN550 - Legal Asp Spt Phys Act 550-3 Legal Aspects of Sport and Physical Activity. A course designed to acquaint student with legal research and the role that law plays in governing the kinesiology, sport and fitness industries. The student will actively research various theories of law and how they affect the nature of kinesiology, sport fitness activity, the participants and consumers. An additional focus will be on specific situations that give rise to injury and subsequent law suits.

KIN555 - Internship:Sport Mgmt 555-1 to 6 Internship in Sport Management. The internship is a culminating experience directly related to the student's intended employment or area of interest. It will, therefore, normally be taken after the predominance of course work is completed. The internship may be completed in any appropriate setting as judged by the faculty associated with the area of sport management. All conditions of placement, conduct and evaluation of the internship will be under the jurisdiction of the appropriate faculty. Graded S/U only. Special approval needed from the instructor.

KIN560 - Gender and Sport 560-3 Gender and Sport: Sociological and Psychological Perspectives. (Same as WGSS 560) This course explores psychological and sociological dimensions underlying the concept of gender and critically examines how gender relates to sport and physical activity. Students will be introduced to non-traditional as well as traditional research that addresses the issue of gender in various physical activity contexts.

KIN580 - Financial Aspects of Sport 580-3 Financial Aspects of Sport. The primary goal of this course is to provide students with a basic knowledge and understanding of the principles, processes, and strategies related to the financial aspects of sport organizations, which consist of professional sport franchises, college athletic departments, community recreation programs, etc. The focus will be on the many conventional and innovative revenue acquisition methods applicable to sport oriented organizations. In addition to the basic accounting concepts and budgeting techniques, this course will address current topics in the field of sport financing, including: tax support, municipal and corporate bonds, economic impact analysis, fundraising, licensing, ticket sales, concessions, and corporate sponsorships.

KIN590 - Readings in Kinesiology 590-1 to 4 Readings in Kinesiology. Supervised readings in selected subjects. Special approval needed from the instructor.

KIN592 - Research in Kinesiology 592-2 to 8 Research in Kinesiology. Plan, conduct, and report assigned research studies. Masters students may take up to three credit hours. Doctoral students must enroll for a minimum of six credit hours. Graded S/U only. Prerequisite: KIN 500 or equivalent. Special approval needed from the instructor.

KIN594 - Professional Develpmnt Project 594-3 Professional Development Project. Supervised independent work leading to the production of a professional development project that can be utilized in the student's professional career. The exact nature of the project is to be determined by the student and the respective graduate advisor. An additional graduate faculty member in the student's area of study also must approve the project before the student begins work. Graded S/U only. Special approval needed from the instructor.

KIN599 - Thesis 599-1 to 6 Thesis. Graded S/U. Prerequisite: KIN 500 or equivalent.

KIN601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. he student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

KIN699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.
**Kinesiology Faculty**

Ackerman, Kenneth, Assistant Professor, *Emeritus*, M.A., Michigan State University, 1959; 1969.

Anton, Philip M., Associate Professor, Ph.D., University of Northern Colorado, 2006; 2007. Exercise Physiology.

Becque, M. Daniel, Associate Professor, Ph.D., University of Michigan, 1988; 1990. Exercise Physiology.

Knapp, Bobbi, Associate Professor, Ph.D., University of Iowa, 2008; 2009. Sport Studies.

Olson, Michael, Associate Professor, Ph.D., Louisiana State University, 2006; 2006. Biomechanics.

Park, Meungguk, Associate Professor, Ph.D., The Ohio State University, 2005; 2005. Sport Management.

Partridge, Julie, Professor, Ph.D., University of Northern Colorado, 2003; 2004. Sport and Exercise Psychology.

Porter, Jared, Associate Professor, Ph.D., Louisiana State University, 2008; 2008. Motor Behavior.

Wallace, Juliane, Associate Professor, *Chair*, Ph.D., Iowa State University, 2004; 2004. Exercise Physiology.

Yoh, Taeho, Professor, Ph.D., Florida State University, 2001; 2001. Sport Management.

---

**Languages, Literatures, and Cultures**

The Department of Languages, Cultures, and International Trade offers a Master of Arts degree in Languages, Literatures, and Cultures with a specialization in either French or Spanish. The degree program includes courses in literature, linguistics, translation, pedagogy, and instructional technology, and allows for considerable breadth of study while offering a well-balanced degree plan.

**Admission**

A non-refundable application fee of $65 must be paid with credit card when applying through Hobsons Radius. In addition to meeting requirements of the Graduate School, the applicant for admission should have a Bachelor’s Degree with a major in the appropriate language of specialization or at least 18 semester hours (27 quarter hours) of relevant courses in the language at the junior-senior level. Students not meeting minimum requirements in coursework or in language proficiency may be given the option of taking additional coursework to make up the deficiency before being officially accepted to the program. These courses will not count towards fulfilling the degree requirements. Students who meet requirements for admission to the Graduate School but do not meet the departmental requirements may register as unclassified students for specific graduate courses in the department only with consent of the instructor and authorization from the Director of Graduate Studies.

**General Requirements**

Students must take 33 credit hours of coursework that must include:
• FL 436; FR 501 / SPAN 501; FR 570 / SPAN 570
• Four additional classes of literature/culture (for Spanish students, at least one of these courses must
  be in Latin American Literature, and at least one in Peninsular Literature). Spanish students are also
  required to take SPAN 511. A minimum of 18 credit hours must be taken at the 500 or 600 levels.
• Three hours of Independent Study will be given only under exceptional circumstances and will not
duplicate available courses. The Director of Graduate Studies is responsible for authorizing such
work in cooperation with the individual professor.

Comprehensive Examinations

The French comprehensive exams will be based on the courses taken. The Spanish comprehensive
examinations will be based on the program reading list. While many of the works on the reading list
will be covered in classes, others will not. Consequently, students are expected to exhibit a breadth of
knowledge that goes beyond what is covered in their classes.

For more detailed information on the format of the exam, consult with the Director of Graduate Studies.
Each year a faculty member from the MA program will be in charge of the preparation, organization,
scheduling, and proctoring of examinations.

Repeat Policy

Re-takes for failed examinations may be scheduled for the following: November, April, or August.
Students will be given an entirely new exam. If the student does not pass the second time, s/he will be
required to take an additional nine credit hours in Peninsular and Latin American literature/culture before
being allowed to retake the exam for the third and last time.

NOTE: Students pass or fail the entire exam, not a single question or area. Students receiving a
Graduate Assistantship who do not pass the exam the first time are not guaranteed additional funding.

Traditional M.A.

This option allows students to complete the MA in two years without having to take courses in the
summer and/or without having to pursue a BA in our department (although students may choose to do
either or both). Students must be accepted into the program prior to commencing coursework towards the
degree:

• First Semester: 3 courses
• Second Semester: 3 courses
• Third Semester: 3 courses
• Fourth Semester: 2 courses; Comprehensive Examinations

Five-year B.A./M.A.

This option allows students in the SIU Carbondale Spanish B.A. program to transfer nine credits of 400-
or 500-level language courses over to the M.A. degree. Students enrolled in our B.A. program who have
maintained a 3.25 grade point average in 300- and 400-level courses may apply to the five-year M.A. at
the end of their junior year. If they are accepted, they continue on with their coursework for another year
(including two summers) after graduating with the B.A.

• First Summer Session: 1 course
• First Semester (Fall): 3 courses
• Second Semester (Spring): 3 courses
• Second Summer Session: 1 course; Comprehensive Examinations

Or

• First Summer Session: 1 course
• First Semester (Fall): 3 courses
• First Semester (Spring): 3 courses; Comprehensive Examinations
• Second Summer Session: 1 course
Double Majors

Students may pursue a double major in Languages, Literatures, and Cultures together with an M.A. in another program. Consult “Double Major for a Master’s Degree” in the Degree Requirements section of this catalog for Graduate School requirements for double majors. In addition to meeting the Graduate School requirements, double majors must complete a minimum of 21 credit hours of coursework in the Department of Languages, Cultures, and International Trade, 18 of which must be in the language of study.

Curriculum Planning

Prior to registering, students are required to plan their curriculum with the Department’s Director of Graduate Studies who will advise the student in all matters pertaining to his/her M.A. Program.

Pertaining to Courses

At least 15 hours of course work must be earned in courses at the 500-level or above, and a minimum of 21 hours of coursework must be taken in the language of study (18 for double majors). No more than half the credit applied toward fulfillment of the degree requirements may be transferred from other universities. A student has three calendar years to complete the degree and must remain registered in (FR 601 / SPAN 601 (Continuing Enrollment)) until the degree is completed.

Grades and Grade-Point Average

Any graduate student whose grade point average falls below 3.0 will be placed on academic probation. Any graduate student on academic probation whose grade point average remains below 3.0 for two consecutive semesters in which she or he is enrolled, excluding summer sessions, will be permanently suspended from the Graduate School, unless the department and the collegiate dean petition the graduate dean for an exception.

French Courses offered:

- FR 410 (3) Selected Topics
- FR 490 (3) Advanced Independent Study
- FR 501 (3) Studies on a Selected Topic or Author
- FR 540 (3) Literature of the 18th Century
- FR 550 (3) Literature of the 19th Century
- FR 560 (3) Literature of the 20th Century
- FR 570 (3) The French and Their History
- FR 576 (3) Francophone Literature
- FR 580 (3) Masterpieces of French and Francophone Literatures

Spanish Courses offered:

- SPAN 414 (3) Translation Techniques
- SPAN 490 (3) Advanced Independent Study
- SPAN 501 (3) Studies of a Selected Topic or Author
- SPAN 511 (3) Linguistic Structure of Spanish
- SPAN 512 (3) History of the Spanish Language
- SPAN 520 (3) Literature of the Middle Ages
- SPAN 530 (3) The Golden Age: Drama
- SPAN 531 (3) Cervantes
- SPAN 532 (3) The Golden Age: Prose and Poetry
- SPAN 534 (3) Colonial Literature
- SPAN 550 (3) Neoclassicism and Romanticism in Spain
- SPAN 551 (3) Spanish-American Literature of the 19th Century
- SPAN 555 (3) Spanish Realism and Naturalism
- SPAN 560 (3) Modern Spanish Literature and Culture (1898 to Spanish Civil War)
- SPAN 561 (3) Spanish-American Literature of the 20th Century
- SPAN 565 (3) Post-War and Contemporary Spanish Literature and Culture
400-Level Courses in Spanish that can count towards the M.A.:

- SPAN 414 (3) Translation Techniques
- SPAN 420 (3) Studies in Literature of the Middle Ages
- SPAN 430 (3) The Golden Age: Drama
- SPAN 431 (3) Cervantes
- SPAN 432 (3) The Golden Age: Prose and Poetry
- SPAN 434 (3) Colonial Literature
- SPAN 450 (3) Neoclassicism and Romanticism
- SPAN 451 (3) Studies in Latin American Literature of the 19th Century
- SPAN 455 (3) Spanish Realism and Romanticism
- SPAN 465 (3) Post-War and Contemporary Spanish Literature and Culture
- SPAN 475 (3-6) Travel-Study in Latin America or Spain
- SPAN 490 (1-3) Advanced Independent Study

Foreign Language (FL) Courses:

- FL 436 (3) Methods in Teaching World Languages
- FL 437 (3) Introduction to Computer-Assisted Language Learning

Languages, Literatures, and Cultures Courses

Linguistics

The Department of Linguistics offers programs leading to the Master of Arts degree in Linguistics and the Master of Arts degree in Teaching English to Speakers of Other Languages (TESOL).

Overview of Graduate Programs

The M.A. program in Linguistics is designed to give students a broad training in most aspects of contemporary linguistics, including phonology, syntax, phonetics, semantics, historical linguistics, psycholinguistics, language acquisition, sociolinguistics, and field methods. In addition, students will pursue advanced study through further coursework and thesis research. Graduates of the linguistics program frequently go on to more advanced study and research in linguistics leading to the Ph.D. degree.

The M.A. program in TESOL is designed primarily for students who wish to pursue careers in the teaching of English to speakers of other languages either in the United States or abroad. The program combines both theory and practice. In addition to a core course in linguistics, students in the TESOL program are required to take courses in the theory and methods of language teaching, language assessment, and second language acquisition, and to teach in a supervised practicum in the teaching of oral and written English. Graduates of the TESOL program can go on to advanced study of language learning and teaching or related fields, in addition to pursuing a career in language instruction, instructional materials or test development, teacher training, program administration, or related areas.

For students who are interested in language study but are not committed to either graduate major, the department offers a number of interesting, non-specialist courses which may serve as electives in degree programs such as those offered by the Departments of Anthropology, Communication Disorders and Sciences, English, Languages, Cultures, and International Trade, Psychology, Communication Studies, and the College of Education and Human Services. A sequence of courses is also available for students wishing to pursue a double major combining linguistics or TESOL with other programs at the master’s level.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admission to Graduate Study in Linguistics. Applicants must pay this fee by credit card. Applicants for admission should address inquiries to the Chair, Department of Linguistics, Southern Illinois University Carbondale, Carbondale, IL 62901-4517, USA.

Admission to the Degree Programs

Undergraduate GPA

Applicants for admission to either degree program, in addition to meeting the requirements for admission to the Graduate School, are expected to have undergraduate grade point averages of at least 3.0 (A = 4.0). Applicants with GPAs below 3.0 may be granted conditional admission. However, students admitted on a conditional basis must earn a graduate GPA of 3.0. Failure to do so will result in the student being dropped from the program.

Foreign Language Requirement

All students who are native speakers of English must have completed at least one semester of study of a foreign language within the preceding five years (excluding high school) and have achieved a grade of B or better. Those students who have achieved proficiency in a foreign language by means other than graded academic study must demonstrate that they have achieved a minimum level of novice-mid as defined in the proficiency guidelines published by the American Council on the Teaching of Foreign Languages. Students may also fulfill this requirement by taking one semester of a foreign language with a grade of B or better while they are enrolled in their M.A. program. In recognition of their experience in learning English, international students who have learned English as a second or foreign language are exempt from this requirement.
TOEFL and GRE

International student applicants who are not native speakers of English must achieve a score on the Test of English as a Foreign Language (TOEFL) of at least 577 (paper) or 90 (IBT), or 7.0 on the IELTS. Although submission of scores on the Graduate Record Examination (GRE) is not required for admission to the Graduate School nor to the department, applicants are advised that high GRE scores put them at a competitive advantage when applying for University fellowships or departmental assistantships.

Academic Retention

Academic Probation

As required by the Graduate School, any student whose GPA falls below 3.0 will be placed on academic probation. Any student who fails to return to good standing after one term on academic probation will not be eligible to hold a graduate assistantship. Any student who fails to return to good standing after two terms on academic probation will be dropped from the program. Any student who accumulates three or more incompletes will be put on academic probation and may return to good standing by reducing the number of incompletes to two or fewer.

Minimum Grades in Core Courses

As described below, both M.A. programs include a number of core courses which are required of all students. These courses must be passed with a grade of B or better. Students who receive a grade lower than B on a core course must take the course again. They will register officially for the course and will be granted a letter of permission to do so from the department. Both grades will be counted in calculating GPA. Students who need to repeat core courses may take other courses concurrently or sequentially for which the core courses are prerequisites.

Grade Point Average to Graduate

All graduate work must be completed with an overall GPA of 3.0.

Master of Arts Two-Year Degree in Linguistics

The Master of Arts in Linguistics requires 36 hours of coursework including a mix of required courses and restricted and non-restricted electives in all the major linguistic subfields. There are two options for completing the MA: a thesis option and a non-thesis option. Thesis writers are required to do advanced coursework in phonology or syntax and three to six hours of thesis writing; non-thesis writers have a little more flexibility in their advanced coursework and take more courses at that level in lieu of thesis writing credits.

Required Core Courses: All Candidates (9 semester hours)
All students must take the three LING courses in Set A:

- LING 505-3 The Professional Study of Linguistics
- LING 503-3 Phonological Theories
- LING 508-3 Syntactic Theory

Restricted Electives: all candidates (9 semester hours)
All students must take at least two of the LING courses in Set B for breadth of study.

- LING 415-3 Sociolinguistics
- LING 417-3 Language Contact
- LING 445-3 Psycholinguistics
- LING 402-3 Phonetics
- LING 500-3 Formal Semantics

All students must also take at least one writing-intensive LING course from Set C.
• LING 552-3  Field Methods in Linguistics
• LING 506-3  Historical Linguistics

Requirements specific to the two options (6 semester hours)
Additional coursework requirements diverge depending on whether students choose the thesis or non-thesis option for the MA.

The thesis option
Those students who wish to write theses must formally apply to the department by the beginning of the third semester. They must also take at least one of the advanced LING courses in Set D:

• LING 553-3  Advanced Phonology
• LING 558-3  Advanced Syntax

Thesis-writing students will also enroll in a minimum of three and a maximum of six hours of LING thesis writing.

• LING 599-3 to 6  Thesis writing course

The thesis is a written summary of a student’s independent research conducted while enrolled in one of the department’s M.A. programs. Every thesis is expected to include a clear statement of the topic, identification of the particular issues to be investigated, a literature review, an explanation of the procedures followed, and an analysis and discussion of research findings. Each student writing a thesis must have a thesis committee composed of at least three faculty members, one of whom serves as chair of the committee. Two of the three committee members must have their primary appointment in the Department of Linguistics. The thesis must be submitted to a public oral examination by the student’s committee. Detailed information regarding the thesis may be found in Thesis Policies and Guidelines, copies of which are available from the department.

The non-thesis option
Students who do not write theses must take two additional LING courses from Set C and/or Set D.

Unrestricted electives
To complete the 36 hours required for the M.A. in Linguistics, students may choose electives from among courses offered within the department or relevant courses taught by faculty in the Departments of Anthropology, Communication Disorders and Sciences, Computer Science, English, Foreign Languages and International Trade, Philosophy, Psychology, Communication Studies, and the College of Education and Human Services (subject to departmental approval). Where appropriate, students are encouraged to take courses in quantitative and ethnographic research methods taught in the Departments of Counseling, Quantitative Methods, Special Education, and Anthropology. Students are also encouraged to attend the annual summer institutes sponsored by the Linguistic Society of America and TESOL. Credit may be allowed for coursework successfully completed in this way.

Master of Arts Degree in Teaching English to Speakers of Other Languages

The M.A. degree in TESOL blends linguistic science with the art of classroom practice. It prepares students both intellectually and experientially so that as professionals they are capable of making wise and informed choices among different language teaching approaches, methods, and techniques. In addition, students will understand how differences among individual students, teaching and learning situations, and social structures influence decisions they will be called upon to make as teachers or other language professionals. The TESOL master’s program provides a firm and broad foundation in current theories of language and language learning and graduates will be prepared to take on careers as teacher educators and curriculum or assessment specialists as well as classroom teachers.

There are two options for completing the M.A. TESOL degree: a thesis option and a non-thesis option. In both cases 36 credits are required. Both options include five components: a group of core courses totaling 15 semester hours, a selection of language skills-related courses totaling 6 semester hours, a teaching specialty course (3 semester hours), free electives totaling 6 semester hours, and research training (6 semester hours)—either a thesis (thesis option) or additional course work from a selected group of focus courses with a substantial research component (non-thesis option).
Core Courses (15 semester hours)
All students in the MA TESOL program take the following five courses:

- LING 472-3 Assessment of ESL and Bilingual Students
- LING 505-3 The Professional Study of Linguistics
- LING 541-3 Second Language Acquisition
- LING 570-3 Methods and Materials of TESOL
- LING 583-3 TESOL Practicum

Language Skills (6 semester hours)
All students must take at least two of the following language skills-related courses:

- LING 531-3 Teaching Grammar and Writing in a Second Language
- LING 585-3 Teaching Listening and Speaking in a Second Language
- LING 587-3 Teaching Reading and Vocabulary in a Second Language

Teaching Specialties Courses (3 semester hours)
All students must take one of the following teaching specialties courses:

- LING 470-3 Theoretical Foundations of ESL and Bilingual Education
- LING 471-3 Bilingual Education Methods and Materials
- LING 573-3 Introduction to Computer-Assisted Language Learning
- LING 582-3 Course Design
- LING 586-3 English for Specific Purposes
- LING 5XX-3 Teaching Internship

Research Component (6 semester hours)
All students must take at least six semester hours from the following courses with a substantial research component:

- LING 415-3 Sociolinguistics
- LING 417-3 Language Contact
- LING 542-3 Advanced Seminar in Second Language Acquisition
- LING 543-3 Bilingualism
- LING 549-3 Research Methods in Linguistics and TESOL
- LING 584-3 Advanced Seminar in Grammar and Composition
- LING 589-3 Advanced Seminar in Reading and Vocabulary
- LING 590-3 Advanced Second Language Pronunciation
- LING 592-3 Advanced Computer-Assisted Language Learning
- LING 599-1 to 6 Thesis

Note that students pursuing the thesis option must enroll in a minimum of 3 and a maximum of 6 semester hours of LING 599 (Thesis).

Free Electives (6 semester hours)
Students can select from a number of elective courses offered each semester. These include additional courses from the categories listed above as well as other courses offered in the department. In addition, courses related to language, education, and/or research methods offered by other departments may be used to complete elective requirements, with approval from the student’s faculty advisor. Students are also encouraged to attend summer institutes and other professional development programs offered by the TESOL International organization or the Linguistic Society of America. Credit may be approved for coursework successfully completed this way.

Accelerated B.A./M.A. in Linguistics
Students who begin as undergraduate majors in either linguistics or TESOL may pursue the 5-year M.A. in Linguistics, providing (i) they have maintained a 3.5 grade point average in 300 and 400-level courses, and (ii) their B.A. coursework includes the following:

LING courses required of all 5-year B.A./M.A. students (15 semester hours):
• LING 200    Language, Society, and the Mind
• LING 300    Introduction to Descriptive Linguistics
• LING 405    Introduction to Phonological Theories
• LING 408    Introduction to Syntactic Theory
• LING 406    Introduction to Historical Linguistics, or LING 452 Field Methods in Linguistics

Beyond these courses and the other requirements for their B.A. degrees is added a fifth year, consisting of advanced coursework and a 20-25 page research paper.

**Fifth year (27 credit hours)**

**Fall (12 credit hours)**

• LING 505    The Professional Study of Linguistics
• LING 558    Advanced Syntax
• LING 553    Advanced Phonology
• Elective not taken at the undergraduate level (400-level or above)

**Spring (12 credit hours)**

• LING 506    Historical Linguistics (if not taken as LING 406) or LING 552 Field Methods (which may be repeated for credit)
• 2 electives not taken at the undergraduate level (400-level; or above)
• LING 593    Research in Linguistics (3 credit hours)

**Summer (3 credit hours)**

• LING 593    Research in Linguistics (3 credit hours)

9 hours of 400-level coursework taken at the undergraduate level will also be counted towards the M.A. This enables students in the accelerated M.A. to meet the 36-hours of coursework required for a Linguistics M.A.

**Linguistics Courses**

LING403 - English Phonology 403-3 English Phonology. Study of English phonology, including phonetics, phonemics, and prosodics. Prerequisite: LING 300 or graduate status or consent of instructor.

LING404 - American Dialects 404-3 American Dialects. Regional variation and social stratification of American English. Phonological and syntactic differences among the major dialects of American English. Prerequisite: LING 300 or graduate status or consent of instructor.

LING405 - Intro to Phonological Theories 405-3 Introduction to Phonological Theories. A survey of various phonological theories from the 19th century up to the present, including theoretical issues arising therefrom and relationships among the theories. Limited data analysis within the perspectives of the different theories. Not open to those who have taken LING 503. Prerequisite: LING 300 or consent of instructor.

LING408 - Intro to Syntactic Theory 408-3 Introduction to Syntactic Theory. This course is an introduction to the major concepts and issues in generative grammar. Data from English and other languages will be examined and students will be provided with numerous opportunities to solve problems in syntax. Students will also be given an opportunity to carry out an individual project in syntax. Not open to those who have taken LING 508. Prerequisite: LING 300 or consent of instructor.

LING412 - Structure of Japanese 412-3 The Linguistic Structure of Japanese. (Same as JPN 410) Inductive approach to the analysis of various aspects (such as phonology, morphology, syntax) of Japanese grammar with emphasis on syntactic structures within any of the current theoretical frameworks such as pragmatics, functionalism and formal linguistics. May include contrastive analysis between Japanese and English, and close examination of theories of comparative-historical linguistics of Japanese
and Korean. This course satisfies the CoLA Writing-Across-the-Curriculum requirement. Prerequisite: one year of Japanese or one previous course in linguistics or consent of instructor.

LING415 - Sociolinguistics 415-3 Sociolinguistics. (Same as ANTH 415) History, methodology, and future prospects in the study of social dialectology, linguistic geography, multilingualism, languages in contact, pidgin and creole languages, and language planning. Prerequisite: LING 300 or Graduate status or consent of instructor.

LING416 - Spanish in the U.S.A. 416-3 Spanish in the U.S.A. (Same as ANTH 416) This course offers a survey of the historical, social, political, linguistic, and educational issues surrounding the Spanish language in the United States. Topics to be addressed include Spanish language use and bilingualism, language maintenance and shift, education of Latino populations, Hispanic diversity, and Latino literature.

LING417 - Language Contact 417-3 Language Contact. (Same as ANTH 417) This course will introduce students to the social conditions under which language contact occurs and the cultural and linguistic consequences of such contact. Primary topics will be language maintenance and shift, ideologies and attitudes regarding bilingualism, and language development and change, using data from a variety of languages and cultures. Designed to provide a comprehensive background for research on bi- or multilingual settings. Prerequisite: one of the following: ANTH 240B, LING 200, LING 300, ANTH 500B, or LING 505.

LING426 - Gender, Culture, & Language 426-3 Gender, Culture, and Language. (Same as WGSS 426 and ANTH 426) This course is designed for students who have had some exposure to gender studies. It will focus on readings in language and gender in the fields of anthropological- and socio-linguistics. Issues to be addressed are the differences between language use by men/boys and women/girls, how these differences are embedded in other cultural practices, and the various methodologies and theories that have been used to study gendered language use.

LING430 - Grammatical Structures 430-3 to 6 (3,3) Grammatical Structures. Detailed analysis of the structure of particular languages. May be repeated to a total of six hours credit with consent of department. Prerequisite: LING 300 or graduate status or consent of instructor.

LING431 - Teaching L2 Writing & Grammar 431-3 Teaching Writing and Grammar in a Second Language. An introduction to current theories of ESL/EFL composition and pedagogical grammar, as well as principles and techniques for teaching composition and grammar in a second language. Course will combine understanding of theory with evaluation of published materials and original development of high-quality teaching materials. Prerequisite: LING 353 or consent of instructor.

LING440 - Topics in Linguistics 440-3 to 9 (3 per topic) Topics in Linguistics. Selected topics in theoretical and applied linguistics. May be repeated to a total of nine hours credit under different topics. Not for graduate credit.

LING442 - Language Planning 442-3 Language Planning. Survey of the field of language planning: definitions and typologies, language problems, language treatment, attitudes and beliefs about language, relations between language planning processes and other kinds of social and economic planning, linguistic innovations and other processes of language change, implementation of language policies. Prerequisite: LING 300 or graduate status or consent of instructor.

LING445 - Psycholinguistics 445-3 Psycholinguistics. (Same as PSYC 445) A broad spectrum introduction to psycholinguistics. Topics to be covered include general methodology for the study of psycholinguistics, the nature of language, theories of human communication, language comprehension and production, first and second language acquisition, meaning and thought, natural animal communication systems, and language and the brain. Prerequisite: LING 300 or graduate status or consent of instructor.

LING450 - Language Families 450-3 to 6 (3,3) Language Families. A synchronic survey of particular language families or sub-families. May be repeated to a total of six hours credit with consent of department. Prerequisite: LING 300 or graduate status or consent of instructor.

LING452 - Field Methods in Linguistics 452-3 Field Methods in Linguistics. At a time when minority languages are dwindling and becoming extinct, language documentation is more important than ever.
This course has two pedagogical goals, related to the documentation of understudied languages. The first goal is to train students on the methods of eliciting and evaluating data to construct a detailed linguistic description and analysis of an unknown language, essentially from scratch, by working with a native speaker of the language. The second goal is for students to discover specific details of the structure of the language under investigation and document them for posterity. Satisfies the CoLA Writing-Across-the-Curriculum requirement. May be repeated for credit. Not open to those who have taken LING 552. Prerequisite: LING 300 and one of the following courses: LING 402, 403, 405, 408, with a minimum grade of C, or consent of instructor.

LING470 - Foundation ESL/Bilingual Ed 470-3 Theoretical Foundations of Teaching ESL and Bilingual Students. Provides a broad overview of the field of bilingual education, including related terminology; historical, political, social, theoretical, international, economic, cultural, and legal aspects of bilingual education; and educational program models for serving English language students. Satisfies the CoLA Writing-Across-the-Curriculum Requirement.

LING471 - Bilingual Ed Methods/Materials 471-3 Bilingual Education Methods and Materials. Methods and materials for: bilingual content, biliteracy, sheltered and multicultural instruction, and for ELLs with disabilities; techniques for advocacy for ELLs, writing funding proposals, and conducting program reviews and workshops. Includes materials reviews, lesson planning, and micro-teaching.

LING472 - Assess ESL/Bilingual Students 472-3 Assessment of ESL and Bilingual Students. This course covers theoretical and practical issues in the assessment, testing, measurement, and evaluation of second and foreign language learners. It covers the history and development of language testing practices; the relationship between assessment, instruction, and course design; principles of good assessment; the sociocultural context surrounding assessment; and traditional and alternative assessment that can be used for all language skills in diverse K-12 and adult learners. Students get hands-on practice critically evaluating assessments, creating their own assessments, and analyzing and interpreting assessment results.

LING473 - Intro Comp Assist Lang Learn 473-3 Introduction to Computer Assisted Language Learning. This hands-on course introduces essential concepts and skills for applying technology to language learning and instruction. Topics include online quizzes and activities, creating and editing multimedia objects for use in instructional materials, social networking, Web resources, evaluating commercial materials, digital storytelling, and hypermedia. New developments in CALL are introduced as the state of the art progresses. Not open to those who have taken LING 573.

LING480A - Less Common Lang-Elemtry 480A-3 to 12 Less Commonly Taught Languages. Elementary course in less commonly taught languages. Languages vary. Section A corresponds to the first semester, section B of the same language is a continuation of section A. Must be taken in an A,B sequence when available. Sequence may be repeated with a different language. Students must earn a grade of C or better in LING 480A before beginning LING 480B.

LING480B - Less Common Lang-Intermd 480B-3-12 Less Commonly Taught Languages. Elementary course in less commonly taught language. Languages vary. Section B is a continuation of section A. Must be taken in A, B sequence when available. Sequence may be repeated with a different language. Students must earn a grade of C or better in LING 480A before beginning LING 480B. Prerequisite: LING 480A.

LING485 - L2 Listen and Speak 485-3 Teaching Listening and Speaking in a Second Language. An introduction to current theories, principles, and techniques for teaching second language listening and speaking skills. Students will gain practical experience in developing meaningful listening and speaking activities/materials. Not open to those who have taken LING 585.

LING487 - L2 Reading & Vocabulary 487-3 Teaching Reading and Vocabulary in a Second Language. An introduction to current theories of reading and vocabulary learning, as well as principles and techniques for teaching reading and vocabulary in a second language. Course will combine understanding of theory with evaluation of published materials and original development of high-quality teaching materials. Prerequisite: LING 353 or consent of instructor.

LING490A - TESOL K-12 Internship 490A-3 TESOL K-12 Internship. The TESOL K-12 internship provides students with the opportunity to work with students of diverse linguistic backgrounds in a
classroom at a local school. Students will volunteer for a minimum of two hours per week (for one credit hour), up to eight hours per week (for three credit hours). Students wishing to fulfill the 100-clock-hours requirement for an ESL endorsement will need to register for three credit hours (volunteer at least eight hours per week). Students will complete weekly reports and monthly reflections, observe language educators, and design and teach language lessons. Prerequisite: LING 353 or LING 570 with a grade of C or better.

LING490B - TESOL International Internship 490B-3 TESOL International Internship. The TESOL K-international internship provides students with the opportunity to work in an international English as a foreign language (EFL) classroom. Students will complete weekly reports and monthly reflections, observe language educators, and design and teach language lessons. Students will also be observed and receive feedback from the teaching staff at the international placement institution. Students will leave the course with practical knowledge regarding classroom organization, management, instructional strategies, international education, and language program organization. Prerequisite: LING 353 or LING 570 with a C or better.

LING500 - Formal Semantics 500-3 Formal Semantics. (Same as PHIL 502) This course will introduce and develop formal mechanisms to encode meaning in natural language. We will deeply explore the topics of predication, definiteness, quantification, and semantic modeling. Mastery of these topics can be applied to many other semantic phenomena. By the end students will be able to: understand and evaluate scholarly literature in semantics; approach problems in natural language from the perspective of a formal semanticist; understand and describe the role of semantics in generative approaches to language; and produce novel work in semantics.

LING503 - Phonological Theories 503-3 Phonological Theories. An examination of the development of phonological theories from the 19th century up to the present. Relationships among various theories and insights into language structures that arise from them are considered. Data analysis within the perspectives of the different theories. Not open to those who have taken LING 405. Prerequisite: LING 505 or consent of instructor.

LING506 - Historical Linguistics 506-3 Historical Linguistics. Theories and methods in the study of the history and prehistory of languages and language families. Prerequisite: LING 503, LING 505, and LING 508 or consent of instructor.

LING508 - Syntactic Theory 508-3 Syntactic Theory. An examination of the major concepts and issues in generative grammar. Data from diverse languages will be examined. Students will be presented with problems in syntax to solve. They will also carry out an individual project in syntactic analysis. Not open to those who have taken LING 408. Prerequisite: LING 505 or consent of instructor.

LING510 - History of Linguistics 510-3 History of Linguistics. The history of linguistic inquiry from classical times to the present. Prerequisite: one previous course in linguistics or consent of instructor.

LING531 - L2 Writing and Grammar 531-3 Teaching Writing and Grammar in a Second Language. An introduction to current theories of ESL/EFL composition and pedagogical grammar, as well as principles and techniques for teaching composition and grammar in a second language. Course will combine understanding of theory with evaluation of published materials and original development of high-quality teaching materials. Prerequisite: LING 485 or LING 585 with a B or better or consent of instructor.

LING540 - Studies in Applied Linguistics 540-3 to 6 (3 per topic) Studies in Applied Linguistics. Selected topics in applied linguistics. May be repeated as topics vary to a total of six hours of credit with consent of department. Prerequisite: LING 505 or consent of instructor.

LING541 - Second Language Acquisition 541-3 Introduction to Second Language Acquisition. (Same as PSYC 577) Introduction to key concepts and major theoretical and methodological issues in second language acquisition. Major developments in SLA in phonology, morphology, lexis, syntax, semantics and discourse and provides students with hands-on experience in describing and accounting for second
language data. Opportunity to design and implement a data-based SLA study in an area of interest to students. Prerequisite: LING 505 or consent of instructor.

LING542 - Adv Seminar Sec Lang Acqsn 542-3 Advanced Seminar in Second Language Acquisition. Research seminar in second language acquisition on selected topics such as universal grammar in SLA, language transfer, variation in SLA, second language learnability, etc. Prerequisite: LING 541 or consent of instructor.

LING543 - Bilingualism 543-3 Bilingualism. (Same as PSYC 578) A comprehensive introduction to the study of bilingualism. Course will examine the linguistic, psycholinguistic, sociolinguistic, and educational aspects of bilingualism, particularly as pertaining to the care and education of bilingual children. Prerequisite: LING 541 or consent of instructor.

LING544 - Discourse Analysis 544-3 Discourse Analysis. (Same as ANTH 544) Survey of major approaches to the analysis of spoken or written discourse including speech act theory, pragmatics, interactional sociolinguistics, ethnography of communication, conversation analysis, variation analysis, and critical discourse analysis. Prerequisite: LING 505 or consent of instructor.

LING545 - Language, Gender, Sexuality 545-3 Language, Gender and Sexuality: Anthropological Approaches. (Same as ANTH 546, WGSS 546) This course examines the study of language in society with a particular focus on how linguistic practices are part of the construction of gender and sexuality identities, ideologies, social categories and discourses. Anthropological theories applied to the study of language, gender and sexuality will be covered along with a variety of methodological approaches.

LING546 - Conversation Analysis: Pragmatics 546-3 Conversation Analysis: Pragmatics. (Same as CMST 546) Study of the pragmatics of everyday conversation: sequential organization, topical coherence, speech act rules and functions, contextual frames, and background understandings. Emphasis on observational research methods and analysis of original data. Special approval needed from the instructor.

LING548 - Linguistic Anth of Education 548-3 The Linguistic Anthropology of Education. (Same as ANTH 548) This course examines the role of language in education through a critical anthropological lens, examining educational institutions across cultures and times. Topics to be covered include the teaching of literacy, language policies and ideologies in education, the linguistic construction of identities in school settings (including national, ethnic, gender, sexuality, age, religious, and social class identities) and modes of intervention to improve educational endeavors. Ethnographic studies of education in a variety of national, cultural, and linguistic contexts will be covered, as well as other discourse analysis approaches to the study of educational processes and institutions. The course is designed to bring together a wide range of material of interest to graduate students in anthropology, linguistics, education, and other related fields.

LING549 - Research Methods 549-3 Research Methods in Linguistics and TESOL. This course examines basic concepts and principles of quantitative and qualitative methods in Linguistics and TESOL. It prepares students to critically read and understand related research as well as design and carry out their own research projects. It includes analyses of research articles, writing literature reviews, making informed decisions about appropriate methodology and data analyses procedures. Prerequisite: LING 505 or consent of instructor.

LING550A - Sem-Syntax & Semantics 550A-3 to 6 Seminar in Theoretical Linguistics. Guided advanced research in syntax and semantics. May be taken only once. Special approval needed from the department.

LING550B - Seminar - Phonology 550B-3 to 6 Seminar in Theoretical Linguistics. Guided advanced research in phonology. May be taken only once each. Special approval needed from the department.

LING550C - Seminar-Sociolinguistics 550C-3 to 6 Seminar in Theoretical Linguistics. Guided advanced research in sociolinguistics. May be taken only once each. Special approval needed from the department.

LING550D - Seminar-Selected Topics 550D-3 to 6 Seminar in Theoretical Linguistics. Guided advanced research in selected topics. May be repeated as topics vary. Special approval needed from the department.
LING551 - Pragmatics  551-3 Pragmatics. (Same as ANTH 551) An investigation of language use in context; this incorporates both social and psychological aspects of language use. Topics to be covered in this course include speech acts; implicature; conversation analysis; and the acquisition of communicative competence by both first and second language learners. Prerequisite: LING 505 or consent of instructor.

LING552 - Field Methods in Linguistics  552-3 Field Methods in Linguistics. At a time when minority languages are dwindling and becoming extinct, language documentation is more important than ever. This course has two pedagogical goals, related to the documentation of understudied languages. The first goal is to train students on the methods of eliciting and evaluating data to construct a detailed linguistic description and analysis of an unknown language, essentially from scratch, by working with a native speaker of the language. The second goal is for students to discover specific details of the structure of the language under investigation and document them for posterity.

LING553 - Advanced Phonology  553-3 Advanced Phonology. Emphasis is on current work in phonology, its impact on phonological theory, and application of theory to data, and implications for current work. Prerequisite: LING 503 or consent of instructor.

LING558 - Advanced Syntax  558-3 Advanced Syntax. This course focuses on the study of current trends in generative grammar, building on Government and Binding and moving into Minimalism. Part of the class will be devoted to the study of original works on special topics. A major requirement of this class is a term project investigating the syntax of a language of the student's choosing. Prerequisite: LING 508 or consent of instructor.

LING570 - TESOL Methods/Materials  570-3 Methods and Materials in TESOL. Requirement for Illinois ESL/Bilingual Approval. Methods/materials to teach ESL/EFL in the United States (K-adult) and abroad. Promotes eclecticism through reflective practice; overview of methods from early grammar translation to cognitive and communicative, integrated skills, technology, and content-based approaches. Lecture, readings, discussion, demonstration, materials review, lesson planning, micro-teaching.

LING573 - Intro to CALL  573-3 Introduction to Computer-Assisted Language Learning. (Same as FL 437) This hands-on course introduces essential concepts and skills for applying technology to language learning and instruction. Topics include online quizzes and activities, creating and editing multimedia objects for use in instructional materials, social networking, Web resources, evaluating commercial materials, digital storytelling, and hypermedia. New developments in CALL are introduced as the state of the art progresses. Not open to those who have taken LING 473.

LING574 - CESL Teaching Methods  574-3 CESL Teaching Methods. Introduces new CESL teaching assistants to teaching methodologies and principles within the CESL context, following CESL's curriculum and classroom practices. Familiarizes students with pedagogical strategies, theories of language instruction, materials design, curriculum development, error correction and assessment, classroom management, reflective teaching, and professionalism. Required of first time CESL teaching assistants.

LING580 - Teaching English Abroad  580-3 to 6 Seminar in Special Topics in TESOL-Teaching English Abroad. Selected topics in special areas of teaching English to speakers of other languages. May be repeated as topics vary. Prerequisite: LING 570 or consent of instructor.

LING582 - Course Design for TESOL  582-3 Course Design for TESOL. A review of issues and procedures in the design and implementation of courses for teaching English to speakers of other languages. Particular attention is given to recent developments such as content-based instruction. All major course components such as setting of objectives, syllabus design, content specification, and evaluation are considered. In addition, resources available for addressing these issues will be discussed. Prerequisite: LING 570 or consent of instructor.

LING583 - TESOL Practicum  583-3 TESOL Practicum. Class observation and supervised teaching of English to speakers of other languages; meets concurrently with Linguistics 454: Observation and Practice in TESOL and Linguistics 100: Instruction in ESL. Prerequisite: LING 570 or consent of department.

LING584 - Advanced L2 Grammar/Comp  584-3 Advanced Seminar in Grammar and Composition. Course will focus on the advanced study of grammatical features in English and their applicability to the writing and composing process of ESL/EFL writers. Additionally, stylistic and rhetorical factors, including
cross-cultural rhetoric, will be considered, with the focus guided by student and instructor interests. Course will include reading the primary research literature, student development of a research project, and implications for supporting second language writers. Prerequisite: LING 431 or LING 531 with a B or better or consent of instructor.

LING585 - L2 Listen and Speak 585-3 Teaching Listening and Speaking in a Second Language. An introduction to current theories, principles, and techniques for teaching second language listening and speaking skills. Students will gain practical experience in developing meaningful listening and speaking activities/materials. Prerequisite: LING 570 or permission of instructor.

LING586 - English for Specific Purposes 586-3 English for Specific Purposes. A course designed to familiarize students with key components of English language courses designed for speakers of other languages with specific needs or in well-defined settings. Case studies and sample courses are reviewed and students develop individual projects related to a content area or course component of their choice, e.g., needs assessment, syllabus design, materials development, or teacher training. Prerequisite: LING 570 or consent of instructor.

LING587 - L2 Reading and Vocabulary 587-3 Teaching Reading and Vocabulary in a Second Language. An introduction to current theories of reading and vocabulary learning, as well as principles and techniques for teaching reading and vocabulary in a second language. Course will combine understanding of theory with evaluation of published materials and original development of high-quality teaching materials. Not open to those who have taken LING 487. Prerequisite: LING 570 with a B or better or consent of instructor.

LING588 - Intercultural Communication 588-3 Intercultural Communication. Advances knowledge and understanding of theory, practice, and research in intercultural communication, including the effects of cultural identities and cross-cultural experiences on language, perception and world view. Implications for language learning and teaching are also explored. Prerequisite: LING 505 or consent of instructor.

LING589 - Advanced Reading & Vocabulary 589-3 Advanced Seminar in Reading and Vocabulary. Course will focus on the advanced study of reading processes and lexical knowledge in first, second and additional languages. All levels of reading skills and lexical knowledge, from letter recognition to discourse processing, will be considered, with the focus guided by student and instructor interests. Course will include reading the primary research literature, student development of a research project, and implications for supporting second language readers. Prerequisite: LING 487 or LING 587 with a B or better or consent of instructor.

LING590 - Adv Sem Sec Lang Pronunciation 590-3 Advanced Seminar in Second Language Pronunciation. Course will focus on aspects of second language acquisition specific to second language phonology along with attention to the phonology of English. Course will be research focused with extensive reading in L2 pronunciation topics and student development of a research project. Prerequisite: LING 485 or LING 585 with a B or better or consent of instructor.

LING592 - Advanced CALL 592-3 Advanced Computer-Assisted Language Learning. (Same as FL 592) This hands-on course builds on LING 573 (Introduction to Computer-Assisted Language Learning) and covers language learning in virtual worlds, creating a presence on the Web, course management systems, developing apps for mobile devices, making instructional videos as well as hypermedia learning units. New developments in CALL are introduced as the state of the art progresses. Prerequisite: LING 573 with a grade of C or better, or consent of instructor.

LING593 - Research in Linguistics 593-1 to 4 Research in Linguistics. Individual research under graduate faculty guidance. Special approval needed from the instructor.

LING597 - Readings in Linguistics 597-1 to 8 Readings in Linguistics. Individual readings in linguistics under graduate faculty guidance. Special approval needed from the department.

LING599 - Thesis 599-1 to 6 Thesis. Minimum of three hours to be counted toward a Master's degree. Special approval needed from the department.

LING601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their
dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**Linguistics Faculty**

Angelis, Paul, Associate Professor, Emeritus, Ph.D., Georgetown University, 1968; 1981.
Baertsch, Karen S., Associate Professor, Ph.D., Indiana University, 2002. Phonology, phonetics, historical linguistics, dialects, Central Asian languages.
Brutten, Sheila, Associate Professor, Emeritus, M.A., Southern Illinois University Carbondale, 1965; 1968.
Dotson, John E., Professor, Emeritus, Ph.D., Johns Hopkins University, 1969.
Friedenberg, Joan, Professor Emeritus, Ph.D., University of Illinois at Urbana-Champaign, 1979; 1994.
Gilbert, Glenn G., Professor Emeritus, Ph.D., Harvard University, 1963; 1970.
Halliday, Laura J., Clinical Professor, Ph.D., Southern Illinois University, 2005. TESOL theory and methods, ESL writing, pedagogical grammar.
Kim, Alan Hyun Oak, Professor, Emeritus, Ph.D., University of Southern California, 1985; 1988.
Lakshmanan, Usha, Professor, Ph.D., University of Michigan, 1989; 1990. First and second language acquisition, psycholinguistics, syntactic theory, Tamil syntax.
Martin, Katherine I., Assistant Professor, Ph.D., University of Pittsburgh, 2015. Second language acquisition, reading and literacy, vocabulary learning, morphological awareness, crosslinguistic transfer, English as a Second Language.
McCrocklin, Shannon, Assistant Professor, Ph.D., Iowa State University, 2014. Second language phonology and pronunciation.
Montavon, Mary V., Lecturer, Emeritus, Ph.D., University of Illinois, 2003.
Perkins, Kyle, Professor, Emeritus, Ph.D., University of Michigan, 1976; 1976.
Punske, Jeffrey, Assistant Professor, Ph.D., University of Arizona, 2012. Theoretical syntax, morphology, and semantics.
Rodríguez-Ordóñez, Itxaso, Assistant Professor, Ph.D., University of Illinois at Urbana-Champaign, 2016. Language contact, sociolinguistics, language acquisition, linguistic ideologies and identities, Basque linguistics.
Wu, Shu-Ling, Assistant Professor, Ph.D., University of Hawaii at Mānoa, 2011. Second language acquisition, applied cognitive linguistics, Chinese linguistics & literature, L2/FL pedagogy.

**Mass Communication and Media Arts**

To support the graduate programs, the College of Mass Communication and Media Arts houses high-end multimedia computer labs and state-of-the-art design, video, audio, animation, and editing software. The college has a wide variety of cinema, photography, print media, radio-television and video production facilities. Students have access to the mainframe computer and the Internet.

For all MCMA graduate programs, applicants must hold a bachelor’s degree from an accredited institution or have completed all undergraduate degree requirements prior to the beginning of the classes for the term for which admission is sought. Applicants may begin the admissions process when they need no more than 32 semester hours beyond the credit shown on their transcript at the time of application to complete all requirements for the bachelor's degree.
Applications

All requirements for admission to the Graduate School at Southern Illinois University Carbondale must be met.

Applicants must submit completed application forms, transcripts of all post-secondary studies, and a personal statement describing their objectives for study in the program to which they are applying, career goals and interests.

Applicants must arrange for three references to send letters of recommendation to the Associate Dean of Graduate Studies.

Students should contact the Associate Dean of Graduate Studies, College of Mass Communication and Media Arts, Mail Code 6606, Southern Illinois University Carbondale, Carbondale, IL 62901 to apply or to make other inquiries. This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Mass Communication and Media Arts (M.A., M.S., M.F.A., Ph.D.). Applicants must pay this fee by credit card.

Retention

In addition to the retention policies of the SIU Graduate School, each master’s degree student must maintain an overall grade point average of 3.0 (A = 4) and each Ph.D. student must maintain an overall grade point average of 3.25 (A = 4). Upon falling below this average, students will be allowed only one academic term (other than summer) to bring their average up to the minimum; failing this, they will be dropped from the program and will not be allowed to re-apply.

All MCMA graduate students will undergo an end-of-the-year faculty review of their progress toward their degree that includes course progress and/or creative or scholarly work. After the review, students will be notified of any deficiencies to be resolved. Students failing to rectify those deficiencies by the end of the next semester (excluding summer) will be permanently suspended from the MCMA graduate program.

All MCMA graduate students who have completed their course work and the minimum number of credits required for projects, thesis or dissertation must enroll in MCMA 601, Continuing Research Enrollment, each semester until the completion of their degree programs. Exceptions to the continuing enrollment rule are allowed only for students who are required to be away from SIU full-time by the United States or the State of Illinois government.

Master of Arts Degree

Media Theory and Research

This degree offers a broad overview of mass communication and media arts and their processes and effects in the larger social system. Graduates gain both an appreciation of the field’s strengths and an understanding of its obstacles in being a force for social development. Areas in which this specialty is used include: department-level leadership in the mass media industries, opinion research, commentary, critical theory, content analysis, and teaching. The degree may lead to doctoral studies.

Admission

Students whose preparation is lacking in certain areas may be required to take undergraduate courses that will not be counted towards the M.A. degree.

International Students must have a TOEFL of at least 550 (paper score) or 80 (internet score) or an IELTS score of 6.5 to be admitted. All applicants must take the Graduate Record Examination (GRE). Generally applicants must have a grade point average of at least 3.0 (A = 4) for their last two years of undergraduate work. Other factors will also be considered including professional and academic accomplishments, examples of professional work, awards and honors, graduate examination scores or evidence of scholarship such as research papers.
Retention

No course in which the grade is below C shall count toward the degree or fulfillment of any requirement, but the grade will be included in the grade point average. No more than three hours of C work in graduate courses will count toward the degree. The College of Mass Communication and Media Arts allows a maximum of three years from date of enrolling in the master’s degree to completion of degree. The program generally takes two years to complete.

Curriculum

Candidates must complete a minimum of 30 credits including a minimum of 15 credits of core requirements, 12 credits in an emphasis area, and a 3-credit thesis.

Core:

- MCMA 500-3 Media as Social Institutions
- MCMA 504-3 Foundations of Mass Communication Theory
- MCMA 592-3 Master’s Seminar

Two of the following in consultation with a faculty adviser:

- MCMA 531-3 Critical Research Methods in Media Arts
- MCMA 532-3 Quantitative Research Methods
- MCMA 534-3 Qualitative Research Methods

Emphasis Area:

A minimum of four courses (12 credits) selected in consultation with the student’s faculty adviser to include at least one course from outside of the college and one course from within. Possible emphasis areas include, but are not limited to: advertising/strategic communication, communication for social change, film and criticism, international communication, law and policy, media economics, media effects, media history, media technologies, new media, political communication, and social issues.

Thesis:

- MCMA 599-3 Thesis

M.S./M.B.A. Concurrent Degree Program

Separately, the M.B.A. in the College of Business requires completion of 33 semester hours of coursework; the MCMA M.S. in Professional Media and Media Management requires 30 semester hours of coursework. The concurrent degree program entails completion of 21 semester hours of MCMA approved courses and 24 credit hours of COB-approved courses, for a total of 45 hours. This is a savings of 18 semester hours over pursuing both degrees separately as COB accepts nine semester hours of MCMA-approved coursework and MCMA accepts nine hours of COB-approved coursework. Students wishing to be admitted to the concurrent program must apply and be accepted to the MCMA M.S., as well as, apply and be accepted into the M.B.A program in the College of Business. This initiates the process to pursue the concurrent degrees.

Applicants for the concurrent degree program must also earn a satisfactory score on the GMAT or GRE to be admitted to the M.B.A program, as well as successfully complete the College of Business Foundation Workshops offered during the summer semester break, if they have not previously completed the 10 foundation business courses (or their equivalent) required for admission into the M.B.A program.

Graduate Certificate in Civil Society, Communication, and Media Practices

A new era of collective activism has expanded and reinvigorated the role of communication and media practices in shaping the space for and nature of public engagement. In this process, Civil Society Organizations (CSOs), Non-Profits (NPOs), NonGovernmental Organizations (NGOs),
local organizations, grassroots movements and media makers have entered public culture with renewed creativity, force, and necessity. This certificate offers students a critical, historical, and theoretical understanding of the significance of communication and media within the broader context of contemporary practices engaged in organizing public and social change. Students will learn to analyze these media practices in their various forms and contexts, from the local to the global, and the complex relationships they navigate with political and social movements, governments, and more mainstream forms, such as entertainment. Our curriculum emphasizes theory and practice and introduces students to a variety of media practices, including research methodologies based in the media arts. The certificate prepares graduates for leading, evaluating, and collaborating in communication efforts aimed at social change. Graduate students will have a broad understanding of the civic potential of media and be prepared to communicate with, promote, and participate in grassroots communities in the age of social media.

Admission

All requirements for admission to the Graduate School at Southern Illinois University Carbondale must be met. Applicants must submit the Application for Admission to Graduate Study forms and certified transcripts of all postsecondary studies. Applicants must also submit a resume outlining educational and professional experience, as well as a personal statement describing their objectives for study in the program, career goals and interests. Generally, applicants must have a grade point average of at least 3.0 (4.0=A) for their last two years of undergraduate work. International students whose native first language is not English, or those with fewer than 100 graded semester hours of college credit at a U.S. college or university, must take the TOEFL and score at least 600 (paper score), 250 (computer score), or 100 (internet score) to be admitted.

Curriculum

The minimum 18 credit hour certificate program requires that the student successfully complete the six courses listed below:

- MCMA 555-3 Communication and Media Management of Civil Society Organizations
- MCMA 568-3 Social Media Theory & Practice
- MCMA 561-3 Communication for Social Change
- MCMA 543-3 New Media Practice for Civil Society Organizations
- MCMA 537-3 Introduction to Communication Research
- MCMA 569-3 Alternative Media: Power & Resistance

Master of Science Degree

The M.S. in Professional Media and Media Management Studies provides students with a practical background in applied research and critique of the communications industries and trains students with varied professional interests to establish careers in communications industries. More specifically, this program aims to train intelligent, self-aware, flexible graduates who will go on to become leaders in the communications industries. The core curriculum is designed to expose students to a broad foundation in media studies. In consultation with their faculty advisor, students also select an emphasis area in which in-depth exploration of one facet of professional media management, studies, practice or technology is explored. Students finish their program of study with a Research Report, which may be accompanied by a project, on a topic of their choosing from within their emphasis area. The College of Mass Communication and Media Arts allows a maximum of three years from date of enrolling in the M.S. program for completion of the M.S. degree. This program generally takes two years to complete.

Program Admission

All requirements for admission to the Graduate School at Southern Illinois University Carbondale must be met. Applicants must submit the Application for Admission to Graduate Study forms, certified transcripts of all post-secondary studies, as well as three letters of recommendation from individuals who can evaluate potential for graduate studies. Applicants must also submit a resume outlining educational and professional experience, as well as a personal statement describing their objectives for study in the
program, career goals and interests. Applicants should include an example of work that demonstrates their competency, preferably professional work, although prior academic work is acceptable. Work samples might be in the form of print articles, video or audio tapes, DVDs, URLs or CDs. Applicants must clearly indicate their role(s) in any project submitted. Generally, applicants must have a grade point average of at least 3.0 (4.0 = A) for their last two years of undergraduate work. International students whose native or first language is not English, or those with fewer than 100 graded semester hours of college credit at a U.S. college or university, must take the TOEFL and score at least 550 (paper score) or 80 (internet score) or have an IELTS score of 6.5 to be admitted. Students whose preparation is deemed lacking in certain areas may be required to take undergraduate courses to attain competency. These will not be counted toward the M.S. degree.

Curriculum

Candidates must complete a minimum of 30 credits including six hours of core requirements, 21 credits in an emphasis area and a 3-credit Research Report.

Core (6 Credits):

- MCMA 500-3 Media as Social Institutions
- MCMA 592-3 Master’s Seminar

Emphasis Area (21 Credits):

A minimum of seven courses selected in consultation with the faculty adviser. No more than six credits can be at the 400-level. Topics of study include: media management, strategic advertising communication, digital documentary production, public policy reporting, and new media production.

Research Report (3 credits):

- MCMA 589-3 Report/Project

Master of Fine Arts Degree

The Master of Fine Arts degree provides substantial advanced study for a small number of highly talented individuals. The program emphasizes the artistic development of the individual student and the creation of quality artistic works in photography, film, video, sound, new media, and interdisciplinary media. Degree requirements are 60 semester hours, including 51 hours at the 500-level. The program generally takes three years to complete.

While mastery of craft within Media Arts is a vital component of the M.F.A., the philosophy is that graduate study should expand the student’s breadth as an artist and encourage interdisciplinary study. Available course work in production, criticism, theory, history, and combined media studies emphasizes the interwoven character of traditional and contemporary approaches and technologies in the 21st century.

Additional course work can be pursued through the School of Art and Design, the School of Music, and the Departments of Theater, English, Anthropology, Communication Studies, etc. A distinguished faculty of artists and scholars, excellent facilities, and a variety of curricular offerings allow students to individually tailor their programs of study.

Admission

All requirements for admission to the Graduate School at Southern Illinois University Carbondale must be met. Applicants must submit the Application for Admission to Graduate Study forms, certified transcripts of all postsecondary studies as well as three letters of recommendation from individuals who can evaluate their potential for graduate studies. Applicants must also submit a resume outlining educational and professional experience, as well as a personal statement describing their objectives for study in the program, career goals and interests.

Prospective students must present evidence of exceptional talent and/or potential in one or two media pursuits in the degree program. Applicants should include an example of work that demonstrates their competency. This evidence will ordinarily consist of a portfolio of photographs or digitally generated
art works, one or more films, videos, sound works, multimedia productions, web art projects, or other evidence of artistic potential. Applicants must clearly indicate their role(s) in any project submitted. An interview with faculty in the program is highly recommended, particularly for applicants with minimal course work in the field.

Acceptance into the program and continuing enrollment are at the discretion of the College of Mass Communication and Media Arts and the Graduate School. Generally, applicants must have a grade point average of at least 3.0 (4.0 = A) for their last two years of undergraduate work. International students whose native or first language is not English, or those with fewer than 100 graded semester hours of college credit at a U.S. college or university, must take the TOEFL and score at least 550 (paper score) or 80 (internet score) or have an IELTS score of 6.5 to be admitted. Students whose preparation is deemed lacking in certain areas may be required to take undergraduate courses to attain competency. These will not be counted toward the M.F.A. degree.

Retention

At the end of the first year in residence, each M.F.A. student will undergo a review by a committee of faculty. Possible outcomes of this review are Pass, Provisional Pass, and Fail. Failure of this review will result in termination from the program. Students who receive a Provisional Pass in this review will receive a letter outlining the areas in which they must improve and be assigned a faculty mentor for this process. Failure to demonstrate improvement will result in termination from the program.

Procedures

By the end of the third semester in residence, each M.F.A. student will be required to select, in consultation with the Associate Dean of Graduate Studies, a committee chair and a committee of two additional graduate faculty members. The faculty committee and the student develop a specific plan of study, considering the requirements of the Graduate School, the degree program, and the goals of the student.

The M.F.A. degree culminates in an intensive Creative Thesis that must be publicly presented. The exact nature of the project and presentation will be determined in consultation between the student and the committee. The committee chair supervises the thesis. An oral examination by the faculty committee will take place in conjunction with the public presentation of the thesis and will focus on an evaluation of the project. The M.F.A. electronic thesis document consists of a formal paper describing the Creative Thesis, its historical precedents, contemporary context, and theoretical underpinnings with embedded media files that document the public exhibition/screening. It must be filed with the SIU Graduate School. The University reserves the right to retain a portfolio or samples of each student’s work.

Curriculum

The minimum 60 credit degree requires 27 credits of common requirements constituting a core, 27 credits of electives, and a six credit thesis.

Core (27 credits):

- MCMA 557-6 MFA Studio Arts Practice (3,3)
- MCMA 558-9 MFA Studio Critique (3,3,3)
- MCMA 550-3 History of Media Arts and Culture
- MCMA 551-3 Theory of the Media Arts
- MCMA 531-3 Critical Research Methods in Media Arts

And

- MCMA 552-3 Seminar: Topics in the History and Theory of Media Arts

Or

- MCMA 555-3 Topical Seminars

Thesis (6 credits):
• MCMA 599-6  Thesis (3,3 or 6)

Electives (27 credits):
Select 27 credits from either inside or outside of the college. No more than six credits can be taken at the 400-level and no more than 15 hours of M.F.A. Projects (3,3,3,3,3) can be taken. M.F.A. Projects cannot be repeated with the same professor.

Doctor of Philosophy Degree
The Ph.D. degree program engages students in an interdisciplinary study of global media communication. Concepts and methods drawn from various research traditions in the field are compared and contrasted, while specialization in particular areas and approaches is open to students.

Admission
Students applying for doctoral study must have a master’s degree and a graduate GPA of at least 3.00. International students must have a TOEFL score of at least 550 (paper score) or 80 (internet score) or have an IELTS score of 6.5 to be admitted. All applicants must submit currently valid Graduate Record Examination (GRE) scores. Other factors will also be considered including professional and academic accomplishments, examples of professional work, awards and honors, evidence of scholarship such as research papers and published articles, and prior full-time teaching in the mass communication and media arts area. A visit to SIU and interview with faculty is recommended.

Students whose preparation is lacking in certain areas may be required to take undergraduate courses that will not be counted towards the Ph.D. degree.

An accelerated entry option to the Ph.D. program is offered in exceptional cases to students who have been admitted to the M.A. program. To be eligible, the student must: 1) possess a master’s degree; 2) have qualified for admission to the MCMA Ph.D. program initially; 3) complete at least nine hours but no more than 18 hours in the M.A. degree; 4) have a minimum 3.25 GPA in the M.A. program with no incomplete or deferred grades. The student may petition the Associate Dean of Graduate Studies for the accelerated entry option during the semester in which the student will begin taking the ninth hour of graduate courses, but must petition before earning the 18th hour of course work in the M.A. program. If approved, the student is enrolled in the Ph.D. program the next semester. Up to 18 graduate credits earned in the M.A. program will count toward the Ph.D. degree if the accelerated entry option is approved by the MCMA Graduate Committee. Once the student is admitted to the Ph.D. program, all requirements of the Ph.D. program apply. Exceptions to any of these rules must be appealed to the MCMA Graduate Committee, which has final authority to approve or reject the petition.

Retention
No course in which the grade is below C shall count toward the degree nor fulfillment of any requirement, but the grade will be included in the grade point average. No more than three hours of C work in graduate courses will count toward the degree.

Procedures
Detailed policies for the Ph.D. degree are available from the MCMA Graduate Office, including such topics as graduate symposium, first year review, composition of graduate committees, comprehensive exam procedures, etc. However, some of the major steps through the program are:

1. During the third semester of enrollment, each Ph.D. student will prepare a total program plan for the degree and secure sponsorship by a faculty member who may become the dissertation committee chair. The plan should include a list of courses and tools, with some explanation and justification for their selection in relation to academic goals. The plan will be discussed and modified, when appropriate, before approval.
2. When the student has completed all course work (with all incomplete and deferred grades removed) other than the classes taken in the concurrent semester, the student must pass rigorous comprehensive written and oral examinations. The examination must be completed during the fall
semester of the third year in the program. Failure to successfully complete the exams by the end of
the fall semester of the third year will result in dismissal from the program.
3. Upon successfully completing the comprehensive written and oral exams, the student advances
to candidacy to complete and defend a dissertation based on scholarly research and independent
thought that adds to the body of knowledge in the field.
4. Under the guidance of a dissertation committee chair, the student forms a dissertation committee
and prepares a dissertation proposal consisting of the introduction, literature review, and
methodology for the investigation proposed. An oral defense of proposal must be made before the
committee and interested observers and approved within one year of reaching candidacy.
5. The dissertation defense will be before members of the dissertation committee and interested
observers. Although others than committee members may be allowed to ask questions, the pass
or fail decision on the oral defense will be made by committee members only. The College of
Mass Communication and Media Arts allows a maximum of seven years from date of enrolling for
completion of the doctoral degree. The program generally takes four years to complete.

Curriculum

The Ph.D. in mass communication and media arts requires a minimum of 60 credits including 12 credits
of foundation courses, nine credits of research tools courses, 15 credits of electives, and a 24-credit
dissertation. A minimum of 12 courses are required. 10 courses must be taken within MCMA.

All course work counting towards the degree must be at the 500-level. If the faculty advisor and student
determines a 400-level course would be beneficial, the course can be taken as an independent study with
specific extra work to make it equivalent to a 500-level course. A plan of study must be submitted and
approved for such a course.

A maximum of two (2) independent study courses, for six credit hours total, can be counted toward
degree (MCMA 596 and/or MCMA 591).

Foundation (12 credits):

- MCMA 504-3 Foundations of Media Communication Theory
- MCMA 505-3 Theoretical Issues in Media Advanced Communication
- MCMA 508-3 Conceptual Foundations of Research Strategy
- MCMA 595-3 Ph.D. Proseminar

Research Tools Courses (9 credits):

Nine credit hours of additional research tools courses must be taken, selected in consultation with the
student’s faculty advisor. A minimum of two (2) must be within MCMA.

Electives (15 credits):

Fifteen credit hours of additional courses must be taken, selected in consultation with the student’s faculty
advisor to build an emphasis.

Possible emphasis areas include but are not limited to Journalism/Mass Communication, Media Law &
Policy, Media/Cultural Studies, Interdisciplinary.

Comprehensive and Oral Exams:

Dissertation (24 credits):

Mass Communication and Media Arts Courses

MCMA497 - Special Interdisciplinary Study 497-1 to 6 Special Interdisciplinary Study. Designed to offer
and test new and experimental courses and series of courses within the College of Mass Communication
and Media Arts. Incorporation course fee: $25.

MCMA500 - Media as Social Institutions 500-3 Media as Social Institutions. Provides an introduction to
major issues involving media in contemporary societies. Multi-disciplinary in nature, the course introduces
major theoretical perspectives used in reviewing media productions and activities and the relationships among media organizations and practitioners and other institutions of society.

MCMA501 - Intellectual Property 501-3 Intellectual Property and the Law. Examines intellectual property in legal, economic, and cultural terms. Topics may include copyright, patents, trademarks, entertainment law, and infringement.

MCMA502 - Media Economics 502-3 Media Economics. Introduction to political economy of the media. Addresses core concepts, theories, and methods used to understand media as cultural industries.

MCMA503 - Media & Technology 503-3 Media and Technology. A survey of the major technological changes in mass media and their impacts on society and the media industries. On completion of the course students should have a basic understanding of the role of media technology in shaping communication patterns and their social outcomes.

MCMA504 - Foundations Media Theory 504-3 Foundations of Media Communication Theory. Principal theoretical approaches to media analysis, addressing empiricist, cinema studies, media studies and cultural studies research paradigms. Historical and cultural contexts of media theory construction. Focus on original texts.

MCMA505 - Advanced Media Theory 505-3 Advanced Theoretical Issues in Media Communication. Analysis and critique of advanced and recent theory and research trends in media studies, cultural studies, communication technology studies and mass communication research. Prerequisite: MCMA 504.

MCMA506 - Law and Policy Mass Comm 506-3 Law and Policy of Mass Communication. Focuses on free expression in journalism and entertainment across the media. Topics may include news gathering techniques, intellectual property, the Internet, and governmental regulation. The course pays special attention to the tension between what is legal and what is ethical.

MCMA507 - Media Management 507-3 Media Management. Analysis of a variety of media industries, including industry structures, and the industry processes of media development, production, and distribution. Attention to management of media companies across sectors as the industry adjusts to economic and technological change.

MCMA508 - Concept Found Research 508-3 Conceptual Foundations of Research Strategy. Analysis and evaluation of conceptual frameworks underlying empirical research strategies, positivist, textual and qualitative, commonly used in media and internet research. Issues in multi-method research strategies are reviewed. Ethical implications are debated.

MCMA509 - Media Ethics 509-3 Media Ethics. Overview of ethics philosophies and accountability tools for the mass media. Areas to be studied include journalism reviews, ethics codes, ombudsmen, media critics, news councils, and public/civic journalism. Covering issues in journalism, photojournalism, public relations, advertising, new media, and "infotainment."

MCMA511 - New Media Production 511-3 New Media Production. Investigate how the Internet works, explore relationships among design, technology, and user experience while developing web sites, information architectures, interface behaviors, and navigation systems. Topics include: HTML & XHTML authoring, Cascading Style Sheets, Javascript, open source software, and incorporating sound, video, and images into web pages. Issues of privacy, legal and ethical responsibilities for consumers and producers of web content.

MCMA512 - Web & Interaction Design 512-3 Web and Interaction Design. The Web is part of a larger environment that constantly evolves in relation to social and technological developments. Design principles, HTML5 authoring, cascading style sheets and web usability. Investigates the design of online experiences through lectures, discussions, workshops, and projects. Relationships are explored among design, technology, and user experience in the context of contemporary Internet cultures and develop skills in designing information architectures, interface behaviors, navigation systems, and typographic and image strategies for the Web. Prerequisite: New Media Production or an introductory web production course with permission of the instructor. Lab Fee: $50.

MCMA513 - Civil Society Media Mgt 513-3 Media Management of Civil Society Organizations. Investigate the multiple roles, contributions, and approaches employed in developing communication
and media efforts of civil society organizations (NGOs, NFPs, NPOs), especially the role of the Communicator, or Media Officer. Students will be able to assess this as a professional option and be equipped with a conceptual and practical 'tool box' for succeeding in this role.

**MCMA516 - NET.ART** 516-3 NET.ART. History, theory, and practice of digital media as an online art form. Examine and produce works in linear and non-linear hypermedia narrative, network conceptualism, and generative software. Issues include identity, location, collaboration, surveillance, hacktivism, tactical media, immersion, game design, media synthesis. Lab fee: $20.

**MCMA530 - Historical Research Methods** 530-3 Historical Research in the Mass Media. Covers a variety of approaches to historical research used by media scholars. Examines how scholars conceive of their object of study, use primary sources, and how they construct the basis of the narrative and analytic discussions of their topic. Focus on historiography and methodology, including data collection, analysis, organization and presentation. Students will use sources including but not limited to newspapers, archives, personal papers, manuscripts, and oral histories.

**MCMA531 - Critical Res Method Media Arts** 531-3 Critical Research Methods in Media Arts. This course introduces students to critical and interpretive research methods and techniques for the study of media arts and culture. It focuses on interdisciplinary approaches and covers a range of methods and theoretical perspectives that may include historiography, ideological and textural analysis, semiotics, psychoanalysis, critical ethnography and auto-ethnography, and/or other critical methods. Areas of emphasis may vary by instructor. This course may be repeated when the topic differs. Prerequisite: MCMA 551.

**MCMA532 - Quantitative Research Methods** 532-3 Quantitative Research Methods in Mass Communication. Identification of relevant research topics, critical evaluation of existing research literature, and development of a detailed research proposal. Emphasis on quantitative methods such as sampling, surveys, research design, experiments, content analysis, and introductory statistics.

**MCMA534 - Qualitative Research Methods** 534-3 Qualitative Research Methods. An introduction to the intellectual underpinnings, epistemology, and methodologies of qualitative research. The course focuses on critical and interpretive approaches to researching media industry structures, artifacts, audiences, and producers.

**MCMA535 - Textual Analysis** 535-3 Textual Analysis. This class examines methods of textual analysis in the media arts with references to their historical, theoretical, and practical contexts.

**MCMA536 - Content Analysis** 536-3 Media Content Analysis. Overview of methods and problems of systematically analyzing mass media messages with critique of published studies. Experience in conducting a content analysis project on a topic of current scholarly significance in mass communication and media arts. Prerequisite: MCMA 532.

**MCMA537 - Intro Communication Research** 537-3 Introduction to Communication Research. Reviews the basic knowledge of research and prepares students to understand, apply and interpret information, research and other published work. Covers elements of research, scales of measurement, sampling procedures, research process, qualitative and quantitative methods and writing research reports. Qualitative methods include case studies, focus groups and intensive interviews. Quantitative methods include surveys, experiments and content analysis. Introduction to use of elementary statistics and data analysis will give students a better understanding of empirical research. Objective is to prepare students for writing term papers, professional careers and the final critical inquiry research project.

**MCMA538 - Discourse Analysis** 538-3 Critical Analysis of Discourse. Critical Discourse Analysis is a theory-based methodology which takes as its unit of analysis the entire ‘utterance’ (e.g. news bulletin, newspaper article, Facebook posting, a hashtag). Its methods are closer to literary and rhetorical criticism than the quantitative word count of content analysis. This methodology allows the research to unveil ideological motivations in language use and in images, and can be applied to most forms of media texts including social media and video games.
MCMA539 - Legal & Govern Research 539-3 Legal and Governmental Research in the Mass Media. Research procedures used to find and analyze documents generated by executive, legislative, and judicial entities. Prerequisite: MCMA 506.

MCMA540 - Critical Documentary Practices 540-3 Critical Documentary Practices. Documentary is both a product of existing social conditions and a form of critical opposition to them. This course will emphasize independent video production from invention of the documentary idea to post-production. Emphasis on connections between critical theory and media production. Students will embrace the conceptual and hands-on process of researching, writing and producing independent documentary video, focusing on critical arts practice.

MCMA543 - Media Arts Studio Seminar 543-15 (1-3,1-3,1-3,1-3,1-3) Media Arts Studio Seminar. A forum for the pursuit of creative projects in the media arts. May be repeated as topic changes. Restricted to CMCMA MFA or PMMM major or consent of instructor or director of Graduate Studies in Mass Communication and Media Arts. Laboratory fee: $50.

MCMA546 - Seminar Film Theory 546-6 (3,3) Seminar Film Theory. Advanced study of major currents in film theory and intensive consideration of particular topics in film theory. Discussion of early debates about aesthetics, perception and realism; linguistically modeled, structuralist, formalist and psychoanalytic theories; ideological, deconstructionist, feminism reception and other postmodern theoretical trends. Special topics might include: feminism and film, Freudian concepts for film, Marxism and film, film and language, formalist film theory, spectatorship, film and perception. Intensive weekly reading and discussion. Films are screened in relation to theoretical topics and assigned readings. Screening fee: $20.

MCMA548 - MFA Projects 548-1 to 15 MFA (Master of Fine Arts) Projects. Supervised independent creative work in media arts, the exact nature of which is to be determined in consultation with the MFA faculty member. Consent of instructor. Equipment usage fee: $50.

MCMA549 - Pro Documentary Practice 549-3 Professional Documentary Practice. Production students will work with experts from a variety of specializations across campus to produce short form documentaries for broadcast on WSIU. A comprehensive overview of producing successful programs for the industry taking the topic from scripting to filming to editing. Advanced video or audio production skills are required.

MCMA550 - History Media Arts & Culture 550-3 History of Media Arts & Culture. Introduces the history of the reproducible media arts, beginning with their prehistory in printmaking, and focusing on photography, cinema, radio, television, video, and other visual, audio, and digital media. Locates media technologies in the historical, material conditions of their emergence, consider how media interact with and make history, how media art forms and movements arise historically and how these relate to mass media. Screening fee: $35.

MCMA551 - Theory of the Media Arts 551-3 Theory of the Media Arts. A survey of the major theoretical debates about the reproducible media arts with particular emphasis on the relationship between mass media, new media technologies, and art. Debates will be grounded in the study of aesthetic practices, technological innovations, political-economic settings, and overall historical context within which they emerged. Prerequisite: MCMA 550. Screening fee: $35.

MCMA552 - History Theory Media Art 552-3 Seminar: Topics History and Theory of Media Arts. This course provides an in-depth study and discussion of selected topics in the history and theory of the media arts. Topics vary and will be announced in advance. This course may be repeated when the topic differs. Screening fee: $35.

MCMA555 - Topical Seminars 555-(3,3,3,3,3) Topical Seminars. Seminars on subjects of current interest, with the topics determined through students and faculty request and interest.

MCMA557 - MFA Studio Arts Practice 557-6 (3,3) MFA (Master of Fine Arts) Studio Arts Practice. The first-year course for all incoming MFA (Master of Fine Arts) students in the college serves as an introduction to media creation strategies and concepts. The emphasis is on aesthetic and conceptual development as encountered within a variety of media arts. The course is team taught by a number of faculty in modules dedicated to various media forms- still image, time-based, spatial, and interactive.
Restricted to CMCMA MFA major or consent of instructor or associate dean of graduate studies in Mass Communication and Media Arts. Lab fee: $75.

MCMA558 - MFA Studio Critique 558-9 (3,3,3) MFA (Master of Fine Arts) Studio Critique. This critique-based seminar course is offered each semester to all graduate students in the MFA program except those in their last semester of thesis work. The goal for this course is to create an interdisciplinary forum where students develop research skills, learn how to best articulate their artistic production, and critique their peers’ works. Restricted to CMCMA MFA major or consent of instructor or associate dean of graduate studies in Mass Communication and Media Arts. Lab fee: $75.

MCMA560 - Studies in Media History 560-3 Studies in Media History. Examine the histories and social effects across media including: books, newspapers, magazines, film, radio, television and the internet. This study will investigate the conceptual dimensions of communication history by examining social, economic, cultural, and political histories of the field.

MCMA561 - Communication Social Change 561-3 Communication for Social Change. Evolution of communication and social change theories and practices; contextual factors (including aid, trade and development policies); organizations influential in formulating and implementing policy; communication intervention strategies; evolving journalism practices.

MCMA562 - Significant Studies Mass Com Res 562-3 Significant Studies in Mass Communication Research. A review of a broad selection of early literature in communication research that has provided much of the conceptual basis for empirical studies during the past two decades.

MCMA563 - Globalization & Media 563-3 Globalization and the Media. Debates about globalization from historical, theoretical, and critical perspectives. The major uses of communication technologies in international economic, political and cultural processes. Topics include regional and global trends, trade regimes, global policy bodies and policy issues; global media influence.

MCMA564 - Political Economy of Media 564-3 Political Economy of Media. Addresses the intersections of politics, economics, and social structures that underpin media arts and industries at global and national levels. Emphasizes the relationship between theories and methods.

MCMA565 - Strategic Advertising 565-3 Strategic Advertising Communication. Problem solving through strategic advertising communications and functional marketing communication, including branding, advertising, PR, sales promotion and direct response in an integrated program. The focus is on strategy and planning, and students will concentrate on integrating targets, timing and message strategy.

MCMA566 - Brand Management 566-3 Brand Management Communication. A conceptual synthesis and practical application of business, research, media and creative principles used in the formulation for a branding/advertising campaign. It includes the development of a complete integrated marketing communications (IMC) campaign for a specific brand.

MCMA568 - Social Media Theory/Practice 568-3 Social Media Theory and Practice. Explores social media from various perspectives. Topics will cover history and development of social media, social advertising/marketing, citizen journalism, social media and health communication, and other issues related to social media such as privacy, gaming, interface design, identity, etc. Students will gain hands-on experience with social media.

MCMA569 - Alt Media Power & Resistance 569-3 Alternative Media: Power and Resistance. Explores "alternative media" as counter hegemonic practice. Course examines various forms of alternative media and different meanings ascribed to them. Case studies locally and around the world demonstrate the growing relevance of alternative media in contemporary societies and the complex relationships they navigate with political and social movements, governments, the private sector, and mainstream forms of media.

MCMA582 - Game Narratives 582-3 Game Narratives. Teaches students the core ideas and practices of game narratives. It covers: a) The conceptual fundamentals of theories of game narrative design; b) The technical and organizational process of creating a narrative game. This includes designing and implementing a narrative game using an appropriate software tool. While game narrative is at the center
of this course, the skills and knowledge acquired in this class are applicable to broad range of design-centric fields and contexts.

MCMA586 - Professional Media Projects 586-1 to 6 Professional Media Projects. Supervised independent media production work, the amount and exact nature of which is to be determined in consultation with MCMA faculty. More than one section may be taken in the same semester. Restricted to PMMM major or consent of instructor or director of Graduate Studies in MCMA. Lab fee: $50.

MCMA589 - MS Report/Project 589-3 MS Report/Project. Research report or media project accompanied by abbreviated research report, directed by a minimum of one member of the graduate faculty in CMCMA. The research report, which is the synthesis of existing literature on a specific topic or the contextualization of an original media project, must be submitted to the Graduate School. Public presentation of the project required. Restricted to PMMM major.

MCMA591 - Readings 591-1 to 6 Readings. Supervised readings on subject matter not covered in regularly scheduled courses. Graduate students limited to three credits per semester. Consent of instructor.

MCMA592 - Master's Seminar 592-3 Master's Seminar. This course orients students to graduate level study in mass communication and media arts. Applied general research skills, literature reviews and proposal writing among other topics are covered. Students work on directed projects, culminating in a proposal for future research or media production. Restricted to CMCMA PMMM, MTR, or MFA major or consent of instructor or associate dean of graduate studies in Mass Communication and Media Arts.

MCMA594 - Practicum 594-3 Practicum. Study, observation and participation in activities related to the fields of Mass Communication and the Media Arts such as internships in related professional organizations. Restricted to CMCMA major.

MCMA595 - Ph.D. Proseminar 595-3 Ph.D. Proseminar. Provides PhD students in the College of Mass Communication and Media Arts a general orientation to the program. Forum for further discussion of topics and issues raised in visiting lectures scheduled through the college which students will be required to attend. Provides a framework for preparation for the annual MCMA research convention at which students will be required to present. Restricted to CMCMA major or consent of instructor or associate dean of Graduate Studies in Mass Communication and Media Arts.

MCMA596 - Independent Study 596-1 to 6 (1 to 3 per semester) Independent Study. Supervised research or independent creative work, the area of study to be determined by the student in consultation with instructor. Consent of instructor.

MCMA599 - Thesis 599-1 to 6 Thesis. Thesis requirements may be satisfied only by a written thesis for an MA in Media Theory and Research and by a creative thesis for an MFA in Mass Communication and Media Arts. Minimum of three hours required for the MA in MTR degree and minimum of six hours required for MFA in MCMA. Graded S/U. Restricted to CMCMA MTR and MFA major. Only MFA thesis course carries a lab fee of $75 per enrollment.

MCMA600 - Dissertation 600-1 to 32 (1-12 per semester) Dissertation. Minimum of 24 hours to be earned for the Doctor of Philosophy degree.

MCMA601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis or research paper. The student must have completed a minimum of 24 hours dissertation research or the minimum thesis or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Mass Communication and Media Arts Faculty

The graduate faculty, consisting of members of the School of Journalism and the departments of Cinema and Photography, and Radio, Television, and Digital Media, offers graduate work leading to the following degrees: Master of Arts in Media Theory and Research, Master of Science in Professional Media and

**Graduate Faculty in Cinema and Photography (CP):**

- **Aguayo, Angela,** Associate Professor, Ph.D., University of Texas, Austin, 2005; 2008. Documentary theory and social change, critical/cultural studies, video production.
- **Kapur, Jyotsna,** Professor, Ph.D., Northwestern University, 1998; 1998. Feminist and Marxist analysis of media, globalization, children’s film and consumer culture, documentary and ethnographic film, the German and Japanese new wave and Indian cinema.
- **Martinez, Antonio,** Associate Professor, M.F.A., East Carolina University, 2005; 2006. Digital imaging, alternative printing processes, multimedia installation, class and racial identity.
- **Metz, Walter,** Professor, Ph.D., University of Texas, Austin, 1996; 2009. Contemporary film and television criticism and theory, literature and film, science and film, post-war American culture.
- **Phillips, Mike,** Clinical Assistant Professor, Ph.D., The Graduate Center of the City University of New York, 2019; 2019. American and transnational popular culture, film genre, historical fiction, African American cinema, and intermediality.
- **Rowley, R. William,** Associate Professor, M.F.A., University of Iowa, 1974; 2000. Foundational digital and analog film production and post-production techniques, experimental filmmaking, observational documentary, intermedial arts.
- **Spahr, Robert,** Associate Professor, M.F.A., Parsons School of Design, New York City, 1991; 2009. Computational art using generative and procedural art processes, genetic algorithms, time-based media and live art.
- **Tudor, Deborah,** Associate Professor and Interim Dean; Ph.D., Northwestern University, 1992; 2006. Culture and technology, globalization, neoliberalism, and cinema.
- **Zhou, Hong,** Associate Professor, M.F.A., York University, Toronto Canada, 2000; 2008. Film and video production, cinematography, Chinese cinema, surrealistic cinema.

**Graduate Faculty in Journalism (JRNL):**

- **Barrett, Anita J. (Stoner),** Visiting Assistant Professor, M.F.A., Syracuse University, 1995; 2005. Web production and Content Management Systems, multimedia, revenue models for journalism.
- **Dolan, Mark,** Associate Professor, M.A., Syracuse University, 1995; 2008. Visual and interactive communication, photojournalism.
- **Han, Dong,** Associate Professor, Ph.D., University of Illinois, 2011; 2012. Intellectual property and media, medical history and political economy, international communication and communication technology.
- **Karan, Kavita,** Professor, Ph.D., University of London, 1994; 2009. Political communication, advertising and market research, international communication, media and children, health communication.
- **Lescelius, Bridget,** Instructor, M.B.A., Virginia Polytechnic, 1996.
- **McClurg, Scott,** Professor and Interim Director, Ph.D., Washington University, 2000; 2001. Political participation, public opinion, electoral behavior, political geography, spatial statistics, and campaign dynamics.
- **Ryoo, Yu hosua,** Assistant Professor, Ph.D., University of Texas at Austin, 2019; 2019. The intersection of digital advertising, medial psychology, and prosocial behavior. Individual, social, and situational factors of digital and social media.

**Graduate Faculty in Radio, Television, and Digital Media (RTD):**

- **Brooten, Lisa B.,** Associate Professor, Ph.D. Ohio University, 2003; 2002. Media and globalization, gender, alternative media, social movements, political communication, interpretive/critical research methods, ethnography.
**Burns, David**, Associate Professor, M.F.A., Parsons School of Design, 2001; 2005. 3D computer animation; media arts theory; technology, culture, and society; memory and post-memory.

**Kreider, Wago**, Associate Professor and Acting Associate Dean and Interim Director of Graduate Studies, M.F.A., Rutgers University, 2002; 2006. Experimental and documentary media production, sound studies and production, cinematic histories, architectural and environmental studies.

**Padovani, Cinzia**, Associate Professor, Ph.D. University of Colorado, 1999; 2005. Historical approaches to political economy, public service broad-casting, international communication, social movements and the media.

**Thompson, Jan**, Professor, M.G.S., Roosevelt University, 1988; 2000. Video production, documentary, sports production.

---

**Mathematics**

The Department of Mathematics offers graduate degree programs leading to the Master of Arts or Master of Science degree in mathematics and the Doctor of Philosophy degree in mathematics. Students in the master’s program can choose from a rich assortment of courses in both pure and applied mathematics and statistics. Each master’s degree candidate works closely with a professor in writing a research paper in an area of interest to the student. A double major at the master’s level between mathematics and a related discipline is also an option. At the doctoral level, a student may specialize in any one of a large number of fields such as algebra, applied mathematics, combinatorics, computational mathematics, control theory, differential equations, geometry, numerical analysis, probability, or statistics. Interdisciplinary programs are also available.

The department is committed to providing a challenging and rewarding experience for its graduate students. The department offers individual attention and mentoring, strives to establish a friendly, supportive environment, and assists students as much as possible to achieve their professional goals. Graduate students have 24 hour access to the departmental computer lab which has thirty state-of-the-art PCs, all with internet connections. For more computing needs, students can access the University Unix computer servers from the lab.

Students interested in the teaching of mathematics may select a minor concentration in education within the Master of Science program in mathematics. Minor work for graduate degrees in other fields, which allow for a minor, is also offered.

Acceptance for graduate study in mathematics and subsequent continuation in the graduate program are at the discretion of the Department of Mathematics, provided that the student has been admitted to the Graduate School and meets the retention standards of the Graduate School. All applicants for the graduate program are considered for teaching assistantships. In order to be considered for a fellowship, the applicant must take the GRE exam, and all applicants are strongly encouraged to take the GRE General Test.

Prospective students are encouraged to contact the Department of Mathematics at mathgradinfo@siu.edu or the web site at math.siu.edu for application forms or additional information.

In addition to the general rules, regulations, and requirements of the Graduate School, the following specific requirements pertain to the degrees available in mathematics.
This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Mathematics. Applicants must pay this fee by credit card.

Master of Science Degree in Mathematics

Students will be considered for acceptance into the M.S. degree program in mathematics if they have completed an undergraduate major in mathematics or a strong undergraduate minor in mathematics together with a major in a closely related discipline. Once accepted, the requirements are as follows:

1. The candidate must complete a total of at least 30 semester hours of graduate credit approved by the Director of Graduate Studies of which 15 hours must be at the 500 level, only three of which can be for MATH 595, MATH 598 or MATH 599, and at least 21 hours must be in courses (exclusive of MATH 411, MATH 412, MATH 511, MATH 512A-G and MATH 513A-I) offered by the department of Mathematics. A minor concentration may be taken outside of the department if approved by the Director of Graduate Studies during the student’s first semester in the master’s program.

2. The candidate’s program must include: (a) MATH 452 and MATH 419 AND (b) at least one 400- or 500-level mathematics course from two of the following three areas: (1) algebra and analysis (excluding MATH 452 and MATH 419); (2) geometry and topology; (3) probability and statistics. These requirements may be met in whole or in part by means of equivalent courses taken here or elsewhere prior to acceptance for graduate study in the department. Students who do not receive a B or better in MATH 452 on the first attempt are required to repeat it. Students who do not receive a B or better in MATH 419 on the first attempt are required to repeat it.

3. The candidate must prepare a research paper or thesis (3 hours credit in MATH 598 or MATH 599) under the supervision of a research adviser and two other faculty members from the department. This committee will be appointed by the Director of Graduate Studies after consultation with all those involved.

4. The candidate must demonstrate competence with the research tool of computer programming. This research tool requirement will be met by passing with a grade of B or better in CS 202 or the equivalent, or by passing a suitable examination given by a faculty member from the Department of Mathematics who has been appointed by the Director of Graduate Studies.

5. The candidate must demonstrate satisfactory performance on a final oral examination covering the graduate course work and the research paper or thesis. This examination will be conducted by the three members of the candidate’s committee and moderated by the research adviser. The student will pass the examination if the research adviser and at least one of the other two committee members so agree.

Master of Arts Degree in Mathematics

Students will be considered for acceptance into the M.A. degree program in mathematics if they have completed with distinction the equivalent of a strong undergraduate major in mathematics. Once accepted, the requirements are as follows:

1. The candidate must complete a total of 30 semester hours of graduate-level mathematics courses of which at least 15 must be at the 500 level.

2. The candidate must complete with a grade of B or better each of the courses MATH 419, MATH 421, MATH 430, MATH 452, MATH 455, and at least two of the courses MATH 501, MATH 519, MATH 530. This requirement may be met in whole or in part by means of equivalent courses taken elsewhere.

3. The candidate must demonstrate the ability to read mathematical literature in French, German, or Russian. This may be certified by passing with a grade of B or better the research tool course 488 offered by the Department of Foreign Languages and Literatures, by passing with a score of 465 or better an examination given by the Educational Testing Service of Princeton, NJ, or by passing a suitable examination given by a faculty member from the Department of Mathematics who has been approved by the Director of Graduate Studies.

4. The candidate must prepare a thesis (three hours credit in MATH 599) under the supervision of a thesis adviser and two other faculty members from the department. This committee will be appointed by the Director of Graduate Studies after consultation with all those involved.
The candidate must demonstrate satisfactory performance on a final oral examination covering the
graduate course work and the thesis. This examination will be given by the three members of the
candidate’s committee and chaired by the thesis adviser. The student will pass the examination if the
thesis adviser and at least one of the other two committee members so agree.

Doctor of Philosophy Degree

Students will be considered for acceptance into the doctoral program if they have completed with
distinction a graduate program comparable to that required for a master’s degree in mathematics,
statistics, or computer science at SIU. Additional evidence of outstanding scholarly ability or achievement
(e.g., a high score on the advanced section of the Graduate Record Examination or published research
papers of high quality) will lend strength to the application. Normally students will have completed MATH
419, MATH 421, MATH 430, MATH 452, and MATH 455 or their equivalent before entering the doctoral
program; those who have not must make up any deficiencies during their first year in the Ph.D. program.
Once admitted, the requirements are as follows:

1. The candidate must pass the departmental qualifying examination within four regular semesters
after admission. Qualifying examinations are given twice annually, in January and in August. The
student will be allowed to take qualifying exams at most three times. A student who fails to pass the
qualifying examination within the allotted time will be dropped from the doctoral program at the end
of the semester. The qualifying exam consists of three parts, each covering a regularly scheduled
500-level MATH course exclusive of MATH 511, MATH 521A-G, MATH 513A-I, MATH 516A, MATH
516B, MATH 584, MATH 585 and MATH 586. The student will decide which courses to be tested on
in consultation with the Director of Graduate Studies. Two of the three must be chosen from MATH
501, MATH 519, MATH 530 and MATH 580, and must include either MATH 501 or MATH 519. All
three parts must be passed, but not necessarily all at once. One of the parts may be from a related
field provided, if in judgement of the Graduate Programs Committee, it has mathematically rigorous
content.

2. The candidate must demonstrate competence with a computer programming research tool. This
requirement will be met by passing with a grade of \textit{B} or better in CS 202 or its equivalent, or by
passing a suitable examination given by a faculty member from the Department of Mathematics who
has been appointed by the Director of Graduate Studies.

3. MATH 501 and MATH 519 or their equivalent with a \textit{B} or better are required courses for all doctoral
students. The candidate must complete a major area (12 hours) and two minor areas (six hours
each). The course work in the major and minor areas must be at the 500-level and must be
exclusive of the courses used to satisfy the qualifying examination. Normally the major and minor
areas will be based on courses currently taught in the department. However, one of the minor areas
may be taken outside the department, subject to the approval of the Director of Graduate Studies.
With regard to the major and two minor areas, at least one of the three must be in an applied area.
The final definition of “applied” will be determined by the dissertation adviser. The following courses
cannot be used to satisfy requirements of the PhD program: MATH 400, MATH 401, MATH 402,
MATH 403, MATH 404, MATH 411, MATH 412, MATH 511, MATH 512A-G, MATH 513A-I, and
MATH 516A, MATH 516B.

4. The candidate must file a request with the Director of Graduate Studies to appoint a dissertation
committee to supervise the remaining doctoral work. This committee shall consist of five members
with the candidate’s dissertation adviser as chair. At least one member of the committee must
represent each of the minor areas, and the dissertation adviser and one other member will represent
the major area. One member of the committee will be chosen from outside of the department.
This committee will be appointed by the Director of Graduate Studies after consultation with the
candidate, the proposed dissertation adviser, the department chair, and the other faculty members
involved.

5. The candidate must pass a preliminary examination over the major area and one minor area
chosen by the candidate. This examination will normally be given after satisfying the research
tools requirement and within 18 months after passing the qualifying examination. The preliminary
examination will consist of a written examination over the major area and an oral examination
over the major area and the chosen minor area. This examination will be prepared, administered,
and evaluated by the dissertation committee. Any member of the graduate faculty may attend
the oral portion of the preliminary examination and (at the discretion of the committee chair)
question the candidate. The candidate will pass the preliminary examination provided that four
members of the committee including the chair so agree. A report on the examination will be included with the candidate's official academic records. In the event that the candidate’s performance is unsatisfactory, the committee as a whole shall decide on the time and content of an appropriate re-examination. A candidate who fails the re-examination will be dropped from the doctoral program. In unusual circumstances a candidate who has passed the preliminary examination may wish to change the major area or dissertation adviser. This will be allowed if the Director of Graduate Studies and department Chair so agree, in which case the dissertation committee will be reconstituted in an appropriate manner. The revised committee may then prescribe additional course work and require the candidate to retake the preliminary examination.

6. The candidate must be officially admitted to candidacy for the Ph.D. degree. This will be done after all of the above requirements have been met.

7. The candidate must complete a dissertation (representing at least 24 hours in MATH 600) under the supervision of the candidate’s dissertation adviser. The dissertation adviser and the four other members of the dissertation committee will evaluate the quality of the completed work which must conform to high literary and scholastic standards and constitute an original and publishable contribution to mathematics. A final oral examination will be conducted by the dissertation committee. During this examination the candidate will first present the major results of the dissertation and then respond to questions. Any member of the University graduate faculty may attend and (at the discretion of the dissertation adviser) ask related questions. The dissertation will be accepted provided the dissertation adviser and at least three of the other four members of the committee so agree.

**Ph.D. Tracks**

Students can get a general mathematics Ph.D. or they can choose one of the four tracks listed below. Students should make their choice when they apply or during their first year in the Ph.D. program.

**Track in Applied Mathematics:** The entrance requirements are MATH 405, MATH 407, MATH 419, MATH 421, and MATH 452, or their equivalents. Students must take two of MATH 502, MATH 505, MATH 519, or MATH 507. For their Qualifying Exam they must take MATH 501 or MATH 519 and two of MATH 502, MATH 505, MATH 507, MATH 555, MATH 574, MATH 575, or MATH 580. They should then write their dissertation in the area of Applied Mathematics.

**Track in Statistics:** The entrance requirements are MATH 419, MATH 421, MATH 452, and MATH 483, or their equivalents. Students must take MATH 580 and MATH 581. For their Qualifying Exam they must take MATH 580 and at least one of MATH 501, MATH 519, or MATH 581, as well as one of MATH 584 or MATH 575 if needed. They should then write their dissertation in the area of Statistics.

**Track in Computational Mathematics:** The entrance requirements are MATH 419, MATH 421, MATH 452, MATH 449, and CS 451, or their equivalents. Students must take MATH 501, MATH 519, MATH 549, and MATH 574. For their Qualifying Exam they must take CS 555, one of MATH 501 or MATH 519, and one other 500-level MATH course (preferably MATH 549, MATH 574, or MATH 575). For their preliminary examination, computer science should be a minor area. They should then write their dissertation in the area of Computational Mathematics.

**Track in Pure Mathematics:** The entrance requirements are MATH 419, MATH 421, MATH 430, MATH 452, and MATH 455, or their equivalents. Students must take MATH 501, MATH 502, MATH 505, MATH 519, MATH 555, and MATH 574 and one of MATH 520, MATH 525, MATH 526, MATH 530, or MATH 549. For their Qualifying Exam they must take at least two of MATH 501, MATH 519, MATH 530, or MATH 555 and the remainder, if needed, from MATH 502, MATH 505, MATH 520, MATH 525, MATH 526, MATH 574, or MATH 549. They should then write their dissertation in the area of Pure Mathematics.

**Direct Entry into the Ph.D. Program**

A prospective student without a masters degree can request direct entry into the PhD program. They must meet the same coursework requirements and demonstrate that they have completed a research project in English. Students should be aware that this option reduces the amount of TA funding they can receive by 12 months.
Accelerated Entry into the Ph.D. Program

A current student in our masters program can request accelerated entry into the PhD program once they have completed one year. They must meet the same coursework requirements and demonstrate that they have completed a research project in English. Students should be aware that the option reduces the amount of TA funding they can receive by 12 months.

Graduate Assistantship

University policy allows 24 months of graduate assistantships for masters students, 48 months for PhD students with a masters degree, and 60 months for direct entry PhD students. See the Admission Policies, Requirements, and Procedures tab for more information on financial assistance.

Certificate for Dual Teaching in Mathematics

This certificate allows an Illinois high school mathematics teacher with a Master's degree (in any field) to teach certain courses for college credit to high school students. An undergraduate degree in Mathematics, Mathematics Education, or a related field is required for admission. The program requires 18 credit hours of graduate level Mathematics courses. Many courses are available online.

Mathematics Courses

MATH400 - Interest Thry Fin Derivatives 400-4 Interest Theory and Financial Derivatives. This course examines financial mathematics and actuarial models for investments including interest, annuities, stocks, bonds, and mutual funds. There is an introduction to financial derivatives, options, and futures. Preparation for Exam FM/2. Prerequisite: MATH 250 (Calculus II) with C or better.

MATH401 - Life Contingencies I 401-3 Life Contingencies I. This course examines actuarial models for life insurance. Life contingency models include life insurance liability calculations, annuities, and credit risk. Basic properties of survival models and Poisson processes are covered. This course and MATH 402 prepare students for Exam MLC/3L. Prerequisite: MATH 483 with C or better.

MATH402 - Life Contingencies II 402-3 Life Contingencies II. This is a second course in actuarial models for life insurance including multiple contingencies, multiple survivals and claim frequency models. Basic properties of Markov Chains are covered. This course and MATH 401 prepare students for Exam MLC/3L. Prerequisites: MATH 221 and MATH 401 with C or better.

MATH403 - Loss Models I 403-3 Loss Models I. This course examines loss models including severity models, ruin models, and estimating and fitting the models. This course and MATH 404 prepare students for Exam C/4. Prerequisite: MATH 483 with C or better.

MATH404 - Loss Models II 404-3 Loss Models II. This is a second course in loss models including estimation and fitting of severity and ruin models, and credibility theory. This course and MATH 403 prepare students for Exam C/4. Prerequisite: MATH 403 with C or better.

MATH405 - Intermediate Diff Equations 405-3 Intermediate Differential Equations. This course features the study of several sets of differential equations with the aid of computers. The equations are actual applications in biology, chemistry, economics, engineering, finance, medicine and physics. Where possible, problems will be chosen to match student's interests. Students from these areas are particularly welcome. Basic theory of differential equations is cited as needed. Prerequisite: MATH 305 with C or better.
MATH406 - Linear Analysis 406-3 Linear Analysis. Introduction to function spaces and operators used in quantum mechanics, partial differential equations, etc. Topics include: discrete and continuous models for the vibrating string, separation of variables, eigenfunction analysis, inner product spaces; operators on inner produce spaces; the spectral theorem for Hermitian operators on finite dimensional spaces, the Courant-Fisher characterization. Prerequisite: MATH 221 and MATH 305 with C or better.

MATH407 - Partial Differential Equations 407-3 Partial Differential Equations. Solution methods for linear partial differential equations arising in engineering and science. Topics include: the heat equation, the wave equation, Laplace's equation, separation of variables, boundary and initial value problems, uniqueness via the energy methods, the maximum principle and characteristics. Solutions to the vibrating string and dissipation of heat in a bar will be discussed. Prerequisite: MATH 251 and MATH 305 with C or better.

MATH409 - Fourier Analysis 409-3 Fourier Analysis. Introduction to the theory, techniques and applications of Fourier analysis. Topics include: Fourier synthesis and analysis equations for periodic and aperiodic functions; convolution; the calculus of Fourier transforms, Fourier series of DFT's; operators and Fourier transforms; FFT and related algorithms; generalized functions such as Dirac's delta and others; selected applications. Prerequisite: MATH 221 and MATH 305 with C or better.

MATH411 - Math Topics for Teachers 411-1 to 6 Mathematical Topics for Teachers. Variety of short courses in mathematical ideas useful in curriculum enrichment in elementary and secondary mathematics. May be repeated as topics vary. Does not count toward a mathematics major.

MATH412 - Prob Solving Approach 412-3 Problem Solving Approaches to Basic Mathematical Skills. Content of basic skills at all levels of education and the development of these skills from elementary school through college; emphasis on problem solving and problem solving techniques; determination of student skills and proficiency level. Credit may not be applied toward degree requirements in mathematics. Prerequisite: MATH 321 or CI 321.

MATH417 - Applied Matrix Theory 417-3 Applied Matrix Theory. Selected applications of matrices to physics, chemistry and economics. This material is also useful for engineering and computer science. Topics include matrix representation of symmetry groups, non-negative matrices and the subsidy problem, location of eigenvalues. Prerequisite: MATH 221 with C or better.

MATH418 - Computer Algebra Systems 418-3 Computer Algebra Systems. This course presents modern computer algebra systems (CAS) as a research tool in mathematics. The use of a CAS in the preparation of reports, theses and dissertations will also be covered. Topics will include: solving differential equations with a CAS; plotting techniques with a CAS; symbolic packages for such areas as abstract algebra, number theory; and combinatorics; programming with a CAS; exporting results to TeX or word processing software; The AMS-LaTeX package. Restricted to graduate standing. Special approval needed from the instructor.

MATH419 - Intro Abstract Algebra II 419-3 Introduction to Abstract Algebra II. A detailed study of polynomial equations in one variable. Solvable groups and the Galois theory of field extensions are developed and applied to extensions of the quadratic formula, proving the impossibility of trisecting an angle with only a straight-edge and compass, and to the basic facts about finite fields as needed in coding theory and computer science. Prerequisite: MATH 319 with C or better.

MATH421 - Linear Algebra 421-3 Linear Algebra. The extension of basic linear algebra to arbitrary scalars. The theory and computation of Jordan forms of matrices (as needed e.g., for certain diffusion equations). Inner products, quadratic forms and Sylvester's Law of Inertia. Prerequisite: MATH 221 with C or better.

MATH425 - Intro to Number Theory 425-3 Introduction to Number Theory. Properties of integers, primes, divisibility, congruences, quadratic forms, diophantine equations, and other topics in number theory. Prerequisite: MATH 221 with C or better.

MATH430 - Intro to Topology 430-3 Introduction to Topology. Study of the real line and the plane, metric spaces, topological spaces, compactness, connectedness, continuity, products, quotients and fixed
point theorems. This course will be particularly useful to students who intend to study analysis or applied mathematics. Prerequisite: MATH 352 with C or better.

MATH433 - Classical & Modern Geometry 433-3 Classical and Modern Geometry. Introduction to the foundations of Euclidean and non-Euclidean geometries. Topics include synthetic approach (Euclidean geometry, axiomatic systems, constructions, proofs), symmetries (similarity, congruence and various transformations and their invariants), metric approach (distance), vector space approach (transformations and matrices, inner product), inversive geometry, projective geometry (art and math) and non-Euclidean geometries. Some applications in modern science, like Relativity Theory, may also be covered. Historical background and connections with other parts of mathematics, science and culture are important components of this course. Prerequisite: MATH 250 and MATH 302 with grades of C or better.

MATH435 - Elem Differential Geometry 435-3 Elementary Differential Geometry. Introduction to modern differential geometry through the study of curves in R3. Local curve theory with emphasis on the Serret-Frenet formulas; global curve theory including Fenchel's theorem; local surface theory motivated by curve theory; global surface theory including the Gauss-Bonnet theorem. Prerequisite: MATH 221 and MATH 251 with C or better.

MATH447 - Intro to Graph Theory 447-3 Introduction to Graph Theory. (Same as CS 447) Graph theory is an area of mathematics which is fundamental to future problems such as computer security, parallel processing, the structure of the World Wide Web, traffic flow and scheduling problems. It also plays an increasingly important role within computer science. Topics include: trees, coverings, planarity, colorability, digraphs, depth-first and breadth-first searches. Prerequisite: MATH 349 with C or better.

MATH449 - Intro to Combinatorics 449-3 Introduction to Combinatorics. (Same as CS 449) This course will introduce the student to various basic topics in combinatorics that are widely used throughout applicable mathematics. Possible topics include: elementary counting techniques, pigeonhole principle, multinomial principle, inclusion and exclusion, recurrence relations, generating functions, partitions, designs, graphs, finite geometry, codes and cryptography. Prerequisite: MATH 349 with C or better.

MATH450 - Methods of Advanced Calculus 450-3 Methods of Advanced Calculus. Multivariable calculus fundamental to continuum mechanics, differential geometry, electromagnetism, relativity, thermodynamics, etc. Includes: parametric curves and surfaces, inverse and implicit function theorems, contraction mapping and fixed point theorems, differentials, convergence of multivariate integrals, coordinate systems in space, Jacobians, surfaces, volumes and Green's, Gauss', and Stokes' theorems. Prerequisite: MATH 251 with C or better.

MATH452 - Introduction to Analysis 452-3 Introduction to Analysis. A rigorous development of one-variable calculus providing the tools necessary for understanding all other advanced courses in analysis. Topics include: sets, axioms for the real numbers, continuity, limits, differentiation, the Riemann integral, infinite sequences and series of functions. Additional topics may include areas such as Riemann-Stieltjes integration or the analysis of multivariable functions. Prerequisite: MATH 352 with C or better.

MATH455 - Complex Analysis 455-3 Complex Analysis with Applications. Analysis of differentiable functions of a single complex variable. Introduces mathematical techniques used to analyze problems in the sciences and engineering that are inherently two dimensional. Topics include: the complex plane, analytic functions, the Cauchy-Riemann equations, line integrals, the Cauchy integral formula, Taylor and Laurent series, the residue theorem, conformal mappings, applications. Prerequisite: MATH 251 with C or better.

MATH460 - Transformation Geometry 460-3 Transformation Geometry. Geometry viewed as the study of properties invariant under the action of a group. Topics include collineations, isometries, Frieze groups, Leonardo's Theorem, the classification of isometries of Euclidean and hyperbolic geometries. Recommended elective for secondary education majors in mathematics. Prerequisite: MATH 319 with C or better.

MATH471 - Optimization Techniques 471-3 Optimization Techniques. (Same as CS 471) Introduction to algorithms for finding extreme values of nonlinear multivariable functions with or without constraints. Topics include: convex sets and functions; the arithmetic-geometric mean inequality; Taylor's theorem for
multivariable functions; positive definite, negative definite, and indefinite matrices; iterative methods for unconstrained optimization. Prerequisite: MATH 221 and MATH 250 with C or better.

**MATH472 - Linear Programming** 472-3 Linear Programming. (Same as CS 472) Introduction to finding extreme values of linear functionals subject to linear constraints. Topics include: recognition, formulation, and solution of real problems via the simplex algorithm; development of the simplex algorithm; artificial variables; the dual problem and duality theorem; complementary slackness; sensitivity analysis; and selected applications of linear programming. Prerequisite: MATH 221 with C or better.

**MATH473 - Reliability & Survival Models** 473-3 Reliability and Survival Models. Introduction to statistical analysis of data on lifetime, including hazard functions and failure distributions; estimation and hypothesis testing in life testing experiments with complete as well as censored data. Prerequisite: MATH 480 or MATH 483 with C or better.

**MATH474 - Time Series** 474-3 Time Series. An introduction to time series: AR, MA and ARIMA models; estimation, time series models. Prerequisite: MATH 480 or MATH 483 with C or better.

**MATH475 - Numerical Analysis I** 475-3 Numerical Analysis I. (Same as CS 475) Introduction to theory & techniques for computation with digital computers. Topics include: solution of nonlinear equations; interpolation & approximation; solution of systems of linear equations; numerical integration. Students will use MATLAB to study the numerical performance of the algorithms introduced in the course. Prerequisites: MATH 221 and MATH 250 with C or better.

**MATH476 - Numerical Analysis II** 476-3 Numerical Analysis II. (Same as CS 476) Continuation of MATH 475. Topics include: solution of ordinary differential equations; computation of eigenvalues and eigenvectors; and solution of partial differential equations. Students will use MATLAB to study the numerical performance of the algorithms introduced in the course. Prerequisites: MATH 305 and MATH 475 with a C or better.

**MATH480 - Prob Stoch Processes I** 480-3 Probability, Stochastic Processes and Applications I. Introduction to the central topics of modern probability including elementary stochastic processes; random variables and their properties; sum of independent random variables and the Central Limit Theorem; random walks; discrete time finite state Markov chains; applications to random number generators and image and signal processing. Also generating functions, conditional probability, expectation, moments. Prerequisite: MATH 251 with C or better.

**MATH481 - Prob Stoch Processes II** 481-3 Probability, Stochastic Processes and Applications II. Continuation of MATH 480. Thorough introduction to Markov processes and Martingales, including the laws of large numbers, classification of states, recurrence, convergence to the stationary distribution in Markov chains, birth processes, Poisson processes, stopping times, and the Martingale convergence theorem. Important and current applications will be included. Prerequisite: MATH 480 with C or better.

**MATH483 - Math Stats in Engr & Sci** 483-4 Mathematical Statistics in Engineering and the Sciences. Develops the basic statistical techniques used in applied fields like engineering, and the physical and natural sciences. Principal topics include probability; random variables; expectations; moment generating functions; transformations of random variables; point and interval estimation; tests of hypotheses. Applications include one-way classification data and chi-square tests for cross classified data. Prerequisite: MATH 250 with C or better.

**MATH484 - Applied Regression Analysis** 484-3 Applied Regression Analysis and Experimental Design. Introduction to linear models and experimental design widely used in applied statistical work. Topics include linear models; analysis of variance; analysis of residuals; regression diagnostics; randomized blocks; Latin squares; factorial designs. Applications include response surface methodology and model building. Computations will require the use of a statistical package such as SAS. Prerequisite: MATH 221 and MATH 483 with C or better.

**MATH485 - Applied Statistical Methods** 485-3 Applied Statistical Methods. Introduction to sampling methods and categorical data analysis widely used in applied areas such as a social and biomedical sciences and business. Sampling methods topics include: simple random and stratified sampling; ratio
and regression estimators. Categorical data analysis topics include: contingency tables; loglinear models; logistic regression; model selection; use of a computer package. Prerequisite: MATH 483 with C or better.

**MATH490 - Topics in Mathematics** 490-3 Topics in Mathematics. Selected topics in mathematics chosen from such areas as: (a) Financial Mathematics, Mathematical Biology or Actuarial Mathematics; (b) Probability, Statistics or Stochastic Processes; (c) Mathematical topics not including Statistics, such as Operations Research, Cryptography and High Dimensional computing in Numerical Analysis, etc. May be repeated up to 3 times as topics vary. Special approval needed from the instructor.

**MATH492 - Industrial Applied Math Clinic** 492-3 Industrial and Applied Mathematics Clinic. Students will participate in a semester-long project to apply their mathematical knowledge to a problem supplied by a business, industrial, or community partner. Students will work in teams, and will engage in client contact, including a final report of their results to the client. Mathematical modeling, research, communication, and project management skills will be developed, along with core mathematical competency needed to solve the client problem. Prerequisites: MATH 221, MATH 483, and CS 202 with grades of C or better.

**MATH495 - Special Topics in Math** 495-1 to 6 Special Topics in Mathematics. Individual study or small group discussions in special areas of interest under the direction of a member of the faculty. Special approval needed from the chair and instructor.

**MATH501 - Measure and Integration** 501-3 Measure and Integration. This course is an introduction to measure theory and the Lebesgue integral. Its purpose is to develop many of the advanced mathematical tools that are necessary for the understanding of all other advanced courses in analysis. Topics will include: measures and measurable functions, Egoroff's theorem, the Lebesgue integral, Fatou's lemma, the monotone and dominated convergence theorems, functions of bounded variation and absolutely continuous functions, Lp-spaces, the Radon-Nikodym theorem, product measures, and Tonelli's and Fubini's theorems. Prerequisite: MATH 452.

**MATH502 - Functional Analysis** 502-3 Functional and Linear Analysis. This course is an introduction to infinite-dimensional spaces and their analysis. Topics include Hilbert and Banach spaces, separable and reflexive spaces, operators and their adjoints, and major theorems such as the Banach-Steinhaus, Open-Mapping, Closed Graph, Hahn-Banach, Riesz and matrix representation, Lax-Milgram, Arzelà-Ascoli, Katô theorems. Spectral theory and applications to such areas as differential equations, Block iterations, quantum probability, fixed point theory or other areas are covered as time permits. Prerequisite: MATH 501 with a grade of B or better.

**MATH505 - Ordinary Differential Equations** 505-3 Ordinary Differential Equations. Existence and uniqueness theorems; general properties of solutions; linear systems; geometric theory of nonlinear equations; stability; self-adjoint boundary value problems; oscillation theorems. Theory will be illustrated with computer simulation of several real-world problems. Prerequisite: MATH 452 and MATH 421 or consent of instructor.

**MATH506 - Adv Topics Ord Diff Equats** 506-1 to 12 Advanced Topics in Ordinary Differential Equations. Selected advanced topics in ordinary differential equations chosen from such areas as: stability, oscillations, functional differential equations, perturbations, boundary value problems. Special approval needed from the instructor.

**MATH507 - Partial Differential Equations** 507-3 Partial Differential Equations. This course introduces the student to the mathematical techniques that are used to analyze qualitative properties of solutions to partial differential equations that arise in engineering and the sciences. Topics studied will include: function spaces including Sobolev spaces; weak derivatives; the Sobolev and Poincare inequalities; existence, uniqueness, and continuous dependence for model equations. Prerequisite: MATH 407 and MATH 501.

**MATH511 - Adv Topics in Teaching of Math** 511-3 Advanced Topics in the Teaching of Mathematics. (Same as CI 529) Selected advanced topics in the teaching of mathematics chosen from such areas as: pedagogical theories; instructional strategies; applications of mathematics; problem solving. This course is counted by the Mathematics department only as part of an approved minor. Special approval needed from the instructor.
MATH512A - Elem: Abstract Algebra 512A-1 to 3 Topics in Mathematics for Teachers of Elementary, Middle School and Junior High Mathematics-Abstract Algebra. This course is counted by the Mathematics department only as part of an approved minor.

MATH512B - Elem: Geometry 512B-1 to 3 Topics in Mathematics for Teachers of Elementary, Middle School and Junior High Mathematics-Geometry. This course is counted by the Mathematics department only as part of an approved minor.

MATH512C - Elem: Probability & Stats 512C-1 to 3 Topics in Mathematics for Teachers of Elementary, Middle School and Junior High Mathematics-Probability and Statistics. This course is counted by the Mathematics department only as part of an approved minor.

MATH512D - Elem: Sets, Logic, Number Sys 512D-1 to 3 Topics in Mathematics for Teachers of Elementary, Middle School and Junior High Mathematics-Sets, Logic and Number Systems. This course is counted by the Mathematics department only as part of an approved minor.

MATH512E - Elem:Applications of Math 512E-1 to 3 Topics in Mathematics for Teachers of Elementary, Middle School and Junior High Mathematics-Applications of Mathematics. This course is counted by the Mathematics department only as part of an approved minor.

MATH512F - Elem: Algebra 512F-1 to 3 Topics in Mathematics for Teachers of Elementary, Middle School and Junior High Mathematics-Algebra. This course is counted by the Mathematics department only as part of an approved minor.

MATH512G - Elem: History of Math 512G-1 to 3 Topics in Mathematics for Teachers of Elementary, Middle School and Junior High Mathematics-History of Mathematics. This course is counted by the Mathematics department only as part of an approved minor.

MATH513A - Secondary Math: Abstract Algebra 513A-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics- Abstract Algebra. This course is counted by the Mathematics department only as part of an approved minor.

MATH513B - Secondary Math: Geometry 513B-1 to 27 Topics in Mathematics for Teachers of Secondary Mathematics- Geometry. This course is counted by the Mathematics department only as part of an approved minor.

MATH513C - Secondary Math:Probability & Stat 513C-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics-Probability and Statistics. This course is counted by the Mathematics department only as part of an approved minor.

MATH513D - Secndry Mth:Sets,Logic,Numbers 513D-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics-Sets, Logic and Number Systems. This course is counted by the Mathematics department only as part of an approved minor.

MATH513E - Secndry Mth:Applications Math 513E-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics-Applications of Mathematics. This course is counted by the Mathematics department only as part of an approved minor.

MATH513F - Secondary Math: Topics 513F-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics-Analysis. This course is counted by the Mathematics department only as part of an approved minor.

MATH513G - Secondary:Discrete Math 513G-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics- Discrete Mathematics. This course is counted by the Mathematics department only as part of an approved minor.

MATH513H - Secondary: Topology 513H-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics-Topology. This course is counted by the Mathematics department only as part of an approved minor.
MATH513I - Secndry: Computer Simulation 513I-1 to 3 Topics in Mathematics for Teachers of Secondary Mathematics-Computer Simulation. This course is counted by the Mathematics department only as part of an approved minor.

MATH516A - Stat Analy in Soc Sci I 516A-4 Statistical Analysis in the Social Sciences. Descriptive statistics; graphic display of data; concepts of probability; statistical estimation, and hypothesis testing. Applications to social science data. This course does not give credit toward a mathematics major. Prerequisite: one year of high school algebra or equivalent.

MATH516B - Stat Analy in Soc Sci II 516B-4 Statistical Analysis in the Social Sciences. Matrix algebra; general linear model; multivariate statistics, ordinal and nominal measures of associations and causal modeling. Applications to social science data. This course does not give credit toward a mathematics major. Prerequisite: one year of high school algebra or equivalent.

MATH519 - Algebraic Structures I 519-3 Algebraic Structures I. Introduction to the basic techniques in the classification of finite groups, including homomorphism theorems, classification of finitely generated abelian groups, Sylow's theorems and classification of small groups, divisibility theory in rings, especially polynomial rings. Prerequisite: MATH 419 or consent of instructor.

MATH520 - Algebraic Structures II 520-3 Algebraic Structures II. Free modules, torsion modules, tensor products of modules, finitely generated modules over principal ideal domains, application of abelian groups, algebraic geometry, homological algebra and group cohomology. Prerequisite: MATH 519.

MATH522 - Adv Topics-Alg & Num Theory 522-1 to 12 Advanced Topics in Algebra and Number Theory. Selected topics in modern algebra and number theory chosen from such areas as: group theory, commutative algebra, non-commutative algebra, field theory, representation theory, analytical number theory, algebraic number theory, additive number theory. Diophantine approximations, Dirichlet series and automorphic form. Special approval needed from the instructor.

MATH525 - Analytic Number Theory 525-3 Analytic Number Theory. Introduction to modern analytic techniques used in the study of quadratic forms, the distribution of prime numbers, Diophantine approximations and other topics of classical number theory. Prerequisites: MATH 425 and MATH 455 with grades of C or better.

MATH526 - Algebraic Number Theory 526-3 Algebraic Number Theory. Introduction to the modern algebraic techniques used in the study of number theory. Advanced Galois Theory, algebraic integers, prime factorization of ideals, Dirichlet unit theorem, ramification theory, local fields, and other topics. Prerequisites: MATH 425 and MATH 419 with grades of C or better.

MATH530 - Topology 530-3 Topology. This course covers the basics of point-set topology, Urysohn's lemma, Tychonoff's theorem, the Barie category theorem, manifolds and the fundamental group. Prerequisite: MATH 430 or MATH 452 with a C or better.

MATH531 - Algebraic Topology 531-3 Algebraic Topology. This course covers homotopy and homology groups, exact sequences, CW complexes, axioms of homology, and beginnings of cohomology. Prerequisite: MATH 530 with a C or better.

MATH532 - Topics in Geom & Topology 532-1 to 12 Topics in Geometry and Topology. Topics may include dynamical systems, topological groups, knot theory, complexity theory, uniform spaces and frames, differential and Riemannian geometry, voting theory and mathematical physics. Special approval needed from the instructor.

MATH535 - Differential Geometry 535-3 Differential Geometry. This course covers differential forms, curvature, connections, integration on manifolds and may include Riemannian geometry or Lie groups. Prerequisite: MATH 530 with a C or better.

MATH540 - Convex Analysis 540-3 Convex Analysis. The course develops the basic results on convex sets and functions which are extensively used in several areas of applied mathematics and in business and engineering. Both finite and infinite dimensional spaces will be discussed. Topics covered include separation theorems, extreme points and the Krein-Milman Theorem. For infinite dimensional
spaces elementary aspects of locally convex spaces will be covered. Applications include inequalities, constrained optimization and minimax theory. Prerequisite: MATH 452 or consent of instructor.

MATH549 - Combinatorial Theory 549-3 Combinatorial Theory. This course will introduce the student to various advanced topics in Combinatorial theory that are basic to modern methods in applicable mathematics. Possible topics include: Enumeration, Polya-Burnside theory, DeBruijn sequences, Graph theory, Cayley's Theorem, Ramsey's Theorem, Hall's Theorem, Design Theory, Distinct representatives, Latin squares and Finite geometries. Prerequisite: MATH 449 or consent of instructor.

MATH553 - Adv Topics Analys & Func Anlys 553-1 to 12 Advanced Topics in Analysis and Functional Analysis. Advanced topics in analysis and functional analysis from such areas as: harmonic analysis, approximation theory, integration theory, advanced complex variables, topological vector spaces, operator theory, Banach algebras, distribution theory. Special approval needed from the instructor.

MATH555 - Complex Analysis 555-3 Complex Analysis. We review the field of complex numbers, differentiability, series convergence and the Cauchy integral formula for functions of a single complex variable. We go on to study the properties analytic, entire, meromorphic, and harmonic functions. We develop rigorous proofs of the Maximum modulus theorem, the Riemann mapping theorem, the residue theorem, and the Weierstrass factorization theorem and related results. If time permits the gamma and Riemann zeta functions are presented. Prerequisite: MATH 455.

MATH559 - Adv Topics in Combinatorics 559-1 to 12 Advanced Topics in Combinatorics. Selected advanced topics in combinatorics chosen from such areas as: graph theory; combinatorial designs; enumeration; random graphs; finite geometry; coding theory; cryptography; combinational algorithms. Special approval needed from the instructor.

MATH560 - Mathematical Finance 560-3 Mathematical Finance. The theory of stochastic processes, including integration, martingales, Brownian motion, difference equations and Ito's lemma, is developed and applied to problems in mathematical finance, such as dynamic asset and option pricing, modeling of financial derivatives and interest rates. The binomial tree method of Cox-Ingersoll-Rubinstein, and the models of Vasicek, Dothan, and others are developed. Stochastic numerical methods and related statistical procedures as used in computational finance are covered if time permits. Since this is an interdisciplinary course, students should contact the instructor about prerequisite knowledge. Special approval needed from the instructor.

MATH566 - Continuum Mechanics 566-3 Continuum Mechanics. This course will provide a rigorous development of the mechanics of solids and fluids. Topics will include: elements of tensor analysis; kinematics; balance of mass, linear momentum and angular momentum; the concept of stress; constitutive equations for fluid and solid bodies; and invariance of constitutive equations under a change in observer. Applications of continuum mechanics to the solution of problems in materials science will be included as time permits. Prerequisite: MATH 450 or MATH 452.

MATH569 - Adv Topics in Applied Math 569-1 to 12 Advanced Topics in Applied Mathematics. Selected advanced topics in applied mathematics chosen from such areas as: continuum mechanics; electromagnetic theory; control theory; mathematical physics. Special approval needed from the instructor.

MATH570 - Adv Topics: Optimization 570-1 to 12 Advanced Topics in Optimization. Selected advanced topics in optimization and operations research chosen from such areas as: calculus of variations, optimal control theory, nonlinear programming, convex analysis, non-smooth analysis, new flows, advanced computer simulation, large scale linear programming. Special approval needed from the instructor.

MATH572 - Adv Topics in Numerical Anlys 572-1 to 12 Advanced Topics in Numerical Analysis. (Same as CS 572) Selected advanced topics in numerical analysis chosen from such areas as: approximation theory, spline theory; special functions; wavelets; numerical solution of initial value problems; numerical solution of boundary value problems; numerical linear algebra; numerical methods of optimization; and functional analytic methods. Special approval needed from the instructor.

MATH574 - Approximation Theory 574-3 Approximation Theory. A study of techniques for approximating functions by polynomials, trigonometric polynomials, polynomial splines, wavelets, etc. Topics include: existence, uniqueness and characterization of best approximations in normed
linear spaces; projection methods for good approximation; the Weierstrass, Muntz-Szasz, and Stone-Weierstrass theorems; degree of approximation and the Jackson theorems; construction of optimal min-max and least squares approximation using rational functions, splines, wavelets. Students will use MATLAB to study the quality of various approximations developed in the course. Prerequisite: MATH 452, MATH 475, and one of MATH 406, MATH 421.

MATH575 - Matrix Computations 575-3 Matrix Computations. A practical introduction to modern numerical linear algebra. Topics include: vector and matrix norms; Householder, Givens and Gauss transforms; factorization methods for solving systems of linear equations with roundoff error analysis; QR and SVD methods for solving linear least squares problems; the QR algorithm for computing the eigenvalues of a matrix. Students will use MATLAB to study the algorithms developed in the course. Prerequisite: MATH 475 and one of MATH 406, MATH 421.

MATH580 - Statistical Theory 580-3 Statistical Theory. The course gives a rigorous introduction to statistical inference. Topics covered include statistical models; sufficiency and completeness; Cramer-Rao bound; Rao-Blackwell theorem; best estimators; most powerful tests; likelihood ratio tests; elements of Bayes and minimax procedures. Prerequisite: MATH 475 and one of MATH 406, MATH 421.

MATH581 - Probability 581-3 Probability. A rigorous, measure-theoretic introduction to probability theory. Principal topics include general probability spaces, product spaces and product measures, random variables as measurable functions, distribution functions, conditional expectation, types of convergence, characteristic functions and the Central Limit theorem, tail events and 0-1 laws, the Borel-Cantelli lemma, and the weak and strong law of large numbers. Prerequisite or Corequisite: MATH 501, or consent of instructor.

MATH582 - Adv Topics in Probability 582-1 to 6 Advanced Topics in Probability. Selected advanced topics in probability chosen from such areas as: martingales, Markov processes, Brownian motion, infinitely divisible laws. Special approval needed from the instructor.

MATH583 - Advanced Topics in Stats 583-1 to 12 Advanced Topics in Statistics. Selected advanced topics in statistics chosen from such areas as: advanced linear models, advanced experimental design, multivariate statistical analysis, decision theory, advanced nonparametric theory. Special approval needed from the instructor.

MATH584 - Linear Models 584-3 Linear Models. This course examines the theory of linear models with applications to the analysis of variance and regression and to the design of experiments. Least squares estimation, and testing for full rank and less than full rank models are covered. Prerequisites: MATH 221 and MATH 484 with grades of C or better.

MATH585 - Multivariate Analysis 585-3 Multivariate Analysis. This course examines the multivariate normal and elliptically contoured distributions, estimators of multivariate location and dispersion, Hotelling's T^2 test, MANOVA, multivariate regression, principal component analysis, factor analysis, canonical correlation analysis, discriminant analysis, and clustering. Prerequisites: MATH 483 and MATH 221 with grades of C or better.

MATH586 - Statistical Learning 586-3 Statistical Computing and Learning. This course covers Statistical Computing and Learning, including supervised and unsupervised learning, statistical computations in software packages such as R and SAS, loops, approximation of distribution functions, computation of maximum likelihood estimations, random number generation, bootstrap, Monte Carlo, permutation tests, and Bayesian techniques. Prerequisites: MATH 483 and MATH 221 with grades of C or better.

MATH590 - Contemporary Math Research 590-1 to 6 Contemporary Mathematics Research. Lectures on various mathematical topics of current research interest by members of the department and by distinguished visitors. Special approval needed from the graduate adviser.

MATH595 - Individual Study 595-1 to 12 Individual Study. Individual study supervised by a member of the continuing faculty. Graded S/U only. Special approval needed from the instructor.

MATH598 - Research Paper 598-1 to 6 Master's Research Paper. Minimum of three hours to be counted toward the Master of Arts or Science in Mathematics degree. Graded S/U only. Special approval needed from the instructor.
MATH599 - Thesis 599-1 to 6 Master's Thesis. Minimum of three hours to be counted toward the Master of Arts or Science in Mathematics degree. Graded S/U only. Special approval needed from the instructor.

MATH600 - Dissertation 600-1 to 30 (1 to 16 per semester) PhD Dissertation. Minimum of 24 hours to be earned for the Doctor of Philosophy degree in Mathematics. Special approval needed from the instructor.

MATH601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

MATH699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Mathematics Faculty

Ban, Dubravka, Professor, Ph.D., University of Zagreb, Croatia, 1998; 2002. Algebra, Representation theory, Automorphic L-functions.

Bhattacharya, Bhaskar, Professor and Chair, Ph.D., University of Iowa, 1993; 1993. Order restricted statistical inference, I-projections, linear models, multivariate analysis.

Mathematics and Science Education

Purpose of the Program

This interdisciplinary M.S. degree program is designed to offer advanced training in mathematics and science education for elementary and middle school teachers. It is designed specifically for in-service teachers seeking additional content knowledge, pedagogical content knowledge, and leadership skills in mathematics and science education. This is a non-thesis, non-research paper program. Candidates are required to complete an Action Research project in lieu of a thesis or research paper. Upon completion of the program, candidates will be eligible for an endorsement in mathematics and science. Program faculty are drawn from various departments in the College of Science and the College of Education and Human Services.

Admission

Prospective graduate students should have an undergraduate degree in Elementary Education, or closely related field, and should already be certified elementary (K-5, 4-8 or K-8) teachers in Illinois. All application materials should be submitted to any one of the Program Co-directors. Students are required to submit official transcripts from all U.S. schools attended during their last two years of undergraduate study, and also for all graduate work completed. Transcripts are not required from institutions where the
student received no degree and was not enrolled for more than 12 semester hours of undergraduate credit, provided that the grades obtained at such institutions are recorded upon the transcript of the college which granted the student’s degree. This program requires a nonrefundable $65 application fee, which must be submitted with the application for admission to the program. Applicants must pay this fee by credit card. Applications for admission to the program will be reviewed by the Program co-directors. Upon recommendation of the co-directors, the application will be forwarded to the Graduate School for approval.

Requirements

Foundation Courses

- MATH 411-3 Mathematical Topics for Teachers
- SCI 503A-3 Science for Elementary School Teachers
- CI 522-3 Integration of Technology Mathematics and Science Teaching

Content Courses

- BIOL 500-3 Contemporary Biology for Teachers
- CHEM 506-3 Chemistry Topics for Teachers (3 credits).
- GEOL 585-3 Earth and Space Science for Teachers
- MATH 511-3 Advanced Topics in the Teaching of Mathematics
- PHYS 575-3 Special Topics in Physics

Educational, Pedagogical and Leadership Courses

- CI 593 (D) (for Science) OR CI 593 (E) (for Mathematics) Individual Research in Education (Action Research)(3 credits)
- CI 428-3 Inquiry Skills for Teaching Junior and Senior High School Science
- CI 530-3 Teaching Problem Solving in School Mathematics (Grades K-8)
- CI 539-3 Math Science Leadership

Retention and Graduation

Students in the MSMSEd program are expected to complete the program in two academic years and two summer terms. Courses offered during the academic year are offered in a flexible on-line or distance-learning format. Laboratory or field experiences may require an additional commitment of two-three Saturdays each semester. Summer courses are offered at various SIU service centers in Southern Illinois.

Approval for graduation requires completion of all required coursework and the Action Research project with a grade of C or better, and an overall GPA in the program of 3.0 or better.

Mathematics and Science Education Faculty

Bu, Lingguo, Associate Professor, Curriculum & Instruction, Ph.D., Florida State University, 2008. MSMSEd Co-director.

Henson, Harvey, Assistant Dean, College of Science, Ph.D., Southern Illinois University Carbondale, 2015, MSMSEd Codirector.

Wright, Mary H., Professor, Mathematics, Ph.D., McGill University, Montreal, Quebec, 1977. MSMSEd Co-director.
Mechanical Engineering

Admission

Students seeking admission to the graduate program in mechanical engineering must meet the admission standards set by the Graduate School and have a bachelor's degree in engineering or its equivalent. A student whose undergraduate training is deficient may be required to take coursework without graduate credit.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Mechanical Engineering. Applicants must pay this fee by credit card. The application form can be obtained from the Department.

Requirements

Each student majoring in mechanical engineering will develop a program of study with a graduate adviser and establish a graduate committee of at least three members at the earliest possible date. A student may, with the approval of a graduate faculty committee and the department chair, also take courses in other branches of engineering, or in areas of science and business, such as physics, geology, chemistry, mathematics, life science, administrative sciences, or computer science. A thesis committee of at least three members will approve the thesis and the comprehensive oral exam.

For a student who wishes to complete the requirements of the master's degree with a thesis, a minimum of thirty semester hours of acceptable graduate credit is required. Of this total, eighteen semester hours must be earned in the Department of Mechanical Engineering and Energy Processes. A minimum of 15 hours of coursework at the 500-level (excluding thesis) is required. Each candidate is also required to pass a comprehensive oral examination covering all of the student's graduate work including thesis.

If a student prefers the non-thesis option, a minimum of thirty-six semester hours of acceptable graduate credit is required. The student is expected to take at least twenty-one semester hours within the Department of Mechanical Engineering and Energy Processes including no more than three semester hours of the appropriate 592 course to be devoted to the preparation of a research paper. A minimum of 15 hours of coursework at the 500-level (excluding thesis) is required. In addition, each candidate is required to pass a written comprehensive examination. An oral presentation of the paper may be required.

Each non-thesis student will select a minimum of three engineering graduate faculty members to serve as a graduate committee, subject to the approval of the chair of the department. The committee must include at least one member from one of the other engineering departments and will:

1. approve the student's program of study,
2. approve the student's research paper topic,
3. approve the completed research paper, and
4. administer and approve the written comprehensive examination.

Teaching or research assistantships and fellowships are available for qualified applicants. Additional information about the program, courses, assistantships, and fellowships may be obtained from the College of Engineering or the Department of Mechanical Engineering and Energy Processes.

Master of Science in Mechanical Engineering

Graduate work leading to the Master of Science degree in mechanical engineering is offered by the College of Engineering. The program is designed to provide advanced study in air pollution control, mechanical system dynamics and vibration, acoustics and signal processing, mass and heat transfer, coal conversion, electrochemical processes, thermal science, thermal systems design, solar systems design, chemical and biochemical processes, mechanical systems, computer-aided design, composite materials and ceramics and tribology.
Accelerated Master's Program

Mechanical Engineering students with senior standing and a GPA of 3.5 will be permitted to take up to six hours of graduate credit in Fall and Spring semesters. Outstanding junior students will be allowed to take one course for graduate credit. By doing so, students then pursuing their MSME degrees after completing their BSME degrees will have these graduate credits transferred toward their MSME degree so that they may be able to finish the degree requirements in a year or so. Students must complete a no fee Graduate School application and submit it to the department chair for approval. Students will be allowed to complete up to 12 hours of graduate credit before receiving their BSME.

Mechanical Engineering Courses

**ME400 - Engr Thermodynamics II** 400-3 Engineering Thermodynamics II. Combined first and second law analysis: Exergy analysis; Analysis of power and refrigeration cycles. Detailed treatment of gas and vapor cycles including gas and steam cycles; Thermodynamics of combustion and reaction of mixtures; Introduction to thermodynamic property relations, chemical and phase equilibrium. Prerequisite: ME 300.

**ME401 - Thermal Measurements Lab** 401-1 Thermal Measurements Laboratory. Study of basic measurements used in the thermal sciences. Calibration techniques for temperature and pressure sensors. Thermal measurements under transient and steady-state conditions. Applications include conduction, convection and radiation experiments. Uncertainty analysis. The handling and reduction of data. Prerequisite: ME 302.

**ME405 - Transportation Power Systems** 405-3 Transportation Power Systems. Operation and performance characteristics of Otto, Diesel, Atkinson cycles. Methods of engine testing, types of fuels and their combustion, exhaust gas analysis. Types, selection, and analysis of jet engines. Analysis of fuel cell types, their performance and limitations. Operation of electric motors, capacitors, battery packs and their charging. Prerequisite: concurrent enrollment in or completion of ME 400, with a minimum grade of C or consent of instructor.

**ME406 - Thermal Systems Design** 406-3 Thermal Systems Design. Applications of the principles of engineering analysis to the design of thermal systems. Coordination of such systems as heat exchangers, air conditioners, cogeneration cooling towers, and furnaces. Emphasis is placed on application of basic principles of heat transfer and fluid mechanics. Prerequisite: ME 302.

**ME408 - Energy Conversion Systems** 408-3 Energy Conversion Systems. Principles of advanced energy conversion systems; nuclear power plants, combined cycles, magnetohydromagnetics, cogeneration (electricity and process steam), and heat pumps. Constraints on design and use of energy conversion systems; energy resources, environmental effects, and economics. Prerequisite: ME 400.

**ME410 - Appl Chem Thermo & Kinetics** 410-3 Applied Chemical Thermodynamics and Kinetics. Designed for students interested in chemical and environmental processes and materials science. Topics covered include application of the Second and Third Laws of Thermodynamics, solution theory, phase equilibria, sources and uses of thermodynamic data, classical reaction rate theory, kinetic mechanisms and the determination of rate-determining steps in chemical reactions. Prerequisite: CHEM 200, 201, ME 300 or consent of instructor.

**ME415 - Engineering Acoustics** 415-3 Engineering Acoustics. Principles of engineering acoustics and their applications to passive and active noise control techniques. Laboratory experience demonstrates techniques for control and reduction of noise. Prerequisite: ME 336.

**ME416 - Air Pollution Control** 416-3 Air Pollution Control. An overview of problems in air pollution likely to influence the Mechanical Engineer. Engineering control theory, procedure and equipment related to control of particulate, gaseous, and toxic air emissions. Restricted to senior standing and College of Engineering or consent of instructor.

**ME421 - Pneumatic Hydraulic Engr** 421-3 Pneumatic Hydraulic Engineering. Design principles of fluid power engineering. The behavior of fluids in a system. Analysis and design of hydraulic and pneumatics
machinery and systems using fluid as a medium for transmission of power and control of motion. Analysis of steady state and dynamic behavior. Critical operations and analysis.

**ME422 - Appl Fluid Mechanics for ME** 422-3 Applied Fluid Mechanics for Mechanical Engineers. Applications of fluid mechanics in internal and external flows. The mathematical basis for inviscid and viscous flows calculations is developed with application to pipe and duct flows; external flow about bodies; drag determination; turbomachinery; and reaction propulsion systems. Semester design project of a fluid mechanical system. Prerequisite: ME 300 and MATH 305; ENGR 370A or 370B concurrently.

**ME440 - Design HVAC & Build Energy Sys** 440-3 Design of HVAC and Building Energy Systems. Building energy design and simulation; HVAC systems, heating and cooling load analysis; Air conditioning processes; Principles of human thermal comfort. Prerequisite: ME 302. Restricted to graduate standing or consent of the instructor.

**ME446 - Energy Management** 446-3 Energy Management. Fundamentals and various levels of analysis for energy management of commercial buildings and industrial processes and buildings. Use of energy management systems and economic evaluations are required in course projects. Prerequisite: ME 302.

**ME451 - Advanced Dynamics** 451-3 Advanced Dynamics. Three-dimensional kinematics and dynamics of particles and rigid bodies; Coordinates and reference frames; Rotations of rigid bodies; Euler angles; Newtonian mechanics; Work and energy; Generalized coordinates and degrees of freedom; Analytical mechanics with a focus on Lagrange’s equations; Hamilton's principle for continuous elastic systems. Prerequisites: MATH 305 and ME 309 with a grade of C or better or graduate standing.

**ME463 - Introduction to Ceramics** 463-3 Introduction to Ceramics. Structure and physical properties, mechanical properties, processing and design of ceramics. Prerequisite: ME 312 or equivalent.

**ME465 - Intro to Nanotechnology** 465-3 Introduction to Nanotechnology. Survey of the rapidly developing fields of nanometer science and engineering. Impact on society; principles of self-assembly; production and properties of nano-materials; cell mechanism as a model for assemblers; nano-tools; and nano-systems are explored. Prerequisite: CHEM 210.

**ME468 - Friction Science & Apps** 468-3 Friction Science and Applications. Study of systems and materials used for friction applications with a focus on aerospace and ground transportation vehicles. Course covers theories and experimental methods regarding friction and wear, contact mechanics, friction materials, vibration and noise, thermal transport and thermo-elastic phenomena. The course approach uses a materials emphasis. Prerequisite: ME 312. Restricted to senior standing or consent of instructor.

**ME470 - Mech System Vibrations** 470-3 Mechanical System Vibrations. Linear vibration of mechanical systems; System modeling; Free and forced response of single degree of freedom systems; Lagrange's equations; Multi-degree of freedom systems; Modal analysis for response calculations; Vibration of continuous sytems. Prerequisite: ENGR 261, ENGR 351, MATH 305.

**ME472 - Materials Selection for Design** 472-3 Materials Selection for Design. Interaction of material design process with material selection criteria. Comparison of materials properties, processes and fabrication. Project work includes design models, materials selection rationale, oral presentation of
projects, construction of mock-up models, and theoretical design problems in the area of the student's specialization, including materials selection considerations for biomaterials/biomedical applications. Prerequisites: ME 312, ENGR 261; ME 222 or ENGR 222 or ENGR 296.

ME477 - Fund Comp Aid Des & Manf 477-3 Fundamentals of Computer-Aided Design and Manufacturing. Introduction to the concepts of computer-aided design and manufacturing (CAD/CAM). Subjects include computer graphics, geometric modeling, engineering analysis with FEM, design optimization, computer numerical controls, project planning, and computer integrated manufacturing (CIM). Students are required to use computer packages for projects. Prerequisite: ME 475 or consent of instructor.

ME478 - FEA in CAD 478-3 Finite Element Analysis in CAD. Course to cover a multitude of topics in CAD/CAE with emphasis on finite element modeling and analysis. Overview of CAD/CAM/CAE; FEA software; FEA problems including trusses, beams, frames, thermal analysis, and fluid mechanics; design optimization; rapid prototyping. Students are required to use FEA software for homework assignments and a design project. Prerequisite: ME 302. Co-requisite: ME 475.

ME480 - Computational Fluid Dynamics 480-3 Computational Fluid Dynamics. Application of computational fluid dynamics techniques to the solution of problems in engineering heat transfer and fluid flow. Discretization techniques; stability analysis. Introduction to grid generation. Prerequisite: ENGR 351, ENGR 370A (or 370B concurrently); ME 302 or consent of instructor.

ME481 - Design/Implement Vision System 481-3 Design and Implementation of Vision System. (Same as BME 481) This course provides an introduction to a vision system and instrumentation with engineering applications including optical microscopy. A vision system is an essential tool in most of the application, and optical microscopy is a powerful scientific tool to study microscale worlds. Topics covered in basic geometrical optics, Optoelectronic devices, basic electronics for illumination system, optical microscopy, actuators in the microscope, fundamentals of fluorescence microscopy, and advanced imaging techniques. Prerequisites: ENGR 296 or ME 222 or consent of instructor.

ME485 - Cell & Molecular Biomechanics 485-3 Cellular and Molecular Biomechanics. (Same as BME 485) Mechanics of living cells at the micron/nanoscale level. Molecular forces, bond dynamics, force-induced protein conformational changes. Structural basis of living cells, contractile forces, mechanics of biomembranes, nucleus, cytoskeletal filaments- actin, microtubule, intermediate filaments. Active and passive rheology, microrheological properties of cytoskeleton. Active cellular processes such as cell adhesion, cell spreading, control of cell shape, and cell migration. Discussion on experimental techniques including single-molecule approaches to understanding key cellular processes. Discussion of theoretical models that predict cellular processes and limitations. Introduction to mechanobiology. Restricted to senior or graduate standing.

ME486 - Nondestructive Eval Engr Matls 486-3 Nondestructive Evaluation of Engineering Materials. (Same as CE 486) Overview of common nondestructive evaluation (NDE) techniques, such as visual inspection, eddy current, X-ray, and ultrasonics, to measure physical characteristics of and to detect defects in engineering materials. Laboratory experiments include contact ultrasonic, magnetic particle, liquid penetrant, and infrared thermography methods of testing. Prerequisite: ME 312 with a grade of C or better.

ME493 - Materials in Energy 493-3 Materials in Energy Applications. Materials are central to every energy technology. The course will provide information on high performance materials for alternative energy technologies and developing a fundamental understanding of their structure-property-performance relationships. It will include materials for fuel cells, lithium ion batteries, supercapacitors, photovoltaics, solar energy conversion, thermoelectrics, and hydrogen production and storage, catalysts for fuel conversion. Prerequisite: ME 312.

ME500 - Advanced Thermodynamics 500-3 Advanced Engineering Thermodynamics. This course creates computer programs to solve complex problems in thermodynamics relating to vapor power cycles,
gas power cycles, refrigeration cycles, and psychrometric evaluations. The course also covers advanced thermodynamic relations involving equations of state and chemical equilibrium. Prerequisite: ME 400 or equivalent or consent of instructor.

**ME501 - Transport Phenomena** 501-3 Transport Phenomena. Mechanism of heat, mass and momentum transport on both molecular and continuum basis. Estimation of transport properties. Generalized transport equations in one- or three-dimensional systems. Analogy of mass, heat and momentum transfer. Macroscopic balances, simultaneous mass and heat transfer. Prerequisite: ME 400 or equivalent or consent of instructor.

**ME502 - Conduction Heat Transfer** 502-3 Conduction Heat Transfer. Engineering considerations involving the construction of mathematical and numerical models of conduction heat transfer and the interpretation of results of analyses. Prerequisite: ME 302.

**ME503 - Convective Heat Transfer** 503-3 Convective Heat Transfer. Laminar and turbulent forced convection heat transfer over surfaces and inside tubes, including non-circular cross sections. Developing flows. Laminar free convection. Emphasis throughout is on the analytical approach. Prerequisite: ME 302.

**ME505 - Vehicle Dynamics** 505-3 Vehicle Dynamics. To provide an introductory coverage of dynamics of vehicle systems. The topics include mainly automotive systems but others such as aircraft and train systems may be discussed. Students will become familiar with issues related to tire behavior, vehicle suspension design, steering, vehicle and load transfer. Prerequisite: ENGR 261.

**ME507 - Combustion Phenomena** 507-3 Combustion Phenomena. Basic combustion phenomena-chemical rate processes-flame temperature, burning velocity, ignition energy, quenching distance and inflammability limits-laminar and turbulent flame propagation-aerodynamics of flame-gaseous detonations-two phase combustion phenomena-fluidized bed combustion. Prerequisite: ME 300.

**ME508 - Nanoscale Heat Transfer** 508-3 Nano/Microscale Energy and Heat Transfer. Review of limitations of macroscopic energy transport models; Energy transport and conversion mechanisms at the micro/nano/molecular scale; Energy transfer in nanostructured energy devices; Related topics on the transport of electrons, phonons and molecules; Molecular Dynamics simulation. Restricted to graduate standing or consent of the instructor.

**ME525 - Small Particle Phenomena** 525-3 Small Particle Phenomena. Small particle formation, behavior, properties, emission, collection, analysis and sampling. Includes atomization, combustion, transport of suspension and sols, filtration, light scattering and movement patterns of mono and polydisperse particles and use of a device to measure size, size distribution and one other physical property of an aerosol. Restricted to graduate standing.

**ME535 - CAD of Mechanical Systems I** 535-3 Computer Aided Analysis of Mechanical Systems I. Computer aided kinematic and dynamic analysis of planar mechanism: topics will include formulation of kinematic and dynamic equations of motion for planar systems. Automatic generations of kinematic constraint such as resolute joint, translation joint, etc. Numerical techniques for solution of nonlinear,
differential, and algebraic equations, application of these techniques to planar mechanism and robotic systems. Prerequisite: ME 309.

**ME537 - Nonlinear Vibrations** 537-3 Nonlinear Vibrations. Dynamic response and stability of nonlinear systems. Examples and sources of nonlinearity. Various techniques for studying dynamic behavior or nonlinear systems. Prerequisite: ME 470 or consent of instructor.

**ME539 - Catalysis** 539-3 Catalysis in Energy Processes. This course spans the full range from fundamentals of kinetics and heterogeneous catalysis via modern experimental and theoretical results of model studies to their equivalent large-scale energy processes. Several processes are discussed including hydrogen production, fuel cells, liquid fuel synthesis. Prerequisite: ME 410 or consent of instructor.

**ME540 - Intro to Continuum Mechanics** 540-3 Introduction to Continuum Mechanics. Tensor analysis applied to continuum mechanics: stress and strain and their invariance, equations of compatibility, constitutive equations - including linear stress-strain relations. Prerequisite: ENGR 350A, MATH 305. Restricted to graduate standing in engineering.

**ME545 - Intelligent Control** 545-3 Intelligent Control. Techniques to design and develop intelligent controllers for complex engineering systems. Specific techniques covered are fuzzy logic, expert systems, genetic algorithms, simulated annealing and any combinations of these. Prerequisite: ME 336 or consent of instructor.

**ME549 - Wave Prpgtn, Impct & Explsns** 549-3 Wave Propagation, Impact and Explosions. This course will deal with the dynamic response of materials and structures to dynamic events with particular emphasis on crashes, impacts and explosions. Prerequisite: ENGR 261 or consent of instructor.

**ME550 - Contact Mechanics** 550-3 Contact Mechanics. Course covers fundamentals of mechanics of elastic and inelastic solids in contact. Although the primary focus is on elastic contact, topics involving plastic flow, thermo-elastic effects and contact of rough surfaces are included in the content. Restricted to graduate standing.

**ME551 - Advanced Vibration** 551-3 Advanced Vibration. Analytical techniques for the vibration of discrete, continuous, and hybrid discrete-continuous systems; Vibration of conservative and nonconservative systems with focus on their representation in terms of linear operators; Properties of vibrating systems; Discretization methods for the analysis of continuous and nonlinear systems; Vibration and stability of gyroscopic systems. Prerequisite: ME 470 with a grade of C or better or graduate standing.

**ME555 - Materials Processing** 555-3 Materials Processing. Course to cover a multitude of topics in the processing of metals, ceramics and, to a lesser extent, polymers. Examples are: materials beneficiation, extraction, solidification, sintering and thin film deposition; topics for which the scientific basis for the processes is well established. Prerequisite: ME 312 and 410 or consent of instructor.

**ME562 - Envr Degradation of Materials** 562-3 Environmental Degradation of Materials. Course designed for majors in engineering and the physical sciences. Topics covered include general corrosion, oxidation, hydrogen embrittlement, stress corrosion cracking and fine particle erosion. Approach will draw on principles of chemistry and materials science. Prerequisite: CHEM 200 and CHEM 210, ME 312, or consent of instructor.

**ME564 - Ceramic Materials Electronics** 564-3 Ceramic Materials for Electronics. Ceramic materials contribute essential passive functions as components for a wide range of electronic applications related to sensors and energy converters. Ceramic material's electronic properties, electronic and ionic conduction in ceramic oxides; processing, properties and applications of ceramic materials for electronics, solid-oxide
fuel cells, properties, fabrication and performance will be covered in this course. Prerequisite: ME 312, 463 or consent of instructor.

**ME565 - Finite Element Analysis**

565-3 Finite Element Analysis. (Same as CE 551) Finite element analysis as a stress analysis or structural analysis tool. Derivation of element stiffness matrices by various means. Application to trusses, plane stress/strain and 3-D problems. Dynamic and material nonlinearity problems. Restricted to graduate standing in engineering or consent of instructor.

**ME566 - Advanced Mechanics-Materials**

566-3 Advanced Mechanics of Materials. (Same as CE 557) Advanced topics in mechanics of materials including: elasticity equations; torsion of non-circular sections; generalized bending including curved beams and elastic foundations; shear centers; failure criteria including yielding, fracture and fatigue; axisymmetric problems including both thick and thin walled bodies; contact stresses; and stress concentrations. Restricted to graduate standing in engineering or consent of instructor.

**ME567 - Tribology**

567-3 Tribology. Analysis and design of tribological components particularly bearings. A number of modern developments in the field and advanced topics will be presented. Restricted to graduate standing or consent of instructor.

**ME568 - Alt Energy & Fuel Resources**

568-3 Alternative Energy and Fuel Resources. The course covers the alternatives for energy resources and the impact of the human growth on the energy usage and its environmental consequences. The course describes the fossil fuel era, renewable energy resources, and hydrogen fuel era. The fundamentals of each of these fuel types, their conversion to usable energy and the potential of each of these fuels for the future is discussed. Prerequisite: ME 300 and 400, or instructor's consent.

**ME569 - Non-Destructive Evaluation**

569-3 Non-Destructive Evaluation. Course to cover a multitude of topics in non-destructive evaluation (NDE) techniques with emphasis on recent advancements in the field. Introduction to the field of NDE. Overview of common NDE techniques, such as visual inspection, eddy current, X-ray and ultrasonics. Recent development and research areas in NDE.

**ME577 - Bioprocess Engineering**

577-3 Bioprocess Engineering. (Same as BME 577) This course introduces the Mechanical and/or the Biomedical Engineer to the applications of bioprocesses to biotechnology, bacterial cell cultivation, animal cell cultivation, plant cell cultivation and medical applications bioprocessing. Attention will be given to a short survey of the working cells and reactors for cell growth, but will be an overview in nature. Restricted to graduate student standing.

**ME580 - Seminar**

580-1 Seminar. Presentations of topics in the broad areas of mechanical engineering such as thermal, mechanics, materials and acoustics. Restricted to enrollment in program leading to Master of Science of Mechanical Engineering.

**ME581 - Microrobotics**

581-3 Microrobotics. This course provides an introduction to Microrobotics which is a newly emerging robotics field. Since the micro/nano-scale technologies have been improved dramatically, the microrobot has been highlighted for applications in healthcare, biotechnology, etc. Topics covered: the forces and its effects on microrobots at the micron scale, the fabrication methods, control/sensing methods for microrobots, microrobots actuation methods, and locomotions in low Re number regime. In addition, the course will summarize and describe the near-future challenges in Microrobotics. Restricted to graduate standing.

**ME582 - Experimental Research Tools**

582-1 Experimental Research Tools. Topics important to engineering graduate students engaging in research. These topics include: laboratory safety, statistical data analysis, experimental design, library research and chemical hygiene. Restricted to graduate enrollment in Engineering.

**ME583 - Technical Research Reporting**

583-1 Technical Research Reporting. Analysis of technical and scientific writing: journal article, thesis, research paper. Guidelines and principles for writing engineering research literature and proposals. Term project involving thesis or research paper proposal to meet department requirements. Prerequisite: ME 582. Special approval needed from the instructor.

**ME592 - Special Investigations in ENGR**

592-1 to 4 Special Investigations in Engineering. Advanced topics in thermal and environmental engineering. Topics are selected by mutual agreement of the student
and instructor. Four hours maximum course credit. Special approval needed from the instructor and department chair.

**ME593 - Spec Topics in Mech Engr** 593-3 Special Topics in Mechanical Engineering. Studies of special topics in various areas in mechanical engineering. Such topics as coal refining, energy conversion, thermal systems, mechanics, robotics, CAD/CAM, TOM and engineering materials. Special approval needed from the instructor.

**ME595 - Research Paper** 595-3 Research Paper. Research paper on a topic approved by a faculty advisor and committee in Mechanical Engineering. This course is restricted to graduate students in the non-thesis option. Restricted to graduate standing in Mechanical Engineering. Special approval needed from the instructor or department.

**ME599 - Thesis** 599-1 to 6 Thesis. Six hours maximum course credit.

**ME601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

### Mechanical Engineering Faculty

**Abrate, Serge**, Professor, Ph.D., Purdue University, 1983; 1995. Impact, penetration, structural dynamics, composites.

**Agrawal, Om**, Professor, Emeritus, Ph.D., University of Illinois-Chicago, 1984; 1985. Computer-aided analysis and design of rigid/flexible multibody systems, numerical analysis, finite element methods, and continuum mechanics, CAD/Simulation of mechanical systems, fractional derivatives and their applications.

**Chen, Juh W.**, Professor, Emeritus, Ph.D., University of Illinois, 1959; 1965.

**Chowdhury, Farhan**, Assistant Professor, Ph.D., University of Illinois at Urbana-Champaign, 2011; 2015. Biomedical Engineering, stem cell biology, regenerative medicine, biomedical and molecular mechanism of tumorigenic cancer cells.

**Chu, Tsuchin P.**, Professor and Director of the Engineering Science Ph.D. Program, Ph.D., University of South Carolina, 1982; 1990. Non-destructive evaluation, biomedical engineering, FEA, carbon composites, CAD/CAM, machine vision, optical methods in experimental mechanics, image processing and analysis.

**Esmaeeli, Asghar**, Professor, Ph.D., The University of Michigan, 1995; 2005 Large scale computations of multiphase flows, phase change phenomena, and electrohydrodynamics.

**Farhang, Kambiz**, Professor, Ph.D., Purdue University, 1989; 1990. CAD/CAM, controls, vibrations, kinematics, dynamics, control and stability of flexible and rigid-body mechanical, electromechanical, mechanical-drive systems; manufacturing processes and process control.

**Jefferson, Thomas B.**, Professor, Emeritus, Ph.D., Purdue University, 1955; 1969.

**Kent, Albert C.**, Professor, Emeritus, Ph.D., Kansas State University, 1968; 1966.

**Koc, Rasit**, Professor and Chair, Ph.D., Missouri University Science and Technology, 1989; 1994. Advanced Materials and composites processing and characterization.

**Mathias, James A.**, Associate Professor, Ph.D., Ohio State University, 2001; 2003. Nanotechnology, microchannels, heat transfer, thermodynamics, energy utilization.
Mondal, Kanchan, Professor, Ph.D., SIUC, 2001; 2006. Electrochemistry, energy from coal, catalysis, reactor systems and design.

Nilufar, Sabrina, Assistant Professor, Ph.D., University of Illinois, Champaign, 2014. Advanced materials, covetics and reinforced composite materials processing and characterization. Phase transformation, corrosion resistance, and thermal and electrical properties for aerospace, military armors, cardiovascular stents application, and biomedical implants for orthopedic application.

Nsofor, Emmanuel C., Professor, Ph.D., Mississippi State University, 1993; 1999. Heat transfer, advanced energy systems, renewable energy sources, computational fluid dynamics (CFD).

O’Brien, William S., Associate Professor, Emeritus, Ph.D., West Virginia University, 1972; 1973.

Orthwein, William C., Professor, Emeritus, Ph.D., University of Michigan, 1958; 1965.

Suni, Ian I., Professor and Director of the Materials Technology Center, Ph.D., Harvard University, 1992; 2013. Application of electrochemistry and electrochemical engineering to technology advancement in thin film growth and dissolution, including both photovoltaic thin films and ULSI materials; electrochemical biosensors, including the use of electrochemical impedance spectroscopy (EIS) for detecting antibody-antigen recognition; and nanotechnology, including the use of nanoporous template materials for alternative energy development and biosensing.

Swisher, George M., Professor, Emeritus, Ph.D., Ohio State University, 1969; 1999.

Tempelmeyer, Kenneth E., Professor, Emeritus, Ph.D., University of Tennessee, 1969; 1979.

Wittmer, Dale E., Professor, Emeritus, Ph.D., University of Illinois, 1980; 1986.

Wright, Maurice, Professor, Emeritus, Ph.D., University of Wales, United Kingdom, 1962; 1984.

Medical Dosimetry

Mission

The mission of the Medical Dosimetry Program offered by Southern Illinois University (SIU) is to provide a quality program integrating education, research and service in order to meet the needs of the profession and improve health care of the people and communities we serve.

Track 1

Program Goals

1. Prepare the student to practice as a competent entry level professional Medical Dosimetrist by offering a comprehensive curriculum and quality didactic/clinical instruction.
2. Provide didactic and clinical experiences that lead to research in educational, professional, or health care issues relating to medical dosimetry.
3. Provide avenues to students for professional development and growth within the profession.
4. Provide avenues for students to develop and apply skills in effective communication necessary for successful medical dosimetry practice.
5. Provide avenues for students to develop and apply skills in critical thinking and problem-solving necessary for successful medical dosimetry practice.
6. Provide a clinical and didactic environment which leads to the development of clinical skills and competence appropriate to an entry level Medical Dosimetrist.

Program Description

The Medical Dosimetrist is a member of the Allied Health and Radiation Oncology Team.
Course material and practicum covers radiation physics, radiation protection, dose calculations, tumor localization, external beam treatment planning, brachytherapy, quality assurance, medical imaging/anatomy, clinical radiation oncology, and radiobiology. Clinical practicum includes external beam treatment planning, brachytherapy treatment, preparation and planning, chart reviews and dose calculations, record and verify system data entry, simulation (conventional and CT-simulation), treatment aid fabrication, treatment machine quality assurance, stereotactic treatment planning, gamma knife, IMRT planning and treatment. Special project assignments, conference attendance, written reports, chapter reviews, and labs are also part of the curriculum.

Accreditation

The Medical Dosimetry Program is accredited through the Joint Review Committee on Education in Radiologic Technology (JRCERT). The program at SIU was the third accredited program in the United States.

The program meets the formal education eligibility criteria for the national certification exam following graduation, as required by the Medical Dosimetrist Certification Board.

General Description of a Medical Dosimetrist

The Certified Medical Dosimetrist (CMD) is a member of the radiation oncology (cancer treatment) team who has knowledge of the overall characteristics and clinical relevance of radiation oncology treatment machines and equipment, is cognizant of procedures commonly used in brachytherapy (treatment with radioactive sources at a close distance) and has the education and expertise necessary to generate radiation dose distributions and dose calculations in collaboration with the Medical Physicist and Radiation Oncologist.

Major Duties

- Design a treatment plan by means of computer and/or manual computation that will deliver a prescribed radiation dose and field placement technique in accordance with the Radiation Oncologist’s prescription to a defined tumor volume.
- Consider dose-limiting structures in the design of treatment plans and document dose in accordance with the Radiation Oncologist’s prescription.
- Coordinate treatment simulations and tumor localization on dedicated devices, including Computerized Tomography (CT), Magnetic Resonance Imaging (MRI), and Positron Emission Tomography (PET) when indicated, for radiation oncology treatment planning.
- Supervise, perform, or assist in the planning of the fabrication of compensation filters, custom shields, wedges, and other beam modifying devices.
- Supervise, perform, or assist in the planning of the production of moulds, casts, and other immobilization devices.
- Supervise therapy staff in the implementation of the treatment plan including: the correct use of immobilization devices, compensators, wedges, field arrangement, and other treatment variables.
- Perform calculations for the accurate delivery of the Radiation Oncologist’s prescribed dose, document all pertinent information in the patient record, and verify the mathematical accuracy of all calculations using a system established by the Medical Physicist.
- Provide physics and technical support to the Medical Physicist, in radiation protection, qualitative machine calibrations, and quality assurance of the radiation oncology equipment.
- Supervise, perform, or assist in the application of specific methods of dosimetry including ion chamber, TLD, or film measurement as directed by the Medical Physicist.
- Assist in intracavitary and interstitial brachytherapy procedures and in the subsequent manual and/or computer calculation of the dose distributions of these treatments.
- Teach applied aspects of medical dosimetry to students and residents, as assigned.
- Participate in clinical research for the development and implementation of new techniques.
- Participate in continuing education in the area of current treatment planning techniques, and advances in medical dosimetry.

Eligibility for the Master of Science Program in Medical Dosimetry Track 1

Preferred candidates are individuals who have a baccalaureate degree and have been trained as a radiation therapist. Consideration is given to applicants with a bachelor’s degree in the physical or biological sciences without radiation therapy experience.

Number of Students

Due to clinical hour requirements and the number of clinical sites, approximately 20 students per year will be allowed at this time.

Application

Applications should be received by February 1st of the year one plans to attend the program. Class selection will occur in February/March.

For more information about admission policies, transfer credit, tuition and fees, refund policies, academic calendars, academic policies, graduation requirements, and student services, please see the Admission Policies, Requirements, and Procedures tab.

Class Location

The program offers education at various clinic sites and didactic education is delivered via distance learning. Live video conferencing equipment is used to allow students to interact with the instructors in real time.

Expenses

- Tuition: Current In-State Graduate Level Tuition and applicable Distance Education Fees.
- Textbooks and Lab Coat: Approximately $500 - $600.
- Living Expenses: Students must find housing on their own. This can vary greatly.
- A Computer, Scanner, and High Speed Internet will be required. Computer and bandwidth specifications will be shared once accepted into the program.

Curriculum

The total curriculum consists of 30 semester hours. Program length is 52 weeks and the students attend classes/clinical for 40 hours per week.

Didactic component is approximately 300 - 350 hours. Clinical component is approximately 1650 - 1700 hours. The student will have approximately 2000 hours of education per year and have 80 hours of vacation.

Fall Semester (Total: 12 hours)

- RAD 510-2  Simulation and Cross Sectional Anatomy in Medical Dosimetry
- RAD 515-4  Medical Dosimetry Clinical I
- RAD 520-3  The Physics of Medical Dosimetry I
- RAD 525-3  Seminars in Medical Dosimetry I

Spring Semester (Total: 12 hours)

- RAD 530-2  The Essentials of Medical Dosimetry
- RAD 535-4  Medical Dosimetry Clinical II
- RAD 540-3  The Physics of Medical Dosimetry II
- RAD 545-3  Seminar in Medical Dosimetry II

Summer Semester (Total: 7-13 hours)

- RAD 550-2  Medical Dosimetry Clinical III
• RAD 555-2     The Physics of Medical Dosimetry III
• RAD 560-2     Seminar in Medical Dosimetry III

Track 2

Program Goals

1. Provide didactic experiences that lead to research in educational, professional, or health care issues relating to medical dosimetry.
2. Provide avenues to students for professional development and growth within the profession.
3. Provide avenues for students to develop and apply skills in effective communication, analytical and critical thinking and problem-solving necessary for successful medical dosimetry practice.
4. Provide a didactic environment which leads to the development of managerial/educational skills appropriate to a Medical Dosimetrist.

Program Description

The Medical Dosimetrist is a member of the Allied Health and Radiation Oncology Team.

Course material covers radiation physics, radiation protection, dose calculations, tumor localization, external beam treatment planning, brachytherapy, quality assurance, medical imaging/anatomy, clinical radiation oncology, and radiobiology. Special project assignments, journal article reports, and chapter reviews as well as management and education courses are also part of the curriculum.

Accreditation

The Medical Dosimetry Program is approved by the Illinois Board of Higher Education (IBHE) and The Higher Learning Commission.

General Description of a Medical Dosimetrist

The Certified Medical Dosimetrist (CMD) is a member of the radiation oncology (cancer treatment) team who has knowledge of the overall characteristics and clinical relevance of radiation oncology treatment machines and equipment, is cognizant of procedures commonly used in brachytherapy (treatment with radioactive sources at a close distance) and has the education and expertise necessary to generate radiation dose distributions and dose calculations in collaboration with the Medical Physicist and Radiation Oncologist.

Major Duties

• Design a treatment plan by means of computer and/or manual computation that will deliver a prescribed radiation dose and field placement technique in accordance with the Radiation Oncologist’s prescription to a defined tumor volume.
• Consider dose-limiting structures in the design of treatment plans and document dose in accordance with the Radiation Oncologist’s prescription.
• Coordinate treatment simulations and tumor localization on dedicated devices, including Computerized Tomography (CT), Magnetic Resonance Imaging (MRI), and Positron Emission Tomography (PET) when indicated, for radiation oncology treatment planning.
• Supervise, perform, or assist in the planning of the fabrication of compensation filters, custom shields, wedges, and other beam modifying devices.
• Supervise, perform, or assist in the planning of the production of moulds, casts, and other immobilization devices.
• Supervise therapy staff in the implementation of the treatment plan including: the correct use of immobilization devices, compensators, wedges, field arrangement, and other treatment variables.
• Perform calculations for the accurate delivery of the Radiation Oncologist’s prescribed dose, document all pertinent information in the patient record, and verify the mathematical accuracy of all calculations using a system established by the Medical Physicist.
• Provide physics and technical support to the Medical Physicist, in radiation protection, qualitative machine calibrations, and quality assurance of the radiation oncology equipment.
• Supervise, perform, or assist in the application of specific methods of dosimetry including ion chamber, TLD, or film measurement as directed by the Medical Physicist.
• Assist in intracavitary and interstitial brachytherapy procedures and in the subsequent manual and/or computer calculation of the dose distributions of these treatments.
• Teach applied aspects of medical dosimetry to students and residents, as assigned.
• Participate in clinical research for the development and implementation of new techniques.
• Participate in continuing education in the area of current treatment planning techniques, and advances in medical dosimetry.

Eligibility for the Master of Science Program in Medical Dosimetry Track 2

Applicants must be a Certified Medical Dosimetrist and be current with the Medical Dosimetry Certification Board (MDCB). These individuals must also have a baccalaureate degree from an accredited university. The baccalaureate degree and academic performance must meet the entrance requirements set forth by the Graduate School at SIU.

Individuals that have been approved by the MDCB to take their exam may apply to the program but CMD verification must be documented before any classes may be taken.

Number of Students

There is no limit to the number of students accepted for Track 2.

Application

Continuous enrollment is allowed for Track 2. This means you may start the program with any semester. For more information about admission policies, transfer credit, tuition and fees, refund policies, academic calendars, academic policies, graduation requirements, and student services, please see the Admission Policies, Requirements, and Procedures tab.

Class Location

Track 2 is offered via distance learning.

Expenses

• Tuition: Current In-State Graduate Level Tuition and applicable Distance Education Fees.
• Living Expenses: Students must find housing on their own. This can vary greatly.
• A Computer, Scanner, and High Speed Internet will be required. Computer and bandwidth specifications will be shared once enrolled.
Curriculum

The total curriculum consists of 30 semester hours. Students may enroll only part time for this program.

Suggested Course Sequence for Track Two Students:

Fall Semester

• RAD 511-3  Fundamentals of Health Care Systems - Odd Years
• RAD 516-3  Cultural Foundations and Theories of Education - Odd Years
• RAD 520-3  The Physics of Medical Dosimetry I - Even Years
• RAD 525-3  Seminars in Medical Dosimetry I - Even Years

Spring Semester

• RAD 531-3  Human Resources in Health Care - Odd Years
• RAD 536-3  Strategic Leadership in Healthcare
• RAD 540-3  The Physics of Medical Dosimetry II - Even Years
• RAD 545-3  Seminar in Medical Dosimetry II - Even Years

Summer Semester

• RAD 551-3  Legal and Ethical Fundamentals of Health Care - Even Years
• RAD 556-3  Individual Research in Healthcare - Odd Years

Throughout the medical dosimetry program, a student must earn a "C" or better in all coursework to continue in the program. In RAD 555, a comprehensive exam is administered in which the student must earn a "B" or better to continue in the program. If a student is removed from the program for academic/performance reasons, they must re-apply for admission to the program.

Medical Dosimetry Courses

RAD444 - CNS Imaging in MRI 444-3 Central Nervous System Imaging in Magnetic Resonance Imaging. Lecture includes discussion of imaging applications of the central nervous system. Review of related anatomy and common pathologies. Special approval needed from the instructor.

RAD454 - Body Imaging in MRI 454-3 Body Imaging in Magnetic Resonance Imaging. Lecture includes discussion of the imaging applications of the gastrointestinal, genitourinary, hepatobiliary and musculoskeletal systems. Review of related anatomy and common pathologies. Special approval needed from the instructor.

RAD464 - Cardiac Imaging in MRI 464-3 Cardiovascular Imaging in Magnetic Resonance Imaging. Lecture includes discussion of the imaging applications of the heart and coronary arteries. Review of related anatomy and common pathologies. Special approval needed from the instructor.
RAD474 - Advanced MRI Internship - 474-6 Advanced MRI Internship. During this clinical internship, the student will be assigned to a selected clinical education center for the entire semester. During this semester, while performing routine MRI procedures, the student will perform MRI procedures of the heart, body, and extremities. Special approval needed from the instructor.

RAD484 - Special Topics in MRI/MRA - 484-3 Special Topics in MRI/MRA. Supervised readings of selected topics in MRI. Special approval needed from the instructor.

RAD494 - Independent Study in MRI - 494-1 to 6 Independent Study in Magnetic Resonance Imaging. The selection and investigation of a topic related to MRI. Special approval needed from the instructor.

RAD510 - Sim/Cross Sectnl Anat/MD - 510-2 Simulation and Cross Sectional Anatomy in Medical Dosimetry. This course covers the conventional and CT simulation techniques used in initiating radiation therapy for cancer patients. Identification of cross-sectional anatomy at different anatomical locations within the human body is also reviewed. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD515 - Medical Dosimetry Clinical I - 515-4 Medical Dosimetry Clinical I. This is the first course of a three course sequence. During the three course sequence, students will complete eight clinical rotations including Brachytherapy, Simulation, Gamma Knife, Treatment Aids, IMRT, External Beam, Physics, Special Measurements and QA. The length of these rotations varies from one to eleven weeks. During this course students will perform two to four of these rotations depending on the rotation schedule. While in the clinical setting students will observe and work directly with a medical dosimetrist. Emphasis is given on learning and understanding the role and responsibilities of a medical dosimetrist in the clinical setting. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD516 - Cult Found/Theories of Educ - 516-3 Cultural Foundations and Theories of Education. Seminar provides an examination of the historical, social, economic and psychological foundations of allied health education with emphasis given to the nature and role of education and training in preparing for the field of medical education. The objectives of this seminar will allow the student to explore the nature and theories of education, the behavioral aspects of education including the assumptions and practices which underlie education. Special approval needed from the instructor.

RAD520 - Physics/Medical Dosimetry I - 520-3 The Physics of Medical Dosimetry I. This course covers the following topics: Radiologic Physics, production of x-rays, radiation treatment and simulation machines, interactions of ionizing radiation, radiation measurements, dose calculations, computerized treatment planning, dose calculation algorithms, electron beam characteristics, and brachytherapy physics and procedures. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD521 - Rad/Imaging Sciences I - 521-3 Advance Practice of Radiologic/Imaging Sciences I. This course will include a review of the following topics: Radiation physics, radiation biology, anatomy, pharmacology, human diseases/pathology, advanced imaging methods, advanced imaging modalities, and patient care.

RAD525 - Seminars in MD I - 525-3 Seminars in Medical Dosimetry I. (Same as RAD 526) This course consists of various seminars/literature reviews associated with radiation oncology. Topics include treatment techniques for various cancers, technological advances in cancer treatment, cancer treatment trends, and the role of a medical dosimetrist. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD526 - Seminar Rad/Imaging I - 526-3 Seminar in Radiologic/Imaging Sciences I. (Same as RAD 525) This course consists of various seminar/literature reviews associated with the radiologic/imaging sciences. Topics include imaging techniques, technological advances in the radiologic/imaging sciences, patient care trends, and the role of an imaging professional. This course is twenty weeks in length.

RAD530 - Essentials of Medical Dosimetry - 530-2 The Essentials of Medical Dosimetry. This course covers the various quality assurance procedures performed in a radiation oncology department. Also included are various statistics topics to educate the student in becoming a good consumer of medical dosimetry research literature. Professional development, billing/coding, HIPAA, and professional service.
are also addressed. This course is twenty weeks in length. Prerequisite: A grade of C or better in RAD 510, RAD 515, RAD 520, and RAD 525.

RAD535 - Medical Dosimetry Clinical II 535-4 Medical Dosimetry Clinical II. This is the second of a three course sequence. During the three course sequence, students will complete eight clinical rotations including Brachytherapy, Simulation, Gamma Knife, Treatment Aids, IMRT, External Beam, Physics, Special Measurements and QA. The length of these rotations varies from one to eleven weeks. During this course students will perform two to four of these rotations depending on the rotation schedule. While in the clinical setting students will observe and work directly with a medical dosimetrist. Emphasis is given on learning and understanding the role and responsibilities of a medical dosimetrist in the clinical setting. This course is twenty weeks in length. Prerequisite: A grade of C or better in RAD 515.

RAD540 - Physics Medical Dosimetry II 540-3 The Physics of Medical Dosimetry II. This course covers the following topics: Imaging for radiation oncology, IMRT, stereotactic radiosurgery, special procedures, particle therapy, hyperthermia, and radiation safety. This course is twenty weeks in length.

RAD541 - Rad/Imaging Sciences II 541-3 Advance Practice of Radiologic/Imaging Sciences II. This course will continue to cover the same topics that were reviewed in RAD 521 but to a greater level of understanding. Topics include: Radiation physics, radiation biology, anatomy, pharmacology, human disease/pathology, advanced imaging methods, advanced imaging modalities, and patient care.

RAD545 - Seminars in MD II 545-3 Seminar in Medical Dosimetry II. (Same as RAD 546) This course consists of various seminars associated with radiation oncology. Topics include treatment techniques for various cancers, technological advances in cancer treatment, cancer treatment trends, and the role of a medical dosimetrist. This course is twenty weeks in length.

RAD546 - Seminar Rad/Imaging II 546-3 Seminar in Radiologic/Imaging Sciences II. (Same as RAD 545) This course consists of various seminar/literature reviews associated with the radiologic/imaging sciences. Topics include imaging techniques, technological advances in the radiologic/imaging sciences, patient care trends, and the role of an imaging professional. This course is twenty weeks in length.

RAD550 - Medical Dosimetry Clinical III 550-2 Medical Dosimetry Clinical III. This is the third course of a three course sequence. During the three course sequence, students will complete eight clinical rotations including Brachytherapy, Simulation, Gamma Knife, Treatment Aids, IMRT, External Beam, Physics, Special Measurements and QA. The length of these rotations varies from one to ten weeks. During this course students will perform one to two of these rotations depending on the rotation schedule. While in the clinical setting students will observe and work directly with a medical dosimetrist. Emphasis is given on learning and understanding the role and responsibilities of a medical dosimetrist in the clinical setting. This course is ten weeks in length. Prerequisite: A grade of "C" or better in RAD 535.

RAD555 - Physics Med Dosimetry III 555-2 The Physics of Medical Dosimetry III. This course covers the following topics: MU calculations, point dose calculations and radiation biology. This course is ten weeks in length. Prerequisite: A grade of C or better in RAD 540.

RAD556 - HC Research 556-3 Individual Research in Healthcare. This course requires students to complete a research project in the field of healthcare based upon student interest and instructor approval. Each project will have a written paper as a final product and this paper will be submitted for publication, as approved by the instructor, in one of the professional journals within the field of healthcare. Restricted to School graduate majors.

RAD560 - Sem in Medical Dosimetry III 560-2 Seminar in Medical Dosimetry III. This course consists of various seminars/literature reviews associated with radiation oncology. Topics include treatment techniques for various cancers, technological advances in cancer treatment, cancer treatment trends, and the role of a medical dosimetrist. This course is ten weeks in length. Prerequisite: A grade of C or better in RAD 545.

RAD565 - Independent Study 565-1 to 6 Independent Study. Directed independent study in selected areas of medical dosimetry studies. Special approval needed from the Program Director.
RAD593 - Advanced Research 593-6 Advanced Research. Students complete a research project including a special project related to administration in the student's chosen field which meets Graduate School guidelines. Restricted to School graduate majors and School advisor.

RAD601 - Continuing Enrollment 601-1 Continuing Enrollment. This course is required to satisfy the Graduate School's requirement of continuous enrollment and is intended for those students who are enrolled in the program but cannot take a core academic course during a given semester. Prerequisite: Consent of Program Director.

Medical Dosimetry Faculty

Collins, Kevin Scott, Professor, Ph.D., Southern Illinois University Carbondale, 2011.
Collins, Sandra K., Professor, Ph.D., Southern Illinois University Carbondale, 2003; 2000. Health care management.
Mobile, Katherine, Lecturer, M.S., University of Wisconsin-LaCrosse, 2011.
Other related dosimetry courses are taught by medical physicists on contract.

Mining Engineering

*Enrollments in Mining Engineering have been suspended indefinitely.

Master of Science in Mining Engineering

Graduate work leading to the Master of Science degree in mining engineering is offered by the College of Engineering. The program is designed to provide advanced study in areas such as rock mechanics and ground control, mine design, mineral and coal processing, surface and underground mining systems performance optimization, innovative mining systems, surface mine reclamation, in-situ mining, mine environment and ventilation, coalbed methane reservoir engineering, carbon dioxide sequestration, dust control, and coal combustion byproduct utilization and management.

Admission

Students seeking admission to the graduate program in mining engineering must meet the admission standards set by the Graduate School and have a bachelor’s degree in engineering or its equivalent. A student whose undergraduate training is deficient may be required to take coursework without graduate credit.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Mining Engineering. Applicants must pay this fee by credit card.

Requirements

A graduate student in mining engineering is required to develop a program of study with a graduate adviser and a graduate committee. Each student majoring in mining engineering may, with the approval of the graduate committee, also take courses in other branches of engineering or in areas of science and business. For a student who wishes to complete the requirements of the master’s degree with a thesis, a minimum of thirty semester hours of acceptable graduate credit is required. Of this total, eighteen semester hours must be earned in the mining engineering department. Each candidate is also required to pass a comprehensive oral examination covering all of the student's graduate work including thesis. A minimum of 15 hours must be earned in courses numbered 500 or above.

If a student prefers the non-thesis option, a minimum of 36 semester hours of acceptable graduate credit is required. The student is expected to take at least 21 semester hours within mining engineering including no more than 3 semester hours of the appropriate 592 course to be devoted to the preparation
of a research paper. In addition, each candidate is required to pass a written comprehensive examination and an oral examination on the research paper.

If a student with a mining engineering background pursues a master's degree with double major, he or she will be required to take a minimum of 18 credits with thesis option and 22 credits with non-thesis option in mining engineering and 60 percent of the total credit requirements of the other department. For a student without a background in the related fields such as minerals engineering, geological engineering etc., the minimum credit requirement in the mining department will be 24 credits with thesis option and 28 credits with non-thesis option. Additional deficiency courses will be prescribed for students with a background in non-related fields.

Each student will select a minimum of three graduate faculty members to serve as a graduate committee, subject to the approval of the chair of the Department of MMRE. At least two of the committee members must be from the mining engineering department. The committee will:

1. approve the student’s program of study,
2. approve the student’s research topic,
3. approve the completed research paper or thesis, and
4. administer and approve the written, or oral, comprehensive examination.

Teaching or research assistantships and fellowships are available for qualified applicants. Assistantship and fellowship support is limited to two years in line with the Department’s expectations of student’s time to graduate. An extension of one semester is approved only under exceptional circumstances (eg: equipment failures). Additional information about the program, courses, assistantships, and fellowships may be obtained from the College of Engineering or the Department of Mining and Mineral Resources Engineering.

Mining Engineering Courses

**ME400 - Engr Thermodynamics II** 400-3 Engineering Thermodynamics II. Combined first and second law analysis: Exergy analysis; Analysis of power and refrigeration cycles. Detailed treatment of gas and vapor cycles including gas and steam cycles; Thermodynamics of combustion and reaction of mixtures; Introduction to thermodynamic property relations, chemical and phase equilibrium. Prerequisite: ME 300.

**ME401 - Thermal Measurements Lab** 401-1 Thermal Measurements Laboratory. Study of basic measurements used in the thermal sciences. Calibration techniques for temperature and pressure sensors. Thermal measurements under transient and steady-state conditions. Applications include conduction, convection and radiation experiments. Uncertainty analysis. The handling and reduction of data. Prerequisite: ME 302.

**ME405 - Transportation Power Systems** 405-3 Transportation Power Systems. Operation and performance characteristics of Otto, Diesel, Atkinson cycles. Methods of engine testing, types of fuels and their combustion, exhaust gas analysis. Types, selection, and analysis of jet engines. Analysis of fuel cell types, their performance and limitations. Operation of electric motors, capacitors, battery packs and their charging. Prerequisite: concurrent enrollment in or completion of ME 400, with a minimum grade of C or consent of instructor.

**ME406 - Thermal Systems Design** 406-3 Thermal Systems Design. Applications of the principles of engineering analysis to the design of thermal systems. Coordination of such systems as heat exchangers, air conditioners, cogeneration cooling towers, and furnaces. Emphasis is placed on application of basic principles of heat transfer and fluid mechanics. Prerequisite: ME 302.

**ME408 - Energy Conversion Systems** 408-3 Energy Conversion Systems. Principles of advanced energy conversion systems; nuclear power plants, combined cycles, magnetohydromagnetics, cogeneration (electricity and process steam), and heat pumps. Constraints on design and use of energy conversion systems; energy resources, environmental effects, and economics. Prerequisite: ME 400.
ME410 - Appl Chem Thermo & Kinetics 410-3 Applied Chemical Thermodynamics and Kinetics. Designed for students interested in chemical and environmental processes and materials science. Topics covered include application of the Second and Third Laws of Thermodynamics, solution theory, phase equilibria, sources and uses of thermodynamic data, classical reaction rate theory, kinetic mechanisms and the determination of rate-determining steps in chemical reactions. Prerequisite: CHEM 200, 201, ME 300 or consent of instructor.

ME415 - Engineering Acoustics 415-3 Engineering Acoustics. Principles of engineering acoustics and their applications to passive and active noise control techniques. Laboratory experience demonstrates techniques for control and reduction of noise. Prerequisite: ME 336.

ME416 - Air Pollution Control 416-3 Air Pollution Control. An overview of problems in air pollution likely to influence the Mechanical Engineer. Engineering control theory, procedure and equipment related to control of particulate, gaseous, and toxic air emissions. Restricted to senior standing and College of Engineering or consent of instructor.

ME422 - Appl Fluid Mechanics for ME 422-3 Applied Fluid Mechanics for Mechanical Engineers. Applications of fluid mechanics in internal and external flows. The mathematical basis for inviscid and viscous flows calculations is developed with application to pipe and duct flows; external flow about bodies; drag determination; turbomachinery; and reaction propulsion systems. Semester design project of a fluid mechanical system. Prerequisite: ME 300 and MATH 305; ENGR 370A or 370B concurrently.

ME440 - Design HVAC & Build Energy Sys 440-3 Design of HVAC and Building Energy Systems. Building energy design and simulation; HVAC systems, heating and cooling load analysis; Air conditioning processes; Principles of human thermal comfort. Prerequisite: ME 302. Restricted to graduate standing or consent of the instructor.

ME446 - Energy Management 446-3 Energy Management. Fundamentals and various levels of analysis for energy management of commercial buildings and industrial processes and buildings. Use of energy management systems and economic evaluations are required in course projects. Prerequisite: ME 302.

ME451 - Advanced Dynamics 451-3 Advanced Dynamics. Three-dimensional kinematics and dynamics of particles and rigid bodies; Coordinates and reference frames; Rotations of rigid bodies; Euler angles; Newtonian mechanics; Work and energy; Generalized coordinates and degrees of freedom; Analytical mechanics with a focus on Lagrange's equations; Hamilton's principle for continuous elastic systems. Prerequisites: MATH 305 and ME 309 with a grade of C or better or graduate standing.

ME463 - Introduction to Ceramics 463-3 Introduction to Ceramics. Structure and physical properties, mechanical properties, processing and design of ceramics. Prerequisite: ME 312 or equivalent.
ME465 - Intro to Nanotechnology 465-3 Introduction to Nanotechnology. Survey of the rapidly developing fields of nanometer science and engineering. Impact on society; principles of self-assembly; production and properties of nano-materials; cell mechanism as a model for assemblers; nano-tools; and nano-systems are explored. Prerequisite: CHEM 210.

ME468 - Friction Science & Apps 468-3 Friction Science and Applications. Study of systems and materials used for friction applications with a focus on aerospace and ground transportation vehicles. Course covers theories and experimental methods regarding friction and wear, contact mechanics, friction materials, vibration and noise, thermal transport and thermo-elastic phenomena. The course approach uses a materials emphasis. Prerequisite: ME 312. Restricted to senior standing or consent of instructor.

ME470 - Mech System Vibrations 470-3 Mechanical System Vibrations. Linear vibration of mechanical systems; System modeling; Free and forced response of single degree of freedom systems; Lagrange's equations; Multi-degree of freedom systems; Modal analysis for response calculations; Vibration of continuous sytems. Prerequisite: ENGR 261, ENGR 351, MATH 305.

ME472 - Materials Selection for Design 472-3 Materials Selection for Design. Interaction of material design process with material selection criteria. Comparison of materials properties, processes and fabrication. Project work includes design models, materials selection rationale, oral presentation of projects, construction of mock-up models, and theoretical design problems in the area of the student's specialization, including materials selection considerations for biomaterials/biomedical applications. Prerequisites: ME 312, ENGR 261; ME 222 or ENGR 222 or ENGR 296.

ME477 - Fund Comp Aid Des & Manf 477-3 Fundamentals of Computer-Aided Design and Manufacturing. Introduction to the concepts of computer-aided design and manufacturing (CAD/CAM). Subjects include computer graphics, geometric modeling, engineering analysis with FEM, design optimization, computer numerical controls, project planning, and computer integrated manufacturing. (CIM). Students are required to use computer packages for projects. Prerequisite: ME 475 or consent of instructor.

ME478 - FEA in CAD 478-3 Finite Element Analysis in CAD. Course to cover a multitude of topics in CAD/CAE with emphasis on finite element modeling and analysis. Overview of CAD/CAM/CAE; FEA software; FEA problems including trusses, beams, frames, thermal analysis, and fluid mechanics; design optimization; rapid prototyping. Students are required to use FEA software for homework assignments and a design project. Prerequisite: ME 302. Co-requisite: ME 475.

ME480 - Computational Fluid Dynamics 480-3 Computational Fluid Dynamics. Application of computational fluid dynamics techniques to the solution of problems in engineering heat transfer and fluid flow. Discretization techniques; stability analysis. Introduction to grid generation. Prerequisite: ENGR 351, ENGR 370A (or 370B concurrently); ME 302 or consent of instructor.

ME481 - Design/Implement Vision System 481-3 Design and Implementation of Vision System. (Same as BME 481) This course provides an introduction to a vision system and instrumentation with engineering applications including optical microscopy. A vision system is an essential tool in most of the application, and optical microscopy is a powerful scientific tool to study microscale worlds. Topics covered in basic geometrical optics, Optoelectronic devices, basic electronics for illumination system, optical microscopy, actuators in the microscope, fundamentals of fluorescence microscopy, and advanced imaging techniques. Prerequisites: ENGR 296 or ME 222 or consent of instructor.

ME485 - Cell & Molecular Biomechanics 485-3 Cellular and Molecular Biomechanics. (Same as BME 485) Mechanics of living cells at the micron/nanoscale level. Molecular forces, bond dynamics, force-induced protein conformational changes. Structural basis of living cells, contractile forces, mechanics of biomembranes, nucleus, cytoskeletal filaments- actin, microtubule, intermediate filaments. Active and passive rheology, microrheological properties of cytoskeleton. Active cellular processes such as cell adhesion, cell spreading, control of cell shape, and cell migration. Discussion on experimental techniques including single-molecule approaches to understanding key cellular processes. Discussion of theoretical
models that predict cellular processes and limitations. Introduction to mechanobiology. Restricted to senior or graduate standing.

ME486 - Nondestructive Eval Engr Matls 486-3 Nondestructive Evaluation of Engineering Materials. (Same as CE 486) Overview of common nondestructive evaluation (NDE) techniques, such as visual inspection, eddy current, X-ray, and ultrasonics, to measure physical characteristics of and to detect defects in engineering materials. Laboratory experiments include contact ultrasonic, magnetic particle, liquid penetrant, and infrared thermography methods of testing. Prerequisite: ME 312 with a grade of C or better.

ME493 - Materials in Energy 493-3 Materials in Energy Applications. Materials are central to every energy technology. The course will provide information on high performance materials for alternative energy technologies and developing a fundamental understanding of their structure-property-performance relationships. It will include materials for fuel cells, lithium ion batteries, supercapacitors, photovoltaics, solar energy conversion, thermoelectrics, and hydrogen production and storage, catalysts for fuel conversion. Prerequisite: ME 312.

ME500 - Advanced Thermodynamics 500-3 Advanced Engineering Thermodynamics. This course creates computer programs to solve complex problems in thermodynamics relating to vapor power cycles, gas power cycles, refrigeration cycles, and psychrometric evaluations. The course also covers advanced thermodynamic relations involving equations of state and chemical equilibrium. Prerequisite: ME 400 or equivalent or consent of instructor.

ME502 - Conduction Heat Transfer 502-3 Conduction Heat Transfer. Engineering considerations involving the construction of mathematical and numerical models of conduction heat transfer and the interpretation of results of analyses. Prerequisite: ME 302.

ME503 - Convective Heat Transfer 503-3 Convective Heat Transfer. Laminar and turbulent forced convection heat transfer over surfaces and inside tubes, including non-circular cross sections. Developing flows. Laminar free convection. Emphasis throughout is on the analytical approach. Prerequisite: ME 302.

ME505 - Vehicle Dynamics 505-3 Vehicle Dynamics. To provide an introductory coverage of dynamics of vehicle systems. The topics include mainly automotive systems but others such as aircraft and train systems may be discussed. Students will become familiar with issues related to tire behavior, vehicle suspension design, steering, vehicle and load transfer. Prerequisite: ENGR 261.

ME508 - Nanoscale Heat Transfer 508-3 Nano/Microscale Energy and Heat Transfer. Review of limitations of macroscopic energy transport models; Energy transport and conversion mechanisms at the micro/nano/molecular scale; Energy transfer in nanostructured energy devices; Related topics on the transport of electrons, phonons and molecules; Molecular Dynamics simulation. Restricted to graduate standing or consent of the instructor.

between nondiffuse, nongray surfaces. Radiation in the presence of other energy transfer modes. Approximate and computer solution techniques. Prerequisite: ME 302.

**ME525 - Small Particle Phenomena** 525-3 Small Particle Phenomena. Small particle formation, behavior, properties, emission, collection, analysis and sampling. Includes atomization, combustion, transport of suspension and solids, filtration, light scattering and movement patterns of mono and polydisperse particles and use of a device to measure size, size distribution and one other physical property of an aerosol. Restricted to graduate standing.

**ME535 - CAD of Mechanical Systems I** 535-3 Computer Aided Analysis of Mechanical Systems I. Computer aided kinematic and dynamic analysis of planar mechanism: topics will include formulation of kinematic and dynamic equations of motion for planar systems. Automatic generations of kinematic constraint such as resolute joint, translation joint, etc. Numerical techniques for solution of nonlinear, differential, and algebraic equations, application of these techniques to planar mechanism and robotic systems. Prerequisite: ME 309.

**ME537 - Nonlinear Vibrations** 537-3 Nonlinear Vibrations. Dynamic response and stability of nonlinear systems. Examples and sources of nonlinearity. Various techniques for studying dynamic behavior or nonlinear systems. Prerequisite: ME 470 or consent of instructor.

**ME539 - Catalysis** 539-3 Catalysis in Energy Processes. This course spans the full range from fundamentals of kinetics and heterogeneous catalysis via modern experimental and theoretical results of model studies to their equivalent large-scale energy processes. Several processes are discussed including hydrogen production, fuel cells, liquid fuel synthesis. Prerequisite: ME 410 or consent of instructor.

**ME540 - Intro to Continuum Mechanics** 540-3 Introduction to Continuum Mechanics. Tensor analysis applied to continuum mechanics: stress and strain and their invariance, equations of compatibility, constitutive equations - including linear stress-strain relations. Prerequisite: ENGR 350A, MATH 305. Restricted to graduate standing in engineering.

**ME545 - Intelligent Control** 545-3 Intelligent Control. Techniques to design and develop intelligent controllers for complex engineering systems. Specific techniques covered are fuzzy logic, expert systems, genetic algorithms, simulated annealing and any combinations of these. Prerequisite: ME 336 or consent of instructor.

**ME549 - Wave Prpgtn, Impct & Explsns** 549-3 Wave Propagation, Impact and Explosions. This course will deal with the dynamic response of materials and structures to dynamic events with particular emphasis on crashes, impacts and explosions. Prerequisite: ENGR 261 or consent of instructor.

**ME550 - Contact Mechanics** 550-3 Contact Mechanics. Course covers fundamentals of mechanics of elastic and inelastic solids in contact. Although the primary focus is on elastic contact, topics involving plastic flow, thermo-elastic effects and contact of rough surfaces are included in the content. Restricted to graduate standing.

**ME551 - Advanced Vibration** 551-3 Advanced Vibration. Analytical techniques for the vibration of discrete, continuous, and hybrid discrete-continuous systems; Vibration of conservative and nonconservative systems with focus on their representation in terms of linear operators; Properties of vibrating systems; Discretization methods for the analysis of continuous and nonlinear systems;
Vibration and stability of gyroscopic systems. Prerequisite: ME 470 with a grade of C or better or graduate standing.

**ME555 - Materials Processing** 555-3 Materials Processing. Course to cover a multitude of topics in the processing of metals, ceramics and, to a lesser extent, polymers. Examples are: materials beneficitation, extraction, solidification, sintering and thin film deposition; topics for which the scientific basis for the processes is well established. Prerequisite: ME 312 and 410 or consent of instructor.

**ME562 - Envir Degradation of Materials** 562-3 Environmental Degradation of Materials. Course designed for majors in engineering and the physical sciences. Topics covered include general corrosion, oxidation, hydrogen embrittlement, stress corrosion cracking and fine particle erosion. Approach will draw on principles of chemistry and materials science. Prerequisite: CHEM 200 and CHEM 210, ME 312, or consent of instructor.

**ME564 - Ceramic Materials Electronics** 564-3 Ceramic Materials for Electronics. Ceramic materials contribute essential passive functions as components for a wide range of electronic applications related to sensors and energy converters. Ceramic material's electronic properties, electronic and ionic conduction in ceramic oxides; processing, properties and applications of ceramic materials for electronics, solid-oxide fuel cells, properties, fabrication and performance will be covered in this course. Prerequisite: ME 312, 463 or consent of instructor.

**ME565 - Finite Element Analysis** 565-3 Finite Element Analysis. (Same as CE 551) Finite element analysis as a stress analysis or structural analysis tool. Derivation of element stiffness matrices by various means. Application to trusses, plane stress/strain and 3-D problems. Dynamic and material nonlinearity problems. Restricted to graduate standing in engineering or consent of instructor.

**ME566 - Advanced Mechanics-Materials** 566-3 Advanced Mechanics of Materials. (Same as CE 557) Advanced topics in mechanics of materials including: elasticity equations; torsion of non-circular sections; generalized bending including curved beams and elastic foundations; shear centers; failure criteria including yielding, fracture and fatigue; axisymmetric problems including both thick and thin walled bodies; contact stresses; and stress concentrations. Restricted to graduate standing in engineering or consent of instructor.

**ME567 - Tribology** 567-3 Tribology. Analysis and design of tribological components particularly bearings. A number of modern developments in the field and advanced topics will be presented. Restricted to graduate standing or consent of instructor.

**ME568 - Alt Energy & Fuel Resources** 568-3 Alternative Energy and Fuel Resources. The course covers the alternatives for energy resources and the impact of the human growth on the energy usage and its environmental consequences. The course describes the fossil fuel era, renewable energy resources, and hydrogen fuel era. The fundamentals of each of these fuel types, their conversion to usable energy and the potential of each of these fuels for the future is discussed. Prerequisite: ME 300 and 400, or instructor's consent.

**ME569 - Non-Destructive Evaluation** 569-3 Non-Destructive Evaluation. Course to cover a multitude of topics in non-destructive evaluation (NDE) techniques with emphasis on recent advancements in the field. Introduction to the field of NDE. Overview of common NDE techniques, such as visual inspection, eddy current, X-ray and ultrasonics. Recent development and research areas in NDE.

**ME577 - Bioprocess Engineering** 577-3 Bioprocess Engineering. (Same as BME 577) This course introduces the Mechanical and/or the Biomedical Engineer to the applications of bioprocesses to biotechnology, bacterial cell cultivation, animal cell cultivation, plant cell cultivation and medical applications bioprocessing. Attention will be given to a short survey of the working cells and reactors for cell growth, but will be an overview in nature. Restricted to graduate student standing.

**ME580 - Seminar** 580-1 Seminar. Presentations of topics in the broad areas of mechanical engineering such as thermal, mechanics, materials and acoustics. Restricted to enrollment in program leading to Master of Science of Mechanical Engineering.

**ME581 - Microrobotics** 581-3 Microrobotics. This course provides an introduction to Microrobotics which is a newly emerging robotics field. Since the micro/nano-scale technologies have been improved
dramatically, the microrobot has been highlighted for applications in healthcare, biotechnology, etc. Topics covered: the forces and its effects on microrobots at the micron scale, the fabrication methods, control/sensing methods for microrobots, microrobots actuation methods, and locomotions in low Re number regime. In addition, the course will summarize and describe the near-future challenges in Microroborics. Restricted to graduate standing.

**ME582 - Experimental Research Tools** 582-1 Experimental Research Tools. Topics important to engineering graduate students engaging in research. These topics include: laboratory safety, statistical data analysis, experimental design, library research and chemical hygiene. Restricted to graduate enrollment in Engineering.

**ME583 - Technical Research Reporting** 583-1 Technical Research Reporting. Analysis of technical and scientific writing: journal article, thesis, research paper. Guidelines and principles for writing engineering research literature and proposals. Term project involving thesis or research paper proposal to meet department requirements. Prerequisite: ME 582. Special approval needed from the instructor.

**ME592 - Special Investigations in ENGR** 592-1 to 4 Special Investigations in Engineering. Advanced topics in thermal and environmental engineering. Topics are selected by mutual agreement of the student and instructor. Four hours maximum course credit. Special approval needed from the instructor and department chair.

**ME593 - Spec Topics in Mech Engr** 593-3 Special Topics in Mechanical Engineering. Studies of special topics in various areas in mechanical engineering. Such topics as coal refining, energy conversion, thermal systems, mechanics, robotics, CAD/CAM, TOM and engineering materials. Special approval needed from the instructor.

**ME595 - Research Paper** 595-3 Research Paper. Research paper on a topic approved by a faculty advisor and committee in Mechanical Engineering. This course is restricted to graduate students in the non-thesis option. Restricted to graduate standing in Mechanical Engineering. Special approval needed from the instructor or department.

**ME599 - Thesis** 599-1 to 6 Thesis. Six hours maximum course credit.

**ME601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**Mining Engineering Faculty**

**Chugh, Yoginder P.**, Professor, Emeritus, Ph.D., Pennsylvania State University, 1971; 1977. Coal combustion byproduct utilization and management, rock mechanics, ground control, coal mining dust control and production engineering in coal mines.

**Paul, Bradley**, Associate Professor, Emeritus, Ph.D., University of Utah, 1989; 1990. Underground mining systems and solution mining, minerals processing, hard rock and industrial minerals, geostatistics, mine environmental studies.

**Sinha, Atmesh K.**, Professor, Emeritus, Ph.D., University of Sheffield, England, 1963; 1975

**Spearing, A.J.S. (Sam)**, Associate Professor, Emeritus, Ph.D., Technical University of Silesia, 1993; 2007. Mine design, rock mechanics, backfill, strata control and risk assessment.
Molecular Biology, Microbiology and Biochemistry

Graduate programs are offered that lead to the Doctor of Philosophy (Ph.D.) and Master of Science (M.S.) in Molecular Biology, Microbiology and Biochemistry. The M.S. degree has thesis and non-thesis options. The non-thesis option M.S. degree has an area of specialization in Public Health Laboratory Sciences. These interdisciplinary programs draw their faculty primarily from the Microbiology program (School of Biological Sciences) and the Department of Biochemistry and Molecular Biology (School of Medicine) on the Carbondale campus, and the Department of Medical Microbiology, Immunology, and Cell Biology (School of Medicine) on the Springfield campus. Adjunct faculty from the Illinois Department of Public Health (IDPH) Division of Laboratories provide training to students in the public health laboratory setting. The programs are designed to offer advanced training (via lecture, discussion and laboratory) in biochemistry, biophysics, bacteriology, genetics, immunology, microbial physiology, cancer biology, mycology, molecular biology, cell biology, developmental biology, structural biology and public health laboratory science. The Ph.D. and thesis option M.S. programs require laboratory research. The non-thesis option M.S. degree program is designed to prepare students for a career in public health laboratory science and requires substantial training in a public health laboratory setting that is directly relevant to career preparation in that area.

Admission

Prospective graduate students should have an undergraduate degree in any of the biological, chemical or physical sciences. The applicants are recommended to have completed courses in biology, organic chemistry, physics and mathematics. Strong candidates with deficiencies in any area may be admitted, but such deficiencies may restrict the research areas available to the student and may lead to requirements for additional courses during graduate study. An advisory system in the program (see below) will help students in planning their course of study. Prospective students for the thesis option M.S. and Ph.D. degrees are encouraged to contact program faculty in areas of their research interest. Prospective students seeking admission to the non-thesis option M.S. degree program with an area of concentration in public health laboratory science are encouraged to contact the Chair of the Public Health Science Program committee.

Students may be admitted to the doctoral program with a bachelor’s or master’s degree. Students in the thesis option M.S. program can be admitted to the doctoral program via accelerated entry or the master’s equivalency option by the recommendation of the faculty and approval of the Graduate School.

All application materials should be submitted to the Program Director. This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Molecular Biology, Microbiology and Biochemistry. Applicants must pay this fee by credit card. Applications for admission to the thesis option M.S. and Ph.D. programs are evaluated by the M.S./Ph.D.Program Admissions Committee and applications for the non-thesis option M.S. degree program with an area of concentration in public health laboratory science are evaluated by the Public Health Science Program Committee. Upon recommendation of the appropriate committee, the application is transmitted to the Graduate School for approval.

The MBMB program requires a grade point average (GPA) of 2.7 (A = 4.0) for admission into the M.S. programs and a GPA of 3.00 in graduate level work for admission into the doctoral program. An excellent record in undergraduate coursework and a strong recommendation of the thesis option M.S./Ph.D. Program Admissions Committee is required for direct admission to the doctoral program after a bachelor’s degree.

Applicants are required to submit Graduate Record Examination (GRE) general test scores. Submission of test scores of the GRE advanced (biochemistry, cell and molecular biology or biology or chemistry) examinations is also encouraged.

International students whose native language is not English will be required to obtain at least 550 (paper score), 60 (revised paper-delivered test) or IBT of 80 on the Test of English as a Foreign Language (TOEFL) or 6.5 on the International English Language Testing System (IELTS).

Financial Assistance

Fellowships and assistantships are available through the program and the participating departments for qualified applicants.
Advisement and General Requirements

For thesis option M.S. and Ph.D. students, the Program Director or the Departmental Graduate Advisors as designated will assist each incoming student with the initial planning of a program of study and will advise the student until a Research Director is chosen. For non-thesis option M.S. degree program students, the Public Health Science Program Graduate Advisor or its Director will assist students in the planning of a program of study.

Research Director and Graduate Committee Selection

Each student in the Ph.D. or thesis option M.S. program should select a Research Director as soon as possible during the first year. The graduate committee for thesis option M.S. students shall consist of the Research Director (chair), and two additional graduate faculty members. The graduate committee for Ph.D. students shall consist of at least five graduate faculty members to include the Research Director (committee chair), three members derived from participating departments and one member from outside the Program. The Program Director, if not otherwise appointed, is an ex-officio (non-voting) member of every graduate committee. Students in the non-thesis option M.S. degree program with an area of concentration in public health laboratory science program need not choose a Research Director or a Graduate Committee and the Public Health Science Program Committee will plan and monitor student progress through the non-thesis option M.S. program.

Graduate Committee Functions

For thesis option M.S. and Ph.D. students only, the graduate committee will:

1. plan and approve the student’s program of study.
2. review the student’s progress in courses and suggest and approve changes in the program of study.
3. evaluate the student’s progress in research and make appropriate recommendations.
4. meet and determine, on a yearly basis, whether a student is making satisfactory progress and may continue toward a degree. If continuation is denied, the committee must notify the Program Director, in writing, of the reasons for this denial.
5. administer written and oral preliminary examinations to the doctoral student.
6. read and evaluate the student’s thesis or dissertation.
7. conduct the required oral examinations.

Public Health Laboratory Science Program Committee

The Public Health Laboratory Science Program Committee is composed of a Program Director and a single member chosen from the MMICB Department for non-thesis M.S. students only. The Public Health Laboratory Science Program Committee will:

1. Provide programmatic oversight of the structure, curricular design, content and personnel involved in the non-thesis option M.S. program.
2. Review applications from students for admission to the non-thesis option M.S. program and make admissions recommendations to the MBMB Program Director.
3. Advise non-thesis option M.S. students in planning a course of study.
4. Monitor student progress toward the non-thesis option M.S. degree.

Formal Course Requirements

All course requirements of the MBMB degree programs and Graduate School are minimum requirements. Additional courses may be required by the student’s graduate committee (thesis option M.S. and Ph.D. students) or the Public Health Laboratory Science Program Committee (non-thesis option M.S. students) to meet any deficiencies or to provide proficiency in a specialized area. Certain courses are required of all students, while others meet the requirements of an individual student’s area of specialization, as determined by the student’s graduate committee (thesis option M.S. and Ph.D. students). The Program Director, with the advice of the student’s graduate committee or the Public Health Laboratory Science Program Committee may designate other courses within or outside of the Program to fulfill formal course requirements. Any course (or its equivalent) that meets the requirements of the Molecular Biology,
Microbiology and Biochemistry graduate program whether taken at SIU or at any other institution before admission to the Program need not be repeated. Course equivalency will be determined by the Program Director in consultation with the appropriate committee or member of the faculty.

The formal core course requirements for both the thesis option M.S. and Ph.D. degree can be met by taking either MBMB 451A, MBMB 451B, and MBMB 460; or their equivalent. All M.S. and Ph.D. students must take either MBMB 502, Introduction to Research, or MBMB 504, Research Methods, and must also take during each semester in residence one hour of MBMB 597, Seminar and Professional Training.

Thesis option M.S. students must take two courses and the doctoral students must take three courses from a list of approved courses for specialization. Only one 400-level course from this list can be used to meet this requirement. Currently this list consists of: MBMB 403, MBMB 405, MBMB 421, MBMB 423, MBMB 425, MBMB 441, MBMB 453, MBMB 455, MBMB 456, MBMB 470, MBMB 477, MBMB 520, MBMB 530, MBMB 531, MBMB 532, MBMB 533, MBMB 543, MBMB 551, MBMB 552, MBMB 553, MBMB 560, and MBMB 562. These courses are selected with the approval of the student’s graduate committee, Research Director or the Departmental Graduate Advisor. In addition, M.S. students are also required to earn at least eight hours in research and thesis credit (MBMB 515, MBMB 598 and MBMB 599; a minimum of three and maximum of six hours for MBMB 599), prepare a thesis on the research project and pass a final oral examination, which serves as the comprehensive examination.

The formal course requirements for non-thesis option M.S. students with an area of specialization in public health laboratory sciences can be met by taking: MBMB 403 or MBMB 405, MBMB 453 or MBMB 455, MBMB 451A, MBMB 451B, CHEM 431, MBMB 460, MBMB 510, MBMB 540, MBMB 541A and MBMB 541B. Non-thesis option M.S. students must also take one hour of MBMB 597 (Seminar and Professional Training) during each semester in residence. The Public Health Laboratory Science Program Committee will make recommendations to the Program Director whether courses taken at SIU or other universities are equivalent to the program requirements.

**Preliminary Examination and Dissertation for the Ph.D. Degree**

Each student in the doctoral program must pass a preliminary examination and meet the Graduate School residency requirement before being advanced to candidacy. The students can take the preliminary examination after completing the formal course requirements.

The student’s graduate committee will prepare and administer a written preliminary examination covering various areas of molecular biology, microbiology and biochemistry, with particular emphasis in the area of concentration declared. This declaration will be done by means of a prospectus of a dissertation composed of: (1) a proposal for the dissertation research, (2) biographical information on the candidate, and (3) a list of the courses taken during the candidate’s graduate program. The proposal should address the proposed graduate research project, and be written in the NIH (National Institutes of Health) or NSF (National Science Foundation) approved format. The prospectus shall be available to the committee members at least 14 days prior to the date of the examination.

A written examination score of at least 80 percent is required before a student can proceed to the oral portion of the preliminary examination. Upon satisfactory completion of the written examination, the candidate will meet with the committee as a whole and discuss the prospectus in detail. The committee will then conduct an oral preliminary examination. At this time, the committee may ask in-depth questions about the research project and other areas of molecular biology, microbiology and biochemistry. At least four of the five committee members must judge the oral performance acceptable for a student to pass the preliminary examination overall. In the event that either the written or oral preliminary examination is failed, a student may request only one re-examination.

Successful completion of both written and oral examinations is required before a student can be advanced to candidacy for the Ph.D. After admission to candidacy, the student must earn at least 24 dissertation credit hours (MBMB 600), prepare and defend a dissertation, and present a public seminar based on the student’s research.
Molecular Biology, Microbiology and Biochemistry Courses

**MBMB403 - Medical Microbiology** 403-3 Medical Microbiology Lecture. (Same as MICR 403) A survey of the more common bacterial, mycotic and viral infections of humans with particular emphasis on the distinctive properties, pathogenic mechanisms, epidemiology, immunology, diagnosis and control of disease-causing microorganisms. Three hours lecture. Spring semester. Prerequisite: MICR 301, or consent of instructor.

**MBMB405 - Clinical Microbiology** 405-3 Clinical Microbiology. (Same as MICR 405) This course will be offered in Springfield only. A comprehensive course for health science professionals covering the biology, virulence mechanisms, and identification of infectious agents important in human disease and host-defense mechanisms. Clinical applications emphasized. Three hours lecture. Prerequisite: MICR 301, or consent of instructor.

**MBMB421 - Biotechnology** 421-3 Biotechnology. (Same as MICR 421) Topics covered will include the genetic basis of the revolution in biotechnology, medical applications including genetic screening and therapeutic agents, industrial biotechnology and fermentation, and agricultural applications. Three hours lecture. Fall semester. Prerequisite: MICR 302, or consent of instructor.

**MBMB423 - Geomicrobiology** 423-3 Geomicrobiology. (Same as MICR 423 and GEOL 423) The course will focus on the role that microorganisms play in fundamental geological processes. Topics will include an outline of the present understanding of microbial involvement of weathering of rocks, formation and transformation of soils and sediments, and genesis and degradation of minerals. Elemental cycles will also be covered with emphasis on the interrelationships between the various geochemical cycles and the microbial trophic groups involved. Prerequisite: MICR 301 and CHEM 210 and 211. Recommended: GEOL 220, 221 or 222.

**MBMB425 - Biochem Physiol Microorganisms** 425-3 Biochemistry and Physiology of Microorganisms Lecture. (Same as MICR 425) Chemical composition, cellular structure, and metabolism of microorganisms. Fall semester. Prerequisite: CHEM 340 or CHEM 339.

**MBMB441 - Viruses and Disease** 441-3 Viruses and Disease. (Same as MICR 441) An intensive, lecture-based course in virology which will emphasize principles of molecular virology, the ubiquity of viruses in nature, evolutionary relationships between viruses, co-evolution between virus and host, and the pathogenic consequences of some viral infections (e.g., AIDS, hepatitis, cancer, etc.). Prerequisites: MICR 460 or MBMB 460 or consent of instructor.

**MBMB451A - Biochemistry** 451A-3 Biochemistry. (Same as CHEM 451A and BCHM 451A) First half of the 451 A,B two semester course. Must be taken in A,B sequence. Three lectures per week. Introduction to biomolecules, biochemical techniques, expression of genetic information, basic thermodynamics, ligand binding, aqueous solutions, protein structure, spectroscopy. Prerequisites: CHEM 340 and CHEM 342 or 442, or equivalents.

**MBMB451B - Biochemistry** 451B-3 Biochemistry. (Same as CHEM 451B and BCHM 451B) Second half of 451A,B two semester course. Must be taken in A,B sequence. Basic kinetics, enzyme kinetics, enzyme inhibitors, regulation of enzymes, oxidation-reduction, high energy bonds, transport across membranes, intermediary metabolism, hormonal control of metabolism. Prerequisites: MBMB 451A or BCHM 451A or CHEM 451A or equivalent.

**MBMB453 - Immunology Lecture** 453-3 Immunology Lecture. (Same as MICR 453) Principles of molecular and cellular immunology. Particular emphasis is given to molecular mechanisms involved in activation and maintenance of the immune response at the basic science level. The role of the immune system in medical diagnostic procedures and in human health is also discussed. Spring semester. Prerequisite: MICR 403, or consent of instructor.

**MBMB455 - Medical Immunology** 455-2 Medical Immunology. (Same as MICR 455) This course will be offered in Springfield only. A survey of the components of the immune system and how they interact with each other to produce responses that are important in the control or mediation of human disease. Two hours lecture. Prerequisite: MICR 301, or consent of instructor.
MBMB456 - Biophysical Chemistry 456-3 Biophysical Chemistry. (Same as CHEM 456 and BCHM 456) A one-semester course in Biophysical Chemistry intended for biochemists and molecular biologists. Emphasis will be on solution thermodynamics, kinetics and spectroscopy applied to biological systems. Prerequisite: CHEM 340 and CHEM 342 or 442, MATH 141 or 150, MBMB 451A or BCHM 451A or CHEM 451A, or equivalents.

MBMB460 - Bacterial & Viral Genetics 460-3 Bacterial and Viral Genetics. (Same as MICR 460) The genetic mechanisms and regulatory events that control gene transfer, lambda phage infection, recombination, and metabolic pathways including a brief introduction to bioinformatics, genome analysis and global regulatory functions. Three hours lecture. Fall semester. Prerequisite: MICR 301 and 302, or consent of instructor.

MBMB470 - Prokaryotic Diversity 470-3 Prokaryotic Diversity Lecture. (Same as MICR 470) A consideration of the major groups of prokaryotes with special emphasis on their comparative physiology and ecology. Three hours lecture. Spring semester. Prerequisite: MICR 301, or consent of instructor.

MBMB477 - Microbial Ecology 477-3 Microbial Ecology. (Same as MICR 477) Concepts of ecology applied to microorganisms; methods in microbial ecology; interactions of microbes with their living and non-living environment microbial habitats and functions. Roles and regulation of microbes in natural and man-made environments, from cellular to community level. Prerequisite: MICR 301 or instructor's consent (based on proven background in both microbiology and ecology).

MBMB480 - Molecular Biol Microorgns Lab 480-4 Molecular Biology of Microorganisms Laboratory. (Same as MICR 480) Genetic and biochemical analyses of microorganisms using a variety of techniques in molecular biology, molecular genetics and biotechnology. Six hours laboratory per week plus two hours of supervised unstructured laboratory work in most weeks. Fall semester. Prerequisite: MICR 301 and 302 with a C grade or better and two (or concurrent enrollment in two) of the following: 421, 423, 425 or 460. Lab fee: $60.

MBMB481 - Diagnostic Applied Micro Lab 481-4 Diagnostic and Applied Microbiology Laboratory. (Same as MICR 481) Enrichment and isolation of prokaryotes from natural samples, diagnostic methods for the identification of pathogenic bacteria, and the nature of the immune response. Six hours laboratory per week plus two hours supervised unstructured laboratory work in most weeks. Spring semester. Prerequisite: MICR 301 and 302 with a C grade or better and two (or concurrent enrollment in two) of the following: 403, 453 or 470. Lab fee: $60.

MBMB502 - Introduction To Research 502-3 Introduction to Research. An introductory research course. Students rotate through at least three research laboratories. Lecture and laboratory hours to be arranged. Students cannot get credit for both MBMB 502 and MBMB 504. Restricted to acceptance into the Molecular Biology, Microbiology and Biochemistry graduate program.

MBMB504 - Research Methods 504-3 Research Methods. Problem definition, experimental design and research methods in specific areas of molecular biology, biochemistry and microbiology. Lecture and laboratory hours to be arranged. Students cannot get credit for both MBMB 502 and MBMB 504. Restricted to acceptance into the Molecular Biology, Microbiology and Biochemistry graduate program.

MBMB505 - Special Topics 505-1 Special Topics. Discussion of current research in specific areas of molecular biology, microbiology and biochemistry. One hour of group discussion per week. Special approval needed from the instructor.

MBMB510 - Public Health Practice 510-3 Functions of Public Health System. This course is an introduction to the concepts and practices of public health at the community, state, and national levels. The course addresses the philosophy, purpose, history, organization, functions, activities and impact of public health practice. The course also addresses a number of important health issues and problems facing the public health system. Special emphasis will be placed on the role of public health laboratory in public health practice. Discussion questions and case studies are integrated into the course, serving to stimulate student participation in gaining in-depth knowledge about real world public health issues and practice. Prerequisite: Bachelor's degree in Microbiology or other Biology, Chemistry, Physical Science.

MBMB515 - Master's Degree Research 515-1 to 6 (1 to 6 per semester) Master's Degree Research. Individualized laboratory research and training. Graded credit for Master's Degree only. Maximum 6 credit
hours. Restricted to admission to master's program in Molecular Biology, Microbiology and Biochemistry. Special approval needed from the instructor.

**MBMB520 - Adv Microbial Phsl/Ctrl Mchsms** 520-2 Advanced Microbial Physiology and Control Mechanisms. The physiology, biochemistry and genetics of microbial regulatory mechanisms. Topics include transport phenomena, catabolite and nitrogen repression, the stringent response, and autoregulatory phenomena. Two lectures per week. Prerequisite: MBMB 425; or CHEM 451A and B, or consent of instructor.

**MBMB521 - Advanced Virology** 521-3 Advanced Virology. An advanced, lecture-based course which will (1) emphasize principles of molecular virology, (2) discuss immune responses to viral infections, (3) learn how viral infections can be prevented or treated, and (4) explore how some viruses can be used as therapeutic agents. Each topic will include an in-depth discussion of current research literature. Prerequisites: 400 level course in genetics and in biochemistry, or consent of the instructor.

**MBMB528 - Readings-Molec/Micr/Bchm** 528-1 to 3 Special Readings in Molecular Biology, Microbiology and Biochemistry. Supervised readings for qualified graduate students. Special approval needed from the instructor.

**MBMB530 - Adv Cellular Biology** 530-3 Advanced Cellular Biology. (This course will be offered in Springfield only). An advanced course based on current literature concerning the cellular biology of eukaryotes. Both students and faculty will make presentations followed by discussion. Topics will include: the cellular and subcellular structure and function of the lower eukaryotes, the biochemistry and biophysics of eukaryotic membrane systems and the higher subcellular functions of mammalian cells. Prerequisite: 400 level course in genetics and in biochemistry or consent of instructor.

**MBMB531 - Molecular & Cellular Biology** 531-3 Molecular and Cellular Biology. Lecture course in molecular and cellular biological techniques used in the study of organisms; structures and processes involved in genome organization; packaging and replication of DNA; transcription and RNA processing; recombination and transposition of DNA; gene regulation with emphasis on developmental processes; signal transduction; structure and function of cellular components; cell-cell interaction; etc. Prerequisite: BCHM 451B or consent of instructor; MBMB or MICR 460 recommended.

**MBMB532 - Methods Structural Biology** 532-3 Methods of Structural Biology. Lecture course in molecular computer graphics, macromolecular structure prediction, molecular dynamics, applications of NMR and X-ray methods to structural determinations of biological macromolecules; spectroscopic methods including UV, IR, Raman, fluorescence and circular dichroism methods. Prerequisite: BCHM 456 or consent of instructor.

**MBMB533 - Advanced Biochemistry** 533-3 Advanced Biochemistry. Lecture course in control mechanisms of biochemical processes, enzyme kinetics, regulation and allosteroy, coupled systems and energy transduction, membranes, transport, etc. Prerequisite: BCHM 451A or consent of instructor.

**MBMB540 - Public Health Laboratory Pract** 540-3 Basis of Public Health Laboratory Practice. The scientific basis of current laboratory practice of public health science in the areas of microbiology, immunology, molecular biology, environmental chemistry, biochemistry and instrumentation (to accompany 541A,B). Prerequisite: MBMB 510, Bachelor's degree in Biology, Chemistry, Physical Science.

**MBMB541A - PHL Training** 541A-3 to 9 Public Health Laboratory Training. This course has a laboratory component of approximately 4-6 hours/week/credit hour of training in a functioning public health laboratory. The content of the course provides in-depth experience in the scientific basis and use of analytical methods in microbiology, immunology and molecular biology that are unique to public health laboratories at the state and national level. Prerequisite: MBMB 510, concurrent with MBMB 540, MICR 301 or equivalent.

**MBMB541B - PHL Training** 541B-3 to 9 Public Health Laboratory Training. This course has a laboratory component of approximately 4-6 hours/week/credit hour of training in a functioning public health laboratory. The content of the course provides in-depth experience in the scientific basis and use
of analytical methods in environmental chemistry and biochemistry that are unique to public health laboratories at the state and national level. Prerequisite: MBMB 510, MBMB 541A.

**MBMB543 - Host Microbial Interactions** 543-3 Host-Microbial Interactions. (This course will be offered in Springfield only). A lecture course that deals in depth with mechanisms of symbiosis and other interactions with respect to the biochemistry of microbe and host. Immunological aspects are discussed. Emphasis is placed on molecular mechanisms. Offered alternate years. Prerequisite: MBMB 403 or MBMB 405 or consent of instructor.

**MBMB551 - Advanced Immunology** 551-3 Advanced Immunology. A lecture course that intensively considers the most recent developments in antibody structure, antigenic analysis, and antigen-antibody reactions. A special focus will be on the use of immunology as a research tool. Prerequisite: MBMB 453 or equivalent, or consent of instructor.

**MBMB552 - Cellular Immunology** 552-3 Cellular Immunology. (This course will be offered in Springfield only). A lecture-discussion course covering contemporary aspects of cellular immunology. The cellular nature of immune responses as well as current information on the regulation of such responses will be considered. Topics will include cellular components of an immune response; receptors, recognition and signals; cellular cooperation; immuno regulation; and tolerance and autoreactivity. Prerequisite: MBMB 453 or MBMB 455 or consent of instructor.

**MBMB553 - Adv Med Microbiol Immunology** 553-3 Advanced Medical Microbiology and Immunology. (Offered in Springfield only). A lecture course providing an in-depth analysis of the mechanisms of pathogenesis of bacterial, viral and mycotic infections. Immune mechanisms involved in recovery, development of immunity and infection mediated immunopathology will be covered. Prerequisite: MBMB 403 and MBMB 453; or MBMB 405 and MBMB 455; or consent of instructor.

**MBMB554 - Evolution Seminar** 554-1 to 4 (1 per semester) Evolution Seminar. (Same as ANTH 554, PLB 554) Advanced topics in evolutionary biology including genetics & development, evolutionary ecology, phylogeny, paleontology, biogeography, population genetics, molecular ecology, speciation, molecular evolution, and macroevolution. Topics will vary each semester. Seminar format with group discussions and student presentations. Graded S/U. Special approval needed from the instructor.

**MBMB556 - Phylogenetics** 556-3 Phylogenetics. (Same as ANTH 556, PLB 556, ZOOL 556) An advanced introduction to modern methods of phylogenetic inference, emphasizing both theoretical background concepts and numerical approaches to data analysis. Topics include properties of morphological and molecular characters, models of character evolution, tree estimation procedures, and tree-based testing of evolutionary hypotheses. Special approval needed from the instructor.

**MBMB560 - Molecular Oncology** 560-3 Molecular Oncology. A lecture-discussion course in molecular and cellular biology of tumor pathogenesis. The lecture covers various aspect of current tumor biology. The in-depth discussion on recent articles will provide students with opportunity to become familiar with front-line research in molecular oncology. Prerequisite: MBMB 451A and B or consent of instructor.

**MBMB562 - Molecular Genetics** 562-3 Molecular Genetics. A lecture and discussion course emphasizing current research and new techniques in replication, transcription, translation, genome organization, gene flow from a general systems viewpoint and regulation. Prerequisite: MBMB 460 or consent of instructor.

**MBMB568 - Topics in Oncology** 568-1 Current Topics in Oncology. A seminar-discussion course covering the pace-setting topics in oncology research. The topics will be selected by the course director. Students will research and select articles to be presented for discussion. The in-depth discussion on recent articles will provide students with opportunity to become familiar with cutting edge line research in oncology. Prerequisite: MBMB 560 or consent of instructor.

**MBMB570A - Adv Topics-Molecular Biology** 570A-1 to 15 (1 to 6 per semester) Advanced Topics-Molecular Biology. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.
MBMB570B - Adv Topics-Biochemistry 570B-1 to 15 (1 to 6 per semester) Advanced Topics-Biochemistry. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.

MBMB570C - Adv Topics-Microbiology 570C-1 to 15 (1 to 6 per semester) Advanced Topics-Microbiology. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.

MBMB570D - Adv Topics-Immunology 570D-1 to 15 (1 to 6 per semester) Advanced Topics-Immunology. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.

MBMB570E - Adv Topics-Virology 570E-1 to 15 (1 to 6 per semester) Advanced Topics-Virology. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.

MBMB570F - Adv Topics-Structural Biology 570F-1 to 15 (1 to 6 per semester) Advanced Topics-Structural Biology. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.

MBMB570G - Adv Topics-Biophysics 570G-1 to 15 (1 to 6 per semester) Advanced Topics-Biophysics. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.

MBMB570H - Adv Topic-General Cell Biology 570H-1 to 15 (1 to 6 per semester) Advanced Topics-General Cell Biology. Selected topics of current scientific interest to the faculty and students. Specific topic to be covered in any semester will be announced. Special approval needed from the instructor.

MBMB580 - Current Topics in Evolution 580-1 Current Topics in Evolution. (Same as ANTH 580, ZOOL 580) The Evolution Discussion Group meets weekly throughout the year to discuss current evolutionary literature and the research of participants. All students and faculty with an interest in evolutionary biology are welcomed to participate.

MBMB597 - Seminar/Professional Training 597-1 to 15 (1 per semester) Seminar and Professional Training. Departmental seminars, and other appropriate professional assignments. Graded S/U only. One hour required each semester in residence. Restricted to graduate standing.

MBMB598 - Research 598-1 to 66 (1 to 12 per semester) Research. Graded S/U only. Special approval needed from the instructor.

MBMB599 - Thesis 599-1 to 6 (1 to 6 per semester) Thesis. Research for Master's degree thesis. Special approval needed from the instructor.

MBMB600 - Dissertation 600-1 to 36 (1 to 12 per semester) Dissertation. Research for Ph.D. degree dissertation. Special approval needed from the instructor.

MBMB601 - Continuing Enrollment 601-1 (1 per semester) Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**Molecular Biology, Microbiology and Biochemistry Faculty**

Achenbach, Laurie, Professor and Dean, College of Science, Ph.D., University of Illinois, Urbana-Champaign 1988; 1990. Molecular genetics of metabolic pathways involved in the bioremediation of environmental contaminants; bacterial diversity and evolution; molecular anaerobic microbiology.

Bartholomew, Blaine, Professor, Emeritus, Ph.D., University of California, Davis; 1988; 1991. Regulation of gene expression, chromatin structure and function, molecular mechanisms of cancer.
Bartke, Andrzej, Professor, Emeritus, Ph.D., (Springfield), University of Kansas, 1965; 1984. Genetic control of aging in mammals and endocrine mechanisms responsible for the effects of longevity genes.

Bender, Kelly, Associate Professor and Program Coordinator, Microbiology, Ph.D., Southern Illinois University, 2003; 2006. Metabolic regulation of bacteria involved in bioremediation; small non-coding regulatory RNAs.

Bhaumik, Sukesh R., Associate Professor, Ph.D., Tata Institute of Fundamental Research (University of Bombay), 1997; 2003. Regulation of eukaryotic gene expression; transcription-coupled ubiquitination and DNA repair; NMR structural studies on proteins and nucleic acids.

Braundmeier-Fleming, Andrea, Assistant Professor, Ph.D., (Springfield), 2005; 2014, Immune cell function and influence on the GI and vaginal microbiome and their implication in reproductive disorders.

Cao, Deliang, Associate Professor, M.D., Ph.D., (Springfield), Institute of Molecular Biology (University of Hong Kong), 1996; 2005. Molecular oncology and experimental therapeutics, with focuses on 1) action mechanisms and modulations of anticancer therapeutic agents and 2) the role of aldo-ketoreductases in cancer development, progression and therapy.

Clark, David P., Professor, Emeritus, Ph.D., University of Bristol, 1977; 1980.

Cooper, Morris D., Professor, Emeritus, Ph.D., (Springfield), University of Georgia, 1971; 1973.

Davie, Judy, Associate Professor, Ph.D., University of California at Berkeley, 1998; 2006. Mechanisms of gene regulation, focusing on myogenin, a transcription factor that controls skeletal muscle development.

Fisher, Derek, Assistant Professor, Ph.D., University of Pittsurgh School of Medicine, 2006; 2012. Developmental regulation in Chlamydia.

Gershburg, Edward, Associate Professor, Ph.D., (Springfield), Tel-Aviv University, 1999; 2007. Epstein-Barr virus (EBV)-encoded protein kinase in viral infection. EBV-PK regulation and enzymology and identification of its viral and cellular targets.

Gupta, Ramesh, Professor and Chair, Biochemistry and Molecular Biology, Ph.D., University of Illinois, 1981; 1984. Molecular biology of Archaea, transcription and RNA processing in extreme halophilic and hyperthermophilic microorganisms.

Haddock, John D., Associate Professor, Emeritus, Ph.D., Virginia Polytechnic Institute and State University, 1990; 1995.

Halford, William, Associate Professor, Ph.D., (Springfield), Louisiana State University Medical Center, 1996; 2007. Using herpes simplex virus as a tool to understand how viral and host immune factors interact to produce life-long viral infections; devising effective cures for persistent viral infections.

Hamilton-Brehm, Scott D., Assistant Professor, Ph.D., University of Georgia, 2008; 2016. Microbial characterization of unique extreme environments, characterization of novel metabolism pathways, and DNA investigations from ancient artifacts.

Jayakody, Lahiru N, Assistant Professor, Ph.D., Kagoshima University, Japan, 2014; 2019. Metabolic Engineering of microbes for fuels, chemical, polymers, and pharmaceuticals production; engineering post-translational protein machineries.

Kadyrov, Farid, Associate Professor, Ph.D., Russian Academy of Sciences, 1997; 2008. DNA replication and repair, DNA damage in cancer.

Konjuca, Vjolca, Assistant Professor, Ph.D., University of Arkansas, Fayetteville, 2002; 2010. Immunology, host-pathogen interactions.

Madigan, Michael T., Professor and Distinguished Scholar, Emeritus, Ph.D., University of Wisconsin, 1976; 1979.
Molecular, Cellular and Systemic Physiology

Graduate courses in physiology may be taken leading to the Master of Science or the Doctor of Philosophy degrees with a major in molecular, cellular and systemic physiology. Graduate courses in molecular, cellular and systemic physiology may also contribute to a program leading to a Master of Science degree major in biological sciences or to a teaching specialty for the Master of Science in Education degree major in secondary education or in higher education.

The Department of Physiology offers advanced training in mammalian physiology, aging, cancer biology, cell physiology, molecular biology, molecular endocrinology, neuro-endocrinology, neurophysiology, neuropharmacology, reproductive biology, and reproductive endocrinology, metabolism and human anatomy. Students entering the graduate training program are advised to plan the course work so as to acquire a broad knowledge of the field before emphasizing one of these sub-disciplines. The advisory system in the department is set up to help students in planning their work. All graduate training programs in the department are subject to approval of the graduate program committee (GPC) of the department.

Each term the student must be engaged in a training assignment which supplements formal course work and will consist of research or teaching or both. The student is required to have participated in both types...
of activities, research and teaching, as a graduate student at SIU as a condition for receiving a graduate degree.

Prerequisites for graduate training in molecular, cellular and systemic physiology include an undergraduate degree in one of the biological, physical, or behavioral sciences, preferably with one year each of physics, mathematics, and chemistry.

Financial Assistance

The Department of Physiology offers financial assistance to qualified applicants accepted by the department. The funds which provide this assistance come from a variety of sources which include: teaching assistantships from the department; University fellowships which are applied for directly by the student; and research assistantships from grants obtained by the graduate program faculty. Students interested in financial assistance should fill out the Financial Support Form available online and in the Department of Physiology office. Additional financial aid information may be found at the SIU Financial Aid Office web page. Financial assistance depends on availability and the student’s qualifications and academic status. Continued financial support is contingent upon the student’s progress toward the degree and good academic standing.

The department may support master’s students for up to 24 months and Ph.D. students for 48 months on department teaching assistantships. However, every effort will be made to encourage the student and his/her adviser to find alternative sources of funding. Continuation of support will be conditioned on satisfactory performance in areas of academics, research, and teaching. Academic performance will be based on good standing in the Graduate School (3.0 GPA) and passage of the preliminary exam by the end of the third year (Ph.D. students only). Satisfactory research performance will be based on the filing of an approved research proposal by the end of the (Ph.D. students only) calendar year and after that time by an annual memo from the student’s advisory committee indicating progress in the area of research. It will be the student’s responsibility to provide this documentation to the GPC. Evaluation of teaching effectiveness will be carried out by the GPC from sources possibly but not limited to the course coordinator, student evaluations and by direct observation of classes by the GPC.

A departmental stipend for graduate student research will be available to molecular, cellular and systemic physiology graduate students working in laboratories of regular physiology department faculty members provided that the student is making satisfactory progress in their research program and remains in good academic standing (as defined above).

Research Tools

Doctoral students must acquire competence in one research tool and are encouraged to attain competence with two tools. The requirements for a research tool may be satisfied by establishing proficiency in advanced statistics, computer science, electronics, advanced mathematics, electron microscopy, foreign language (with suitability of a particular language being determined by the student’s committee), or some technique which is acceptable to the student’s advisory committee. Courses which are normally part of a track requirement or are highly recommended for students in a particular track cannot serve as tools for students in that track. Approval of a given tool by the student’s committee will be granted only if the student has demonstrated proficiency by taking a formal course and receiving a grade (preferably \( B \) or better) or by passing a formal examination given by an expert in that field (preferably a faculty member in the University department where the subject is normally taught).

Master's Degree

The application should be submitted online through the Graduate School. All applicants must submit a brief (300-600 words) statement of goals and ambitions indicating why they wish to do graduate work and three letters of recommendation submitted by individuals who can comment on their academic abilities, character, and potential for doing research. The Graduate Record Exam (GRE) is required, and the score on the general part must be submitted with the application.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Molecular, Cellular and Systemic Physiology. Applicants may pay this fee by credit card.
The Graduate School requires an earned grade point average (GPA) of 2.70 or better \((A = 4.0)\) on all undergraduate work. A minimum GPA of 3.00 \((A = 4.0)\) in all undergraduate and graduate work is needed for serious consideration.

The graduate program committee of the department will normally examine the credentials, which include the application form, transcript(s), letters of recommendation, goal statement, and GRE scores, only after all materials have been received.

International students must take the TOEFL exam and obtain a score greater than 550 (paper score) or 220 (computer score) to qualify for admission by the Graduate School, and must pass a Test of Spoken English prior to the awarding of teaching assistantships by the Department of Physiology.

**Advisory Committee**

The Director of Graduate Studies will act as an advisor to new graduate students until a research advisor is selected. The choice of a research advisor is a very important step and should be carefully considered. During the first semester, most students rotate through four research laboratories to get acquainted with faculty members and research programs before selecting an advisor who will direct the thesis research and help plan course work.

The functions of the research advisor are:

1. To provide guidance in the student’s research and the use of facilities.
2. To provide mentorship in conducting, evaluating, and publishing scientific research.
3. To serve as chair of the Advisory Committee and consultant for the selection of the other members of the Advisory Committee (at least three additional members from the graduate faculty, including one from outside the department).

Members of the Advisory Committee should provide expertise in or complementary to the research area and provide guidance in the selection of course work. The student should meet with the committee yearly or as needed to discuss research and academic progress.

Following the selection of a research advisor and the Advisory Committee, the Graduate Faculty Committee Approval Form (available online and in the department office) must be filled out with the names and signatures of committee members and filed with the department secretary. The completed form will then be forwarded to the Graduate School for final approval.

**Total Hours Required**

A total of 30 semester hours at the 400- and 500-level is required for the master’s degree. Of the total hours completed, at least 21 of these must be graded \((A, B, C)\) hours. At least 15 of the total 30 must be 500-level courses taken at SIU. Of these 15, a minimum of 3 hours of PHSL 599 (thesis) is required. More than three hours of 599 may be taken, however only six may be counted toward the 500-level requirement.

**Thesis**

The thesis should represent a competent piece of original research carried out on a specific physiological problem or area under the research advisor’s supervision. It should include an adequate review of the literature, a statement of the hypothesis, a set of experiments testing the hypothesis by whatever methods are appropriate, an analysis of the results, and an interpretation of the work and its significance. Upon completion of the thesis research, a final department seminar is presented followed by an oral examination. The examination will be conducted by the Advisory Committee and will cover the subject of the thesis and other matters related to the discipline.

**Doctoral Program**

The Graduate School requires a grade point average in previous graduate work of at least 3.0 and acceptance by the academic unit offering the Ph.D. program. See the following pages for accelerated and direct entry options.
The application should be submitted online through the Graduate School. All applicants must submit a brief (300-600 words) statement of goals and ambitions indicating why they wish to do graduate work and three letters of recommendation submitted by individuals who can comment on their academic abilities, character, and potential for doing research. The Graduate Record Exam (GRE) is required, and the score on the general part must be submitted with the application.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Molecular, Cellular and Systemic Physiology. Applicants may pay this fee by credit card.

The graduate program committee of the department will examine the credentials which include the application form, transcript(s), letters of recommendation, goal statement and GRE scores (if applicable) only after all materials have been received.

International students must take the TOEFL exam and obtain a score greater than 550 (paper score) or 220 (computer score) to qualify for admission by the Graduate School, and must pass a Test of Spoken English prior to the awarding of teaching assistantships by the Department of Physiology.

Ph.D. Direct Entry Option

This option is presently available for admission to the Graduate School. Contact the Department of Physiology for further information regarding this option. The Department of Physiology may accept a post-baccalaureate student directly into a Ph.D. program provided that the student has:

1. A cumulative undergraduate grade point average of 3.25 (A = 4.0).
2. Sufficient undergraduate course work in biology, chemistry, physics, and mathematics or an outstanding score on the Graduate Record Exam (GRE) on: (a) the general part or (b) the advanced part in biology, chemistry, physics, or mathematics.

A student admitted to the doctoral program under this option is subject to the admissions requirements stated above and all other requirements of the doctoral degree, including: course work, retention, residency, examinations, research proposal, dissertation, and all applicable time limits. The Advisory Committee may adjust the course work and requirements of the student based on the student’s background and research area. Students who have taken one or more core courses at another accredited university may be given credit toward their core requirements if such courses are deemed equivalent to our core courses by the Graduate Program Committee and department grade requirements are met.

Ph.D. Accelerated Entry Option

The Department of Physiology offers the Ph.D. accelerated entry option to a graduate student in the Master’s program who demonstrates the intellect, research aptitude, and commitment for pursuing a doctoral degree. At the end of at least one year of studies at the master’s level, the student may request that their Advisory Committee review their qualifications and performance in order to establish eligibility for entry into the doctoral program under this option. The student must have a GPA of at least 3.25 (A = 4.0) in graduate course work and letters of reference attesting to the student’s abilities and potential to perform doctoral level research. The Advisory Committee must establish that the student is prepared and able to conduct research at the doctoral level, which may be established by publications; presentations at meetings; depth of understanding; and quality of seminars, presentations, and research proposal. The Advisory Committee will make a recommendation that the student should either continue in the Master’s program or advance into the doctoral program.

After the student’s eligibility has been established, the research advisor and/or the Advisory Committee will prepare a written review of the student’s qualifications and submit it to the Graduate Program Committee for approval. The Graduate Program Committee will then submit a recommendation to the Chair of the Department of Physiology, who will in turn submit a letter to the Graduate School requesting a waiver of a master’s degree or master’s equivalency and entry into the doctoral program.

The student will need to submit the following items to the Graduate School: a letter of acceptance into the doctoral program from Graduate Program Committee Chair, a Graduate School application form (indicating Ph.D.), and a completed Notification of Accelerated Entry Option Students Form.

A student admitted to the doctoral program under this option is subject to all requirements of the doctoral degree, including: course work, retention standards, residency, examinations, research proposal, dissertation, and all applicable time limits.
Please note that only courses taken after admission to the doctoral program will count toward residency.

Advisory Committee

The Director of Graduate Studies will act as an advisor to new graduate students until a research advisor is selected. The choice of a research advisor is a very important step and should be carefully considered. During the first semester, most students rotate through four research laboratories to get acquainted with faculty members and research programs before selecting an advisor who will direct the dissertation research and help plan course work.

The functions of the research advisor are:

1. To provide guidance in the student’s research and the use of facilities.
2. To provide mentorship in conducting, evaluating, and publishing scientific research.
3. To serve as chair of the Advisory Committee and consultant for the selection of other members of the Advisory Committee (at least four additional members from the graduate faculty, including one from outside the department).

Members of the Advisory Committee should provide expertise in or complementary to the research area and provide guidance in the selection of course work. The student should meet with the committee yearly or as needed to discuss research and academic progress.

Following the selection of a research advisor and the Advisory Committee, the Graduate Faculty Committee Approval Form (available in the department office) must be filled out with the names and signatures of committee members and filed with the department secretary. The completed form will then be forwarded to the Graduate School for final approval.

Total Hours Required

The requirements for the Ph.D. degree are those established by the Graduate School, the Guide to Graduate Studies and the student’s advisory committee. The Graduate School requires 24 semester hours prior to candidacy and 24 semester hours of dissertation credit. Of the total hours completed, at least 10 of these must be graded ($A$, $B$, $C$) hours.

Preliminary Examination

Preliminary examinations for doctoral students consist of a set of written exams covering the student’s research area and course work, a research proposal in the area of the dissertation research project, and an oral defense of the proposal. In most cases, the written exams are taken in early August after completion of the second year of study. After passing the written exams, the student will have one month to write the research proposal. The student’s Advisory Committee will evaluate the research proposal and if it is found acceptable, the oral defense of the proposal will be scheduled with the Advisory Committee. Details of the preliminary examinations are available from the Graduate Program Committee.

Dissertation

The dissertation should represent a competent piece of original research carried out on a specific physiological problem or area under the advisor’s supervision. It should include an adequate review of the literature, a statement of the hypothesis, a set of experiments testing the hypothesis by whatever methods are appropriate, an analysis of the results, and an interpretation of the work and its significance. The research should be of sufficient quality and quantity to merit publications in peer-reviewed journals. Upon completion of the dissertation research, a final department seminar is presented followed by an oral examination. The examination will be conducted by the Advisory Committee and will cover the subject of the dissertation and topics related to the discipline.

Certificate in Anatomy

The purpose of the anatomy certificate is to allow graduate students to become proficient in anatomy teaching. This will allow them to compete more effectively for jobs in this field. Students are eligible for the anatomy certificate if they are in an existing anatomically-based master’s or Ph.D. program (e.g.
Physiology, Anthropology, or Zoology). Additional prerequisites (e.g., embryology, basic vertebrate anatomy) are preferred. Students lacking such prerequisites will be encouraged to obtain them prior to admission into the anatomy certificate program. The Graduate Program Committee of the Department of Physiology will review all applications. In addition to graduate coursework in anatomy, students in the anatomy certificate program will obtain experience teaching gross anatomy to undergraduates and medical students. A minimum of 17-18 graduate credit hours are required for fulfillment of the certificate requirements. They are: Advanced Human Anatomy with lab, (PHSL 401A,B, 10 hours), Vertebrate Histology, (ZOOL 409, 4 hours) and either Neuroanatomy, (PHSL 573, 3 hours) or Vertebrate Anatomy Lab, (ZOOL 418, 3 hours). Where appropriate, these courses may also count for credit toward the master’s or Ph.D. degree. The Graduate Program Committee in the Department and the student’s advisory committee will make recommendations for other coursework and oversee the student’s progress. In addition to graduate coursework in anatomy, students in the anatomy certificate program will obtain experience teaching gross anatomy to undergraduates and medical students. Students supported by assistantships will have the same teaching obligations as all other departmentally supported students. Students will be required to teach at least two semesters of gross anatomy assisting Physiology and Anatomy Department faculty in the Medical School.

Molecular, Cellular and Systemic Physiology Courses

PHSL401A - Adv Human Anatomy w/Lab  401A-5 Advanced Human Anatomy with Laboratory. A-B sequence. Laboratory dissection of the human body with lectures as needed. Primarily for students majoring in physiology, biological sciences, anthropology or pre-medical fields. Prerequisite: PHSL 301. Enrollment by consent of instructor. Lab fee: $20.

PHSL401B - Adv Human Anatomy w/Lab  401B-5 Advanced Human Anatomy with Laboratory. A-B sequence. Laboratory dissection of the human body with lectures as needed. Primarily for students majoring in physiology, biological sciences, anthropology or pre-medical fields. Prerequisite: PHSL 301. Enrollment by consent of instructor. Lab fee: $20.

PHSL420A - Principles of Pharmacology  420A-3 Principles of Pharmacology. Examines basic principles of pharmacology (pharmacokinetics) and the action of various classes of drugs on living organisms. Drug classes covered include those affecting most organ systems of the human body, such as the nervous, cardiovascular, gastrointestinal and renal systems as well as drugs used for antibiotic and cancer chemotherapy. Three lectures per week. Prerequisites: PHSL 310 or PHSL 410A,B, CHEM 340 and CHEM 341 (or equivalent) with grades of C or better.

PHSL420B - Principles of Pharmacology  420B-3 Principles of Pharmacology. Examines basic principles of pharmacology (pharmacokinetics) and the action of various classes of drugs on living organisms. Drug classes covered include those affecting most organ systems of the human body, such as the nervous, cardiovascular, gastrointestinal and renal systems as well as drugs used for antibiotic and cancer chemotherapy. Three lectures per week. Prerequisites: PHSL 310 or PHSL 410A,B, CHEM 340 and CHEM 341 (or equivalent) with grades of C or better.

PHSL426 - Comparative Endocrinology  426-3 Comparative Endocrinology. (Same as ANS 426, ZOOL 426) Comparison of mechanisms influencing hormone release, hormone biosynthesis, and the effects of hormones on target tissues, including mechanisms of transport, receptor kinetics, and signal transduction. Prerequisites: PHSL 310 or ANS 331 or ZOOL 220 with a grade of C. Laboratory/Field Trip fee: $15.

PHSL430 - Cellular&Molecular Physiology  430-3 Cellular and Molecular Physiology. This course will examine the molecular and cellular aspects of physiology, with special emphasis on the experiments used to examine the regulation of gene expression, protein activities, and cellular functions in eukaryotes.
Topics include: mechanisms regulating gene expression, signaling pathways, cancer biology, and the use of experimental model organisms. Prerequisite: BIOL 211 & BIOL 213 or CHEM 350 & 351.

**PHSL433 - Comparative Physiology** 433-3 Comparative Animal Physiology. (Same as ZOOL 433) Variations of the physiological processes in animal phyla, comparison with human physiology, and review of basic physiology principles and comparative aspects of mechanism and function. Prerequisite: BIOL 211, BIOL 212 & BIOL 213 or PHSL 310 with a grade of C or better.

**PHSL440A - Biophysics** 440A-3 Biophysics. Biomathematics, biomechanics and biortransport. Three lectures per week. Prerequisites: MATH 141 or 150; PHSL 310; PHYS 203 A&B and 253 A&B or PHYS 205 A&B and 255 A&B. May be taken in B,A sequence with consent of instructor.

**PHSL440B - Biophysics** 440B-3 Biophysics. Bioelectrics and bio-optics applied to physiological problems. Three lectures per week. Prerequisites: MATH 141 or 150; PHSL 310; PHYS 203 A&B and 253 A&B or PHYS 205 A&B and 255 A&B. May be taken in B,A sequence with consent of instructor.

**PHSL450 - Advanced Human Sexuality** 450-3 Advanced Human Sexuality. (Same as WGSS 449) Advanced, comprehensive course intended to supplement and expand the critical examination of topics covered in PHSL 320, Reproduction and Sexuality. The objectives of this class are to examine the physiological and behavioral basis of human reproduction and sexuality. Examining how humans reproduce from a physiological perspective including all aberrations and clinically relevant dysfunctions, as well as, the spectrum of human sexual behaviors including typical and atypical sexual behavior, paraphilias and diversity of human relationships. Prerequisite: PHSL 320.

**PHSL460 - Electron Microscopy** 460-2 Electron Microscopy. Lecture course designed to introduce the student to the theory and principles of electron microscopy. Two lecture hours per week. Restricted to senior standing or permission of instructor.

**PHSL462 - Biomedical Instrumentation** 462-3 Biomedical Instrumentation. Diagnostic and therapeutic modalities related to engineering. Cardiovascular, neural, sensory and respiratory instrumentation. Special approval needed from the instructor.

**PHSL470 - Biological Clocks** 470-3 Biological Clocks. Study of the temporal aspects of diverse physiological and behavioral functions which possess diurnal and sectional periodicity. Species covered will include many eukaryotic organisms including plants, but will mainly stress mammals. Oscillations in sleep-wake cycle, locomotion, reproduction, hormonal secretion and numerous other processes will be explored. In addition, the effects of biological clocks in humans and the effect of jet lag and depression will be examined. Prerequisite: PHSL 320.

**PHSL480 - Cancer Journal Club** 480-1 to 3 Cancer Journal Club. Goal of the journal club is to discuss current primary journal articles about cancer, often with an emphasis on ovarian cancer. Each semester a theme is selected to guide selection of articles. Grade is based on: 1) presentation; 2) participation; 3) short essay on each journal article that is discussed. Each student presents at least one journal article per semester and is expected to participate in the discussion of each paper that is presented. Faculty and graduate students also present articles for discussion to provide examples of how to read and discuss primary scientific literature. Student will, with instructor approval, choose either 1 cr/hr for a research paper component for which they write a 10 page research paper reviewing current literature related to the journal club's theme for the semester or a different cancer theme as determined by the instructor, or select 2 cr/hrs for journal club participation as outlined above, or 3 cr/hrs for completing both course components. Prerequisite: PHSL 310 with a B or better or concurrent enrollment.

**PHSL500 - Advanced Seminar in Phsl** 500-1 to 6 (1 per semester) Advanced Seminar in Physiology. Presentation of research and current literature in physiology. Required of all graduate students in physiology. Graded S/U only.

**PHSL501 - Presentation Physiological Data** 501-1 Presentation of Physiological Data. Research areas and special topics requisite for conducting scientific research will be presented. Students will learn how to organize a talk on experimental findings in physiology, prepare slides, and communicate effectively in an oral presentation format. Graded S/U only.
PHSL510 - Experimental Methods  510-3 Experimental Methods in Physiology. The main objectives of this course are to acquaint the student with the techniques and the equipment used in modern research laboratories and to provide instruction in the principles and practice of scientific experimentation. Restricted to Physiology (MCSP) graduate students only.

PHSL511A - Adv Mammalian Physiology  511A-1 to 5 Advanced Mammalian Physiology. Physical and chemical organization and function in mammals, with emphasis on the human. Physiology of blood and circulation, respiration, digestion, metabolism, excretion, endocrines, sensory organs, nervous system, muscle and reproduction. Four lectures and one seminar per week. Seminar will consist of primary literature discussion and student presentation on areas covered in lecture. Principal lecturer for each of the area topics will lead discussion and assign the primary literature. May be taken in any sequence. Restricted to consent of department. Special approval needed from the instructor.

PHSL511B - Adv Mammalian Physiology  511B-1 to 5 Advanced Mammalian Physiology. Physical and chemical organization and function in mammals, with emphasis on the human. Physiology of blood and circulation, respiration, digestion, metabolism, excretion, endocrines, sensory organs, nervous system, muscle and reproduction. Four lectures and one seminar per week. Seminar will consist of primary literature discussion and student presentation on areas covered in lecture. Principal lecturer for each of the area topics will lead discussion and assign the primary literature. May be taken in any sequence. Restricted to consent of department. Special approval needed from the instructor.

PHSL512 - Teaching Methods  512-2 Teaching Methods and Strategies. This online course is designed to introduce instructional theories and methods to students interested in teaching in the Life Sciences. It will provide coverage of methods of classroom instruction, management and assessment. The methodology of the course will include projects on lesson construction, online discussion boards of readings, and quizzes. Students should finish the course prepared to be competent in up-to-date methodology and strategies in critical teaching practices.

PHSL520 - Reproduct Function/Sex Behav  520-4 Reproductive Function and Sexual Behavior. Advanced, comprehensive course examining the physiological and behavioral basis of human reproduction and sexuality. Topics include physiology and pathophysiology of the human reproductive system and normal and atypical sexual behavior. Course topics will include didactic presentations and problem-based lab discussions selected by the students selected from lecture or related topics. The class will meet three times weekly for didactic presentations and once a week for a three hour extensive discussion and presentation utilizing self-directed learning strategies and knowledge in a problem-based format, similar to that used in the medical school curricula. Special approval needed from the instructor.

PHSL530 - Advanced Cell Physiology  530-3 Advanced Cellular and Molecular Physiology. This course will examine the molecular and cellular aspects of mammalian physiology using the primary literature as the source of topics for oral presentations and discussions. Special approval needed from the instructor.

PHSL531 - Adv Cellular Phsl Lab  531-2 Advanced Cellular Physiology Laboratory. One one-hour lecture and one three-hour laboratory per week, designed to be taken concurrently with PHSL 530. Basic experimental procedures used in studies in cellular physiology.

PHSL533 - Adv Comparative Physiology  533-4 Advanced Comparative Physiology. Advanced concepts and techniques used in current studies in comparative physiology. Three lectures and one discussion period per week.

PHSL540 - Advanced Biophysics  540-3 Advanced Biophysics. Survey of recent biophysical research with emphasis on historical development of current advances. Three lectures per week. Prerequisite: PHSL 440 or its equivalent.

PHSL570A - Biological Structure  570A-3 Advanced Physiological Topics-Biological Structure. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

PHSL570B - Cardiovascular Physiology  570B-3 Advanced Physiological Topics-Cardiovascular Physiology. Studies of current research and literature in various topic areas of physiology. One or more
of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570C - Respiratory Physiology** 570C-3 Advanced Physiological Topics-Respiratory Physiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570D - Nerve-Muscle Physiology** 570D-3 Advanced Physiological Topics-Nerve-Muscle Physiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570E - Metabolism** 570E-3 Advanced Physiological Topics-Metabolism. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570F - Gastrointestinal Physiology** 570F-3 Advanced Physiological Topics-Gastrointestinal Physiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570G - Neurophysiology** 570G-3 Advanced Physiological Topics-Neurophysiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570H - Radiation Biology Physiology** 570H-3 Advanced Physiological Topics-Radiation Biology Physiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570I - Environmental Physiology** 570I-3 Advanced Physiological Topics-Environmental Physiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570J - Biomathematics** 570J-3 Advanced Physiological Topics-Biomathematics. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570K - Biomedical Computing** 570K-3 Advanced Physiological Topics-Biomedical Computing. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570L - Endocrinology** 570L-3 Advanced Physiological Topics-Endocrinology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570M - Animal Care** 570M-3 Advanced Physiological Topics-Animal Care. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

**PHSL570N - Biophysics** 570N-3 Advanced Physiological Topics-Biophysics. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.
PHSL570 - Pharmacology 570-3 Advanced Physiological Topics-Pharmacology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

PHSL570P - Special Topics 570P-3 Advanced Physiological Topics-Special Topics. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

PHSL570Q - Reproductive Physiology 570Q-3 Advanced Physiological Topics-Reproductive Physiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

PHSL570R - Renal Physiology 570R-3 Advanced Physiological Topics-Renal Physiology. Studies of current research and literature in various topic areas of physiology. One or more of the following list of topic sections will be offered each semester, so that each section will be available once every two or three years.

PHSL571 - Res/Probs:Electron Microscopy 571-3 Research and Problems in Biological Transmission Electron Microscopy (TEM). Laboratory course designed to provide experience in techniques for biological electron microscopy. Student, with the aid of the instructor, designs and carries out a project in transmission electron microscopy. Two three-hour laboratories per week. Prerequisite: PHSL 460 or special permission of instructor.

PHSL573 - Neuroanatomy 573-3 Neuroanatomy. A detailed survey of human neuroanatomy. The course will include radiographic, cross-sectional and developmental anatomy of the nervous system. Dissection of the human brain will occur in general laboratory sessions. Three lectures per week.

PHSL574 - Neuropharmacology PHSL 574-3 Neuropharmacology. (Same as PHRM 574) A detailed examination of the biochemical aspects of neuropharmacology with emphasis on neurotransmitters - their synthesis, storage, release and metabolism in the central and peripheral nervous system. Considerable emphasis is placed on major health research developments (both past and present) that influence how one studies the action of drugs on the nervous system. Prerequisites: PHSL 410A/B, and CHEM 350.

PHSL575 - Neuroendocrinology 575-3 Neuroendocrinology. Designed to investigate and discuss the current research and historical aspects of the field of neuroendocrinology. In addition, designed to have students examine and evaluate current literature in the field and through discussion have them present their analysis of the research. One hour of lecture, one hour of discussion of textual material, one hour of multiple reports on library research. Prerequisite: PHSL 410A, B or equivalent, or an undergraduate/graduate endocrinology course, or consent of instructor.

PHSL581A - Medical Educ Multimedia 581A-3 Multimedia in Medical Education. Students will participate in the daily discussions of a medical education multimedia corporation. Emphasis will be on process and instructional design. Students will be supervised by team members in the production of commercial educational packages. Skills to be acquired include the ability to digitize images and sound, and to create a Power Point presentation on a topic of the student's choice.

PHSL581B - Adv Medical Ed Multimedia 581B-6 Advanced Multimedia in Medical Education. Intended to be a "hands on" course which contributes significantly to the development of multimedia teaching materials for medical education. Students will be assigned to a project as part of a development team. Under supervision of the team leader, they will assist in software design, material preparation and assembly. Prerequisite: PHSL 581A.

PHSL582 - Clinical Appl/Radiology 582-3 Clinical Application/Radiology. The study of human anatomy through imaging techniques such as standard x-rays, computer assisted tomography (CT) and magnetic resonance imaging (MRI). The course will include individualized work with clinical specialists in a hospital setting for 1/2 day per week with times to be arranged. Restricted to graduate status, acceptance into anatomy certificate program. Graded S/U.
PHSL590 - Readings or Research Cur Topics 590-1 to 4 Readings or Research in Current Physiological Topics. By special arrangement with the instructor with whom the student wishes to work. Graded S/U only.

PHSL598 - Research 598-1 to 48 (1 to 12 per semester) Research. The credit hours selected for this course registration will be determined by the major professor of the student. In a typical semester no more than six hours will be taken by a student except under special circumstances. Graded S/U only. Special approval needed from the instructor.

PHSL600 - Dissertation 600-1 to 32 (1 to 16 per semester) Dissertation Research. Research for dissertation for Ph.D. degree.

PHSL601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

PHSL699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Molecular, Cellular and Systemic Physiology Faculty

Zheng, Zhengui (Patrick), Assistant Professor, Ph.D., Shanghai University of Traditional Chinese Medicine, 1997; 2014. Developmental and molecular basis of sexual differentiation during vertebrate organogenesis.

Music

The Graduate Faculty in the School of Music is made up of accomplished performers, composers, and scholars with a deep concern for preparing their Master of Music students for future success. In addition to their many professional activities – both nationally and internationally, they present many recitals, lectures, and workshops for the University community on the SIU campus. Please visit the SIU School of Music website and the SIU Graduate School website for more information.

Master of Music - 7 concentrations

- Performance (for emphases see list below)
- Music Theory and Composition
- Music History and Literature
- Music Education
- Opera/Music Theater
Performance Emphases:

- Orchestral Instruments
- Piano
- Vocal
- Guitar
- Orchestral Conducting
- Wind Conducting
- Choral Conducting

Performing Ensembles

The strength of the SIU School of Music is the abundance of performing opportunities available to its students. There are vast performing opportunities for all Master of Music performers and composers, often working side by side with their mentors.

Ensembles include: Southern Illinois Symphony Orchestra, SIU Wind Ensemble and Symphonic Band, SIU Concert Choir, Chamber Choir, and Choral Union, SIU Jazz Ensemble, Marjorie Lawrence Opera Theater, SIU Guitar Ensemble, Southern Illinois Improvisation Unit, SIU Percussion Ensemble, SIU Flute Choir, SIU Clarinet Choir, and Marching Salukis. Other ensembles include: SIU Graduate String Quartet, Altgeld Chamber Players, Southern Illinois Jazztet, Southern Illinois Chamber Music Society, and New Chicago Chamber Orchestra. Throughout the year there are hundreds of concerts, recitals, operas, musicals, and emerging composer recitals.

Graduate students in residence must participate in an ensemble, as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist, every semester in residence. In addition, students may elect participation in other regularly scheduled ensembles.

School of Music Resources

The newly renovated Morris Library is a fully functional and impressively equipped research center. The School of Music is a three building complex including Shryock Auditorium, the Old Baptist Foundation Recital Hall, and Altgeld Hall, a replica of King Ludwig's Bavarian castle! Facilities include:

- Rehearsal spaces for large ensembles, choral, jazz, music theater, and chamber music, which often serve as alternate performance spaces;
- Practice rooms, including rooms for piano majors and three practice organs: a four-rank Ott tracker organ, a six-rank Moeller, and a four-rank Wicks;
- Computer/Listening Lab – available for all music students;
- Recording facilities for live concert recordings as well as professional studio recordings;
- The Center for Experimental Music (CEM), a computer composition laboratory for all aspects of electro-acoustic music production, available for composition students.

Also part of the School of Music complex of buildings are:
- Shryock Auditorium: the primary concert space for orchestra, opera, band, and choral concerts, located adjacent to the School of Music; it houses a fifty-eight rank Reuter pipe organ, the principal instrument for recitals and teaching, which is installed in Shryock Auditorium;
- Old Baptist Foundation Recital Hall: a small chamber music space for more intimate recitals.

Application for Admission

Students interested in pursuing the Master of Music should apply for admission through the SIU Graduate School application website.

The online application system includes a separate School of Music application. All applicants must complete both applications in order to be considered for graduate work at SIU. The music application is sent directly to the Director of Graduate Studies in Music:

Director of Graduate Studies in Music
School of Music
In addition to the application materials above, International students require additional documents including financial disclosure form, a photocopy of undergraduate diploma, and other materials for attaining a student VISA. Non-English speaking students must also submit a recent TOEFL score. All forms are provided and explained on the Graduate School application website. Further clarification or additional questions regarding the entire application process may be answered by writing to gradmus@siu.edu.

Auditioning Process

Each applicant must be assessed by members of the School of Music faculty in order to be accepted into his/her specific discipline. Performers must audition either in person or recording; composers should submit scores and recordings of their compositions; scholars should submit examples of their researched writing. More information can be found on the School of Music website: cola.siu.edu/music/. In order to set up an audition, make contact with the specific faculty member in your area, as found on the School of Music website. You are also encouraged to contact that performer, composer, or scholar, as well as the Director of Graduate Studies in Music, at any time, before or during the application process, if you have area specific questions or concerns.

Assistantships, Fellowships, and Tuition Waivers

There are a number of opportunities for graduate students to receive financial assistance with their degree. Students should apply for Master-level fellowships by sending the appropriate application (found on the SIU Graduate School website) and supporting documentation directly to the Director of Graduate Studies in Music. The annual deadline for receipt of this material is January 1st. Graduate Assistantships offer students a complete tuition waiver plus a monthly stipend in turn for teaching and/or research assistance in the School of Music. The application is included as part of the specific School of Music application, completed with the SIU Graduate School application. However, the deadline for primary consideration for a GA is February 15th.

There are several additional types of financial assistance available including PROMPT Fellowships, tuition waivers, Excellence Through Commitment Graduate School Scholarships, etc. Information about cost and financial help can be found at: gradschool.siu.edu/cost-aid. Additional aid for Master of Music students includes scholarships for string students, given annually by the Southern Illinois Chamber Music Society, and three annual competitions for composition students, the Carl Deis Prize, the Southern Illinois Symphony Orchestra Composition Competition, and the Mykytyn Distinguished Composition Award.

Screening Exams

All incoming students must take screening examinations in Aural Skills, Music Theory, Music History pre-1750, and Music History post-1750. These exams are available for online administration and should be taken as soon as possible after being notified of your acceptance into the program, but before arriving on campus to begin your degree. Students in collaborative piano-vocal accompanying emphasis, opera/musical theater, and performance- vocal emphasis are required to take additional screening examinations in French diction, Italian diction, German diction, and IPA diction. Students in collaborative piano-instrumental accompanying emphasis are strongly encouraged to take the additional screening examinations in diction. These examinations are administered on or before the first day of classes. Incoming students found deficient in certain areas will be assigned remedial coursework- MUS 399 A-K Graduate Music Review in aural skills, music theory, music history, diction, or other pertinent areas. All deficiencies must be corrected by taking the appropriate sections of MUS 399 BEFORE registering for graduate-level courses in those areas, and it is mandatory to take care of all deficiencies during their first year of the MM program. For each assigned section of Graduate Music Review, the minimum grade to
fulfill the deficiency is $B$ or better, with the exception of Graduate Ear Training which requires a grade of $C$ or better.

## Master of Music Curriculum

The curriculum for each MM concentration is slightly different, appropriately focusing on specific aspects of training. Current MM students should follow the curricular guides found below for their specific MM concentration. These guides are also found on the School of Music Website. Any deviations from this should be discussed with your major professor, and then proposed to the School of Music Graduate Committee.

Graduate students self-register each semester, on the SIU website: [gradschool.siu.edu/registration](http://gradschool.siu.edu/registration).

Each student should regularly meet with both their major professor and the Director of Graduate Studies in Music to ensure that they are fulfilling all the curricular responsibilities of their specific concentration.

Note: Only courses at the 400- and 500-level count toward the total hour count to complete the curriculum for the Master of Music degree. At least 18 of the total credit hours must be at the 500 or above level.

### Course Number | Credit Hours
---|---
MUS 470, MUS 471, MUS 472, MUS 474, MUS 475, MUS 476, MUS 477, MUS 478A, MUS 478B, MUS 573, MUS 574 | 6
MUS 566 A-L | 4**
Thesis MUS 599 (6) or MUS 595 (1) plus 5*** credits of approved music education electives | 6
**TOTAL** | 36

*No more than two credits of MUS 440 A-Y or MUS 540 A-Y may count toward the approved music education elective requirement.

**Music education students in residence must participate in a major ensemble every semester in residence. Part-time students may petition to substitute other coursework to fulfill the ensemble requirement.

***A minimum of two credit hours of elective must be at the 500 or above level.

---

### Concentration - Music History and Literature

| Course Number | Credit Hours |
---|---|
MUS 501 | 3
MUS 502A and MUS 502B | 4
MUS 599 | 6
MUS 470, MUS 471, MUS 472, MUS 474, MUS 475, MUS 476, MUS 477, MUS 478A, MUS 478B, MUS 573 or MUS 574 | 9
MUS 566 A-L | 4
Approved non-music history graduate music electives* | 6
MUS 499, MUS 482, MUS 500, or approved graduate music history electives* | 4
**TOTAL** | 36

*A minimum of 1 credit hour of elective must be at 500 or above level.

In addition to the general requirements for graduation, music history and literature majors must have a reading ability in at least one foreign language. It is recommended that students successfully complete two semesters of a foreign language at the undergraduate level (preferably French or German), or pass FR 488 or GER 488 with a grade of B or higher.

---

### Concentration - Piano Education Arts

| Course Number | Credit Hours |
---|---|
MUS 501 | 3
MUS 502A or MUS 502B | 2
MUS 440Q or MUS 540Q | 9*
MUS 410A and MUS 410B | 2
MUS 510A, MUS 510B, and MUS 510C (3, 3, 3) | 9
MUS 479 A or MUS 479I | 2
MUS 470, MUS 471, MUS 472, MUS 474, MUS 475, MUS 476, MUS 477, MUS 478A, MUS 478B, MUS 573, or MUS 574 | 3
MUS 566 A-L | 2
MUS 498 or MUS 598 | 3*
MUS 595 | 1
**TOTAL** | 36
To fulfill the degree requirements of 18 credit hours at the 500 or above level, 3 credit hours of either Applied Music (MUS 540Q) or Recital (MUS 598) is recommended, or additional coursework at the 500 or above level is required.

**Creation of the Graduate Faculty Committee**

In the Fall of the second year, each student should formally create their Graduate Faculty Committee. Although the three members of this committee are the student’s choice, they must be SIU faculty with whom the student has had academic contact, and they must agree to serve on this important committee. The student must complete and submit the Graduate Faculty Committee Form, signed by the student’s choice for Chair of this committee, to the Director of Graduate Studies.

**Master of Music Thesis Requirements**

Each of the various concentrations of the MM degree have slightly different thesis requirements, chosen from the following, separately or in combination:

- **MUS 599**: A major written thesis on a topic proposed to and approved by the School of Music Graduate Committee. Composers write a major composition under direction of the student’s Graduate Faculty committee.
- **MUS 598**: A graduate recital under approval and direction of the student’s recital jury, this may be performing, conducting, or directing. Collaborative Piano students perform three recitals as per the curriculum above.
- **MUS 595**: A written research paper under the direction of the student’s Graduate Faculty Committee. Performers write extended program notes to accompany their graduate recital; Composers write extended notes to accompany their major composition thesis.

Research Papers and Theses (including compositions) must be submitted (UPLOADED) to the SIU Graduate School on or before their posted deadline. For more information, visit: [gradschool.siu.edu/current-students/thesis-dissertation-researchpaper](http://gradschool.siu.edu/current-students/thesis-dissertation-researchpaper).
Final Comprehensive Examinations

Final examinations are created and administered individually by each student’s Graduate Faculty Committee, during the student’s final semester, prior to the SIU Graduate School’s deadline. The exams are in two parts:

(1) an extended written exam, essay style; and
(2) a one hour oral exam with the student's Graduate Faculty Committee.

Chronology and Forms

In addition to meeting regularly with the Director of Graduate Studies in Music, students can learn about all expectations in regard to their degree program by reading the “Chronology of Master of Music Procedures” found on the School of Music website. This document contains links to all the necessary forms that are to be submitted during their degree. Links to these forms can be found at: gradschool.siu.edu/about-us/forms.

Music Courses

MUS400 - Performance Techniques 400-1 (1,1) Performance Techniques. Individual instruction in any secondary applied field. Designed to provide added depth of preparation for teaching instrumental and vocal music. Restricted to graduate music major or consent of instructor. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS401 - Opera Workshop 401-1 to 12 (1 to 2 per semester) Opera Workshop. Open to all appropriately experienced singers, actors, dancers, instrumentalists and theater technicians. Study of opera/operetta repertoire and performance techniques. Special approval needed from the instructor.

MUS402 - Musical Theater Workshop 402-1 to 12 (1 to 2 per semester) Musical Theater Workshop. Open to all appropriately experienced actors, singers, dancers, instrumentalists and theater technicians. Study of musical theater/musical revue repertoire and performance techniques. Special approval needed from the instructor.

MUS403 - Lyric Theater Ensemble 403-1 to 16 (1 to 2 per semester) Lyric Theater Ensemble. A select group which performs operatic or musical theater literature, usually in the form of a fully mounted production each semester. May be repeated for credit. Prerequisite: audition or consent of instructor. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS406 - Electronic Composition 406-2 Electronic Composition and Sound Synthesis. Principles of acoustics, parameters of music/sound, basic sound synthesis, wave forms and manipulation of wave forms, digital audio and digital audio platforms, audio recording/engineering, microphone types/use, utilizing sample libraries, mixing, and basic mastering. Restricted to junior standing.

MUS407 - Modal Counterpoint 407-2 Modal Counterpoint. Study of Renaissance contrapuntal techniques. Extensive writing practice, and analysis of stylistic models. Prerequisite: MUS 308 with a C or better.

MUS410A - Piano Pedagogy Practicum 410A-2 Piano Pedagogy Practicum. Provides undergraduate and graduate piano pedagogy majors with the opportunity for supervised practice piano teaching. Course activities include lesson-planning, conducting and evaluating studio piano and class piano lessons, and a survey of important educational issues that impact on effective piano teaching. Special approval needed from the instructor.

MUS410B - Piano Pedagogy Practicum 410B-2 Piano Pedagogy Practicum. Provides undergraduate and graduate piano pedagogy majors with the opportunity for supervised practice piano teaching. Course activities include lesson-planning, conducting and evaluating studio piano and class piano lessons, and a
survey of important educational issues that impact on effective piano teaching. Special approval needed from the instructor.

MUS420 - Instrument Repair 420-1 to 2 (1,1) Instrument Repair. A shop-laboratory course dealing with the selection, tuning, adjustment, maintenance, and repair of musical instruments. Prerequisite: two semesters of instrumental techniques courses or consent of instructor.

MUS421 - Advanced Analysis 421-2 Advanced Analysis. Structure, form, and design in music as the coherent organization of all of its factors. Analysis of works chosen from a variety of styles and genres. Prerequisite: MUS 321 with a C or better.

MUS430A - Jazz Arranging I 430A-2 Jazz Arranging I. Step-by-step approach to jazz arranging and techniques from lead sheet construction through full big band arrangements. Students will write and arrange for combos, trombone section and rhythm, saxophone section and rhythm, and full big band with all projects to be played by student ensembles. Special approval needed from the instructor.

MUS430B - Jazz Arranging II 430B-2 Jazz Arranging II. Step-by-step approach to jazz arranging and techniques from lead sheet construction through full big band arrangements. Students will write and arrange for combos, trombone section and rhythm, saxophone section and rhythm, and full big band with all projects to be played by student ensembles. Prerequisite: MUS 430A with a C or higher.

MUS440A - Applied Music-Flute 440A-1 to 3 Applied Music-Flute. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS440B - Applied Music-Oboe 440B-1 to 3 Applied Music-Oboe. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS440C - Applied Music-Clarinet 440C-1 to 3 Applied Music-Clarinet. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS440D - Applied Music-Bassoon 440D-1 to 3 Applied Music-Bassoon. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS440E - Applied Music-Saxophone 440E-1 to 3 Applied Music-Saxophone. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.
concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440F - Applied Music-Horn** 440F-1 to 3 Applied Music-Horn. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440G - Applied Music-Trumpet** 440G-1 to 3 Applied Music-Trumpet. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440H - Applied Music-Trombone** 440H-1 to 3 Applied Music-Trombone. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440I - Applied Music-Euphonium** 440I-1 to 3 Applied Music-Euphonium. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440J - Applied Music-Tuba** 440J-1 to 3 Applied Music-Tuba. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440K - Applied Music-Percussion** 440K-1 to 3 Applied Music-Percussion. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440L - Applied Music-Violin** 440L-1 to 3 Applied Music-Violin. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.
Credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440M - Applied Music-Viola**

440M-1 to 3 Applied Music-Viola. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440N - Applied Music-Cello**

440N-1 to 3 Applied Music-Cello. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440O - Applied Music-Double Bass**

440O-1 to 3 Applied Music-Double Bass. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440P - Applied Music-Voice**

440P-1 to 3 Applied Music-Voice. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440Q - Applied Music-Piano**

440Q-1 to 3 Applied Music-Piano. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS440R - Applied Music-Organ**

440R-1 to 3 Applied Music-Organ. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.
MUS440S - Applied Mus-Harpsichord 440S-1 to 3 Applied Music-Harpsichord. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS44OT - Applied Music-Guitar 440T-1 to 3 Applied Music-Guitar. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS44OU - Applied Music-Recorder 440U-1 to 3 Applied Music-Recorder. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS44OV - Applied Music-Coaching 440V-1 to 3 Applied Music-Coaching. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS44OW - Applied Music-Conducting 440W-1 to 3 Applied Music-Conducting. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS44OX - Appl Music-Mus Theater Voice 440X-1 to 3 Applied Music-Musical Theater Voice. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Not available outside Music Theater degree. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS440Y - Appl Music-Collaborative Piano 440Y-1 to 3 Applied Music-Collaborative Piano. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Undergraduate students must be concurrently enrolled in one of the major ensembles. Graduate students must be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular
guide and appropriate degree requirement checklist. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS450 - Topics in Ethnomusicology** 450-3 Topics in Ethnomusicology. Courses in this series are designed for advanced undergraduate and graduate students in music and related disciplines to the issues, theories, and interdisciplinary research methodologies of ethnomusicology. Restricted to junior/senior/graduate status.

**MUS450A - Women in Music** 450A-3 Women in Music. (Same as WGSS 450A) Explores the creative contributions of women in music, examining women's participation across a range of genres, cultural/geo graphic areas, and time periods. Restricted to junior/senior/graduate music major or consent of instructor.

**MUS450B - Music and Social Change** 450B-3 Music and Social Change. Examines music as a force in movements for social change as well as music outside of formally identified movements serving this purpose. Seeks out musical sources and cultural meanings, along with connections between music in movements across time, space, culture, and genre. Restricted to junior/senior/graduate music major or consent of instructor.

**MUS450C - Ethnomusic Sound Healing** 450C-3 Ethnomusicology: Sound Healing. Interdisciplinary exploration of the physical properties, physiological effects, and integrative possibilities of sound/music to empower, transform, and heal mind-body-spirit individually and in community. Restricted to junior/senior/graduate or consent of instructor.

**MUS450D - Ethnomusic Healing & Creative** 450D-3 Ethnomusicology: Healing and the Creative Process. Explores the healing potential embodied in the process of creating across a range of different contexts & media, drawing on research from interdisciplinary fields. Restricted to junior/senior/graduate or consent of instructor.

**MUS452A - Traditions Uppity Women Blues** 452A-3 Traditions of Uppity Women's Blues. (Same as AFR 452A and WGSS 452A) Examines the tradition of “uppity” women's blues from the so-called “classic” blues singers of the 19th century (Gertrude “Ma” Rainey, Bessie Smith, Ida Cox, etc.) to the contemporary blues of Saffire, Denise LaSalle and others. Explores ways blues women challenge conventions of gender and sexuality, racism, sexism, classism and homophobia. Restricted to upper level music major. Special approval needed from the department.

**MUS452B - Blues/Boogie Woogie Piano Styles** 452B-3 Blues and Boogie Woogie Piano Styles. (Same as AFR 452B) Traces the history, culture, and stylistic developments of blues and boogie woogie piano. Explores socio-cultural contexts and examines key players, pieces, and musical styles. Restricted to upper level music major. Special approval needed from the department.

MUS456B - Music for Exceptional Child II 456B-2 Music for Exceptional Children. Applications for the gifted, emotionally disturbed, and culturally disadvantaged child. Take in sequence. Prerequisite: MUS 456A.

MUS457 - Conducting MS/HS Band 457-2 Conducting the Middle/High School Band. This course is designed to further develop the skills learned in Introduction to Conducting and Advanced Conducting. Emphasis will be placed on advanced conducting techniques and score study. Topics will include middle/high school band literature, error detection, rehearsal planning, and teaching techniques. Prerequisites: MUS 316, MUS 317, and/or MUS 318.

MUS458 - Survey of Wind Literature 458-2 Survey of Wind Literature. The study of wind literature from its beginning in the music of Gabrieli through the classical wind serenades of Mozart to the composers of today. The course will include music written for wind chamber groups, as well as music for wind ensemble and the traditional concert band. Restricted to junior/senior/graduate music major or consent of instructor.

MUS461 - Applied Music Pedagogy 461-3 Applied Music Pedagogy. Specialized problems and techniques employed in studio teaching of any particular field of music performance. Study of music literature appropriate for the various levels of performance. Opportunity, as feasible, for supervised instruction of pupils. Meets with appropriate instructor, individually or in groups. Special approval needed from the instructor.

MUS470 - History of Opera 470-3 History of Opera. The development of the music, libretti and staging of opera from the late Renaissance to the present. Prerequisite: MUS 357B, or consent of instructor.

MUS471 - History of Musical Theater 471-3 History of Musical Theater. The development of the music, book, lyrics and staging practices of musical theater from its late 19th Century beginnings to present, with a detailed study of selected contributors and their works. Satisfies the College of Liberal Arts Writing-Across-the-Curriculum music major requirement. Restricted to BFA or MM Opera/Music Theater majors only, or consent of instructor.

MUS472 - Chamber Music Literature 472-3 Chamber Music Literature. A study of literature for the principal types of chamber music groups. Special approval needed from the instructor.

MUS474 - Survey of Jazz History 474-3 Survey of Jazz History. In-depth study of the history of jazz through examination of historical lineage and perspective, recorded output and important stylistic characteristics of each major period. Biographical backgrounds of major composers and performers will be considered as they contribute to the evolution of musical styles. Prerequisite: none.

MUS475 - Baroque Music 475-3 Baroque Music. The development of vocal and instrumental music in the period 1600-1750, from Monteverdi to Bach and Handel. Oratorio and Cantata, the influence of opera, sonata, suite, and concerto. Prerequisite: MUS 357A with a grade of C or better, or graduate standing.

MUS476 - Classical Music 476-3 Classical Music. Development of the sonata, symphony, concerto, and chamber music in the 18th and early 19th centuries, with emphasis on the music of Haydn, Mozart, and Beethoven. Prerequisite: MUS 357B with a grade of C or better, or graduate standing.

MUS477 - Romantic Music 477-3 Romantic Music. Development of the symphony and sonata forms, chamber music, and vocal music in the 19th and early 20th centuries. Rise of nationalism and impressionism. Prerequisite: MUS 357B with a grade of C or better, or graduate standing.

MUS478A - Modern Music I 478A-3 Modern Music I. Examine important works and figures from Western Music in the first half of the 20th Century. Topics included will be Atonality, Serialism, Impressionism, Expressionism, Nationalism, Ballet and Theater Music, Neo-Classicism, Experimentalism, and Jazz. A strong emphasis will be placed on the social and political context in which the music was created. Prerequisite: MUS 357B with a grade of C or better, or graduate standing.

MUS478B - Modern Music II 478B-3 Modern Music II. Examine important works and figures from Western Music in the second half of the 20th Century. Included will be atonality, serialism, avant-garde, minimalism, electronic music, experimental instruments and indeterminacy. Emphasis placed on the social, economic and political context. Students will examine the compositional philosophies and techniques of the era. Prerequisite: MUS 357B with a grade of C or better, or graduate standing.
MUS479A - Solo Performance Lit-Piano 479A-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (A) Piano Literature I, including an introductory study of harpsichord music. Special approval needed from the instructor.

MUS479B - Solo Performance Lit-Organ 479B-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (B) Organ Literature, in relation to the history of the instrument. Special approval needed from the instructor.

MUS479C - Solo Performance Lit-Art Song 479C-2 to 6 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (C) Art Song-topics to rotate over a 3-year sequence; may be repeated for up to 6 credit hours. Special approval needed from the instructor.

MUS479D - Solo Perform Lit-Guitar/Lute 479D-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (D) Guitar and Lute Literature. Special approval needed from the instructor.

MUS479E - Solo Perform-Solo String Lit 479E-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (E) Solo String Literature. Special approval needed from the instructor.

MUS479F - Solo Performance Lit-Solo Wind 479F-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (F) Solo Wind Literature. Special approval needed from the instructor.

MUS479G - Solo Perform-Percussion Lit 479G-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (G) Percussion Literature. Special approval needed from the instructor.

MUS479I - Solo Perform Lit-Piano Lit II 479I-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (I) Piano Literature II. Special approval needed from the instructor.

MUS479J - Solo Perf Lit-Instr Lit Pianst 479J-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (J) Instrumental Sonata Literature for Pianists. Special approval needed from the instructor.

MUS479K - Solo Perf Lit-Piano Cham Music 479K-2 to 8 (2 per topic) Solo Performance Literature. Topics presented will depend upon the needs of students and instructors schedules. (K) Piano Chamber Music Literature. Special approval needed from the instructor.

MUS480 - Advanced Composition 480-2 to 4 (2,2) Advanced Composition. Original composition involving the larger media. Individual instruction. Prerequisite: two semesters of MUS 380 with a grade of C or better and approval of composition jury. Undergraduate students limited to 2 credit hours per semester. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS481 - Special Topics Music Theory 481-1 to 4 Special Topics in Music Theory and Composition. An advanced seminar exploring specialized areas in music theory and composition. An emphasis on current trends, composing, score study, and analysis. Prerequisite: MUS 321 and MUS 322 or prior consent of instructor.

MUS482 - Readings Music Hist & Lit 482-1 to 4 Readings in Music History and Literature. Assigned readings and reporting of materials pertaining to a particular phase of history or literature. Approximately three hours preparation per week per credit. Prerequisite: MUS 357A and B, or prior consent of instructor.

MUS483 - Readings in Music Education 483-1 to 4 Readings in Music Education. Assigned readings and reporting of materials pertaining to a particular phase of music education. Approximately three hours preparation per week per credit (adjusted for shorter sessions). Special approval needed from the instructor.
MUS484 - Trends in Music Education 484-3 Trends in Music Education. Evolving issues important to the music educator.

MUS498 - Recital 498-2 to 3 Recital. Preparation and presentation of a full solo recital in any applied field. Recital should contain approximately 50 minutes of music. Prerequisite: prior or concurrent registration in MUS 440 and approval of applied jury.

MUS499 - Independent Study 499-1 to 8 Independent Study. Original investigation of selected problems in music and music education with faculty guidance. Project planned to occupy approximately three hours preparation per week per credit (adjusted for shorter sessions). Not more than three hours toward 36 required for graduate degree. Special approval needed from the selected instructor.

MUS500 - Independent Investigation 500-1 to 6 Independent Investigation. An opportunity for the graduate student to investigate at an advanced level special interests outside the scope of normal course offerings. The student will select a member of the graduate faculty to guide and evaluate the work. Not more than three hours toward 36 required for graduate degree. Special approval needed from the selected instructor and student's graduate advisor.

MUS501 - Music Bibliography & Research 501-3 Music Bibliography and Research. Bibliographic materials for graduate study in music theory, history, education, and music performance. Practical experience in research techniques and scholarly writing style. Recommended to be taken during the first semester of graduate study. Required of all degree programs.

MUS502A - Analytic Techniques A 502A-2 Analytic Techniques A. Study of the analytic techniques of Heinrich Schenker through analysis of representative works from the common practice period. Prerequisite: MUS 321 and/or consent of instructor. Restricted to graduate standing in music.

MUS502B - Analytic Techniques B 502B-2 Analytic Techniques B. Study of post-tonal music theories-including Allen Forte's pitch-class set theory and twelve-tone theory-through analysis of representative 20th and 21st century works. Prerequisite: MUS 322 and/or consent of instructor. Restricted to graduate standing in music.

MUS503 - Sci Eval & Res in Music 503-3 Scientific Evaluation and Research in Music. Quantified research concepts and vocabulary; measurement theory and techniques for evaluating and testing musical aptitude and achievement; investigation of acoustical perception; survey of current scientific research in music. A research project is required.

MUS509 - Hist & Phil of Music Educ 509-3 History and Philosophy of Music Education. The evolution of school music and its changing relationship to the individual, to society, and to the school curriculum.

MUS510A - Sem-Piano Pedagogy Tech 510A-3 Piano Pedagogy Seminar-Piano Technique. Provides an in-depth study of the three classic texts on the subject of piano technique and prepares students to deal with important aspects of piano technique in piano teaching.

MUS510B - Sem-Piano Pedagogy Lit 510B-3 Piano Pedagogy Seminars-Piano Literature. An extensive survey of baroque, classical, romantic and contemporary piano literature designed specifically to meet the needs of those pursuing professional careers as piano teachers.

MUS510C - Sem-Piano Pedagogy Analysis 510C-3 Piano Pedagogy Seminars-Piano Music Analysis. Details the analytic and problem-solving techniques of piano performance study that are fundamental for teaching piano students of all ages and abilities.

MUS535 - Contemporary Idioms 535-2 Contemporary Idioms. An analysis of major compositional techniques since 1945. Prerequisite: MUS 502B or consent of instructor.

MUS540A - Applied Music-Flute 540A-1-3 Applied Music-Flute. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the
weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540B - Applied Music-Oboe 540B-1-3 Applied Music-Oboe. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540C - Applied Music-Clarinet 540C-1-3 Applied Music-Clarinet. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540D - Applied Music-Bassoon 540D-1-3 Applied Music-Bassoon. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540E - Applied Music-Saxophone 540E-1-3 Applied Music-Saxophone. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540F - Applied Music-Horn 540F-1-3 Applied Music-Horn. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540G - Applied Music-Trumpet 540G-1-3 Applied Music-Trumpet. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540H - Applied Music-Trombone 540H-1-3 Applied Music-Trombone. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.
concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540J - Applied Music-Tuba 540J-1-3 Applied Music-Tuba. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540K - Applied Music-Percussion 540K-1-3 Applied Music-Percussion. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540L - Applied Music-Violin 540L-1-3 Applied Music-Violin. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540M - Applied Music-Viola 540M-1-3 Applied Music-Viola. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540N - Applied Music-Double Bass 540N-1-3 Applied Music-Double Bass. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540O - Applied Music-Voice 540O-1-3 Applied Music-Voice. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the
weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540Q - Applied Music-Piano 540Q-1-3 Applied Music-Piano. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540R - Applied Music-Organ 540R-1-3 Applied Music-Organ. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540S - Applied Music-Harpsichord 540S-1-3 Applied Music-Harpsichord. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540T - Applied Music-Guitar 540T-1-3 Applied Music-Guitar. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540U - Applied Music-Recorder 540U-1-3 Applied Music-Recorder. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540V - Applied Music-Coaching 540V-1-3 Applied Music-Coaching. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540W - Applied Music-Conducting 540W-1-3 Applied Music-Conducting. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540X - Appl Music-Mus Theater Voice 540X-1 to 3 Applied Music-Musical Theater Voice. May be repeated for credit as long as passing grade is maintained. Students must perform an end of
semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Not available outside Music Theater degree. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS540Y - Appl Music-Collaborative Piano 540Y-1-3 Applied Music-Collaborative Piano. May be repeated for credit as long as passing grade is maintained. Students must perform an end of semester jury and be concurrently enrolled in an appropriate ensemble as determined by their declared concentration/emphasis curricular guide and appropriate degree requirement checklist. Students enrolled in 1 or 2 credits take one half-hour lesson per week; 3 credits take one hour lesson per week. Students enrolled in 2 or 3 credits must attend the weekly studio class. Prerequisite: Audition or recommendation of applied jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS545 - Pedagogy of Music Theory 545-2 Pedagogy of Music Theory. An orientation to the philosophy of theory with application to teaching techniques. Special approval needed from the instructor.

MUS550 - School Mus Admin & Supervsn 550-2 School Music Administration and Supervision. Study of the objectives and processes of music instruction. Administration roles in developing the means and ends of music instruction, and techniques employed for the improvement of instruction.

MUS556 - Advanced Conducting 556-2 to 4 (2,2) Advanced Conducting. Individual or group study with appropriate instructor of choral, orchestral, or band literature. Practice in score reading, baton technique and interpretation. Opportunity to rehearse and conduct ensembles when feasible. Prerequisite: completion of an undergraduate conducting course. Restricted to graduate standing in music, or consent of instructor.

MUS565A - Chamber Music-Vocal 565A-1 to 4 (1 per topic) Chamber Music-Vocal. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS565B - Chamber Music-String 565B-1 to 4 (1 per topic) Chamber Music-String. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS565C - Chamber Music-Woodwind 565C-1 to 4 (1 per topic) Chamber Music-Woodwind. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS565D - Chamber Music-Brass 565D-1 to 4 (1 per topic) Chamber Music-Brass. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS565E - Chamber Music-Percussion 565E-1 to 4 (1 per topic) Chamber Music-Percussion. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

MUS565F - Chamber Music-Keyboard 565F-1 to 4 (1 per topic) Chamber Music-Keyboard. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and
public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS565G - Chamber Music-Guitar** 565G-1 to 4 (1 per topic) Chamber Music-Guitar. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS565H - Chamber Music-Contemporary** 565H-1 to 4 (1 per topic) Chamber Music-Contemporary. Groups of 2 to 16 performers as organized and sponsored by individual faculty members. Includes duo-piano teams and piano in combination with other performers. Regular weekly rehearsals of appropriate music and public performance as feasible. Each subject may be repeated up to 2 hours. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566A - Ensemble-Marching Salukis** 566A-1 Ensemble-Marching Salukis. Fall semester only. Open to all students with experience in bands. Performs at all home football games, and one or two away games. Prerequisite: Experience in bands. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566B - Ensemble-Symphonic Band** 566B-1 Ensemble-Symphonic Band. Open to all students with experience in bands. Performs standard literature. Two or three concerts per year. Prerequisites: experience in bands and audition prior to first registration. Fee: $15/credit hour.

**MUS566C - Ensemble-Concert Wind** 566C-1 Ensemble-Concert Wind Ensemble. A select group which performs advanced contemporary literature. Three concerts and tour per year. Prerequisite: audition prior to first registration. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566D - Ensemble - Symphony** 566D-1 Ensemble-Symphony. Open to all experienced string, woodwind, brass, and percussion players. Plays standard and advanced orchestral literature, performs three or four concerts per year. Prerequisite: audition prior to first registration. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566E - Ensemble-Choral Union** 566E-1 Ensemble-Choral Union. Open to qualified students who desire to perform major choral-orchestral literature. Two concerts per year. Prerequisite: audition prior to first registration. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566F - Ensemble-Concert Choir** 566F-1 Ensemble-Concert Choir. A select group which performs advanced choral literature of all eras. Three or four concerts per year and tours as feasible. Prerequisite: audition prior to first registration. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566G - Ensemble-Chamber Singers** 566G-1 Ensemble-Chamber Singers. Open to all experienced singers. Emphasis on contemporary literature. Three or four concerts per year and tours as feasible. Prerequisite: audition required. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566H - Guitar Ensemble** 566H-1 Ensemble-Guitar Ensemble. Emphasizes the study, rehearsal, and performance of works from the Renaissance to the present, including music composed for then classical/jazz guitar and transcriptions. Prerequisite: Audition prior to first enrollment. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566I - Opera Workshop** 566I-1 Ensemble-Opera Workshop. Open to all appropriately experienced singers, actors, dancers, instrumentalists and theater technicians. Study of opera/operetta repertoire and performance techniques. Special approval needed from the instructor. Technology and Repair/Replacement fee: $15/credit hour.

**MUS566J - Jazz Ensemble** 566J-1 Ensemble-Jazz Ensemble. For students experienced with popular literature. Concerts and tours when feasible. Prerequisite: audition prior to first registration. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566K - Accompanying Lab** 566K-1 to 12 (1 or 2 per semester) Ensemble-Accompanying Lab. Experience, under supervision, in accompanying soloists and groups. Prerequisite: Studying at the MUS
340 level or above or with permission of instructor. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS566L - Chamber Music-Piano** 566L-1 to 12 Ensemble-Chamber Music-Piano. Groups of two to sixteen performers as organized and sponsored by individual faculty members. Includes duo-piano teams, piano in combination with other performers, and other instrumental/vocal combinations. Regular weekly rehearsals of appropriate music and public performance as feasible. Instrumentalists and singers experiment with new musical techniques and styles. Small ensembles will rehearse weekly. Special approval needed from the instructor. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS573 - Medieval Music** 573-3 Medieval Music. Music of the medieval world; Gregorian chant; the Tropes; secular songs of the troubadours and trouveres; the rise of polyphony; Ars Antiqua; organum and conductus; Ars Nova; Dunstable and English descant up to about 1450; types of notation. Non-music majors: special approval needed from the instructor.

**MUS574 - Renaissance Music** 574-3 Renaissance Music. Burgundian and Netherlands music from 1450 and its spread; Isaac and Josquin; 16th Century polyphony in France, Germany, Spain, and England; the rise of music for instruments and for solo voices. Non-music majors: special approval needed from the instructor.

**MUS580 - Graduate Composition** 580-3 Graduate Composition. Composition in the larger forms for solo and ensemble performance. Prerequisite: Approval of composition jury. Technology and Instrument Repair/Replacement fee: $15/credit hour.

**MUS595 - Research Paper** 595-1 Research Paper. A written report presenting the history and style of works performed in the graduate recital, MUS 598 or 498, or other topic relating to the student’s principal performing area or independent study project. Prerequisite: MUS 501 and approval of topic by the student’s Graduate Faculty Committee.

**MUS598 - Graduate Recital** 598-3 Graduate Recital. Preparation and presentation of a full solo recital in any applied field. The recital program should contain approximately 60 minutes of music. Prerequisite: completion of at least three credits in 540 in the appropriate field and approval of instructor. The Recital Jury certifies the acceptability of the recital program and the student’s preparedness 2-3 weeks prior to the scheduled public recital. The Recital Jury submits the public recital grade to the Director of Graduate Studies.

**MUS598A - Recital, CP Vocal** 598A-1 to 3 (1 to 2 per semester) Graduate Recital, CP Vocal. Preparation and presentation of a full recital with a vocalist. Restricted to Collaborative Piano majors only. Approval of performance jury. The performance jury certifies the acceptability of the completed recital and the grade to the graduate committee.

**MUS598B - Recital, CP Instrumental** 598B-1 to 3 (1 to 2 per semester) Graduate Recital, CP Instrumental. Preparation and presentation of a full recital with an instrumentalist. Restricted to Collaborative Piano majors only. Approval of performance jury. The performance jury certifies the acceptability of the completed recital and the grade to the graduate committee.

**MUS599 - Thesis** 599-2 to 6 Thesis. An intensive written study in the history, theory, teaching or philosophy of music; or the manuscript and parts (with tape recording when feasible) of a substantial musical composition or series of compositions accompanied by an analytical or explanatory document. Graded S/U or DEF. Prerequisite: MUS 501 and prior approval of topic or proposal by thesis director and graduate committee in music.

**MUS601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Reifinger, James L., Jr., Assistant Professor, D.M.E. Indiana University, 2007; 2013. Music Education.

Simmons, Margaret, Professor, Emerita, M.Mus., University of Illinois, 1976; 1977.

Stemper, Frank, Composer In Residence (Professor), Emeritus, Ph.D., University of California, Berkeley, 1981; 1983.

Pharmacology and Neuroscience

Graduate courses of study leading to the Master of Arts, Master of Science, and Doctor of Philosophy degrees in Pharmacology and Neuroscience are offered by Southern Illinois University School of Medicine, Department of Pharmacology. Course offerings in the graduate program have been designed so that graduate students may acquire a broad basic knowledge in different areas of Pharmacology and Neuroscience. Graduate students in the M.S. and Ph.D. programs may choose from a diversity of specializations when selecting a research advisor and a research topic. Graduate students in the M.A. program are not required to perform laboratory research and write a thesis. M.A. students can select a faculty advisor under whose direction they will complete their capstone project for completion of the degree.

The minimum requirements for admission to an advanced degree program in Pharmacology and Neuroscience are that all students must have an undergraduate degree in one of the biological sciences. Students may be admitted with a deficiency in this prerequisite, but it must be remedied at an accredited university that is approved by the Graduate School prior to completion of PHRM 550A and PHRM 550B. Students with undergraduate training in related areas, such as chemistry, physics, mathematics, computer science, psychology or engineering are strongly encouraged to consider graduate work in Pharmacology and Neuroscience.

Unrestricted admission into the master’s program requires an undergraduate grade point average (GPA) of 3.0 (A = 4.0). For unrestricted admission into the doctoral program, a GPA of 3.25 (A = 4.0) on all course work is required.

Each applicant must submit directly to the Department of Pharmacology:

1. A completed application, including a nonrefundable $65 application fee that must be submitted with their application for Admission to Graduate Study in Pharmacology and Neuroscience. Applicants must pay this fee by credit card.
2. Original official transcripts for all undergraduate and graduate coursework sent directly from each university or college attended by the applicant.
3. Copies of all diplomas.
4. A Career Statement (250 words or less) describing the career path that the applicant intends to pursue upon completion of the graduate study.
5. A Statement of Area of Research Interest (250 words). This statement should include the names of 2-3 Pharmacology Department faculty members whose research interests are most aligned with those of the applicant, as well as specific reasons for this selection. The faculty research interests can be found on the Department of Pharmacology Website. Applicants for the M.A. program are not required to submit this document.
6. Scores of the Graduate Record Examination (GRE) sent directly from Education Testing Service.
7. Three letters of recommendation from faculty familiar with the applicant’s potential.
8. A copy of the TOEFL scores (international students only) sent directly to the Department of Pharmacology in Springfield, as well as the official scores sent directly from the ETS®.
9. A resume or curriculum vitae.
10. A copy of current passport.
11. A copy of current Visa.

Equivalent course work completed at other institutions or in other collegiate units may be substituted for certain course requirements for graduate course work in Pharmacology and Neuroscience if approved by the Pharmacology and Neuroscience Graduate Program Committee and the Graduate School.
Performance Requirements to Maintain Student Status

Master’s Degree. An overall GPA of 3.0 (A = 4.0) in all graduate work in the program is required to remain in the program. Any grade below B in a Pharmacology and Neuroscience core course must be compensated for by retaking the course and earning at least a B grade.

Doctor of Philosophy Degree. An overall GPA of 3.0 (A = 4.0) in all graduate work in the program is required to remain in the program. Any grade below B in a Pharmacology and Neuroscience core course must be compensated for by retaking the course and earning at least a B grade.

Financial Assistance

The Pharmacology and Neuroscience Graduate Program offers financial assistance that includes tuition waivers. Research assistantships and departmental fellowships are available for M.S. and Ph.D. students; application for this support is made directly to the Department of Pharmacology. The department does not provide financial support to students in the Master of Arts program. The Graduate School governs limits on support.

M.S. and Ph.D. students should be aware that renewal of support in the form of a research assistantship or fellowship is contingent upon satisfactory performance evaluations. Performance is documented in an annual progress report and is evaluated by the student's advisor and the Graduate Program Committee. Failure to make satisfactory progress towards the degree, as documented in the annual progress report, may lead to termination of support. The performance evaluation considers both assigned duties relevant to graduate assistantships and progress in coursework and research.

Requirements Common to the Master of Science and Ph.D. Degrees in Pharmacology and Neuroscience

All M.S. and Ph.D. students are required to complete formal course work in two areas: (1) core courses and (2) electives.

The core courses are PHRM 501, PHRM 500 (Introduction to Seminar, Pharmacology Seminar; all graduate students must enroll in either PHRM 500 or PHRM 501 every Fall and Spring semester), PHRM 550A and PHRM 550B (Principles of Pharmacology), PHRM 577 (Neuroscience). In addition doctoral students are also required to successfully complete PHRM 530 (Advanced Pharmacology and Neuroscience). In accordance with the graduate school, maximum coursework for full-time graduate students is 6 hours per semester; 9 hours is the minimum. For a graduate student with a Graduate Fellowship, up to 6 hours per semester is the maximum; 9 hours is the minimum. After admission into candidacy, 6 hours is the minimum.

All graduate students must acquire training in the use of appropriate research tool(s) as required by the Graduate School and determined by the graduate student’s thesis/dissertation committee. All students are required to attain competence in PHRM 540 (Responsible Conduct of Research).

Students may fulfill the requirements for a research tool by taking any of the following courses: PHRM 552 (Statistics), MBMB 504 (Research Methods), or PHRM 551 (Methods in Pharmacology). Students may also attain competence by formal training, or by demonstrating competence in another manner acceptable to the graduate student's thesis/dissertation committee.

An advisory system in Pharmacology and Neuroscience will help students in planning their program. Upon their admission to the Master’s or Doctoral program, the Pharmacology and Neuroscience Graduate Program Director will advise students until the student chooses a research advisor. The programs outlined by students, their advisors and their thesis/dissertation committees are subject to approval by the Pharmacology and Neuroscience Graduate Program Committee. The choice of advisor and the formulation of the thesis/dissertation committee is an important step and should be carefully considered. Students are to choose a research advisor immediately after completion of core coursework (including required research tools and PHRM 551) and prelims.

As soon as a graduate student has selected a research advisor, a thesis/dissertation committee should be formed. The thesis committee for a student in the Master’s program will consist of a minimum of four members: the student’s research advisor (chair), two faculty members from the Department of Pharmacology and one faculty member from an outside department. The dissertation committee for a student in the Doctoral program will consist of a minimum of five members: the student’s research advisor (chair), two or three faculty members from the Department of Pharmacology, and one or two
faculty members from outside the department. Members of this committee should be able to contribute significantly in the area of the student’s research program. The student’s research advisor, acting through the Graduate Program Director and Chair of the Department of Pharmacology, will request approval of this committee from the Dean of the Graduate School. The Chair of the Department of Pharmacology and the Graduate Program Director are ex-officio members for all thesis/dissertation committees of which they are not formal members.

**Requirements for a Master of Arts Degree in Pharmacology and Neuroscience**

The application should be submitted online through the Graduate School. All applicants must submit three letters of recommendation from individuals who can comment on their academic abilities and character. The Graduate Record Exam (GRE) is required. Prerequisites for admission include an undergraduate degree in physical or biological science with a GPA of 3.0 or better. One year of physics, mathematics and chemistry is recommended. This program requires a nonrefundable $65.00 application fee that must be submitted with the application for Admissions to Graduate Study in Pharmacology and Neuroscience. Applicants may pay this fee by credit card. The graduate program committee of the department will normally examine the credentials, which include the application form, transcript(s), letters of recommendation, and GRE scores, only after all materials have been received. Students in the Master of Arts program do not receive a stipend or tuition waiver.

The faculty advisor will help plan course work and supervise the capstone project. A total of 34 semester hours at the 400- and 500-level is required for the Master of Arts degree. Of the total hours completed, at least 20 of these must be graded (A, B, C) hours. At least 17 of the total 34 must be 500-level courses. Of these 17, a minimum of six hours of PHRM 590 (Readings or Research in Pharmacology) is required. More than 6 hours of 590 may be taken, however only six may be counted toward the 500-level requirement. Students are not required to write a thesis for the Master of Arts degree. Upon completion of their coursework students are required to pass a comprehensive exit examination and complete a capstone project in order to receive their degree.

Requirements for a Master of Science Degree in Pharmacology and Neuroscience

1. A minimum of two-years of full-time study (one year in residence) is required for a Master of Science degree.
2. A total of 30 semester hours at the 400 and 500 level is required for a Master of Science degree. At least 15 of these hours must be in 500-level courses, of which a minimum of six hours should be PHRM 599 (Thesis Research).
3. A written comprehensive examination must be passed with at least a grade of B. It will be prepared, conducted and evaluated by the Pharmacology and Neuroscience Graduate Program Committee and will be taken upon completion of the major core course work. This examination will become a part of the student’s permanent file.
4. Before significant research has begun, a thesis plan is required. The thesis plan will be presented and discussed in an informal meeting with thesis committee members. A cover sheet for the graduate student’s thesis plan must be signed by all members of the student’s thesis committee and filed with the graduate program director.
5. A thesis must be completed in the student’s research area of interest and receive approval of the student’s thesis committee. The thesis is expected to be a competent, original research project carried out in a selected area under the research advisor’s supervision. It should include a statement of the problem, an adequate review of literature, a careful analysis of results by whatever appropriate methods and an interpretation of the findings. The student must submit a preliminary draft of the thesis to the research advisor at least 10 weeks prior to graduation. A corrected copy must be submitted to other members of the thesis committee no later than four weeks before the formal thesis defense seminar.
6. Results of the thesis research must be defended in a pharmacology seminar that must be announced at least two weeks in advance by sending out proper notices. Immediately following the seminar, an oral examination will be conducted by the student’s thesis committee. Any member of the University community may attend the seminar and participate on questioning and discussion subject to reasonable time limitations imposed by the committee chair. Only committee members may vote or make recommendations concerning acceptance of the thesis and the oral examination.
7. The student will be recommended for the degree if members of the student’s thesis committee judge both the thesis and the performance at the oral examination to be satisfactory. If approved, a thesis approval form will be completed, signed by the student’s major research advisor and the chair of the Department of Pharmacology, and transmitted to the Graduate School. The oral examination may be repeated once, no sooner than three months after the first examination. A second failure will result in dismissal from the Pharmacology and Neuroscience Graduate Program.
8. Each student is required to have six semester hours of PHRM 599 (Thesis Research). Each student who has completed all course work and registered for the minimum of thesis research hours is required to register in PHRM 601 (Continuing Enrollment) until completion of the degree.
9. The student is responsible for electronically submitting the thesis to the Graduate School. The student is responsible for submitting one bound copy to the graduate program curriculum office and one bound copy to the student’s research advisor at least three weeks prior to graduation.
10. Below is a representative schedule for completion of the requirements for the Master’s of Science Degree in Pharmacology and Neuroscience. Students are strongly encouraged to begin research as soon as possible by taking PHRM 590 (Readings or Research in Pharmacology). In addition to the core courses, the following elective courses will be offered. Students should take at least one elective course.

Elective courses:

Credits:

- PHRM 590  Readings or Research in Pharmacology (entire year)  (1-24)
- MBMB 530  Advanced Cellular Biology (Spring)  (3)
- PHRM 560  Geriatric Pharmacology  (3)
- PHRM 565  Principles of Toxicology  (3)
- PHRM 577  Neuroscience  (4)
- MBMB 560  Molecular Oncology  (3)
• Or other 500 level courses

Research Tools:

• PHRM 552 Applied Statistics (3)
• MBMB 504 Research Methods (Fall) (3)
• PHRM 551 Methods in Pharmacology (4)
• PHRM 540 Responsible Conduct of Research (1)

Summary of Requirements for Master of Science Degree

1. Achievement of a grade point average of at least a 3.0 (A = 4.0)
2. Completion of a research tool as required by the Graduate Program and the thesis committee
3. Comprehensive written exam of course work
4. Informal thesis proposal presentation with thesis committee
5. Interim meeting with thesis committee to review progress
6. Submission of thesis to research advisor (10 weeks prior to graduation)
7. Corrected thesis to thesis committee (four weeks prior date of defense)
8. Announcement of thesis defense (four weeks prior notice)
10. Submission of approved thesis to Graduate School (two copies), Graduate Program Director (one copy), and research advisor (one copy) three weeks prior to graduation
11. Submission of department clearance form
12. All theses will be electronically submitted

Requirements for a Doctor of Philosophy Degree in Pharmacology and Neuroscience

1. Students entering the Ph.D. program in Pharmacology and Neuroscience should meet the minimum requirements listed for the Master’s of Science degree program. Students entering the doctoral program in Pharmacology and Neuroscience may be admitted directly from a master’s program.
2. The Accelerated Entry (from a master’s program) is designed for students who make an early commitment to pursuing a doctoral degree. The Pharmacology and Neuroscience Graduate Program recommends this option after the student’s credentials, eligibility and performance have been reviewed. To be eligible for this option: (1) the student must have attained a 3.25 (A = 4.0) GPA in graduate course work, (2) the student must have successfully completed the core courses with a grade of B or better and (3) a research advisor with whom the student will work toward his/her degree should submit a letter of recommendation attesting to the student’s ability and potential to perform doctoral research. Approval of the review must be given by the Department of Pharmacology faculty and chair. The Chair of the Department will then request from the Graduate School a waiver of the master’s degree or master’s equivalency before entry into the doctoral program. The student’s research advisor and the Graduate Program Committee will establish specific course work requirements for the Ph.D. degree in accordance with the requirements of the program.
3. The Ph.D. degree may not be conferred fewer than six months nor more than five years after admission to candidacy, except upon approval of the Dean of the Graduate School. The student is admitted to Ph.D. candidacy after having completed the residency requirement, the research tools requirement and the comprehensive written preliminary examination.
4. A comprehensive written preliminary examination of course work must be passed with a grade of B or better. It will be prepared, conducted, and evaluated by the Pharmacology and Neuroscience Graduate Program Committee and will be given after completion of the core courses, typically during the summer session. This examination will become a part of the student’s permanent file. The preliminary examination may be repeated only once, no sooner than three months after the initial examination. Most course work should be completed prior to this examination, but this examination should precede the greater part of the dissertation research.
5. A dissertation proposal is required before the student begins significant research. The dissertation proposal will be presented as a Pharmacology seminar. Immediately following this seminar, the proposal will be defended orally before the student’s dissertation committee. A cover sheet for the graduate student’s dissertation committee must be signed by all members of the student’s dissertation committee and filed with the Graduate Program Director. The student is required to meet formally with the dissertation committee at least once between defense of the proposal and the dissertation defense. The purpose of this interim meeting is to review progress and to modify the planned experiments, if deemed necessary based on assessment of data collected as of that date. Results of the dissertation research should be published in peer-reviewed journals with the doctoral candidate as first author. The dissertation defense presentation will occur no earlier than one year after the dissertation proposal defense and after at least one paper has been submitted.
The dissertation is expected to be a competent, original research project that will make significant contribution to the body of scientific knowledge. As such, it should be of sufficient quality to merit publication in a peer-reviewed journal. It should include a statement of the problem, an adequate review of literature, a careful analysis of results by whatever methods are appropriate, and an interpretation of the findings.

6. Students must have at least one paper submitted for publication and are encouraged to obtain two or more publications from the graduate research work. Students will not be allowed to defend their dissertation until this requirement has been met.

7. The residency requirement for the doctorate must be fulfilled after admission to the doctoral program and before formal admission to doctoral candidacy. The residency requirement is satisfied by completion of 24 semester hours of graduate credit on campus as a doctoral student within a period not to exceed 4 calendar years. A doctoral student will be permitted to count no more than 6 hours of Dissertation Research towards achieving the 24 semester hour residency requirement. To meet the residency requirement, students may enroll in any other course that they have not taken that meets with the approval of their advisor and dissertation committee, e.g. any formal departmental or non-departmental courses and PHRM 590 (Readings or Research in Pharmacology).

8. The Graduate School requires completion of the residency requirement before making application to candidacy. Admission to candidacy is granted by the Dean of the Graduate School upon recommendation of the student’s dissertation committee or the Graduate Program Committee after the student has fulfilled the residency requirement for the doctoral degree, passed the comprehensive written preliminary examination and met the research tool requirement. The candidate must fulfill all degree requirements within a five-year period after admission to candidacy; otherwise the student may be required to take another preliminary examination and be admitted to candidacy a second time.

9. After admission to candidacy, the student must complete 24 hours of dissertation credit PHRM 600 (Dissertation Research) complete the dissertation research project and prepare the dissertation document to meet the requirements of the dissertation committee and the Graduate School. A student who has completed all formal course work, dissertation and candidacy credit requirements but has not completed and defended the dissertation must register for PHRM 601 (Continuing Enrollment) until completion of the degree.

10. A preliminary draft of the dissertation should be given to the research advisor at least 10 weeks prior to graduation; a corrected copy should be submitted to other committee members no later than four weeks before the dissertation defense seminar.

11. Results of the dissertation research must be defended in a Pharmacology seminar which must be announced at least two weeks in advance by sending out proper notices. Immediately following the Pharmacology Seminar, a final oral examination will be conducted covering the dissertation subject and other discipline related materials. Any member of the University community may attend the final oral examination and may participate in the questioning and discussion, subject to reasonable time limitations imposed by the committee chair. Only members of the committee may vote or make recommendations concerning acceptance of the dissertation and final examination. A student will be recommended for the degree if members of the dissertation committee judge both the dissertation and the performance at the final examination to be satisfactory. If approved, a dissertation approval form will be completed, signed by the student’s major research advisor, the Chair of the Department of Pharmacology and submitted to the Graduate School. The examination may be repeated once, no sooner than three months after the first examination. Failure of the second examination will result in dismissal from the Pharmacology and Neuroscience Graduate Program.

12. The student is responsible for electronically submitting the dissertation to the Graduate School. The student is responsible for submitting one bound copy to the graduate program curriculum office and one bound copy to the student’s research advisor prior to graduation.

13. Below is a representative schedule of the requirements for the Ph.D. degree in Pharmacology and Neuroscience (accelerated entry from master’s course). Note that alternative scheduling is available for those students who already have a Master of Science degree in Pharmacology and Neuroscience. In addition to the core courses, the advanced and elective courses will be offered. Students should take two advanced pharmacology courses and one elective course. Students are also strongly encouraged to start research as soon as possible by taking PHRM 590 (Readings or Research in Pharmacology).

**Elective courses**

**Credits:**
• PHRM 590  Readings or Research in Pharmacology (Entire year)  (1-24)
• MBMB 504  Research Methods (Fall)  (3)

**Summary of Requirements for Doctor of Philosophy Degree**

1. Achievement of a grade point average of at least 3.00 (A = 4.0)
2. 24 semester hours residency
3. Completion of research tools required by Graduate Program and Dissertation Committee
4. Comprehensive written preliminary exam of course work
5. Completion of four semester hours of PHRM 501 with a grade of B or better
6. Admission to candidacy
7. Oral defense of dissertation proposal
8. Interim meeting with dissertation committee to review progress
9. Submission of at least one manuscript, based on the student’s dissertation research, for publication to a peer-reviewed journal
10. Submission of dissertation to research advisor with copies of publications or submitted manuscripts (10 weeks prior to graduation)
11. Corrected dissertation to dissertation committee (four weeks prior to defense)
12. Completion of an approved dissertation with 24 hours of dissertation credit
13. Announcement of dissertation defense (two weeks prior notice)
14. Oral defense of dissertation
15. Submission of approved dissertation to Graduate School (two copies), graduate program office (one copy), and research advisor (one copy) three weeks prior to graduation
16. Submission of departmental clearance form
17. All dissertations will be electronically submitted

**Pharmacology and Neuroscience Courses**

**PHRM500 - Pharmacology Seminar** 500-1 to 16 Pharmacology Seminar. Presentation of research and current literature in pharmacology. Required of all graduate students in pharmacology after completion of four credit hours of 501. Requires presentation at a Journal Club session each fall semester and a formal
seminar each spring semester for duration of registration. Graded S/U only. Prerequisite: PHRM 501. (Springfield Only.)

**PHRM501 - Introduction to Seminar** 501-1 to 4 (1 per semester) Introduction to Seminar. Training in interpretation of research and current literature in order to enhance quality of seminar presentation. Enrollment for the initial four semesters is required of all beginning pharmacology graduate students. All other pharmacology graduate students must enroll in PHRM 500. (Springfield Only.)

**PHRM530 - Advanced Pharmacology** 530-3 Advanced Pharmacology & Neuroscience. The goal of this course is to understand the process involved in scientific discovery and research by reading, analyzing, critiquing and discussing scientific articles covering the field of Pharmacology and Neuroscience and the related field of cellular and molecular biology. Prerequisites: PHRM 550A Principles of Pharmacology and PHRM 577 Neuroscience. (Springfield Only).

**PHRM540 - Responsible Research** 540-1 Responsible Conduct of Research. This course will provide information on topics relevant to the ethical conduct of research, including conflict of interest, publication policies, animal and human subjects, peer review, and mentoring. No prerequisite.

**PHRM542 - Regulatory Pharmacology** 542-2 Regulatory Issues in Drug Development. This course will examine regulatory issues, including clinical trials, the FDA process for drug approval, technology transfer and intellectual property. No prerequisites.

**PHRM550A - Principles of Pharmacology** 550A-4 Principles of Pharmacology. A study of chemistry, pharmacodynamic actions, mechanisms of action, absorption, distribution, metabolism, elimination, adverse effects, interactions and toxic effects of drugs currently used in therapeutics. Three to five hours lecture, one to four hours discussion per week. Must be taken in sequence. No prerequisite required.

**PHRM550B - Principles of Pharmacology** 550B-4 Principles of Pharmacology. A study of chemistry, pharmacodynamic actions, mechanisms of action, absorption, distribution, metabolism, elimination, adverse effects, interactions and toxic effects of drugs currently used in therapeutics. Three to five hours lecture, one to four hours discussion per week. Must be taken in sequence. No prerequisite required.

**PHRM551 - Methods in Pharmacology** 551-4 Methods in Pharmacology. The main objective is to acquaint the student with various sophisticated laboratory equipment, basic techniques/principles of pharmacological experiments. One hour lecture and three hours laboratory twice weekly. This course is prerequisite to all advanced pharmacology courses. (Springfield Only.)

**PHRM552 - Basic Science Statistics** 552-3 Applied Statistics for the Basic Sciences. This course reviews introductory statistics and focuses on advanced statistics, linear and nonlinear modeling, applicable to basic bimedical sciences. The course will also provide students with experience in the use of statistical package computer programs for data analysis. No prerequisite required.

**PHRM555 - Cardiovascular Pharmacology** 555-3 Cardiovascular Pharmacology. A study of structure, biochemistry, electrophysiology, and neurogenic and humoral regulation of the cardiovascular system in normal and diseased states. Three hours of lecture per week. Prerequisite: PHRM 550A,B or equivalent, or consent of course coordinator. (Springfield Only.)

**PHRM560 - Geriatric Pharmacology** 560-3 Geriatric Pharmacology. A study covering age-related changes in the physiology of particular organ systems which lead to the prevalence of many diseases and to altered drug action in the elderly. Research issues in aging will be discussed emphasizing the biological substrates of altered pharmacodynamics and pharmacokinetics in the aged. Prerequisite: PHRM 550A,B. Special approval needed from the course coordinator. (Springfield Only.)

**PHRM565 - Principles of Toxicology** 565-3 Principles of Toxicology. This course deals with principles and understanding of phenomena of chemical-biologic interactions; a study of adverse chemical effects on living organisms and risk that chemical exposure poses to man/environment; deleterious, acute, chronic chemical effects on specific organs, tests to predict risks, facilitate search for safer chemicals and drugs and means of rational treatment of manifestations of toxicity; prominent discussion on drugs, medical devices, food additives, pesticides; regulation of toxic chemicals, hazardous wastes, toxic pollutants in water and air; and emphasis on diseases caused by and uniquely associated with drugs, diagnosis and treatments of such intoxicants. (Springfield Only.)
PHRM574 - Neuropharmacology 574-3 Neuropharmacology. (Same as PHSL 574) A detailed examination of the biochemical aspects of neuropharmacology with emphasis on neurotransmitters; their synthesis, storage, release and metabolism in the central and peripheral nervous system. Considerable emphasis is placed on major research developments (both past and present) that influence how one studies the action of drugs on the nervous system. Prerequisite: PHSL 410A/B and CHEM 451A/B.

PHRM577 - Neuroscience 577-4 Neuroscience. This course provides basic neuroscience knowledge covering the fundamental principles of neural cell biology, neurophysiology, neurochemistry, neuroanatomy and behavior. This knowledge is essential to understand the mode of action of the drugs acting on excitable cells including muscle, autonomic system and central nervous system. No prerequisite.

PHRM590 - Readings/Research Pharmacology 590-1 to 24 Readings or Research in Pharmacology. Special arrangements to be made with the instructor with whom the student wishes to work. Graded S/U only.

PHRM599 - Thesis 599-1 to 6 Thesis Research. Research for thesis for a Master's degree. Hours and credit to be arranged by chair and adviser.

PHRM600 - Dissertation Research 600-1 to 32 (1 to 12 per semester) Dissertation Research. Research for dissertation for the Ph.D. degree. Hours and credit to be arranged by chair and adviser.

PHRM601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

PHRM699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Pharmacology and Neuroscience Faculty

Arai, Amy C., Professor, Ph.D., (Springfield), Chiba University, 1987; 1999. Molecular and pharmacological modulation of AMPA-type glutamate receptors and its impact on synaptic physiology.

Caspary, Donald M., Distinguished Research Professor, Ph.D., (Springfield), New York University, 1971; 1973. Sensory physiology, neurophysiology, neuroanatomy, comparative physiology.

Copello, Julio A., Associate Professor, Ph.D., (Springfield), National University of La Plata, 1989; 2005. Physiological and pharmacological modulation of ryanodine receptors/calcium release channels and its impact on excitation-contraction coupling of skeletal muscle and heart.

Cox, Brandon, Assistant Professor, Ph.D., (Springfield), Georgetown University, 2008; 2013. Mechanism of auditory hair cell regeneration in the neonatal mouse cochlea and the postnatal maturation of the cochlea.

Elble, Randolph C., Associate Professor, Ph.D., (Springfield), Indiana University, 1986; 2005. Tumor suppression in breast cancer by CLCA family of chloride current regulators.

Faingold, Carl L., Distinguished Professor and Chair, Ph.D., (Springfield), Northwestern University, 1970; 1972. Convulsive seizure mechanisms and effects of anticonvulsants; pharmacological alterations of cerebral evoked potentials.

Premkumar, Louis S., Professor, Ph.D., (Springfield), Australian National University, 1992; 1999. Molecular neurobiology, molecular mechanism(s) underlying pain perception; structure and function of ion channels.

Ramkumar, Vickram, Professor, Ph.D., (Springfield), University of Maryland, 1986; 1992. Molecular pharmacology of adenosine receptors in cardiovascular system and central nervous systems.

Rybak, Leonard P., Professor, M.D., Ph.D., (Springfield), University of Minnesota, 1973; 1981. Investigation of mechanisms controlling ionic composition and resting potentials in the peripheral auditory apparatus using chinchilla model.
Philosophy

The Department of Philosophy offers a wide range of advanced courses in the major areas within the field leading to the M.A. and Ph.D. degrees. Students are offered a diversified curriculum not dominated by one school of thought or method of approach. The broad range of specializations represented by the faculty exposes students to a variety of aspects of philosophy and at the same time permits them to concentrate on their own particular area of interest. Graduate-level courses in such allied fields as the natural and social sciences, the arts, linguistics, law, and women’s studies offer supplements to the philosophy curriculum.

Graduate courses in philosophy may be used as a minor in programs leading to the Master of Arts or Master of Science in Education degrees. Students who do not plan to continue work in philosophy beyond the master’s degree level are encouraged to elect a graduate minor or to combine philosophy with another subject in a 40-hour double major.

All graduate students in philosophy are expected to have some supervised experience in teaching basic work in the field, either through regular teaching assistantships or through special assignments. Opportunities for intern experience at area junior or community colleges are made available.

Admission

Admission to the philosophy graduate program requires the following:

1. An online application form needs to be completed. A non-refundable application fee of $65 must be submitted with the application. This fee must be paid with a credit card.
2. Official transcripts of each school attended to be sent to the department.
3. A sample of written work, e.g., a term paper written for an undergraduate or graduate philosophy class, to be sent to the department’s director of graduate studies.
4. Three letters of recommendation from individuals familiar with the student’s work should be requested by the applicant to be sent to the department’s director of graduate studies.
5. Graduate Record Examination verbal and quantitative scores are requested but not required to be submitted to the department. TOEFL scores of at least 550 (paper score) or 220 (computer score) are required for all foreign students. These scores should be sent directly to the department. Scores for the Test of Spoken English are strongly recommended for foreign students applying for teaching assistantships.

The department expects an applicant for admission to its graduate program to have had at least 15 semester hours in philosophy or closely related theoretical subjects, including at least one semester in ethics, one in logic, and a year in the history of philosophy. The department may waive a portion of this requirement in favor of maturity and of quality of breadth of academic experience. Applicants will be required to make up serious background deficiencies by taking appropriate undergraduate philosophy courses without credit.

Application for financial assistance is made by filling out a financial assistance form. Applicants for Graduate School and Morris Fellowships should send these applications to the department by February 1 of the academic year preceding that for which application is made. Applications for departmental graduate assistantships should be sent to the department by April 1 of that year.

Entry into the Ph.D. Program. There are two routes by which a student may enter the doctoral program. The standard one is by completion of an M.A. degree in philosophy at an accredited institution. There is also one alternative available in special circumstances.

Accelerated Entry. After at least one semester in residence, a student enrolled in the M.A. program may petition the department’s faculty for accelerated entry into the Ph.D. program. Such entry is permitted only in special circumstances where a student has completed the equivalent of an M.A. degree at
Master of Arts Degree

The department’s M.A. degree program is designed both for students wishing to continue on for a Ph.D. degree and those who plan to receive a terminal master’s degree. For the latter students a minor concentration of up to nine semester hours outside philosophy is permitted, subject to approval by the director of graduate studies. In order to receive the M.A. degree the student must fulfill the following requirements:

1. Complete 30 semester hours of course work in philosophy or allied fields, six of which may be credited toward preparation of a thesis. Fifty percent of the course work must be at the 500 level or above.

2. Fulfillment of a formal logic requirement demonstrated in one of the four following ways:
   a. by having earned a grade of B or better in an undergraduate course covering sentential calculus and first order predicate logic
   b. by having earned a grade of B or better in PHIL 105 as an undergraduate at SIU
   c. by passing, with a grade of B or better during one’s first year of residence, an examination covering sentential calculus and first order predicate logic
   d. by passing with a grade of B or better PHIL 420 during one’s first year of residence

3. Fulfillment of a language or research tool requirement. This may be accomplished by passing, with a grade of B or better, one of the following:
   a. A 488 language course. (Note: these courses are offered through the Department of Foreign and Classical Languages at various times)
   b. An examination offered through the Department of Philosophy.
   c. A Directed Readings course offered either by the Department of Philosophy (PHIL 591) or (subject to approval by the Graduate Director) another academic unit, in which a philosophic text is translated and a final piece of research is produced.
   d. The student may appeal to the Director of Graduate Studies:
      i. To produce a translation of a previously untranslated text or article under professional guidance, whether within or outside the Philosophy Department.
      ii. For special dispensation, having already demonstrated sufficient competence in a language or research tool.

   None of these options for fulfilling the language/research tool requirement count toward satisfying the 30 hour requirement, except the Directed Readings (PHIL 591).

4. A written comprehensive examination of up to five hours in length, dealing with the formulations and solutions of the persistent problems of philosophy as treated by major thinkers, from Thales to the end of the 19th Century. Normally, this examination should be taken no later than at the beginning of one’s third semester of residence. Students who have incompletes older than one month may not sit for this exam. (Students are expected to make up incomplete grades within one month of completion of the course in which the incomplete was awarded.) The Graduate Committee may address special considerations. Students preparing for the exam should consult the Department’s Study Guide, available in the Graduate Secretary’s Office. The History Comprehensive exam will be offered once each year in the Fall Semester. The Comprehensive examination papers will be read by members of the Department’s faculty. These readers will submit to the Department’s Director of Graduate Studies a ‘high pass,’ ‘pass,’ ‘low pass’, or ‘fail’ recommendation. Students may petition the Graduate Director to retake the exam in the spring. A student may also petition the Graduate Director to complete a terminal M.A. The Graduate Committee will make the final decision on petitions.

5. Fulfillment of a research writing requirement by either of the following. In general, this requirement should be met no later than the end of one’s second year of residence.
   a. Presentation of an acceptable thesis, 50-75 pages in text length, to be written under the direction of a member of the Department. Six thesis hours is the maximum number of hours that can count for credit for the Master’s degree (paragraph A, above). A preliminary draft stating the thesis title, describing the problem to be investigated, the method to be used, the outline of the study, and a preliminary bibliography must be prepared in advance for the thesis advisor. An instruction booklet should be secured from the Graduate School or the Department Graduate Secretary, which specifies the proper form for these documents.
b. For a terminal M.A., the student may present three edited research papers, written in connection with graduate courses or seminars under three different individuals (whose prior approval must be obtained), to a special committee of three members, only one of whom may be an individual under whom the papers were originally written.

**Doctor of Philosophy Degree**

The Ph.D. degree in philosophy is designed to prepare students for college teaching and for research in their field of study. In order to receive the Ph.D. degree the student must fulfill the following requirements:

1. Completion of 30 semester hours of work beyond the M.A. level including:
   - Students, as part of their required coursework in the Ph.D. program, must take one course in each of the following areas as Course Distribution Requirements: Ancient/Medieval Philosophy, Modern Philosophy, 19th Century Philosophy, 20th Century Philosophy. The 19th and 20th Century Philosophy requirements must include one course taken in the American tradition and one course in the Continental Tradition.

2. Demonstration of competence in formal logic in one of the following ways:
   a. By having met the logic requirement for the Master’s degree.
   b. By having earned a grade of B or better in an undergraduate course covering sentential calculus and first order predicate logic.
   c. By having earned a grade of B or better in PHIL 105 as an undergraduate at SIU.
   d. By passing with a grade of B or better, during one’s first year of residence, an examination covering sentential calculus and first order predicate logic.
   e. By passing with a grade of B or better, PHIL 420 during one’s first year of residence.

3. Incoming doctoral students from other universities will be required to take the history comprehensive examination on the history of philosophy. This must be completed by the end of the first year of residence. Candidates who have already passed a comprehensive examination on the history of philosophy, or who have taken a range of courses in the history of philosophy may appeal to the Graduate Director to be waived from taking this examination.

4. Each doctoral candidate must take a general preliminary examination after (s)he has accumulated between 24 to 30 hours of credit beyond the Masters degree level and before (s)he begins work on the dissertation. (Students who have current incompletes may not sit for this examinations: Students are expected to make up incomplete grades within one month of completion of the course in which the incomplete was awarded. The Graduate Committee may address special considerations.) Candidates should see the Graduate Secretary for a copy of the Department’s Study Guide, which lists recommended readings and study questions. The examination will cover the following areas:
   a. Ancient Philosophy
   b. Medieval Philosophy.
   c. Modern Philosophy
   d. Nineteenth Century Philosophy
   e. Early Twentieth Century Philosophy

   This examination will consist of five sections, and students will write responses to five questions. The preliminary examination papers will be read by members of the Department’s faculty who will submit to the Department’s Director of Graduate Studies a ‘high pass,’ ‘pass,’ ‘low pass,’ or ‘fail’ recommendation. Any student whose exam receives a simple majority of failing recommendations will have failed the exam, and any students whose exam receives simple majority of high passes or passes or of a combination will be deemed to have passed the exam. Students may petition the Graduate Director to retake the exam in the spring. The Graduate Committee will make the final decision.

5. Fulfillment of a language/research tool requirement in one of the following ways:
   a. As indicated in the M.A. level requirements (paragraph I,C), for a second language in addition to that studied for the Master’s degree. The level of proficiency required is the same as the M.A. level and fulfilling the M.A. requirement counts as one of the two required.
   b. By showing greater proficiency in the same language that was used to meet the same requirements for the Master’s degree.
   c. By demonstrating a reading knowledge of one language as indicated in the M.A. level requirements and by completing, satisfactorily, at least two courses in a research related area, such as mathematics, history, archival work, editing, and so on, pursued outside the
Department at the graduate level. This option must be approved by the Graduate Director prior to being undertaken.

Fulfilling these requirements does not count toward the completion of 30 semester hours of work beyond the M.A. level, unless the work is done as Directed Readings (PHIL 591).

6. Admission to Candidacy – After 30 hours of course work have been completed, the logic and the language requirements have been fulfilled and the preliminary examinations passed, the Director of Graduate Studies (in the person of the Graduate Secretary) must file an Admit to Candidacy form with the Graduate School. This form is to be filed at least six months before the expected date of graduation. The student is responsible for seeing whether this form has, in fact, been filed. The student must have obtained the agreement of a faculty member to serve as dissertation director.

7. Dissertation
   a. The dissertation director is responsible for selecting a dissertation committee for the student. The committee shall consist of five graduate faculty members, at least one of whom shall be from an SIU graduate program outside the student’s academic unit. The Department allows for the possibility of faculty from other institutions to serve on the student’s committee in addition to the requisite number of SIU faculty. Once the dissertation director has been chosen and the committee formed, any subsequent changes to the dissertation directorship position must be approved by the Director of Graduate Studies. The appropriate change form must be sent to the Dean of the Graduate School for approval.
   b. In preparation for the writing of the dissertation, the candidate must have a prospectus review. The Director of the dissertation is responsible, in consultation with the candidate, for determining what appropriate background reading is necessary for beginning the dissertation and for the initial formulation of the project. The candidate will proceed to generate the prospectus. A prospectus should be approximately 10 - 20 pages in length; it should also include a proposed outline for the dissertation and a working bibliography. The Director of the dissertation will appoint a committee (four professors, including one from outside the Department) that will convene for the review of the prospectus. The review will help the candidate in the final formulation of the project before proceeding with the writing of the dissertation. The committee members will fill out a comment sheet for the candidate.
   c. While working on the dissertation, the student must register for the course numbered 600. The student is to devote at least one academic year of full-time work to complete the dissertation and will register for 24 semester hours of dissertation credit (Students may sign up for from 1 to 16 hours of PHIL 600 per semester). For example, the student wishing to complete the dissertation in one year may register for 12 hours of dissertation credit for each of two terms. Students who have completed 24 semester hours of dissertation credit and have not completed the doctoral dissertation are subject to the continuing enrollment requirement course number 601. Students are required to complete 24 hours of PHIL 600. The student may take only six of these 600-level hours prior to formal admission to candidacy, and only six of these hours will count towards the residency requirement.
   d. Students who have completed all but the dissertation requirements, but who have previously enrolled for the minimum number of research, thesis, or dissertation credit hours required of the degree, must enroll every semester for at least one hour until all degree requirements have been completed (Summer sessions exempt). Whether in residence or not, students are required to enroll in Continuing Enrollment (PHIL 601 - 1 hour per semester) if not otherwise enrolled. Concurrent registration in any other course is not acceptable. See the Graduate Catalog for more specific details, under heading GENERAL REGULATIONS AND PROCEDURES.
   e. The candidate will do the required research and write the dissertation. There is no given length for a dissertation, but 150 to 250 pages is the average length of a philosophy dissertation.
   f. The candidate and the dissertation director should work together until the document is ready to receive critical input from the committee. When the dissertation director indicates that the dissertation is ready for defense, it shall be required of the dissertation director to submit to each committee member a copy of the dissertation for the members’ examination. This must be delivered at least one month in advance of the scheduled defense. The committee must then decide whether or not the dissertation is acceptable for defense.
   g. The candidate shall conduct an oral defense of the dissertation and related topics in the field before the dissertation committee. The oral defense is open to the public. Only the committee members vote or make recommendations concerning the acceptance of the dissertation and final examination. At the discretion of the dissertation director, guests may be permitted to ask questions of the candidate after the committee members have conducted the examination. A
A student will be recommended for the degree of Doctor of Philosophy only if the members of the committee judge both the dissertation and the performance at the final oral examination to be satisfactory. One dissenting vote is permitted.

**Philosophy Courses**

**PHIL405 - Democratic Theory** 405-3 Democratic Theory. (Same as POLS 405) An examination of various aspects of democratic thought, including the liberal tradition and its impact upon the United States. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement. Prerequisite: POLS 114 or consent of instructor.

**PHIL415 - Logic of Social Sciences** 415-3 Logic of Social Sciences. (Same as SOC 415) An examination of the theoretical structure and nature of the social sciences and their epistemological foundations. The relationship of social theory to social criticism; theory and praxis. Historical experience and social objectivity. Social theory as practical knowledge.

**PHIL433 - Post-Colonialism** 433-3 Post-Colonialism Philosophy. This course focuses on African, Caribbean, and Latin American philosophers who have and continue to contribute to the development of post-colonial philosophy. In this class we will examine how post-colonial thinkers challenge and rework some of the main areas of philosophy, such as epistemology, political philosophy, ethics, philosophy of language, etc., by decentering the colonial assumptions that underpin these areas and their development. This class explores what this decentering means, not only for postcolonial theory, but also for how we think of race, class, gender and other forms of oppression and liberation, globally. Restricted to junior standing.

**PHIL434 - Media Ethics** 434-3 Media Ethics. (Same as JRNL 434) Explores the moral environment of the mass media and the ethical problems that confront media practitioners. Models of ethical decision-making and moral philosophy are introduced to encourage students to think critically about the mass media and their roles in modern society.

**PHIL441 - Philosophy of Politics** 441-3 Philosophy of Politics. (Same as POLS 403) The theory of political and social foundations; the theory of the state, justice, and revolution. Classical and contemporary readings such as: Plato, Aristotle, Hobbes, Locke, Rousseau, Marx, Dewey, Adorno and others. Prerequisite: PHIL 340 or PHIL 102 or consent of instructor.

**PHIL445 - Philosophy of Law** 445-3 Philosophy of Law. Study of contemporary philosophical essays on topics at the intersection of law and philosophy, such as abortion on demand, capital punishment, plea bargaining, campus speech codes, legalization of addictive drugs, and animal rights, and of what systematic philosophers, such as Thomas Hobbes, John Locke, John Stuart Mill, Karl Marx, and H.L.A. Hart, have written about the nature of a legal system and the appropriate realm of legal regulation.

**PHIL446A - Feminist Philosophy** 446A-Feminist Philosophy. (Same as WGSS 456A) A general survey of feminist theory and philosophical perspectives.

**PHIL446B - Special Topics Fem Philosophy** 446B-Special Topics in Feminist Philosophy. (Same as WGSS 456B) A special area in feminist philosophy explored in depth, such as Feminist Ethics, French Feminism, Feminist Philosophy of Science, etc.

**PHIL446C - Women Philosophers** 446C-3 Women Philosophers. (Same as WGSS 456C) Explores the work of one or more specific women philosophers, for example Hannah Arendt, Simone DeBeauvoir, etc.

**PHIL450 - Transcendentalism** 450-3 American Transcendentalism. This course will study the rise of Transcendentalism as a philosophical movement in early Nineteenth Century New England. Focus will be on Ralph Waldo Emerson and Henry David Thoreau with possible attention to Margaret Fuller and other figures like Hedge, Parker and Brownson.

**PHIL451 - Hist African Amer Philosophy** 451-3 History of African American Philosophy. (Same as AFR 499A) A survey of major thinkers and themes in the history of African American Philosophy from colonial
times to the 20th century. Prerequisite: at least one previous course in either Philosophy or Africana Studies with a grade of C or better.

**PHIL455 - Philosophy of Race** 455-3 Philosophy of Race. (Same as AFR 499B) A survey and critical examination of a range of theories on the nature and meaning of "race," the intersection of race with class and gender, and the promotion of racial progress. Such theories include racial realism and idealism, racial biologism, cultural race theory, social constructivist theory, integrationism, separatism, racial eliminativism, cosmopolitanism, and especially critical race theory. Prerequisite: at least one previous course in Philosophy or Africana Studies with a grade of C.

**PHIL459 - Topics Africana Philosophy** 459-1 to 6 Topics in Africana Philosophy. (Same as AFR 499C) A seminar on varying topics, themes, and figures in African, African American, and/or Caribbean Philosophy, e.g., "W.E.B. Du Bois and His Contemporaries," "Pan-Africanism," "Philosophies of Liberation," "Black Feminism," "Contemporary African Philosophy," "Philosophies of the Caribbean." Prerequisite: At least one previous course in Philosophy or Africana Studies with a minimum grade of C.

**PHIL460 - Philosophy of Art** 460-3 Philosophy of Art. We will examine several important theories that define art by focusing in on only one aspect, for example, imitation, expression, form, institutional setting, or even indefinability. What role does imagination play in each of these accounts, and does this tell us something important about how people experience their world?

**PHIL468A - Kant: Theoretical Philosophy** 468A-3 Kant-Theoretical Philosophy.

**PHIL468B - Kant: Practical Philosophy** 468B-3 Kant-Practical Philosophy.

**PHIL468C - Kant: Aesthetics/Teleology/Rel** 468C-3 Kant-Aesthetics, Teleology and Religion.

**PHIL471A - Medieval Philosophy** 471A-3 History of Medieval Philosophy. An examination of some of the most important figures and themes in medieval philosophical thought. Medieval debates in the area of metaphysics, natural philosophy, epistemology, ethics and politics will be explored in reading the works of such figures as Augustine, Boethius, Abelard Avicenna, Averroes, Maimonides, Bonaventure, Thomas Aquinas, Duns Scotus, Ockham and Nicholas of Cusa. Prerequisite: PHIL 304 or consent of instructor.

**PHIL471B - The Medieval Thinker** 471B-3 The Medieval Thinker. An examination of the thought of one of the central and most influential figures of the medieval world. Possible subjects of the course are Augustine of Hippo, Al-Ghazali, Moses Maimonides, Bonaventure, Thomas Aquinas, Duns Scotus, Dante Alighieri or William Ockham. Prerequisite: PHIL 304 or consent of instructor.

**PHIL472 - The Rationalists** 472-3 The Rationalists. Study of the philosophy of one or more of Descartes, Spinoza, Leibniz, Malebranche, Wolff. Prerequisite: PHIL 305A or B or consent of instructor.

**PHIL473A - The Empiricists-Locke** 473A-3 The Empiricists-Locke. Study of the principles of British empiricism as represented by Locke. May also include study of Berkeley. Prerequisite: PHIL 305 or consent of instructor.

**PHIL473B - The Empiricists-Hume** 473B-3 The Empiricists-Hume. Study of the principles of British empiricism as represented by Hume. May also include study of Berkeley. Prerequisite: PHIL 305 or consent of instructor.

**PHIL474 - Aristotle's Ethics** 474-3 Aristotle's Ethics. This course will focus on reading Aristotle's Nicomachean Ethics. Topics will include: the idea of a well-lived life (happiness), the relation of reason and desire, character formation, deliberative and moral reasoning, the types of human excellence, friendship and the role of philosophy in a well-lived life. Readings may include: Greek drama (e.g., Abitgone, Medea), Aristotle's Politics, and contemporary writers in "virtue ethics." Prerequisite: PHIL 304 with a grade of B or better.

**PHIL482 - Recent European Philosophy** 482-3 Recent European Philosophy. Philosophical trends in Europe from the end of the 19th Century to the present. Phenomenology, existentialism, the new Marxism, structuralism, and other developments. Language, history, culture and politics.

**PHIL485 - The Presocratics** 485-3 The Presocratics. The course will survey the Presocratic movement from the Milesians, Heraclitus and the Pythagoreans to the Eleatics, Empedocles, Anaxagoras and
Democritus. Topics will include: the idea of nature, origin/source/principle (arche), the mathematical and nature, Being, pluralism and monism, the atomic theory. Some attention may be paid to the Sophists and the Epicureans. Prerequisite: PHIL 304 with a minimum grade of B.

PHIL486 - Early American Philosophy 486-3 Early American Philosophy. From the Colonial Era to the Eve of World War I. This course will trace the transplantation of European philosophy to the New World and watch its unique process of development. Movements such as Puritanism, the theory of the American Revolution, the philosophical basis of the Constitution, transcendentalism, idealism, Darwinism and pragmatism and such figures as: Jonathan Edwards, Thomas Jefferson, James Madison, Ralph Waldo Emerson, Josiah Royce, Charles Sanders Peirce, and William James.

PHIL490 - Special Problems 490-1 to 8 Special Problems. Hours and credits to be arranged. Courses for qualified students who need to pursue certain topics further than regularly titled courses permit. Special topics announced from time to time. Students are invited to suggest topics. Special approval needed from the department.

PHIL500 - Metaphysics 500-3 Metaphysics. Seminar focusing on readings taken from major classical to contemporary writings in the subject of metaphysics (e.g., Aristotle's Metaphysics, Descartes' Principles, Whitehead's Process and Reality, etc.) or on special movements or on problems in the subject (e.g., substance, causation, reductivism, etc.).

PHIL501 - Philosophy of Religion 501-3 Philosophy of Religion. Analysis of a problem in philosophical theology or the phenomenology of religion or of the work of a particular thinker.

PHIL502 - Formal Semantics 502-3 Formal Semantics. (Same as LING 500) This course will introduce and develop formal mechanisms to encode meaning in natural language. We will deeply explore the topics of predication, definiteness, quantification, and semantic modeling. Mastery of these topics can be applied to many other semantic phenomena. By the end students will be able to: understand and evaluate scholarly literature in semantics; approach problems in natural language from the standpoint of a formal semanticist; understand and describe the role of semantics in generative approaches to language; and produce novel work in semantics.

PHIL530 - Theory of Knowledge 530-3 Theory of Knowledge. Seminar focusing on readings taken from major classical to contemporary writings in the theory of knowledge (e.g., Plato, Theaetetus; Aristotle, De Anima; Locke, Essay Concerning Human Understanding; Quine, Ontological Relativity; Rorty, The Mirror of Nature, etc.) or on movements or on problems in the subject (the object of knowledge, justification, method, etc.).

PHIL542 - Political & Legal Philosophy 542-3 Political and Legal Philosophy. Relations of law, morality, and politics, and consideration of problems and issues in philosophy of law.

PHIL545 - Ethics 545-3 Ethics. An examination of the fundamental assumptions underlying twentieth century British and American moral theory. Special attention is given to recent attempts to develop a psychologically realistic moral philosophy that avoids both moral absolutism and extreme forms of relativism.

PHIL551 - Introduction to Teaching 551-1 Introduction to Teaching and the Profession. Introduction to the methodology and ethics of teaching philosophy; supervision of teaching assistants. Restricted to philosophy graduate students on assistantship contract.

PHIL552 - Teaching Practicum 552-1 Teaching Practicum. Ongoing supervision of teaching assistants and discussion of pedagogical, ethical and professional issues. Prerequisite: PHIL 551.

PHIL553 - Supervision of Teaching 553-1 Supervision of Teaching for Graduate Assistants. Instruction in the methods of teaching philosophy and direct supervision of course teaching. Prerequisite: PHIL 551.
PHIL560 - Aesthetics 560-3 Aesthetics. Selected topics or writings.

PHIL562 - Phil of Human Communication 562-3 Philosophy of Human Communication. (See CMST 562)

PHIL563 - Philosophy of Nietzsche 563-3 Philosophy of Nietzsche. A reading of Nietzsche's works and critical discussion of his major themes in light of their historical and contemporary reception.

PHIL564 - Frankfurt Schl Critical Theory 564-3 Frankfurt School Critical Theory. An examination of the conceptual foundations and historic-philosophical theories of the Institute for Social Research School, known as critical theory, covering one or more of the major first- and second-generation thinkers: Horkheimer, Adorno, Marcuse, Habermas.

PHIL565 - Continenl Feminist Philosophy 565-3 Continental Feminist Philosophy. (Same as WGSS 565) An examination of major figures and problems in continental feminism, focusing on metaphysical, ethical, political, and aesthetic theories in the works of Beauvoir, Kristeva, Iragaray, Butler, and Kofman.

PHIL566 - Psychoanalysis 566-3 Psychoanalysis. An examination of psychoanalytic theory in the context of continental philosophy, studying the foundation of psychoanalysis and major developments since Freud, including French psychoanalytic theory, the British School, and developments in American psychoanalysis.

PHIL570 - American Idealism 570-3 American Idealism. One or more American idealists. Recent seminars have been devoted to the thought of Brand Blanshard and Peter A. Bertocci.

PHIL577A - Classcl American Philos-Peirce 577A-3 Classical American Philosophy-Peirce. A focused study of various aspects of Peirce's philosophy such as his pragmatism and semiotics.

PHIL577C - Classicl Amer Philos-Dewey 577C-3 Classical American Philosophy-Dewey. An examination of such themes in Dewey's philosophy as the influence of Darwin, nature and experience, aesthetics, technology and democracy.

PHIL577D - Classical Amer Philosophy-Mead 577D-3 Classical American Philosophy-Mead. A critical examination of Mead's theories regarding the social self and social life.

PHIL578 - Husserl 578-3 Husserl. A careful and systematic reading of Husserl's major works or treatment of important themes throughout his writings, such as, the problem of evidence, perception and rationality, time-consciousness, phenomenology of association, or the lifeworld.

PHIL579 - Heidegger 579-3 Heidegger. This course features a close reading of Heidegger's masterwork, BEING AND TIME, supplemented by selected later essay and secondary literature as suggested by the instructor.

PHIL580 - The Pre-Socratics 580-3 The Pre-Socratics. The emergence of Greek philosophy in the sixth century B.C., the Milesians, Heraclitus and the Pythagoreans; the Eleatic movement and Parmenides, and the critical systems of Empedocles, Anaxagoras, and atomism; concluding with a discussion of the Sophistic movement and Socrates. Epic, lyric and dramatic literature of the period may be examined as well as philosophical writings.

PHIL581 - Plato 581-3 Plato. Intensive reading of selected texts focusing on some aspect of Plato's thought or on Platonism as a movement.

PHIL582 - Aristotle 582-3 Aristotle. Intensive reading on several texts, analyzing selected portions of Aristotle’s thought.

PHIL583 - Merleau-Ponty 583-3 Merleau-Ponty. This course will focus on a major work by Merleau-Ponty (such as the Phenomenology of Perception), or will develop a major theme (perception, aesthetics, politics) in his thought by consulting several of his works.
PHIL584 - Levinas 584-3 Levinas. This course will be devoted to a detailed and systematic study of one of Levinas's major works, such as Totality and Infinity or Otherwise than Being, or to a survey of key elements of his thought contained in his many important essays.

PHIL587 - Kant 587-3 Kant.

PHIL588 - Hegel 588-3 Hegel.

PHIL589 - Scheler 589-3 Scheler. This course is devoted to a systematic reading of Scheler's works that concern any one of the many dimensions of his thought, for example, the nature of "person", ethics and value theory, the philosophy of religion, the sociology of knowledge, or politics.

PHIL590 - Graduate Seminar 590-1 to 12 General Graduate Seminar. Selected topics or problems in philosophy. Repeatable for 12 hours per term, 30 hours toward degree.

PHIL591 - Readings in Philosophy 591-1 to 16 Readings in Philosophy. Supervised readings for qualified students. Prerequisite: Students must have written permission from the Graduate Director to register for more than six hours at each level.

PHIL599 - Thesis 599-2 to 6 Thesis. Minimum of four hours to be counted towards a Master's degree.

PHIL600 - Dissertation 600-3 to 32 (1 to 16 per semester) Dissertation. Repeatable for 16 hours per term, 30 hours toward degree.

PHIL601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

PHIL699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Philosophy Faculty

Alexander, Thomas, Professor, Emeritus, Ph.D., Emory University, 1984; 1985.

Beardsworth, Sara, Associate Professor, Ph.D., University of Warwick, 1994; 2004. Nineteenth and twentieth century European philosophy, Kristeva.

Clarke, David S., Jr., Professor, Emeritus, Ph.D., Emory University, 1964; 1966.

Frankowski, Alfred, Assistant Professor, Ph.D., University of Oregon, 2012.

Gillan, Garth J., Professor, Emeritus, Ph.D., Duquesne University, 1966; 1969.

Hahn, Robert, Professor, Ph.D., Yale University, 1976; 1982. Greek philosophy, philosophy and history of science, Kant.

Hickman, Larry A., Professor, Emeritus, Ph.D., University of Texas at Austin, 1971; 1993.

Kelly, Matthew J., Associate Professor, Emeritus, Ph.D., University of Notre Dame, 1963; 1966.

Manfredi, Pat A., Associate Professor, Emeritus, Ph.D., University of Notre Dame, 1983; 1994.

Tyman, Stephen, Associate Professor, Emeritus, Ph.D., University of Toronto, 1980; 1980.

Physical Therapy

The Doctor of Physical Therapy (DPT) program is currently being developed by the School of Health Sciences within the College of Applied Sciences and Arts. Pending approval by the Commission on Accreditation in Physical Therapy Education (CAPTE), the first cohort will begin fall 2023.

The DPT is an entry-level clinical doctoral program designed using a hybrid model combining online and face-to-face courses in a weekend format to allow allied health professionals the flexibility to maintain their current occupation while advancing in the profession. Students applying to the DPT program must possess a bachelor degree. Preference will be given to applicants employed in an allied health profession. The doctorate curriculum is designed as a 3-year degree allowing students to attend on a weekend basis that meets nine times per semester.

Physical therapists are movement experts who optimize quality of life through prescribed exercise, hands-on care, and patient education. Physical therapists teach patients how to prevent or manage their condition to achieve long-term health benefits. Through patient examination and development of a plan of care, the will implement treatment techniques to promote improved mobility, reduced pain, restoration of function, and prevention of disability. PTs also work to prevent mobility loss through the development and implementation of fitness-and wellness-oriented programs.

Admission

The Doctor of Physical Therapy program will accept students to begin the course sequence each fall semester. In order to be considered for admission into the Doctor of Physical Therapy program, students must have obtained a bachelor degree prior to applying to the program. Preference is given to students with degrees in an allied health program and current employment in an allied health profession. A selective admissions process will be used to help ensure the most qualified applicants enter the DPT program.

The minimum admission guidelines of the DPT program are the criteria provided below: Candidates will be granted admittance into SIUC as a graduate student.

- Candidates will possess a bachelor degree
- Candidates must have obtained a C or better in the prerequisite classes including 1 semester of statistics, 2 semesters of basic college physics, 2 semesters of college general chemistry, 1 semester of medical terminology
- Minimum overall grade point average of 3.25 (4.0 scale)
- Three satisfactory professional recommendations.
- Demonstration of college-level writing ability. (written essay)
- Completed Physical Therapy program application
- Resume

Enrollment in the Doctor of Physical Therapy program is limited and based on a competitive process. Applicants will be evaluated on the overall submitted application package. Students will be selected by the Admissions Committee.

Degree Requirements

Students must have obtained a bachelor degree prior to application. The Doctor of Physical Therapy program is an entry-level hybrid weekend program designed for working professionals. The curriculum is designed as a 3-year, full-time program requiring a total of 108 credit hours that combines lecture, laboratory and assigned clinical experiences.
Successful completion of the program provides graduates with the educational requirements necessary to take the National Licensure Examination for the Physical Therapist (NPTE). Licensure is required for practice in each state.

Physician Assistant Studies

The Physician Assistant (PA) Program is offered by the School of Medicine Department of Family and Community Medicine. The Program utilizes a problem-based learning curriculum and clinical rotations to prepare primary care physician assistants to practice medicine with physician supervision.

The physician assistant is often the first health care provider to see a patient and perform a variety of tasks including collecting historical and physical examination data from the patient and ordering appropriate laboratory and diagnostic tests. The physician assistant synthesizes patient information and participates in formulating and executing a treatment plan to meet the patient’s needs. A physician assistant can evaluate psychological aspects of a patient’s health, counsel when appropriate, and teach patients about primary health problems. The physician assistant makes referrals when indicated and can perform procedures, such as EKGs, venipuncture, casting, suturing, and injections. The physician assistant prescribes medications. Graduates of the PA Program are trained as primary care providers and awarded the Master of Science in Physician Assistant Studies (MSPA) degree.

Admission

To be considered for enrollment in the Physician Assistant Program, prospective students must have at least overall, prerequisite, and science GPAs of 3.2 on a 4.0 scale, be admitted to the Graduate School, complete the program prerequisites and other requirements. This program requires a nonrefundable $65 application fee (subject to change without notice by the SIU Board of Trustees) that must be submitted with the application for admissions to graduate study in the Physician Assistant Program. Accepted applicants will be required to submit a nonrefundable enrollment deposit to reserve a position in the class. The deposit is due within 10 days of the program’s invitation to the applicant. The deposit will be applied to the student’s Bursar account two weeks after matriculation. If an applicant, who has accepted an offer for admission, decides to drop, the enrollment deposit will not be refunded. MSPA students will not receive the border state decrease adjustment to their tuition and fees. Therefore, all out-of-state students will pay a higher tuition rate. No advanced placement is awarded towards completion of PA Program courses, even if the applicant is licensed as a medical doctor.

Degree Requirements

Prospective students must have completed all of the following prerequisite courses before matriculation:
- Medical Terminology - one semester or proficiency
- Chemistry with labs - two semesters (select from General, Inorganic, Organic, or Biochemistry)
- Psychology - one semester
- Human Physiology - one semester (higher level preferred)
- Human Anatomy – one semester (higher level with cadaver lab preferred)
- Microbiology with lab-one semester
- General Biology for science majors, - one semester (may also select from Genetics or Cell and Molecular Biology)
- Statistics-one semester
- English Composition - one semester
- and CPR for Healthcare Providers. Graduate Record Examination (GRE), or MCAT scores must be submitted with application materials. Applicants must have successfully completed all the required prerequisites by the fall term prior to matriculation, with the exception of medical terminology and CPR for Healthcare Providers. Those must be completed by the end of the Spring term prior to matriculation.

Students who have completed or will soon complete a Bachelor’s degree and prerequisite course requirements should contact the program advisor or consult the program website for the most current application information.

Enrollment in the Physician Assistant Program is limited and based on a competitive process. Applicants will be evaluated on the overall submitted application package, including overall, science, and prerequisite
GPAs that must each be a 3.2 on a 4.0 scale, academic potential, motivation, familiarity with the PA role, oral and written communication skills, interpersonal skills, and potential for success in the SIU Carbondale PA Program and the PA profession. Students will be selected by the Admissions Committee for an interview with a maximum of 40 being admitted to the professional sequence. The MSPA Program is extremely rigorous and outside employment while in the Program is discouraged.

Students selected for the professional sequence will begin study in the summer session. Those accepted into the Program will be notified of acceptance by the spring semester prior to the summer of entry. The curriculum is a 26-month sequence with the first 12 months (Phase I) consisting of problem-based learning activities, basic science and clinical medicine courses, and clinical experiences. The next 14 months consist of clinical rotations with seminars (Phase II) and a summer preceptorship (Phase III). All students complete a Master's Project before graduation. During the clinical rotation phase, students may be required to relocate to other locations, called Hubsites, throughout Illinois. More information on deadlines or other requirements can be obtained from the PA Program Advisor at: paadvisement-L@listserv.siu.edu. All courses are restricted to Physician Assistant Majors.

Requirements for Major in Physician Assistant Studies Program

First Year Sequence (Phase I) - 54 hours
PA 500, PA 501, PA 502, PA 503, PA 504, PA 505, PA 506, PA 507, PA 511, PA 512, PA 513, PA 514, PA 515, PA 521, PA 522, PA 523, PA 524, PA 525, PA 531, PA 532, PA 533, PA 534, PA 535, PA 536, PA 547, PA 550, PA 599

Second Year (Phase II & Phase II) - 36 hours
PA 545, PA 551, PA 580, PA 581, PA 582, PA 583, PA 596, PA 599

Total - 90 hours

Curricular Guide

Phase I

• Semester 1 – Summer (Unit 1) – 10 Credit Hours
  # PA 500-1 Introduction to the Profession
  # PA 501-3 PBL, Unit 1
  # PA 511-1 Pharmacology I
  # PA 521-2 Clinical Anatomy and Integrated Sciences I
  # PA 531-2 Patient Evaluation I
  # PA 547-1 Research Methods

• Semester 2 – Fall (Units 2 & 3) – 22 Credit Hours
  # PA 502-3; PA 503-3 PBL, Units 2 and 3
  # PA 506-1 Patient Education/Behavioral Science
  # PA 507-1 Diversity in Medical Practice
  # PA 512-1; PA 513-1 Pharmacology II, III
  # PA 522-2; PA 523-2 Clinical Anatomy and Integrated Sciences II, III
  # PA 532-2; PA 533-2 Patient Evaluation II, III
  # PA 550-2 Clinical Mentoring - Phase I
  # PA 599-2 Master’s Seminar

• Semester 3 – Spring (Units 4 & 5) – 22 Credit Hours
  # PA 504-3; PA 505-3 PBL, Units 4 and 5
  # PA 506-1 Patient Education/Behavioral Science
  # PA 514-1; PA 515-1 Pharmacology IV, V
  # PA 524-2; PA 525-2 Clinical Anatomy and Integrated Sciences IV, V
  # PA 534-2 Clinical/Procedural Skills
  # PA 535-2 ACLS/EKG
  # PA 536-1 Introduction to the Surgical Setting
  # PA 550-2 Clinical Mentoring – Phase I
  # PA 599-2 Master’s Seminar

Phase II

• Semester 4 – Summer – 6 Credit Hours
# PA 551-1  Clinical Mentoring – Phase II
# PA 580-1  PBL Tutor Group – Phase II
# PA 581-3  Clinical Rotations I
# PA 599-1  Master’s Seminar

## Semester 5 – Fall – 12 Credit Hours
# PA 551-2  Clinical Mentoring – Phase II
# PA 580-2  PBL Tutor Group – Phase II
# PA 582-6  Clinical Rotations II
# PA 599-2  Master’s Seminar

## Semester 6 – Spring – 12 Credit Hours
# PA 551-2  Clinical Mentoring – Phase II
# PA 580-2  PBL Tutor Group – Phase II
# PA 583-6  Clinical Rotations III
# PA 599-2  Master’s Seminar

### Phase III

#### Semester 7 – Summer – 6 Credit Hours
# PA 545-3  Health Care Systems
# PA 596-3  Preceptorship

A limited number of electives are also available to MSPA students:

**PA Elective Courses:**

- PA 508 1-3 Holistic Medicine
- PA 585 1-6 Independent Study

**PA Continuing Enrollment:**

- PA 601-1

Used to complete the Master’s Project if all other Program requirements are met.

For more information on the MSPA degree offered by the Physician Assistant Program, visit our web site at: [siumed.edu/paprogram](http://siumed.edu/paprogram) or email the Program Advisor.

---

### Physician Assistant Studies Courses

**PA500 - Intro to PA Profession** 500-1 Introduction to the PA Profession. This course is designed to provide students with an understanding of professional issues of the Physician Assistant. Students are introduced to physician assistant history, standards of quality assurance, credentialing and licensure, regulations governing practice, business issues, and contract negotiation. Students explore opportunities in professional organizations and ways to strengthen their professional development.

**PA501 - PBL Group, Unit 1** 501-3 Problem Based Learning Group, Unit 1. This course is designed to focus on medical topics in cardiology and gastroenterology. Problem-based learning is utilized with emphasis on expanding the student's knowledge base, enhancing the student's clinical reasoning skills and self-directed learning, and improving interpersonal communication skills among students and patients. Limited to six to nine students per section.

**PA502 - PBL Group, Unit 2** 502-3 Problem Based Learning Group, Unit 2. This course is designed to focus on internal medicine topics in respiratory medicine, dermatology, urology, and infectious disease. Problem based learning is used with emphasis on expanding the student's knowledge base, enhancing clinical reasoning skills and self-directed learning, and improving interpersonal communication skills among students and patients.

**PA503 - PBL Group, Unit 3** 503-3 Problem Based Learning Group, Unit 3. This course is designed to focus on internal medicine topics in neurological and psychiatric diseases. Problem-based learned
is utilized with emphasis on expanding the student's knowledge base, enhancing the student's clinical reasoning skills and self-directed learning, and improving interpersonal communication skills among students and patients.

**PA504 - PBL Group, Unit 4** 504-3 Problem Based Learning Group, Unit 4. This course is designed to focus on health concerns, physiological and psychosocial issues of obstetrics, gynecology, urology, and pediatric gastroenterology. Problem based learning is utilized in expanding the student's knowledge base, clinical reasoning skills, self-directed learning, and improving interpersonal communication skills.

**PA505 - PBL Group, Unit 5** 505-3 Problem Based Learning Group, Unit 5. This course is designed to focus on medical topics related to endocrinology, renal disease, and metabolism. Problem-based learning is utilized with emphasis on expanding the student's knowledge base, enhancing the student's clinical reasoning skills and self-directed learning, and improving interpersonal communication skills among students and patients.

**PA506 - Beh Sci/Patient Ed** 506-1 to 3 Behavioral Science/Patient Education. This course explores behavioral science and patient education as it applies to the practice of medicine, as well as maintenance of health and prevention of illness.

**PA507 - Diversity - Med Practice** 507-1 Diversity in Medical Practice. Students examine issues that arise when delivering medical services to persons of diverse cultures, ethnicity, race, sexual orientation, gender, and socioeconomic status. Implications for providing medical services to persons who have experienced discrimination and disadvantage will be discussed.

**PA508 - Holistic Medicine** 508-1 to 3 Holistic Medicine. This course is designed to explore the current research, practice and applications of Mind-Body-Spirit Medicine (MBSM). Students will explore the use of various techniques for use in clinical and therapeutic settings as well as for maintaining their own personal health.

**PA511 - Pharmacology I** 511-1 Pharmacology I. This course introduces students to the therapeutic agents most commonly used for treatment of disorders of the cardiovascular and gastrointestinal systems. The practical aspects of dosage, schedules, therapeutic effect, adverse reactions, metabolism, mechanism of action and excretion are investigated.

**PA512 - Pharmacology II** 512-1 Pharmacology II. This course introduces students to the therapeutic agents most commonly used involving the pulmonary and integumentary systems, as well as those medications used in infectious disease. The practical aspects of dosage, schedules, therapeutic effect, adverse reactions, metabolism, method of action and excretion are investigated.

**PA513 - Pharmacology III** 513-1 Pharmacology III. This course introduces students to the therapeutic agents most commonly used in neurology and psychiatry. The practical aspects of dosage, schedules, therapeutic effect, adverse reactions, metabolism, method of action and excretion are investigated.

**PA514 - Pharmacology IV** 514-1 Pharmacology IV. This course introduces students to the therapeutic agents most commonly used in practice involving pregnancy, neonates, infants, sexually transmitted diseases, menopause, and prostate disorders. The practical aspects of dosage, schedules, therapeutic effect, adverse reactions, metabolism, method of action and excretion are investigated.

**PA515 - Pharmacology V** 515-1 Pharmacology V. This course introduces students to the therapeutic agents most commonly used in treating diabetes, thyroid disorders, renal disease, and fluid disorders. The practical aspects of dosage, schedules, therapeutic effect, adverse reactions, metabolism, method of action and excretion are investigated.

**PA521 - Clin Anat & Int Sci I** 521-2 Clinical Anatomy and Integrated Sciences I. This course involves the study of anatomical structures with cadaveric materials, clinical applications, physiology and pathophysiology of selected systems. Radiology, microscopy, and embryology issues will be included.

**PA522 - Clin Anat & Int Sci II** 522-2 Clinical Anatomy and Integrated Sciences II. This course involves the study of anatomical structures with cadaveric materials, clinical applications, physiology and pathophysiology of selected systems. Radiology, microscopy, and embryology issues will be included.
PA523 - Clin Anat & Int Sci III 523-2 Clinical Anatomy and Integrated Sciences III. This course involves the study of anatomical structures with cadaveric materials, clinical applications, physiology and pathophysiology of selected systems. Radiology, microscopy, and embryology issues will be included.

PA524 - Clin Anat & Int Sci IV 524-2 Clinical Anatomy and Integrated Sciences IV. This course involves the study of anatomical structures with cadaveric materials, clinical applications, physiology and pathophysiology of selected systems. Radiology, microscopy, and embryology issues will be included.

PA525 - Clin Anat & Int Sci V 525-2 Clinical Anatomy and Integrated Sciences V. This course involves the study of anatomical structures with cadaveric materials, clinical applications, physiology and pathophysiology of selected systems. Radiology, microscopy, and embryology issues will be included.

PA531 - Patient Evaluation I 531-2 Patient Evaluation I. This course is designed to prepare the Physician Assistant student in taking a patient history and performing portions of the physical exam. Interview and communication skills, medical terminology, and recording patient information are also explored.

PA532 - Patient Evaluation II 532-2 Patient Evaluation II. This course is designed to build on student's knowledge of pertinent physical exam skills, and increase knowledge regarding the medical history and clinical procedures. Students continue to improve skills in areas of the patient interview, medical terminology, and recording patient information.

PA533 - Patient Evaluation III 533-2 Patient Evaluation III. This course is designed to build on students' knowledge of physical exam skills, introduce new systems, and improve skills in areas of the patient interview, medical terminology, and recording patient information.

PA534 - Clinic Procedure Skills 534-2 Clinical Procedural Skills. Students develop and expand their skills in performance of clinical procedural skills needed for competency in office and hospital-based practice. Topics will include central line placement, IV therapy, EKG, lumbar puncture, venipuncture, casting, suturing, and thoracentesis.

PA535 - EKG & ACLS 535-2 EKG and Advanced Cardiac Life Support (ACLS). EKG/ACLS is designed to provide the knowledge and skills needed to read EKGs and to evaluate and manage the first ten minutes of an adult ventricular fibrillation/tachycardia arrest. Students learn to manage ten core ACLS cases, a respiratory emergency, four types of cardiac arrest, four types of pre-arrest emergencies, and stroke.

PA536 - Intro Surgical Setting 536-1 Introduction to the Surgical Setting. During this course, the student will be exposed to the various aspects of the general surgical setting. Fundamentals to be introduced include pre- and post-operative care, sterile technique, gowning and gloving, and the identification of surgical instruments.

PA545 - Health Care Systems 545-3 Health Care Systems. This course is designed to cover the following topics: delivery of health care, standards of care and guidelines as they affect practice issues, cost and effectiveness, economics of health care, insurance and health care, indigent medical care, the health workforce, access to care, health policy, and technology (electronic medical records, email, telemedicine).

PA547 - Research Methods & EBM 547-1 Research Methods and Evidence Based Medicine (EBM). This course focuses on scientific inquiry within the Physician Assistant practice, covering the application of basic research methodology including problem formation, research designs, sampling, measurement, data analysis technical writing and dissemination of research results, and research ethics. Students will also focus on developing evidence-based medicine (EBM) skills.

PA550 - Clinical Mentoring-Phase I 550-1 to 4 Clinical Mentoring - Phase I. Students gain clinical experience in the community setting by participating in a one-half day per week continuity clinic in Family Medicine with a designated mentor. Students register for this course during the first fall semester of the program. They register again for this course in the spring semester, until Phase II.

PA551 - Clinical Mentoring-Phase II 551-1 to 5 Clinical Mentoring - Phase II. Students continue to gain clinical experience in the community setting by participating in a one-half day per week continuity clinic in Family Medicine with a designated mentor. Students register for this course during the second
summer semester of the program. They register again for this course in subsequent semesters, until the Preceptorship. Maximum hours per term are 2.

**PA580 - PBL Tutor Group Phase II** 580-1 to 6 Problem Based Learning (PBL) Group Phase II. Phase II students participate in a one-half day per week problem based learning tutor group, in which they engage in the Barrowsian method of problem-based learning at respective Hubsites. This course is designated to foster independence in clinical reasoning and knowledge synthesis by working through patient problems, as well as improving the application of knowledge to clinical practice.

**PA581 - Clinical Rotations I** 581-3 Clinical Rotations I. This is the first (summer semester) in a three course sequence of supervised clinical experience in a variety of settings and nine specialty areas.

**PA582 - Clinical Rotations II** 582-6 Clinical Rotations II. This is the second course (fall semester) in a three course sequence of supervised clinical experience in a variety of settings and nine specialty areas.

**PA583 - Clinical Rotations III** 583-6 Clinical Rotations III. This is the third course (spring semester) in a three course sequence of supervised clinical experience in a variety of settings and nine specialty areas.

**PA585 - Independent Study** 585-1 to 6 Independent Study. Directed independent study in selected areas of Physician Assistant studies.

**PA596 - Preceptorship** 596-3 Preceptorship. The eight week preceptorship simulates the role of the Master's prepared graduate Physician Assistant, with supervision by the clinical preceptor. This is generally completed in a primary care area of medicine.

**PA599 - Master's Seminar** 599-1 to 15 Master's Seminar. This is a longitudinal course taken over several semesters in which students work on proposal design, development, construction, research, writing, and project presentation. The Master's Seminar culminates in defense of a Grand Rounds Presentation, Community Project Presentation, or a published Problem-Based Learning Module and Tutor Guide. Restricted to Physician Assistant majors.

**PA601 - Continuing Enrollment** 601-1 Continuing Enrollment. For graduate students who have not completed the program and are in the process of their Master's Project. The student must have completed all other program requirements to be eligible to register for this course. Concurrent enrollment in any other courses is not permitted. S/U or DEF grades only. Prerequisite: Completion of all Program coursework except PA 599.

### Physician Assistant Studies Faculty

**Debeljuk, Gloria,** Clinical Assistant Professor, Family and Community Medicine, MD, MSW, LCSW, School of Medicine, University of Buenos Aires, Argentina, Southern Illinois University, 1967, 1994.

**Diemer, Donald,** *Program Director* and Clinical Assistant Professor, Family and Community Medicine, DHSc, MPAS, PA-C, University of Nebraska, Lincoln, 1996.

**Johnson, Molly T.,** Clinical Assistant Professor, Family and Community Medicine, MS, APN, Pace University, Lienhard School of Nursing, Pleasantville NY, 1982.

**Kelly, Cheri,** Academic Coordinator and Clinical Assistant Professor, Family and Community Medicine, M.S., PA-C, Southern Illinois University, 1990, 1999.

**Miller, Brooke,** Clinical Coordinator and Assistant Professor, Family and Community Medicine, MPAS, PA-C, University of Nebraska Medical Center, 2006, 2009.

**Pierson, William T.,** Clinical Assistant Professor, Family and Community Medicine, Ph.D., Southwest College of Naturopathic Medicine, Tempe, AZ, 2000.

**Pulver, Rhonda,** Clinical Coordinator and Assistant Professor, Family and Community Medicine, MS, PA-C, Wayne State University, 2005; 2010.

**Reichert, Rob,** Instructor of Pharmacology, Family and Community Medicine, PharmD, St. Louis College of Pharmacy, 2011.

**Ryznyk, Laurie,** *Associate Director* and Associate Professor, Family and Community Medicine, MPAS, PA-C, University of Nebraska Medical Center, 2001, 1995.
Scott, M. Kate, Assistant Professor, Family and Community Medicine, MPAS, PA-C, University of Nebraska Medical Center, 2016, 1995.
Smith, Sidney, Clinical Assistant Professor, Family and Community Medicine, M.D., F.A.A.P, Northwestern University School of Medicine, 1965.
Waldyke, Kathryn, Clinical Assistant Professor, Family and Community Medicine, M.D., Michigan State University, 1990; 2011.

Physics

The Department of Physics offers graduate programs leading to the Master of Science degree with a major in physics and to the Doctor of Philosophy degree in Applied Physics.

This program requires a $65 application fee that must be submitted with the application for Admissions to Graduate Study in Physics. Applicants must pay this fee by credit card.

Master of Science

In order to be considered for admission into the Master of Science program, students must have a baccalaureate degree in Physics, or equivalent. Applicants for admission to the Master’s degree program are strongly encouraged to submit GRE scores together with other application materials.

In addition to the general requirements of the Graduate School for the Master of Science degree, the student must complete PHYS 500A (or mathematics equivalent), PHYS 510, PHYS 520A, PHYS 520B, and PHYS 530A, PHYS 530B.

Other specific requirements for the Master’s degree are as follows:
A thesis is required, based upon not more than six nor less than three semester hours of 599-level credit. The 599 credit requirement is in addition to the minimum 15-hour requirement at the 500 level as stated in this catalog and should be distributed preferably over several terms of enrollment.

Each candidate for an M. S. degree is required to pass an examination, written or oral or both, covering graduate work including the thesis; the examination is administered by the student's thesis committee.

Each candidate for an M.S. degree is required to earn one credit in PHYS 581 by lecturing in the graduate seminar. An oral thesis defense satisfies this requirement.

Master of Science (Non-Thesis/Research Paper Option)

In order to be considered for admission into the Master of Science Non-Thesis Option (MSNT) program, students must have a baccalaureate degree in Physics, or equivalent.

In addition to the general requirements of the Graduate School for the Master of Science degree, the student must complete PHYS 425, PHYS 450, PHYS 500A (or mathematics equivalent), PHYS 510, PHYS 520A, PHYS 520B and PHYS 530A. Those students enrolled in the MS non-thesis option who have taken PHYS 425 and/or PHYS 450 as part of their undergraduate curriculum may replace those courses with any other 500-level course and/or 400-level course (after consulting with their respective advisory committee).

An advanced experimental or computational, or theoretical project resulting in a research paper is required, based upon not less than four semester hours of PHYS 598. The research paper has to be completed by the end of the second year in the program. It should be written as a standard scientific text (i.e., with appropriate referencing), and it should be between 15 and 20 pages in length. The research paper should explain in detail the project undertaken by the student enrolled in the MS non-thesis option and must contain background and motivation (with proper literature review), and problem statement and goals of the project, results, a discussion related to the work undertaken in accomplishing the goals and objectives, conclusions and plans for future work. The style that should be used is that appropriate for a manuscript submitted to Phys. Rev.
Further, it is also noted that the outcome of the project (in the form of the research paper) has to be approved by the student’s advisory committee. Once the research paper is approved, an electronic version of the research paper must be filed in the Graduate School by submission at Open SIU.

Other specific requirements for the MSNT are as follows: Each candidate for an MSNT degree is required to have a CGPA of 3.0 (in 4.0 scale) throughout the program.

Doctor of Philosophy in Applied Physics

Program Description and Objectives

The Department of Physics offers a graduate program at the doctoral level leading to the Ph.D. degree in Applied Physics. The Applied Physics doctoral program is designed to provide advanced studies both in the application of the concepts and methods of physics to various research areas, including: materials, nanoscience and nanotechnology, quantum computing, computational physics, condensed matter physics, magnetism, thin films, and in the application of the methods and techniques of physics to the study of industrial processes and products. The Applied Physics Ph.D. provides students with broad, in-depth knowledge of the fundamentals of those areas of physics relevant to applications, as well as with advanced specialized knowledge in applied areas. The ultimate goal of this program is to produce graduates that are competent scientific researchers in Applied Physics, i.e., researchers that are capable of initiating and completing an independent investigation in a specific sub-field of Applied Physics. The graduates of this program will be able to fill the needs of academia, industry and government in the area of Applied Physics.

Admissions

Applicants will be admitted into the Applied Physics Ph.D. following one of three routes:

1. **Direct admission**: this option requires the applicant to have completed a Bachelor’s degree in Physics (or its equivalent) with a grade point average of at least 3.25 (in exceptional cases the Department may solicit the Graduate School to waive this requirement).
2. **Accelerated admission**: students are admitted into the Master’s degree program and after one semester they can be considered for admission into the doctoral program if they show exceptional research potential and have accumulated a GPA of 3.25.
3. **Regular admission**: for students who have completed a Master’s degree in Physics or equivalent and have accumulated a GPA of 3.25 in graduate level courses (in exceptional cases the Department may solicit the Graduate School to waive this requirement). The students obtaining their Master’s degree at SIU will have satisfied most of the core course requirements for the Applied Physics Ph.D.

All applicants for admission to the doctoral program in Applied Physics must submit Graduate Record Examination (GRE) scores together with other required application materials.

Course Requirements

In addition to the general requirements of the Graduate School, the student must complete a sequence of Required Basic Core Courses, and Elective Courses that includes:

**Required Basic Core Courses**

- PHYS 500A  Mathematical Methods in Physics (3 credits)
- PHYS 510  Classical Mechanics (3 credits)
- PHYS 520A, PHYS 520B  Electromagnetic Theory (6 credits)
- PHYS 530A, PHYS 530B  Quantum Mechanics II (6 credits)

In addition, students are required to complete one additional course (3 credits only) from those in the following list:

**Elective Courses**
• PHYS 550  Computational Physics
• PHYS 545A  Statistical Mechanics II (3 credits only)
• PHYS 565A  Solid State Physics II (3 credits only)
• SCI 501A, SCI 501B  Research Transmission Electron Microscopy
• SCI 502A, SCI 502B  Research Scanning Electron Microscopy
• PHYS 575  Special Topics in Physics: Magnetism and Magnetic Materials
• PHYS 575  Special Topics in Physics
• PHYS 575  Special Topics in Physics: Spectroscopy of Materials
• PHYS 575  Special Topics in Physics: Surface Science
• PHYS 575  Special Topics in Physics: Quantum Computing
• PHYS 575  Special Topics in Physics: Hybrid Materials
• PHYS 575  Special Topics in Physics: Advanced Optics

The following courses are not allowed to count as electives: PHYS 599 (Thesis), PHYS 600 (Dissertation), and PHYS 601 (Continuing Enrollment).

Starting no later than the beginning of the third semester in the program, students will be required to enroll for two consecutive semesters in PHYS 570, a 3-credit hour per semester Special Project course.

In addition to the above-described coursework, while working on their dissertation, the students must complete 24 credit hours of PHYS 600 (Dissertation) in no less than two academic years of full-time work.

Admission to Candidacy

To be admitted to candidacy, the prospective doctoral candidate must satisfactorily complete the Qualifying Procedure. The Qualifying Procedure includes:

1. Three written examinations
2. A research proposal
3. The student's performance in Required Basic Core courses
4. The recommendation of the research advisor (if the student has a research advisor).

1. Three written examinations:

The students will take three written exams. The exams are chosen by the student from the following five possible topics: Quantum Mechanics, Classical Mechanics, Statistical Mechanics, Electromagnetic Theory and Solid State Physics.

The students will have to select three out of the five exams to take (i.e., they will not be allowed to pick the best three out of four or five).

The students will have to pass the three exams, as evaluated and determined by the Graduate Committee.

These written exams will be prepared at the undergraduate level. That is, at a level that is consistent with the corresponding courses at the 200-, 300-, 400-level at SIU.

The level will be specified by the corresponding textbooks used in these courses at SIU.

For Classical Mechanics Halliday and Resnick (or equivalent) specifies the 200-level and Symon or Thornton and Marion specifies the 300- and 400-level;

For E+M Theory, Halliday and Resnick (or equivalent) specifies the 200-level and Lorrain and Corson, or Griffiths or equivalent specifies the 300- and 400-level;

For Statistical Mechanics, at the 400-level only, “Thermal Physics” by Kittel and Kroemer specifies the level;

For Quantum Mechanics at the 300-level “Modern Physics” by Serway, Moser, and Moyer or equivalent, specifies the level, and “Introduction to Quantum Mechanics” (Second Edition), by David J. Griffiths specifies the 400 level.

For Solid State Physics, at the 400-level only “Introduction to Solid State Physics” by Kittel specifies the level.

The written exams will consist of a set of questions from which the students will get to choose a subset that they will answer. Where it is applicable (i.e. for Classical Mechanics, E+M and Quantum), some of the questions will be at the 200-level and others at the 300- and 400-level.
The written exams will be held one per day over the course of a week.

2. A written research proposal:
The research proposal has to be completed by the end of the second year in the program.
It should be written as standard scientific text (i.e., with appropriate referencing), and it should be between 10 and 15 pages in length.
The style that should be used is that appropriate for a manuscript submitted to Phys. Rev.

3. The course performance of the student in the required classes for the program. (Must have a grade point average of 3.25 (out of 4) in the basic core curriculum in Applied Physics).

4. If the student is engaged in research by the end of the first year in the program, the recommendation of the research advisor.

General Considerations

Students are expected to have completed the Qualifying Procedure by the end of the fourth semester in the doctoral program.

Students are required to take the exam at the end of their first Spring semester in the program.
The written exam portion of the Qualifying Procedure will be prepared and administered by an examination committee appointed by the Chair.
The written exam portion of the Qualifying Procedure will be held on a yearly basis, generally in early August.

Students will be allowed to participate in the exam portion of the qualifying procedure twice. The one exception to the above rule is that students who so desire can have a “free try” at the Qualifying Examination by taking it at the beginning of their first semester in the program without this instance counting as one of the two allowed opportunities to take the exam. Students are encouraged to attempt the written exam portion of the Qualifying Procedure as early as the beginning of their first semester in the program in order to make use of the free option.

Students will be allowed to change one exam area (of the three) per each time they take the exams. This adds up to a maximum total of two changes, if the student takes the exams in the free try. Note that what is limited to two times (or to three times, if the student takes advantage of the free try) is the number of times the student can participate in the qualifying exam procedure; i.e. it is not that the student can repeat two times each individual exam. The students can participate in the exam process twice (or three times with the free try) and must pass three exams at the end of their tries.

Those students who start at SIU in the Spring semester will have their free try at the beginning of the following Fall; they will be required to take this free try.

Students who complete the Master’s degree at SIU and then proceed to the Ph.D. will be considered as incoming doctoral students for the purpose of the free try exam. They will, however, be required to take this free try.

Those students who begin at SIU in the Fall can have their free try only in the Fall in which they start.
The Graduate Committee will evaluate all four points of the Qualifying Procedure for each student applicant and will decide on admission to candidacy for each applicant. The Graduate Committee will decide on what weight will be given to the different portions of the Qualifying Procedure.

Upon successful completion of the Qualifying Procedure, the Department will request the Graduate School to admit the student to candidacy for the doctoral degree, once the applicant has completed the required 24 hour residency period.

Dissertation Committee and Dissertation Examination

No later than six months after admission to candidacy, the student will request the appointment of a dissertation committee to supervise the student’s dissertation. This committee will include five faculty members, with at least one from outside the Department of Physics, at least one doing research in theoretical physics, and at least one doing research in experimental physics. The majority of the committee shall consist of faculty members from the Department of Physics. The committee will be chaired, in most cases, by the student's dissertation supervisor. The committee will meet within two months after its formation to determine if any specific coursework, beyond the core curriculum, is
to be required of the student, and to determine if any special requirements might be appropriate for the student’s particular research area. At this time (i.e., no later than eight months after admission to candidacy), the committee will be given a formal, written dissertation proposal and an oral presentation on the proposed research by the student.

**Dissertation Defense**

Upon completion of a dissertation demonstrating the student’s ability to conduct independent research, the dissertation committee will administer a final oral examination. This oral examination shall consist of a defense of the dissertation. Upon the satisfactory completion of both the dissertation and the final examination, the committee will recommend the student for the doctoral degree.

**Physics Courses**

**PHYS420 - Electricity and Magnetism II** 420-3 Electricity and Magnetism II. Induced electromotive force, quasisteady currents and fields, Maxwell's equations, electromagnetic waves and radiation, with applications. Prerequisite: PHYS 320 with grade of C or better.

**PHYS424 - Electronics** 424-4 Electronics for Scientists. Coordinated two-hour lecture and four-hour laboratory study of electronics. Emphasis is on overall modern electronics and its applications in the experimental research laboratory setting. Topics include DC and AC circuit theory, measurement techniques, semiconductor active devices, operational amplifiers and feedback, digital circuits, Boolean algebra, microprocessors and large scale integration, digital to analog/analog to digital conversion, and data acquisition. Prerequisite: PHYS 203B or 205B and MATH 111 with a grade of C or better.

**PHYS425 - Solid State Physics** 425-3 Solid State Physics I. Structure of a crystalline solid; lattice vibrations and thermal properties; electrons in metals; band theory; electrons and holes in semiconductors; opto-electronic phenomena in solids; dielectric and magnetic properties; superconductivity. Prerequisite: PHYS 310, 320, and 430 with grade of C or better.

**PHYS428 - Modern Optics and Lasers** 428-3 Modern Optics and Lasers. Properties of electromagnetic waves in space and media, polarization and interference phenomena and devices, electro- and magneto-optic effects, optical gain, and lasers. Prerequisite: PHYS 420 with grade of C or better.

**PHYS430 - Quantum Mechanics I** 430-3 Quantum Mechanics I. An introduction to quantum phenomena, wells, barriers, Hydrogenic atoms, angular momentum and identical particles. Prerequisite: PHYS 305, 310, and 320 with a grade of C or better. Prior or concurrent enrollment in PHYS 420 is desirable.

**PHYS431 - Atomic Physics** 431-3 Atomic and Molecular Physics I. Atomic spectra and structure; molecular spectra and structure. Prerequisite: PHYS 430 with a grade of C or better.

**PHYS432 - Nuclear Physics** 432-3 Nuclear Physics I. Basic nuclear properties and structure; radioactivity, nuclear excitation, and reactions, nuclear forces; fission and fusion. Prerequisite: PHYS 430 with grade of C or better.

**PHYS440 - Quantum Mechanics II** 440-3 Applications of Quantum Mechanics. Applications of quantum mechanics to include time-independent and time-dependent perturbation theory, variational methods, introduction to solid-state physics and materials. Prerequisite: PHYS 430 with grade of C or better.

**PHYS445 - Thermodynamics/Stat Mech** 445-3 Thermodynamics and Statistical Mechanics. Laws of thermodynamics; Principles and Applications of Classical and Quantum Statistical Mechanics; Introduction to Phase Transitions. Prerequisites: PHYS 305 and PHYS 301 both with a grade of C or better; MATH 251 with a grade of C or better.

**PHYS450 - Advanced Lab** 450-3 Advanced Laboratory Techniques. Introduces students to experimental research and encourages them to develop and carry out experiments. Prerequisite: PHYS 305 and PHYS 355 with a grade of C or better. Lab fee: $50.
PHYS458 - Laser and Optics Lab 458-2 Laser and Optical Physics Laboratory. Properties of laser beams and resonators, fluorescence and two photon spectroscopy, diffraction, Fourier transformation and frequency filtering, electro- and magneto-optic modulation, fiber propagation and related experiments. Prerequisite: PHYS 428 with grade of C or better.

PHYS470 - Special Projects 470-1 to 3 Special Projects. Each student chooses or is assigned a definite investigative project or topic. Prerequisite: PHYS 310, 320 or consent of instructor.

PHYS475 - Special Topics 475-3 Special Topics in Physics. These courses are advanced special topics in physics designed to enable undergraduate and graduate students to become well-versed in a particular and current research area of physics with the intention of preparing them for future research and/or industrial applications. They are offered as the need arises and interest and time permit. Students are required to give presentations. Special approval needed from the instructor.

PHYS476B - Biological Physics 476B-3 Introduction to Biological Physics. This course provides an introduction to how physics principles and techniques are applied to study and describe complex and emergent processes found at the biological and biomolecular level. This course combines several topics not usually covered in standard undergraduate science courses to qualify and quantify cell structure, mechanics, dynamics, self-assembly, and biological functionality. Prerequisites: Two semesters of an introductory physics sequence (PHYS 203A,B or PHYS 205A,B) with minimum grades of C, MATH 150 or concurrent enrollment.

PHYS476C - Computational Physics 476C-3 Introduction to Computational Physics. This course provides foundational knowledge in the usage of computers for solving natural problems in different types of physical systems. The class will give a thorough understanding of various numerical techniques such as interpolating/extrapolating data, integrating ordinary and partial differential equations, and solving linear algebra problems. Students will be guided to write programs for solving several applied physics problems in classical and modern physics. A brief survey of High Performance Computing will also be presented giving students a working knowledge of scientific computing. Prerequisites: Two semesters of an introductory physics sequence (PHYS 203A,B or PHYS 205A,B), with minimum grades of C and concurrent enrollment in PHYS 305. PHYS 301, PHYS 310 and PHYS 320 are not required but recommended.

PHYS476M - Materials Physics 476M-3 Introduction to Materials Science and NanoPhysics. This course will serve as an introductory course in Materials Science and Nanoscale Physics. Topics to be covered include: The need for studying Materials Science, classification of materials, advanced concepts in materials manufacturing, modern materials, nanoscale materials, electrical, thermal, magnetic and optical properties of materials, tailoring materials for application development, Techniques of Materials characterization, Nanomaterials and Nanotechnology, and Societal Impact. Prerequisites: Two semesters of an introductory physics sequence (PHYS 203A,B or PHYS 205A,B), with minimum grades of C and concurrent enrollment.

PHYS476Q - Quantum Entanglement 476Q-3 Quantum Entanglement. This course provides an introduction to the theory of quantum entanglement and its use in quantum information science, especially for the task of communication. Topics include quantum teleportation, entanglement measures, and nonlocality. Prerequisite: MATH 221 with a grade of C or better.

PHYS530A - Quantum Mechanics II 530A-3 Quantum Mechanics II. Basic principles; the harmonic oscillator and the hydrogen atom; scattering; approximation and perturbation methods; spin, statistics.

PHYS530B - Quantum Mechanics II 530B-3 Quantum Mechanics II. Basic principles; the harmonic oscillator and the hydrogen atom; scattering; approximation and perturbation methods; spin, statistics.

PHYS531A - Advanced Quantum Mechanics 531A-3 Advanced Quantum Mechanics. Quantum theory of radiation; applications of field theory to elementary particles; covariant quantum electrodynamics; renormalization; special topics. Content varies somewhat with instructor. Prerequisite: PHYS 530. Special approval needed.

PHYS535A - Atomic/Molecular Physics II 535A-3 Atomic and Molecular Physics II. Recent experimental methods in atomic and molecular spectroscopy with applications. Detailed quantum mechanical and group theoretical treatment of atomic and molecular systems. Reactions between atomic systems. Special approval needed from the instructor.

PHYS545A - Statistical Mechanics II 545A-3 Statistical Mechanics II. Principles of classical and quantum equilibrium statistics; fluctuation phenomena; special topics in equilibrium and non-equilibrium phenomena.

PHYS545B - Statistical Mechanics II 545B-3 Statistical Mechanics II. Principles of classical and quantum equilibrium statistics; fluctuation phenomena; special topics in equilibrium and non-equilibrium phenomena.

PHYS550 - Computational Physics 550-3 Computational Physics. Using modern computers to solve physics problems. Integration of ordinary and partial differential equations, interpolation and extrapolation, finite element analysis, linear and nonlinear equations, eigensystems, optimization, root finding, Monte Carlo simulations, etc.

PHYS560A - Nuclear Physics II 560A-3 Nuclear Physics II. Fundamental properties and systematics of nuclei, scattering theory, nuclear two-body problem, nuclear models, nuclear many-body problem, electromagnetic properties of nuclei, radioactivity, nuclear reactions. Prerequisite: PHYS 530. Special approval needed from the instructor.

PHYS565B - Solid State Physics II 565B-3 Solid State Physics II. Fundamental concepts in solid state physics. Lattice vibrations, band theory of solids, the Fermi surface, dynamics of electrons. Transport, cohesive, optical, magnetic and other properties of solids. Special approval needed from the instructor.

PHYS570 - Special Projects in Physics 570-1 to 36 Special Projects in Physics. Each student works on a definite investigative topic under the supervision of a faculty sponsor. The projects are taken from the current research in the department. Resourcefulness and initiative are required. Graded S/U only. Special approval needed from the instructor.

PHYS575 - Selected Topics in Physics 575-1 to 12 (1 to 4 per topic for a maximum of three topics) Special Topics in Physics. The courses reflect special research interests of the faculty and current developments in physics. They are offered as the need arises and interest and time permit. Students are required to give presentations. Special approval needed from the instructor.
PHYS581 - Graduate Seminar 581-1 to 3 (1,1,1) Graduate Seminar. Lectures on special topics by students, faculty, or invited scholars; participation is required of all graduate students. For credit each student may present a seminar in the form of a lecture on a theoretical or experimental topic, a demonstration experiment or apparatus critique. Graded S/U only.

PHYS598 - Research 598-1 to 50 (1 to 12 per semester) Research. Maximum credit 50 hours. Graded S/U only. Special approval needed from the instructor.

PHYS599 - Thesis 599-1 to 6 Thesis.

PHYS600 - Dissertation 600-1 to 30 Dissertation. Minimum 24 credit hours required for Ph.D. degree. Special approval needed from the instructor.

PHYS601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

PHYS699 - Postdoctoral Research 699-1 Postdoctoral Research. One credit hour per semester. Concurrent enrollment in any other course is not permitted. Must be a Postdoctoral Fellow.

Talapatra, Saikat, Professor, Ph.D., Southern Illinois University, Carbondale. 2002; 2007.

Plant Biology

The School of Biological Sciences offers graduate programs leading to a Master of Science in Plant Biology, Master of Science in Biological Sciences, Master of Science in Education in the Biological Sciences, and the Doctor of Philosophy in Plant Biology. The first master’s degree was granted in 1948, and the first Ph.D. degree in 1965.

An advisory committee of faculty members from plant biology as well as other programs helps design individualized programs to meet the specific educational goals and career aspirations of each student. The broadly diversified faculty of the department provide research emphases in ecology and
environmental science, systematics and biodiversity, and molecular biology and physiology. Graduate degrees in plant biology will be awarded to students in recognition of their ability to do independent research as evidenced by the acceptance of a thesis or dissertation and the demonstration of competent scholastic ability.

The Plant Biology program is housed in various major teaching and research facilities on the campus of Southern Illinois University (SIU) including Life Science II and Life Science III. Faculty members provide research and laboratory facilities for students. The department supplies centralized facilities including laboratories for basic specialized computing, a core facility for nutrient analyses, and molecular biology, as well as herbaria, growth chambers, field sites and greenhouses. Excellent cooperative research arrangements are available for activities including electron microscopy, chemical analyses and research photography. Southern Illinois University is strategically located in the transition zones of several North American biomes and is within a one hour drive to spectacular natural areas including Pine Hills Research Natural Area, Cypress Creek Bioreserve, Garden of the Gods, and Little Grand Canyon.

Admission

Applications should be completed online, addressed to the Director of Graduate Studies of the program, and must include a completed application form, three letters of recommendation, official transcripts of all institutions of higher learning attended, official GRE scores including the verbal, quantitative and analytical portions of the examination and grade point average. Students must meet both Graduate School and program admission requirements. Financial assistance is available on a competitive basis. To be considered for financial support a financial assistance form must also be submitted. Acceptance to the department is contingent on availability of faculty to advise the student, research space and facilities, and satisfactory evidence of funding to complete the degree program (e.g., teaching assistantship, research assistantship, or fellowship). International students whose native language is not English must have a minimum of 550 or the equivalent electronic score on the TOEFL test.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Plant Biology. Applicants must pay this fee by credit card.

Applicants must have a Bachelor’s Degree (or equivalent) in a life science. A student who does not meet these requirements may petition for admission to the department, or register as a regular nondeclared graduate student. Either prior to admission or during their programs, students must complete a course in each of the following categories: 1) plant systematics or plant diversity; 2) plant physiology, cell biology or molecular biology; and 3) plant ecology or environmental science. A course in plant morphology or plant anatomy is strongly recommended. A student who does not meet these requirements may petition for admission to the department. All deficiencies, as determined by the student’s advisory committee, must be removed during the first year by taking appropriate courses (graduate or undergraduate) with grades of B or better in each course. Criteria for admission include GPA (3.25 or higher), GRE scores, letters of recommendation, transcripts and availability of faculty, space and facilities. To be admitted into the program, at least one faculty member must be willing to serve as major advisor or co-advisor if the student desires to work in the Forestry or Plant, Soil and Agricultural Systems departments. Students desiring financial assistance for Fall semester admission should consult the Plant Biology website for the deadline. Application forms are available from the Director of Graduate Studies in the Department of Plant Biology or the Departmental website.

Accelerated Entry into the Doctoral Program

A student who enters a master’s program in plant biology may, if deemed capable, be permitted to apply to be accelerated into a program leading directly to a Ph.D. degree, subject to the following conditions and specifications. In order to qualify for consideration, each endorsed student must: (a) have been in the SIU plant biology graduate program no less than one or more than two academic terms when proposed; (b) have a graduate grade point average of 3.75 or better; (c) have no grade in any course (conditional or otherwise) in his/her graduate record of less than B; and (d) be deemed by the Evaluation and Awards Committee as having superior capabilities.

Once advanced into the doctoral program by the Graduate School, the student shall be eligible to qualify for graduate assistance totaling no more than 60 months. Once in the doctoral program, the student is subject to all of the academic, retention, and exit requirements for a regular doctoral program.

If for any reason, a student who has been admitted into the accelerated entry program fails to complete the doctoral program successfully that student shall not automatically be re-admitted into the master’s
program. Instead, the student may (if so desired) make formal application for admission into the master’s program in plant biology.

**Advisement**

Following admission to the program and before registration for course work, the student must consult a staff member representing the field of major interest or, if this is unknown, the Director of Graduate Studies of the department, for assistance in planning the first registration. At registration, deficiencies and specific departmental requirements must be considered first.

Within the first semester of the program, the student must select a faculty member who is willing to serve as the major adviser. The major adviser in consultation with the student will then select appropriate faculty members to comprise the advisory committee. For the master’s degree program, a minimum of three people shall make up the advisory committee, two of whom must be voting members of the Plant Biology program. The advisory committee for the Ph.D. degree program will be composed of at least five people, three of whom must be voting members of the plant biology faculty and one who must be from outside the department. The Director of Graduate Studies is an ex-officio member of each graduate advisory committee. The duties of the advisory committee are to:

1. plan, approve and file with the Director of Graduate Studies the program of study, and advise the student on his/her research program especially during the first semester of the student’s program;
2. read, evaluate and file with the Director of Graduate Studies the student’s research prospectus by the end of the second semester of the student’s program;
3. monitor the student’s progress and make any necessary changes in the program, while providing advice and direction on the student’s research problem;
4. annually assess the student’s progress and file recommendations as to retention or dismissal from the program with the Evaluation and Awards Committee;
5. participate in and grade the written and oral preliminary examinations for the Ph.D. degree;
6. read and evaluate the student’s thesis or dissertation and make suggestions for improvement; and
7. administer the defense and final examination of the thesis or dissertation.

In either degree program, following establishment of the advisory committee and before advance registration for the second term, the student must meet with the advisory committee to discuss the program of courses for the degree and plans for research. In this regard, the committee is empowered to require work in areas with which the student’s interests are allied. The advisory committee will advise the student on the selection of readings on general and historical topics of importance that may not be encountered in formal courses. Copies of the approved program of courses and the plans for research must be placed in the departmental files by the beginning of the second semester of study. An approved research prospectus must be completed and filed with the Director of Graduate Studies by the end of the second semester.

**Research and Training Assignments**

Research is required of each student in the program. In addition, each term the student must be engaged in a training assignment which supplements formal course work through professional activities such as research or teaching. The assignment varies according to the needs, professional goals, and competencies of the student, and increases in responsibility as the student progresses. The assignments require from 10 to twenty hours of service per week.

**Academic Retention**

The general regulations of the Graduate School with respect to academic retention shall be followed. In addition, no course in which the grade is below C shall count toward the degree or fulfillment of any requirement, but the grade will be included in the grade point average. No more than five hours of C work in graduate courses will count toward the degree.

All students are subject to regular review by the department’s Evaluation and Awards committee. Those not attaining the minimum acceptable academic standards or who in any way fail to meet any other scheduled requirements or standards may be dropped from the program.
Program and Course Requirements

Appeals

Appeals for variations from the departmental graduate program must be presented in writing to the plant biology graduate faculty meeting as a committee of the whole. Appeals must receive approval from a majority of the total plant biology graduate faculty.

Appeals for changes in the student’s graduate advisory committee or changes in the original program must be approved in the following order: (1) approval from adviser; (2) approval from the remaining members of the student’s advisory committee. Student appeals for change of major advisor must be presented in writing to the plant biology graduate faculty meeting as a committee of the whole. Appeals must receive approval from the Evaluation and Awards Committee.

The Master's Degree

A minimum of 30 hours of graduate credit is required beyond the bachelor’s degree. Fifty percent of courses counted towards the degree must be at the 500-level. Those 30 hours should include 1) a minimum of 22 hours of graded credit hours in Plant Biology or related disciplines (nine of these 22 may be graded individualized instruction courses); 2) seminars as specified below (generally four credit hours); and 3) at least four (maximum six) hours of thesis (PLB 599). All master's degree students must earn a minimum of two credit hours in graduate seminars during each year of residence. Students may take any seminar course approved by their committee, with the following constraints: 1) student must take PLB 590 their first fall term; and 2) student must take PLB 580 each spring semester of residency. A graduate minor of at least 10 graduate hours may or may not be required; this is to be determined by the student and the advisory committee.

As noted in the admission requirements, students will take, either prior to or during their program, at least one course in each of the following categories: 1) plant systematics; 2) plant physiology, cell biology, or plant molecular biology; and 3) ecology or environmental science. Courses in plant anatomy and genetics are strongly recommended also if they have not been taken prior to the program.

A program of study must be approved by the student’s advisory committee and be submitted to the Director of Graduate Studies by the end of the first semester of the student's program. Changes made after the first semester of the student’s program must be approved by the student’s advisory committee.

At the time of completion of the thesis, the student must schedule a public seminar presentation of the thesis material and a comprehensive examination over the thesis and related subject matter.

The Ph.D. Degree

Course work for the degree shall include: 1) a minimum of 20 graded credit hours in plant biology or related disciplines; 2) minimum of two tools courses (generally 6 to 12 graded credit hours); 3) seminar credits as specified below (generally 8 to 10); and 4) minimum of 30 credit hours of dissertation research (PLB 600). All Ph.D. students must earn a minimum of two credit hours in graduate seminars each year until they advance to candidacy. Students may take any seminar course approved by their committee, with the following constraints: 1) student must take PLB 590 their first fall term; and 2) student must take PLB 580 each spring semester until they advance to candidacy.

As noted in the admission requirements, students will take, either prior to or during their program, courses in all of the following categories: 1) plant systematics; 2) plant physiology; cell biology or plant molecular biology; and 3) ecology or environmental science. Courses in plant anatomy and genetics are strongly recommended if they have not been taken prior to starting the program.

A program of study must be approved by the student’s advisory committee and be submitted to the Director of Graduate Studies by the end of the first semester of the student’s program. Changes made after the first semester of the student’s program must be approved by the student’s advisory committee.
Tools

The student shall demonstrate knowledge in two research tools approved by the student’s advisory committee. A tool is defined as training in laboratory (or field) methods, instrumentation, technology, or communication skills including languages that are integral to the pursuance of research. Specific tool requirements will be determined by the student’s advisory committee. Courses used to satisfy tools requirements shall not be applied toward the total number of hours required for the degree. A foreign language tool can be met by earning a grade of B or better in appropriate 400-level course (Latin, French, German, Spanish or Russian). The tool can also be met by passing an Educational Testing Service (ETS) examination in French, German, Spanish or Russian. The ETS passing level for French and German is 465 and for Russian and Spanish it is 440. A statistical tool requirement can be satisfied by earning a B or better in one or more graduate level statistics courses. Course recommendations for statistical tools include Ecological Analysis of Communities (PLB 444), Biostatistics (PLB 557), Advanced Biostatistics (PLB 558). Other courses can be used to satisfy a statistical tool requirement if deemed acceptable by the student’s advisory committee. Tool requirements other than language or statistics may be completed by earning a B or better in courses approved by the student’s advisory committee, including courses from outside the program.

Concentration in Ecology

Students opting to declare ecology as a concentration shall follow the same program as students in the Plant Biology Ph.D. degree program that do not declare a concentration subject to the following courses: Course work for the concentration in ecology shall consist of a minimum of 20 semester hours at the seminar, readings, research, dissertation, and research tool requirements. The Seminar in Plant Biology Ecology (PLB 589A) or equivalent must be taken every Fall and Spring semester until student achieves candidacy. The student's advisory committee shall consist of at least five members with a majority from the Department of Plant Biology and at least two members from outside the Department of Plant Biology. For the preliminary examination, the field of expertise shall be ecology. One of the two research tools will be statistics, and the other should demonstrate knowledge defined as training in laboratory (or field) methods, instrumentation, technology, or communication skills including language that is integral to the pursuance of ecological research.

Preliminary Examination

The preliminary examination will consist of two parts: a written examination and an oral examination. The written and oral examinations shall emphasize competence in:

1. One of the fields of expertise within the Program: plant systematics and plant diversity; plant physiology, cell biology and molecular biology; or ecology.
2. The student’s designated area of specialization (as determined by the advisory committee), and
3. The student’s research tools (see above) and a basic, general knowledge of Plant Biology (as defined by the PLB Faculty).

These three components of the written examination will be administered as separate entities. Subject matter covered in the two specialization examinations may be excluded from the general component at the discretion of the advisory committee.

The student, with the approval of his/her graduate advisory committee, will register with the Director of Graduate Studies to take the examination. The Director of Graduate Studies will then appoint a faculty member who is not on the student’s advisory committee to chair the examination committee (EC) and administer both the written and oral examinations. The Chair of the examination committee will solicit questions from the student’s advisory committee and from the faculty at large. Upon receipt of these questions, the Chair of the examination committee will call the committee together to construct and plan the written part of the examination. The student will be allocated one eight-hour block of time to complete each of the three components of the examination. The student may request additional time.

The student must pass all parts of the written examination to proceed to the oral examination. Pass means that the student has demonstrated through clear written statements a clear understanding of the topics presented in the written examination. A vote of the EC to pass or fail must be taken immediately following the grading of the written examination. Passing of the written examination will be determined by simple majority vote of the EC. If the student fails one or more of the three components of the
examination, he/she must be reexamined on the failed components. If the student fails any part(s) of the
general examination, he or she must be reexamined on the failed part(s). In consultation with the advisory
committee, the EC chair will schedule and administer the reexamination. The reexamination may not be
taken during the same academic term. The student must pass the written examination by the second
attempt to continue in the program.

Following passage of the written portion of the examination, the EC chair will schedule and administer
the oral portion of the examination. The oral examination must be scheduled not sooner than 10 working
days nor more than 30 working days from the completion date of the written examination. The EC chair
will not participate in the questioning of the student and does not have a vote regarding the proceedings.
The oral preliminary examination must be announced at least 10 working days before the examination is
to be given. The examination may only be scheduled when classes are in session, including finals week.
The examination shall last at least two hours and not more than four hours and should be scheduled
to allow attendance of a maximum number of faculty members from the student’s department and all
of the preliminary examination committee members. The student’s answers to the written examination
will be made available to the graduate faculty (upon request) before the oral part of the preliminary
examination. All attending graduate faculty members will be given the opportunity to express their opinion
on the examination. A vote on performance in the oral examination must be taken immediately following
completion of the examination. A pass requires a vote with no more than one dissenting member of the
preliminary examination committee, and may have conditions. If the vote is pass, then two levels may
be recognized: Pass and Pass with Distinction. A student will be allowed two attempts to pass the oral
preliminary examination. Should a student fail a second attempt to pass the preliminary examination, he/
she will be dropped from the program. Doctoral students entering the program with a master’s degree
must take the preliminary exam by the end of 30 months and must pass the preliminary examination and
be admitted to candidacy by the end of 36 calendar months after first registering in the doctoral program.

Final Examination (Dissertation Defense)

The final examination will be oral. It must be preceded during that semester by a public seminar on the
student’s research findings. The student’s advisory committee will notify the Director of Graduate Studies
of its recommendation for the date of the final examination at least two weeks prior to the seminar.
The seminar and examination must be announced at least 10 working days before the seminar and
examination. The seminar and examination must be held when classes are in session, including finals
week. The final examination shall last for no more than three hours. It is to cover the dissertation and
related subject matter. Passage of the final oral examination should be construed to mean there shall be
no more than one dissenting vote of the advisory committee. Should a student fail a second attempt to
pass the final examination, they will be dropped from the program.

Plant Biology Courses

**PLB400 - Plant Anatomy** 400-4 Plant Anatomy. This course is an introduction to the differentiation,
diversification and structure of plant tissues and organs, with emphasis on the organization of seed
plants. Laboratory will include instruction in the techniques of microscopy used in the study of plant
structure. Two lectures and two laboratories per week. Prerequisite: BIOL 213 or PLB 200 with grades of
C or better. Lab fee: $50.

**PLB401 - Curation of Collections** 401-2 Curation of Collections. This course will be an introduction
to the curation of biological collections and strongly involve experiential learning through participatory
activities with collections. This will involve an overview of museums, collection procedures, and the long-
term features of high quality curation of specimens and will examine how a broad range of organisms is
curated. Lab/Field trip fee: $50.

**PLB402 - Collections Management** 402-2 Collections Management and Research Design. This course
will build on the knowledge of collection curation. Research design as it specifically relates to the fields
of natural history will be developed. Students will learn to utilize existing organismal collections and build
their own research collections through directed research design. Students will be expected to write their
own research proposal and to review other students' proposals. Prerequisite: PLB 401.
PLB408 - Plant Systematics 408-4 Elements of Plant Systematics. This course covers the principles of plant classification including history, nomenclature, specimen collection and preservation, current systematic methodologies, and a survey of major plant families. Two lectures and four hours of lab per week. Prerequisites: BIOL 213 or PLB 200 with grades of C or better. Lab fee: $50.

PLB415 - Plant Morphology 415-5 Morphology of Vascular Plants. This course examines the external form, internal structure, and relationships of vascular plants. Three lectures and two laboratories per week. Prerequisite: BIOL 213 or PLB 200 with a grade of C or better (PLB 300 and PLB 400 recommended). Lab fee: $40.

PLB416 - Limnology 416-3 Limnology. (Same as ZOOL 415) Lakes and inland waters; the organisms living in them, and the factors affecting these organisms. Two lectures and one 4-hour laboratory alternate weeks. Prerequisite: BIOL 307 with a grade of C or better. Laboratory/Field Trip fee: $15.

PLB419 - Plant Molecular Biology 419-3 Plant Molecular Biology. (Same as PSAS 419, CSEM 419) A survey of molecular phenomena unique to plant systems. Topics will include: genome organization and synteny between plant genomes, transcriptional and post-transcriptional control of gene expression, signal transduction, epigenetics, plant-pathogen interactions and responses to biotic- and abiotic-stresses. Prerequisite: BIOL 305 or CSEM 305. Restricted to junior standing.

PLB425 - Environmental Plant Phys 425-4 Environmental Physiology of Plants. (Same as CSEM 425; Same as PSAS 425) The environmental physiology of plants focuses on the 1) influence of abiotic factors (e.g., light, water, temperature, nutrients, pollutants) on growth, development, and yield; 2) mechanisms by which plants respond to these abiotic factors; 3) use of biotechnology to increase abiotic stress tolerance in model and crop plants. Prerequisite: PLB 320 or CSEM 409. A $35 laboratory fee will be assessed.

PLB427 - Plant Biochemistry 427-5 Plant Biochemistry. (Same as CSEM 427 and PSAS 427) Exploration of fundamental biochemical pathways in plants with an emphasis upon carbon and nitrogen metabolism. Prerequisite: PLB 320 or consent of instructor. Lab fee: $35.

PLB433 - Intro to Ag Biotechnology 433-3 to 7 Introduction to Agricultural Biotechnology. (Same as AGSE 433, ANS 433, CSEM 433, HORT 433, PSAS 433) This course will cover the basic principles of plant and animal biotechnology using current examples; gene mapping in breeding, transgenic approaches to improve crop plants and transgenic approaches to improve animals will be considered. Technology transfer from laboratory to marketplace will be considered. An understanding of gene mapping, cloning, transfer, and expression will be derived.

PLB435 - Pollination Ecology 435-3 Pollination Ecology. (Same as ZOOL 435) This course will be an evolutionary and ecological examination of the interactions between plants and pollinators. Topics include pollination syndromes, plant breeding systems, pollinator foraging, learning, and behavior, specialized vs. generalized relationships, coevolution/cospeciation, chemical ecology, honey beekeeping & agricultural pollination, and conservation implications of pollinator relationships. Labs will provide hands-on experience in methods of investigating plant breeding systems, plant reproductive ecology, pollinator behavior and efficacy, pollen analysis, floral scent chemistry, and floral phenology. Prerequisite: BIOL 307 (General Ecology) with a grade of C or better or equivalent. For graduate students and senior undergraduates. Lab fee: $75.

PLB438 - Molecular Genetics Lab 438-3 Plant and Animal Molecular Genetics Laboratory. (Same as AGSE 438, CSEM 438, PSAS 438, ZOOL 438) Arabidopsis and Drosophila model organisms, lab-based training in laboratory safety, reagent preparation, phenotype analysis, genetics, DNA and RNA analysis, PCR, cDNA construction, cloning and sequencing of genes. Includes plant and bacterial transformation, and a population level analysis of genetic variation using RAPD markers in grasses and Alu insertion in humans. Two 2-hr labs and one 1-hr lecture per week. Prerequisite: BIOL 305 or equivalent or consent of instructor. Lab fee: $30.

PLB440 - Grassland Ecology 440-3 Grassland Ecology. This course examines grassland structure and function in relation to various biotic and abiotic factors. Field trips will visit local grasslands. Two lectures and one 4-hour lab per week. Prerequisite: BIOL 307 or consent of instructor. Lab fee: $50.
PLB443 - Restoration Ecology 443-3 Restoration Ecology. (Same as ZOOL 443) Ecological restoration tests current understanding of ecosystem assembly and function. This course applies ecological theory to restoration, with an emphasis on factors influencing plant community assembly and evaluating restoration success. Two lectures a week and one four-hour lab alternate weeks. Prerequisite: BIOL 307.

PLB444 - Ecological Analysis Communities 444-4 Ecological Analysis of Communities. (Same as ZOOL 444) Includes concepts and methods pertaining to the analysis of ecological data. Approaches will include a variety of methods for analyzing multivariate ecology, diversity, pattern, and spatial data. Laboratory will include the computer application of these concepts and methods to field situations. Two lectures and one 4 hour lab per week. Prerequisite: PLB/ZOOL 360, BIOL 307. Lab fee: $15.

PLB445 - Wetland Ecology & Mgmt 445-4 Wetland Ecology and Management. (Same as ZOOL 445) This course provides students with experience in wetland ecology and management with an emphasis on wetland functioning, field sampling, and identification of common wetland plants. Prerequisite: BIOL 307 with a grade of C or better. Two lectures and one 4-hour lab per week. Lab fee: $25.

PLB451 - Flora of Southern Illinois 451-3 Flora of Southern Illinois. Exposure to the major upland and lowland communities of southern Illinois with an emphasis on the identification, distribution and ecology of the natural and introduced floristic components. This is a field-based course wherein the students travel to local areas for plant identification. Each week, 4-8 hours per weekly session is spent in field work and travel to specific field sites is required via a university vehicle. Prerequisite: PLB 408 with a grade of C or better or consent of instructor. Field Trip fee not to exceed $160.

PLB452 - Plant Population Ecology 452-4 Plant Population Ecology. This course covers principles and research techniques of plant population ecology including the spatial, age, size and genetic structures of plant populations. The origin of these different aspects of population structure, their influences upon each other and their temporal dynamics are also examined. Two lectures and one 4-hour lab per week. Prerequisite: BIOL 307 or consent of instructor. Lab fee: $35.

PLB471 - Intro to Systems Biology 471-3 Introduction to Systems Biology. (Same as ZOOL 472) The bioinformatic analysis of large genomic and post-genomic data sets. Integration of gene regulation, protein interaction, metabolite and hormonal signaling provides an understanding of basic cellular circuitry networks. Examine redundancy, robustness and decision making in biological systems. Lab includes databases, tools, and manipulation of large data sets. Prerequisite: BIOL 305 or CS 330. Lab fee: $15.

PLB475 - Advanced Cell Biology 475-3 Advanced Cell Biology. Cell structure at molecular and cytological levels. Includes discussions of research methods, plasma membrane, cell exterior and recognition, the endomembrane system and related organelles, self-replicating organelles, the cytoskeleton, nuclear structure and function in cell replication, cell differentiation and response, and eukaryotic cell evolution. Prerequisite: BIOL 306 or equivalent.

PLB476 - Advanced Cell Biology Lab 476-2 Advanced Cell Biology Laboratory. Laboratory course to accompany Plant Biology 475. Light and electron microscopy, cell culturing, biochemical methods, and experimental protocols are used to study the structure of cell membranes, intracellular organelles, including the Golgi apparatus, ER, mitochondria, plastids, lysosomes, the cytoskeleton, and nucleus. Prerequisite: PLB 475 or concurrent enrollment.

PLB490 - Food Webs and Ecosystems 490-3 Energetics, Food Webs, and Ecosystems. (Same as ZOOL 490) This course places conservation of particular species into the context of community and ecosystem management. Approaches to quantifying energy needs of individual species will be extended to models of trophic networks among multiple species. Food web structure and function, species interactions, and resilience to species loss species invasions, and environmental changes will be examined in light of landscape processes. Prerequisite: BIOL 307 or consent of instructor.

PLB492 - Honors in Plant Biology 492-2 to 6 Honors in Plant Biology. Individual research problems available to qualified juniors and seniors. Special approval needed from the department chair.

PLB493B - Res Topics Pl Biol-Systematics 493B-1 to 4 Research Topics in Plant Biology-Systematics. Individual laboratory or field research under supervised direction. Does not count for thesis (PLB 599) or dissertation (PLB 600) credit. Special approval needed from the departmental chair.

PLB493C - Res Top Pl Biol-Physlgy/Mol Bi 493C-1 to 4 Research Topics in Plant Biology-Physiology/Molecular Biology. Individual laboratory or field research under supervised direction. Does not count for thesis (PLB 599) or dissertation (PLB 600) credit. Special approval needed from the departmental chair.

PLB502B - Scanning Electron Micrscp Lab 502B-2 Research Scanning Electron Microscopy Lab. (See SCI 502B)

PLB520 - Plant Growth & Development 520-3 Plant Growth and Development. (Same as PSAS 520) Physiological control of developmental processes. Emphasis on exogenous growth-regulating compounds and their behavior in plants. Prerequisite: PLB 320 or consent of instructor.

PLB524 - Gene Regulatory Networks 524-3 Gene Regulatory Networks. (Same as PSAS 524) An examination of the integration of genes into networks including developmental, abiotic stress response, metabolic and photoreceptor gene regulatory networks. Includes motif discovery, cis-regulatory elements, discussion of transcription factor families, RNA interference, network theory, feedback loops, cytoplasmic inheritance, maternal effect, post-transcriptional and post-translational regulation. Includes 2 lectures and a 2 hr computational bioinformatics lab per week. Prerequisite: PLB 471 or permission of instructor.

PLB525 - Cell Biology Research Techniqs 525-2 to 16 (2 to 4, 2 to 4, 2 to 4, 2 to 4, 2 to 4) Cell Biology Research Techniques. A special techniques course designed for graduate students specializing in cell studies. Provides instrumentation training, with emphasis on application of the method to a research project. (a) Quantitative Cytology. (b) Immuno-Labelling and Qualitative Histochemistry. (c) Deep Etching Techniques in Electron Microscopy. (d) Cell Fractionation and Biochemical Techniques. Course fee: $50.

PLB525A - Cell Biology Research Tech 525A-2 to 16 (2 to 4, 2 to 4, 2 to 4, 2 to 4, 2 to 4) Cell Biology Research Techniques-Quantitative Cytology. A special techniques course designed for graduate students specializing in cell studies. Provides instrumentation training, with emphasis on application of the method to a research project.

PLB525B - Immuno-Label & Histochem 525B-2 to 16 (2 to 4, 2 to 4, 2 to 4, 2 to 4, 2 to 4) Cell Biology Research Techniques-Immuno-Labeling and Qualitative Histochemistry. A special techniques course designed for graduate students specializing in cell studies. Provides instrumentation training, with emphasis on application of the method to a research project.

PLB525C - Etching Tech Elect Micro 525C-2 to 16 (2 to 4, 2 to 4, 2 to 4, 2 to 4, 2 to 4) Cell Biology Research Techniques-Deep Etching Techniques in Electron Microscopy. A special techniques course designed for graduate students specializing in cell studies. Provides instrumentation training, with emphasis on application of the method to a research project.

PLB525D - Cell Fraction & Biochem Tech 525D-2 to 16 (2 to 4, 2 to 4, 2 to 4, 2 to 4, 2 to 4) Cell Biology Research Techniques-Cell Fractionation and Biochemical Techniques. A special techniques course designed for graduate students specializing in cell studies. Provides instrumentation training, with emphasis on application of the method to a research project.

PLB530 - Plant Ecophysiology 530-3 Plant Ecophysiology (Same as PSAS 530) A study of the physiological processes that influence the growth, reproduction, adaptation, and geographic distribution of plants. The ecophysiology of plant stress and plant interactions. Prerequisite: PLB 320 or CSEM 409; BIOL 307.
PLB535 - Energetic Aquatic Ecosystems 535-2 Energetic Aquatic Ecosystems. Special approval needed from the instructor.

PLB545 - Ecosystem Ecology 545-3 Ecosystem Ecology. (Same as ZOOL 545) Fundamentals of and human modification to atmospheric chemistry and cycling of major nutrients in terrestrial ecosystems are covered in the context of global change. Laboratory exercises provide methodology and analytical approaches to studying ecosystem structure and function. Two lectures a week and one four-hour lab alternate weeks.

PLB546 - Nutrient Cycling Methods 546-2 Nutrient Cycling Methods. Research in ecosystem ecology requires a basic understanding of biochemistry. Analytical methodology used to study pools and transformations of major nutrients in terrestrial ecosystems, applicable to freshwater systems, will be the focus of this laboratory course. Three hour laboratory every other week. Prerequisite: PLB 545 or concurrent enrollment. Course fee: $30.

PLB547 - Tropical Studies Costa Rica 547-3 to 8 Tropical Studies in Costa Rica. Credit for field courses taken under the jurisdiction of the Organization for Tropical Studies in Costa Rica. Courses and credits will vary. Prerequisite: approval of OTS Advisory Committee at Southern Illinois University Carbondale.

PLB554 - Evolution Seminar 554-1 to 4 (1,1,1,1) Evolution Seminar. (Same as ANTH 554, MBMB 554) Advanced topics in evolutionary biology including genetics & development, evolutionary ecology, phylogeny, paleontology, biogeography, population genetics, molecular ecology, speciation, molecular evolution, and macroevolution. Topics will vary each semester. Seminar format group discussions and student presentations. Graded S/U. Special approval needed from the instructor.

PLB556 - Phylogenetics 556-3 Phylogenetics. (Same as ANTH 556, MBMB 556, ZOOL 556) An advanced introduction to modern methods of phylogenetic inference, emphasizing both theoretical background concepts and numerical approaches to data analysis. Topics include properties of morphological and molecular characters, models of character evolution, tree estimation procedures, and tree-based testing of evolutionary hypothesis. Special approval needed from the instructor.

PLB557 - Biostatistics 557-4 Biostatistics. (Same as ZOOL 557) Basic biostatistical procedures used by researchers in life sciences and related fields. Topics include descriptive statistics, probability and distributions, statistical models, likelihood methods, experimental design, analysis of variance, regression, correlation, and the use of statistical software.

PLB558 - Advanced Biostatistics 558-4 Advanced Biostatistics. (Same as ZOOL 558) Advanced biostatistical procedures used by researchers in life sciences and related fields. Topics include multiple and logistic regression, randomization tests, jackknife and bootstrap. Mantel tests, BACI designs, MANOVA, repeated measures analysis, and the use of statistical software. Prerequisite: PLB 557 or equivalent, ZOOL 557.

PLB570 - Grad Readings Plant Biology 570-2 to 3 Graduate Readings in Plant Biology. A course of individually assigned readings in botanical literature. Every semester. Special approval needed from the instructor. Graded S/U only.

PLB571 - Genomics Euk: Bioinformatics 571-4 Genomics of Eukaryotes: Bioinformatics. (Same as PSAS 571) Genomics, Proteomics and Bioinformatics are rapidly making important contributions to the Life Science through biotechnology. An appreciation of the genomic tools is important to all in agriculture and biology. The relationships between molecular biology bioinformatics and the biotechnology industry will be explored. Short independent practical projects in genomics, proteomics or bioinformatics will be pursued.

PLB578 - Population Genetics 578-3 Population Genetics. (Same as ZOOL 578) Genetic structure of populations, factors causing changes and principles governing rate and direction of change. Three lectures per week. Prerequisite: BIOL 304 and BIOL 305.

PLB580 - Departmental Seminar 580-1 to 6 Departmental Seminar. Student presentations and critiques of original research, including presentations by occasional invited speakers. Graded S/U only. Required of all graduate students in residence, when offered.
PLB589A - Sem in Plant Biology-Ecology  589A-1 to 12 (1 per topic per semester) Seminars in Plant Biology-Ecology. (Same as ZOOL 576) Discussions of current and historical research and literature in various subject areas of plant biology. Graded S/U only.

PLB589B - Seminar Plb-Molec/Bioch Physl  589B-1 to 12 (1 per topic per semester) Seminars in Plant Biology-Molecular and Biochemical Physiology. Discussions of current and historical research and literature in various subject areas of plant biology. Graded S/U only.

PLB589C - Sem Plb-Systmcs & Biodvrsity  589C-1 to 12 (1 per topic per semester) Seminars in Plant Biology-Systematics and Biodiversity. Discussions of current and historical research and literature in various subject areas of plant biology. Graded S/U only.

PLB590 - Introduction to Research  590-1 Introduction to Research. General introduction to research and graduate program policies. Guest presentations by department faculty. Fall only. Graded S/U only. Required of all graduate students during their first year in residence, when offered.

PLB591A - Research - Anatomy  591A-2 to 9 Research-Anatomy. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591B - Research - Bryology  591B-2 to 9 Research-Bryology. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591C - Research - Ecology  591C-2 to 9 Research-Ecology. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591D - Research - Morphology  591D-2 to 9 Research-Morphology. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591E - Research - Mycology  591E-2 to 9 Research-Mycology. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591F - Research - Paleobotany  591F-2 to 9 Research-Paleobotany. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591G - Research - Pathology  591G-2 to 9 Research-Pathology. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591H - Research - Photography  591H-2 to 9 Research-Photography. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591I - Research - Phycology  591I-2 to 9 Research-Phycology. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591J - Research - Physiology  591J-2 to 9 Research-Physiology. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB591K - Research - Systematics  591K-2 to 9 Research-Systematics. Assignments involving research and individual problems. Master's students may use this for their research for their thesis. Summer only. Graded S/U. Special approval needed from the instructor and the department.

PLB600 - Dissertation 600-1 to 36 (1 to 12 per semester) Dissertation. Course to be taken in the research for and in writing of the doctoral dissertation. Every semester. Graded S/U only. Special approval needed from the instructor.

PLB601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

PLB699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Plant Biology Faculty

Ashby, William C., Professor, Emeritus, Ph.D., University of Chicago, 1950, 1960.

Baer, Sara, Professor, Ph.D., Kansas State University, 2001; 2004. Ecosystem ecology, nutrient cycling, restoration ecology, and social ecology.

Battaglia, Loretta, Associate Professor, Ph.D., University of Georgia, 1998; 2003. Community ecology, wetland ecology, invasive species, climate change, multivariate methods.

Crandall-Stotler, Barbara, Professor, Emerita, Ph.D., University of Cincinnati, 1968; 1970.

Garwood, Nancy, Adjunct Professor, Ph.D., University of Chicago, 1979; 2005. Tropical botany, including community ecology, seed germination, seedling morphology, and systematics.

Geisler, J.B. Matthew, Associate Professor, Ph.D., The Ohio State University, 1999; 2006. Gene expression and protein interaction patterns, mathematical gene modeling, Arabidopsis, yeast and Drosophila interactomes.

Geisler-Lee, Jane, Adjunct Assistant Professor, Ph.D., The Ohio State University, 2002; 2007. Systems biology, cell wall, suberin, Onoclea sensibilis, genomics, transcriptomics, metabolic pathways, sporogenesis, rhizome development.

Lightfoot, David A., Professor, Ph.D., University of Leeds, 1985; 1991. Biotechnology (molecular); nitrogen assimilation; genetics and development.

Matten, Lawrence C., Professor, Emeritus, Ph.D., Cornell University, 1965; 1965.

Mohlenbrock, Robert H., Distinguished Professor, Emeritus, Ph.D., Washington University, 1957; 1957.

Nickrent, Daniel L., Professor, Emeritus, Ph.D., Miami University (Ohio), 1984; 1990. Distinguished research.

Richardson, John A., Associate Professor, Emeritus, M.F.A., Ohio University, 1969; 1969.
Robertson, Philip A., Professor, Emeritus, Ph.D., Colorado State University, 1968; 1970.
Sipes, Sedonia D., Associate Professor, Ph.D., Utah State University, 2001; 2001. Plant-insect interactions, pollination ecology, evolutionary ecology, chemical ecology, and systematics.
Tindall, Donald R., Professor, Emeritus, Ph.D., University of Louisville, 1966; 1966.
Weber, Jennifer., Adjunct Assistant Professor, Ph.D., University of CA, Irvine, 2012; 2016. Evolutionary ecology, including breeding system evolution, pollination biology, population genetics and climate change biology.
Wood, Andrew J., Professor, Ph.D., Purdue University, 1994; 1996. Biotechnology, biochemistry, desiccation, drought, genetics, horticulture, plant physiology, stress.
Yopp, John H., Professor, Emeritus, Ph.D., University of Louisville, 1969; 1970.

Plant, Soil, and Agricultural Systems

The School of Agricultural Sciences offers the Master of Science degree in Plant, Soil and Agricultural systems with concentrations in the areas of crop, soil, and horticultural sciences with an emphasis in environmental studies in agriculture available in each of these three concentrations. The concentrations in crop, soil, and horticultural sciences can be pursued with either a thesis-option or a research paper (non-thesis) option. We offer graduate work in agricultural education and information and agricultural technologies.

Supporting courses in education, communication, engineering, plant biology, microbiology, chemistry, statistics, and other areas essential to research in the student’s chosen field may be selected. Supporting courses are selected on an individual basis by the student and the advisory committee. Once the general field has been selected, the research and thesis may be completed in any one of the many divisions of that field. In field crops, the research may be directed toward crop production, management and precision farming, weeds and pest control, or plant breeding, genetics and biotechnology; in horticulture, the research and thesis may be in landscape design, vegetables, tree-fruits, small-fruits, floricultural and ornamental plants, plant tissue culture, or turf management; in soils, the research may relate to soil fertility, soil physics, soil microbiology, soil chemistry, or soil and water conservation; in environmental studies, the research may be directed toward water pollution, reclamation of strip-mined soil, or agricultural chemical pollution problems. Often two of these more restricted areas can be combined in one thesis/research problem.

Agricultural education coursework is designed for instructors in secondary schools, for students preparing for employment at junior colleges, and for those desiring to continue their education by obtaining a Ph.D. degree. Agricultural information coursework is designed to provide graduate training for extension agents, agricultural communication professionals, product-education specialists, and others who are interested in agricultural information processing and transfer to a variety of non-student clientele. Agricultural technologies coursework is designed to offer students interested in technology based systems the opportunity to study one or more of the following areas: (a) power and machinery; (b) product handling; processing, and storage, (c) farm equipment evaluation; and (d) precision farming. Each of these areas offers application in agricultural environmental studies.

Students interested in plant, soil and agricultural sciences at the doctoral level can be admitted to a program of study leading to the Ph.D. degree in Agricultural Sciences, Plant Biology, or through the Environmental Resources and Policy Ph.D. program.

Admission

Application for admission must include an online application available at gradschool.siu.edu, a statement of interest, college transcripts, and four letters of recommendation. Letters should be requested from four persons who can evaluate the student's academic ability. Final admission to the program and a particular concentration administered by the Plant, Soil and Agricultural Systems program is made by the department. Minimal admission requirements to the program are: a) completion of the plant, soil and agricultural systems or agricultural systems undergraduate requirements and b) a minimal grade
point average of 2.7 ($A = 4.0$). The students who do not meet the requirement of completing the required courses in the undergraduate program in plant, soil and agricultural systems or agricultural systems may apply to enroll as nondeclared students to make up these deficiencies. Undergraduate coursework taken to correct these deficiencies will not apply to the minimum requirements for the master’s degree. Students entering the Plant, Soil and Agricultural Systems graduate program with a GPA below 2.70 are accepted on a conditional basis and must enroll in 12 hours of structured courses at the 400–500 level and make a GPA of 3.0 or be suspended from the program.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Plant, Soil and Agricultural Systems. Applicants must pay this fee by credit card.

**Program Requirements**

The crop, soil, and horticultural sciences concentrations can be pursued as a 30-credit hour with thesis program or a 40-credit hour with research paper (non-thesis) option. The ecological urban landscapes concentration is 30 credit hours, 27 online credit hours, and three credit hours of an applied practicum. These are described below:

**Thesis option**

If the student submits a thesis, minimum coursework requirements for the master’s degree may be fulfilled by satisfactory completion of 30 semester hours of graduate credit. At least 20 hours of that credit must be from structured courses. 50% of course credit hours are required at the 500 level, of which no more than 10 hours may be from unstructured courses. Graduate seminar is required but is not a structured course. Overall, at least 15 semester hours must be from departmental courses.

**Research paper (non-thesis option)**

If the student submits a research paper (non-thesis option) minimum coursework requirements for the master’s degree may be fulfilled by satisfactory completion of 40 semester hours of graduate credit. At least 30 hours of that credit must be from structured courses. At the 500 level, 18 hours of course credit are required, of which no more than 10 hours may be from unstructured courses. Graduate seminar is required but is not a structured course. Overall, at least 25 semester hours must be from departmental courses.

Students who wish to teach in agriculture education must complete a minimum of 15 hours in agriculture (including agricultural education), six hours of research methods or statistics, and six hours in education or community development. M.S. students usually take four to six hours of research or thesis, and complete the additional hours by taking courses in education or agriculture.

Each student, whether in the thesis or non-thesis option, will be assigned a mutually agreed upon major professor to direct the program. The major professor will serve as chair of the student’s advisory committee which will consist of at least two members from within the department and may include one member from another department or program. Each master’s degree candidate must pass a comprehensive oral examination covering graduate work including the thesis or research paper.

**PSAS 590 Readings and PSAS 592 Special Problems** - available for students who have completed a course for another degree and need additional coursework to fulfill 30 credit hours.

**Plant, Soil, and Agricultural Systems Courses**

**PSAS400 - Trends-Soil Sci & Agronomy** 400-3 Trends in Soil Science and Agronomy. A discussion session format will be employed as a means of acquainting students with recent literature and allowing them to remain current with latest developments in their area of specialty. Special approval needed from the department.

**PSAS401 - Agricultural Plant Pathology** 401-2 Agricultural Plant Pathology. A study of macro and micro-organisms and environmental factors that cause disease in plants of agricultural importance; of the
mechanisms by which these factors induce disease in plants; and of the methods for managing diseases and reduce the damage they cause. Special approval needed from the department.

**PSAS402A - Problems Ag Education** 402A-3 Problems in Agricultural Education. Designed to improve the techniques related to award programs and application processes of agricultural education specialists through discussion, application, organization, and assignment to problems in the field of agricultural education. Emphasis will be placed on conceptual understanding of FFA and Agricultural Education award programs, applications, Supervised Agricultural Experience Program, and National Chapter Award Program, affiliated professional partnerships, and external sources for developing the entire Agricultural Education program.

**PSAS402B - Problems Agri Tech** 402B-1 to 6 Problems in Agricultural Technologies. Designed to improve the techniques of agricultural mechanization workers through discussion, assignment, and special workshops on problems related to their field. Emphasis will be placed on new innovative and currently developed techniques for the field. A limit of six hours will be counted toward graduation in Master's degree program. Special approval needed from the department.

**PSAS403A - Field Crop Diseases** 403A-2 Field Crop Diseases. A survey of major diseases of important field crops in the United States. Disease identification, cycles, and management strategies will be addressed. Special approval needed from the department.

**PSAS403B - Hort Crop Diseases** 403B-2 Horticultural Crop Diseases. A survey of major diseases of important horticultural crops in the United States. Disease identification, cycles, and management strategies will be addressed. Special approval needed from the department.

**PSAS403C - Turfgrass Diseases** 403C-1 Turfgrass Diseases. A survey of major diseases of important turfgrasses in the United States. Disease identification, cycles, and management strategies will be addressed. Special approval needed from the department.

**PSAS403D - Tree Diseases** 403D-1 Tree Diseases. A survey of major diseases of important tree species in the United States. Disease identification, cycles, and management strategies will be addressed. Special approval needed from the department.

**PSAS405 - Plant Breeding** 405-3 Plant Breeding. Principles of plant breeding emphasized together with their application to the practical breeding of agronomic, horticultural and forest plants. Special approval needed from the department. Field trip costs approximately $10.

**PSAS408 - World Crop Prod Problems** 408-3 World Crop Production Problems. Ecological and physiological factors influencing production in various areas of the world. Natural limitations on world crop production. Non-agricultural factors influence world crop output. Prerequisite: CSEM 200.

**PSAS409 - Crop Physiology** 409-3 Crop Physiology. Principles of basic plant physiology. Topics include cell structure, photosynthesis, respiration, water and mineral relations, vascular transport and plant growth regulators. Prerequisites: PLB 200, CHEM 140B. Course fee: $50.

**PSAS411 - Human Res Dev Program AG** 411-3 Human Resource Development Programs in Agriculture. Principles and procedures of human resource development (HRD) programs in agriculture with emphasis on program determination and methods. Special approval needed from the department.

**PSAS412 - Methods:Ag Mechanization** 412-3 Methods of Agriculture Mechanization. Theory and use of educational materials and devices adaptable to the needs and interests of educators involved in agricultural mechanization laboratories. There is a $15 laboratory fee for this course.

**PSAS414 - Adult Ed Methods** 414-3 Adult Education Procedures, Methods and Techniques. Determining adult education needs and interests of the community. Securing and organizing the information needed for adult education programs and planning teaching activities.

**PSAS415 - Beg Teaching Seminar** 415-3 Beginning Teacher Seminar. The application in the professional field setting, of principles and philosophies of the education system. Includes application of principles of curricula construction, programming student and community needs. Special approval needed from the department.
PSAS419 - Plant Molecular Biology 419-3 Plant Molecular Biology. (Same as PLB 419) A survey of molecular phenomena unique to plant systems. Topics will include: genome organization and synteny between plant genomes, transcriptional and post-transcriptional control of gene expression, signal transduction, epigenetics, plant-pathogen interactions and responses to biotic- and abiotic-stresses. Special approval needed from the department.

PSAS420 - Crop Pest Control 420-4 Crop Pest Control. Study of field pests of forest, orchard, field and garden crops; pest control principles and methods; control strategy; and consequences of pest control operations. Special approval needed from the department. Lab fee: $35.

PSAS421 - Turf Mgt Issues/Strategies 421-3 Turf Management Issues and Strategies. Issues in environment, technology, management, society, politics, business, and sports that interact with turf management. Students will utilize periodicals and other references for preparing papers addressing these issues. Prerequisite: HORT 322 or permission of instructor. Lab fee: $25.

PSAS422 - Turf Science & Pro Mgmt 422-3 Turfgrass Science and Professional Management. Basic concepts of physiology, growth, and nutrition of turfgrasses and their culture. Application of turfgrass science to management of special areas, such as golf courses, athletic fields, sod farms, and to the turfgrass industry. Prerequisite: CSEM 240 and HORT 322 or equivalent or consent of instructor. Lab fee: $50.

PSAS423 - Greenhouse Mgt 423-3 Greenhouse Management. Principles of greenhouse management controlling environmental factors influencing plant growth; greenhouses and related structures; and greenhouse heating and cooling systems. Prerequisite: HORT 220 or consent of instructor. Laboratory fee: $40.

PSAS424 - Floriculture 424-4 Floriculture. Production, timing and marketing of the major floricultural crops grown in the commercial greenhouse. Each student will have an assigned project. Special approval needed from the department. Laboratory fee: $40.

PSAS425 - Environmental Plant Phys 425-4 Environmental Physiology of Plants. (Same as PLB 425) The environmental physiology of plants focuses on the 1) influence of abiotic factors (e.g., light, water, temperature, nutrients, pollutants) on growth, development, and yield; 2) mechanisms by which plants respond to these abiotic factors; 3) use of biotechnology to increase abiotic stress tolerance in model and crop plants. Prerequisite: PLB 320 or CSEM 409. A $35 laboratory fee will be assessed.

PSAS426 - Genomics &Bioinformatics 426-4 Genomic and Bioinformatics. The course is designed to introduce students from a variety of backgrounds and departments to the scope and methodology of genomic and bioinformatic sciences. Real problems and solutions from genome data analysis are studied in this course to see how high throughput genomics is driving bioinformatics, and changing the biological sciences in revolutionary ways. Special approval needed from the department.

PSAS427 - Plant Biochemistry 427-5 Plant Biochemistry. (Same as PLB 427) Exploration of fundamental biochemical pathways in plants with an emphasis upon carbon and nitrogen metabolism. Special approval needed from the department. Lab fee: $35.

PSAS428 - Ad Landscape Design I 428-3 Advanced Landscape Design I. Development of the design process, graphics and verbal communication of landscape projects. Emphasis on large-scale projects and residential design. Special approval needed from the department. Laboratory fee: $25.

PSAS429 - Adv Landscape Design II 429-3 Advanced Landscape Design II. Development of the design process, graphics and verbal communication of landscape projects. Emphasis on construction details, color rendering and portfolio development. Special approval needed from the department. Laboratory fee: $25.

PSAS431 - Landscape Construction 431-4 Landscape Construction. An introduction course in the basic elements of landscape construction dealing with wood, concrete, masonry and stone. Emphasis will be placed on safety, construction interpretation of construction drawings, specifications for
specific structures, materials selection, cost estimation, site preparation, and construction techniques. Prerequisite: HORT 220. Laboratory fee: $170.

PSAS432 - Garden Ctr & Nursery Mgt 432-4 Garden Center and Nursery Management. Principles and practices in both field and container production or ornamental landscape materials and the marketing of landscape plant materials at the nursery and retail garden center. Business management of both nurseries and garden centers will be included. Special approval needed from the department. Laboratory fee: $50.

PSAS433 - Intro to Ag Biotechnology 433-3 to 7 Introduction to Agricultural Biotechnology. (Same as ANS 433, PLB 433) This course will cover the basic principles of plant and animal biotechnology using current examples; gene mapping in breeding, transgenic approaches to improve crop plants and transgenic approaches to improve animals will be considered. Technology transfer from laboratory to marketplace will be considered. An understanding of gene mapping, cloning, transfer, and expression will be derived.

PSAS434 - Woody Plant Maint 434-3 Woody Plant Maintenance. Care and management of ornamental shrubs and trees commonly used in the landscape. Topics to include trimming, pruning, fertilization, transplanting and diagnosis of woody plant problems. Special approval needed from the department.

PSAS435 - Ag Mol Biotech Seminar 435-1 to 4 Agricultural Molecular Biotechnology Seminar. Molecular Biology is rapidly making important contributions to agricultural science through biotechnology. An appreciation of the techniques of molecular biology and their application to plant improvement is important to all in agriculture and biology. The relationships between plant molecular biology and the biotechnology industry will be discussed. Presentations on particular research problems will be made. Graded S/U only.

PSAS436 - Successful Fruit Growing 436-4 Successful Fruit Growing. Learn how to grow and use temperate fruit trees for your pleasure and/or economic benefit. Learn to use the basic principles of plant-environment interaction to understand and solve common problems found in the culture of tree fruit crops in the landscape, garden or orchard. Master the secrets of fruit growing through emphasis on hands-on experiential laboratories. Focus on Midwest culture of tree fruit and nut crops. One-day field trip. Required textbooks mandatory. Special approval needed from the department. Laboratory fee: $135.

PSAS437 - Vegetable Production 437-4 Vegetable Production. Culture, harvesting, and marketing of vegetables; with morphological and physiological factors as they influence the crops. Special approval needed from the department. Laboratory fee: $25.

PSAS438 - Molecular Genetics Lab 438-3 Plant and Animal Molecular Genetics Laboratory. (Same as PLB 438, ZOOL 438) Arabidopsis and Drosophila model organisms, lab-based training in laboratory safety, reagent preparation, phenotype analysis, genetics, DNA and RNA analysis, PCR, cDNA construction, cloning and sequencing of genes. Includes plant and bacterial transformation, and a population level analysis of genetic variation using RAPD markers in grasses and Alu insertion in humans. Two 2-hr labs and one 1-hr lecture per week. Prerequisite: BIOL 305 or equivalent or consent of instructor. Lab fee: $30.

PSAS439 - Landscape Design Software 439-3 Introduction to Landscape Design Software. Introduces students to a popular software program used to create landscape designs. Emphasis is on learning the software program rather than learning the design process. Prerequisite: HORT 328A and HORT 328B.

PSAS441 - Soil Morph & Classif 441-3 Soil Morphology and Classification. Development, characteristics, and identification of soils, study of profiles; and interpretation and utilization of soil survey information in land use planning. Special approval needed from the department. Field trip costing approximately $5.

PSAS442 - Soil Physics 442-3 Soil Physics. A study of the physical properties of soils with special emphasis on soil and water relationships, soil productivity and methods of physical analysis. Prerequisite: CSEM 240.

PSAS443 - Soil Management 443-3 Soil Management. The soil as a substrate for plant growth. Properties of the soil important in supplying the necessary mineral nutrients, water and oxygen and for
providing an environment conducive to plant root system elaboration. Soil management techniques that are important in optimizing plant growth. Prerequisite: CSEM 240.

**PSAS445 - Irrigation Princ & Pract** 445-3 Irrigation Principles and Practices. This course will cover basic principles of irrigation sciences; water requirements of crops; soil water relationship; water application methods including flooding, sprinkler and drip (or trickle) systems; water conveyance, distribution and measurement; evaluation of irrigation efficiency; and irrigation scheduling. Considerations will also include crop production effects and economic aspects of irrigation. Special approval needed from the department.

**PSAS446 - Soil & Water Conservation** 446-3 Soil and Water Conservation. Covers the principles of hydrologic processes and soil erosion. Consideration will be given to the occurrence of soil erosion as it affects humans, food production and the environment. The methods and technologies for protecting against and controlling of erosion will also be discussed. Special approval needed from the department.

**PSAS447 - Soil Fertility** 447-3 Fertilizers and Soil Fertility. Recent trends in fertilizer use and the implications of soil fertility build up to sufficiency and/or toxicity levels; the behavior of fertilizer material in soils and factors important in ultimate plant uptake of the nutrients; the plant-essential elements in soils and ways of assessing their needs and additions; tailoring fertilizer for different uses and management systems; implication of excessive fertilization in our environment. Concurrent enrollment in PSAS 448 required. Special approval needed from the department.

**PSAS448 - Soil Fertility Evaluation** 448-2 Soil Fertility Evaluation. A laboratory course designed to acquaint one with practical soil testing and plant analysis methods useful in evaluating soil fertility and plant needs. One hour lecture, two hours laboratory. Concurrent enrollment in PSAS 447 required. Special approval needed from the department. Laboratory fee: $15.

**PSAS454 - Soil Microbiology** 454-4 Soil Microbiology. (Same as MICR 454) A study of microbial numbers, characteristics and biochemical activities of soil microorganisms with emphasis on the transformation of organic compounds, nitrogen phosphorus, sulfur, iron and other plant essential nutrients. Prerequisite: CSEM 240 or MICR 301. Lab fee: $15.

**PSAS455 - Plant-Microbe Interactions** 455-3 Biology of Plant-Microbe Interactions. The molecular basis of post-pathogen interactions and disease development in plants is examined with a critical review of original and current literature focusing on the mechanisms of pathogenesis, virulence, disease development and resistance, and response mechanisms in plants. Special approval needed from the department.

**PSAS463 - Ag Electrical Systems** 463-3 Agricultural Electrical Systems. Electrical knowledge and basics skills are developed and implemented with practical exercises and projects. Electrical circuits will be planned and constructed, with emphasis on convenience, codes and safety. Laboratory fee: $40.

**PSAS466 - Vine & Small Fruit Culture** 466-4 Vine and Small Fruit Culture. Study of the developmental patterns and environmental responses of important vine and small fruit crops; strawberries, brambles, blueberries, grapes and exotic crops. Learn to adapt these crops to profitable culture for the amateur or professional with a Midwest focus. Practical hands-on experience in the classroom and the field. Two one-day field trips required. Required textbooks mandatory. Special approval needed from the department. Lab fee: $150.

**PSAS467 - Wines of the World** 467-3 Wines of the World. Varieties, terroir, culture and connoisseurship. Study the impact of varietals, terroir and culture on important wines from regions around the world. Learn wine geography and its effect on wine character with practical hands-on experience and expand connoisseurship skills. A team approach to wine appellation presentations and a term project involved in the wine trade will teach industry production, marketing and networking skills. Meet once a week for 4 hours; 2 hr lecture, 2 hr lab. Meeting time arranged for convenience of majority interested in taking the class, with instructor approval. Prerequisite is successful completion of HORT 333, From the Vine to its Wine, with a grade of C or better. Must be 21 years of age prior to the beginning of class to enroll. Proof of age and signature on informed consent form required at first class meeting. Purchase and use of required textbook mandatory. Laboratory fee of $192.

PSAS469 - Organic Gardening 469-3 Organic Gardening. This class will focus on the philosophical background of organic farming, as well as the biological, environmental and social factors involved in organic food production. The student will learn the basic principles of successful organic gardening without the need to use man-made synthetic chemical sprays and fertilizers. Topics covered will include soils and organic fertilizers, composting and mulches, companion planting and crop rotation, organic cultivation of fruit, vegetable and ornamental flowers/shrubs, organic pest and disease control, permaculture, and organic garden planning design and maintenance.

PSAS470 - Post Harvest Handling 470-2 Post Harvest Handling of Horticultural Commodities. Fundamental principles of post harvest physiology, handling, and evaluation of horticultural commodities will be covered. Specific details will be given on vegetable, fruit, ornamental and floricultural commodities. Prerequisite: HORT 220 and PLB 320. Field trip costing approximately $30.

PSAS472 - Precision Agriculture 472-3 Precision Agriculture. A study of the core components of Precision Agriculture including the Global Positioning System (GPS), multispectral and hyperspectral remote sensing technology, Geographic Information Systems (GIS), soil sampling, yield monitoring, and analysis & decision making systems applied for site specific management of production agriculture resources. Laboratory fee: $5.

PSAS473 - Agricultural Automation 473-3 Agricultural Automation. This course introduces students to topics such as power distribution, programmable controllers, sensors and components, ladder control circuits and diagrams, and motor controls. The lab will address automation issues for different industrial processes such as pasteurization. Lab fee: $20.

PSAS475 - Golf Course Green Instal 475-4 Golf Course Green Installation and Maintenance. This course will mainly focus on the requirements, installation, care and maintenance of the rooting media of golf course putting green and turfgrass on disturbed soils. Prerequisite: CSEM 240.

PSAS476 - Ag Safety & Health 476-3 Agricultural Safety and Health. Analysis of safety and health issues important to managers and supervisors in agricultural operations. Topics include agricultural accident data, causes and effects of accidents, hazard identification, strategies for accident prevention, response to accidents and health risks and safeguards. Development and documentation of accident and illness prevention activities in the workplace. Special approval needed from the department.

PSAS480 - Designing Outdoor Spaces 480-3 Designing Outdoor Spaces. This course will instruct and challenge the student to design outdoor spaces that cultivate a sense of place as related to the site and the user. The course will review fundamental landscape planning process including principles and elements of design with an emphasis on "green" decision making. Special approval needed from the department.

PSAS483 - Ag Processing Systems 483-3 Agricultural Processing Systems. This course provides students with an understanding of the design principles, equipment, procedures and processes utilized in handling, processing and storing agricultural products. Prerequisite: AGSE 371.

PSAS486 - Invasive Plant Ecology & Mgmt 486-3 Invasive Plant Ecology and Management. (Same as FOR 486) Ecology and evolution of invasive plant species, with a focus on land management, including characteristics and biology, introduction and spread, population dynamics, community impacts and ecological interactions, and invasive plant evolution and adaptation, as well as management techniques and considerations, including biological, chemical, and mechanical control. Prerequisite: BIOL 307 or consent of instructor. Restricted to junior standing.

PSAS488 - Food Engineering Technology 488-3 Food Engineering Technology. This course introduces the basic principles of facilities planning for larger operations and complexes of the food processing industry, and to gain management/technology insight in food engineering technology. Special approval needed from the instructor.
PSAS495 - Food & Pharma Packaging 495-3 Food and Pharmaceutical Packaging. Applied packaging and food engineering principles used in packaging, storing, preserving, and transporting food and drug products. Topics include packaging functions, graphic design, printing, sterilization, and food safety. Utilization of paper, glass, plastics, laminates, and metals. Applications of machinery and equipment. Prerequisite: AGSE 371.

PSAS499 - Ag Info for Teachers 499-3 Agriculture Information for K-12th Grade Teachers. A general inquiry into the agriculture literacy appropriate for K-12th grade students. A framework for evaluating content appropriate for K-12th grade students in the pursuit of agriculture literacy will be developed. Special approval needed from the instructor.

PSAS500 - Ag Systems Research Methodlogy 500-3 Agricultural Systems Research Methodology. Research methodology for agricultural education and agricultural systems technology including defining research problems, preparing project proposals and sources of data. Special approval needed from the department.

PSAS501 - Recent Research: Ag Educ 501-3 Recent Research in Agricultural Education. A study of recent research and development in agricultural education. The course includes an analysis of regional and national scholarly publications, procedures and products. Special approval needed from the department.

PSAS518 - Principles of Herbicide Action 518-3 Principles of Herbicide Action. Chemistry and mode of action of herbicides. Nature of herbicidal action. Illustrates the various types of chemical weed control procedures in current use. The physiology of herbicidal action examined using the different mechanisms established for various chemical groups of herbicides. Prerequisite: PSAS 468, PLB 320.

PSAS520 - Growth & Development-Plants 520-3 Growth and Development of Plants. (Same as PLB 520) Physiological control of developmental processes. Emphasis on exogenous growth-regulating compounds and their behavior in plants. Special approval needed from the department.

PSAS524 - Gene Regulatory Networks 524-3 Gene Regulatory Networks. (Same as PLB 524) An examination of the integration of genes into networks including developmental, abiotic stress response, metabolic and photoreceptor gene regulatory networks. Includes motif discovery, cis-regulatory elements, discussion of transcription factor families, RNA interference, network theory, feedback loops, cytoplasmic inheritance, maternal effect, post-transcriptional and post-translational regulation. Includes 2 lectures and a 2 hr computational bioinformatics lab per week. Prerequisite: PLB 471 or permission of instructor.

PSAS525 - Program Development:Ag Educ 525-3 Program Development in Agricultural Education. Analysis and appraisal of current trends in agricultural education program development. Attention is given to implications for educators at the high school, post-secondary and in extension education positions. Offered each year, alternating spring and summer semesters.

PSAS526 - Cytogenics 526-4 Cytogenetics. Special approval needed from the department.

PSAS527 - Professional Development Ag Ed 527-3 Professional Development in Agricultural Education. Recent developments and trends in agricultural education are presented for review and discussion. The role of the agricultural instructor in determining educational priorities is emphasized. Offered each year, alternating fall and summer semesters.

PSAS530 - Plant Ecophysiology 530-3 Plant Ecophysiology. (Same as PLB 530) A study of the physiological processes that influence the growth, reproduction, adaptation, and geographic distribution of plants. The ecophysiology of plant stress and plant interactions. Special approval needed from the department.

PSAS531 - International Ag Systems 531-3 International Agricultural Systems. Introduction to world agriculture, farming systems, world crops, agricultural trade, and food production and processing. Influence of population and climate. Ethical issues surrounding rain forests, global agriculture, finance,
world trade, crops and livestock, and the environment. Appropriate technologies and their social and
economic impact on developing countries. Special approval needed from the department.

PSAS547 - Soils and Environ Quality 547-2 Soil and Environmental Quality. A study of the interaction
between plants and soil-water, and their effects on soil and water pollution. Reactions and processes
governing the solubility and mobility of metals, organic compounds and nutrients in soil, sustainable
management practices, and soil/water resource remediation improving environmental quality will be
discussed Prerequisite: CSEM 240 or consent of instructor.

PSAS548 - Fundamentals Urban Soils 548-2 Fundamentals in Urban Soils. Study of the function,
structure, and management of soils and engineered soils in the urban environment. Emphasis is on urban
horticulture, turf, urban forests, landscape plants and urban settings. Course will focus on understanding
and implementation of basic soil concepts, with an emphasis on sustainability and management of urban
soils to minimize maintenance and maximize utility.

PSAS550 - Plant Dis Mgmt & Epidem 550-3 Plant Disease Management and Epidemiology. This course
will provide understanding of approaches to managing plant diseases, strategies for developing and
implementing integrated disease management programs, and methods for monitoring and analyzing
epidemics.

PSAS551 - Plant Nematology 551-4 Plant Nematology. This course will provide an understanding of
plant parasitic nematode anatomy and morphology, identification, life cycles, and management strategies.
Emphasis will be placed on practical or applied aspects of information presented. Special approval
needed from the department.

PSAS555 - Nanotechnology AgriFood 555-4 Nanotechnology for Agricultural and Food Industries.
This course will cover fundamentals and application of nanotechnology applied to the agri-food sector.
Novel techniques such as encapsulation and delivery of agricultural and food molecules, diagnostics and
sensing for plant and animal health will be covered. Application in production, processing and packaging
of food and feed, to improving safety, quality and security will also be covered by student participation
and guest lecturers. Prerequisite: basic undergraduate physics and chemistry or consent of instructor.

PSAS560A - Field Plot Technique 560A-3 Field Plot Technique. Design of field plot and greenhouse
experiments including appropriate statistical analyses for each of the designs. Data interpretation.
Prerequisite: ZOOL 557 or PLB 360.

PSAS560B - Field Plot Technique 560B-2 Field Plot Technique. Each of the designs discussed in (A)
will be illustrated with a type problem and solved by computer processes using primarily MINITAB and
SAS software programs. Prerequisite: PSAS 560A or concurrent enrollment or consent of instructor.

PSAS561 - Control Programming 561-3 Control Programming. Course in the logic and procedures of
computer programming for automating, controlling, and monitoring of agricultural processes. Students
will analyze problems, design solutions, develop software and test solutions. Students will be expected
to develop a control, monitoring, and automated data collection project related to their research interests.
Special approval needed from the department. Laboratory fee: $10.

PSAS562 - Sustainable Landscape Prctcs 562-3 Sustainable Landscape Practices. Landscape
practices designed and maintained with respect to natural systems offer ecological benefits, functional
solutions and aesthetic value to outdoor spaces. This course will introduce best practices and
construction methods of sustainable landscape features as green roofs, green walls, and permeable
pavers with an emphasis on construction details, material selection and case studies. Students will
expand critical thinking skills as applied to landscape planning.

PSAS563 - Plants Ecological Landscape 563-3 Plants for the Ecological Landscape. Introduction to
alternative plant selections for the urban landscape associated with the use of native plants and creating
edible landscapes. Emphasis is placed on site location, whether on the ground, in containers or on a
green roof, to determine best practices and appropriate choices in urban environments.

PSAS564 - Fruit in Urban Environment 564-3 Growing Fruit in the Urban Environment. Learn why and
how to grow perennial fruit crops in limited and special spaces in the urban environment. The potential
uses of temperate perennial fruit plants in the urban landscape are examined. Theoretical obstacles to
successful fruit growing are explored. The unique advantages and disadvantages of growing long-lived perennial plants in urban landscape are examined. Methods of developing practical crop scheduling for intended outcomes (low vs. high inputs) are talked about. Efficient utilization of urban meso-climate niches are covered.

**PSAS565 - Bee Mgmt in Urban Spaces** 565-1 Bee Management in Urban Spaces. Study of the role of bees in the urban landscape. Behavior, biology and pests of bees will be examined. Practical management of bees will be explained in connection with maintaining healthy bee ecosystems. The demonstrator species will be the honey bee Apis mellifera.

**PSAS571 - Genomics Euk: Bioinformatics** 571-4 Genomics of Eukaryotes: Bioinformatics. (Same as PLB 571) Genomics, Proteomics and Bioinformatics are rapidly making important contributions to the Life Science through biotechnology. An appreciation of the genomic tools is important to all in agriculture and biology. The relationships between molecular biology bioinformatics and the biotechnology industry will be explored. Short independent practical projects in genomics, proteomics or bioinformatics will be pursued.

**PSAS572 - Current Research Ag Systems** 572-3 Current Research in Agricultural Systems. A study and analysis of current problems, research findings and innovations in agricultural systems. Technical reports and journal articles will be discussed and analyzed. Students will select articles related to their own research interests and begin writing a thesis or research proposal. Special approval needed from the department.

**PSAS575 - Agricultural Systems** 575-3 Introduction to Agricultural Systems. Operational functions and processes that are integrated to accomplish a designated, well-defined purpose in production and processing. Topics include planning and evaluating reliability, manpower, scheduling, economy, packaging, human and animal factors. Prerequisites: AGSE 318, 371, or instructor approval. Lab fee: $10.

**PSAS580A - Coll In Bioinf Comp Eng** 580A-3 Colloquium in Bioinformatics for Computer Engineers. Bioinformatics makes important contributions to the Life Sciences through biotechnology. The use of Bioinformatics is important to all in agriculture, biology, computer engineering and computer science involved in the analysis of genes; proteins; and genomes by computers and networks. Short independent practical projects in bioinformatics or computer networking may be pursued. Graduate Student status required. Sections A, B, and C. May be taken online.

**PSAS580B - Coll In Bioinf Comp Eng** 580B-3 Colloquium in Bioinformatics for Computer Engineers. Bioinformatics makes important contributions to the Life Sciences through biotechnology. The use of Bioinformatics is important to all in agriculture, biology, computer engineering and computer science involved in the analysis of genes; proteins; and genomes by computers and networks. Short independent practical projects in bioinformatics or computer networking may be pursued. Graduate Student status required. Sections A, B, and C. May be taken online.

**PSAS580C - Coll In Bioinf Comp Eng** 580C-3 Colloquium in Bioinformatics for Computer Engineers. Bioinformatics makes important contributions to the Life Sciences through biotechnology. The use of Bioinformatics is important to all in agriculture, biology, computer engineering and computer science involved in the analysis of genes; proteins; and genomes by computers and networks. Short independent practical projects in bioinformatics or computer networking may be pursued. Graduate Student status required. Sections A, B, and C. May be taken online.

**PSAS581 - Seminar** 581-1 to 4 (1,1,1,1) Seminar. Individual presentations on subjects and problems relating to soils, field and horticultural crops, education, information, and technologies and other phases of plant, soil and general agriculture. Graded S/U only.

**PSAS581A - Seminar: Ag Education** 581A-1 to 4 (1,1,1,1) Seminar. Individual presentations on subjects and problems relating to soils, field and horticultural crops, education, information, and technologies and other phases of plant, soil and general agriculture. Graded S/U only.

**PSAS581B - Seminar: Ag Mechanization** 581B-1 to 4 (1,1,1,1) Seminar. Individual presentations on subjects and problems relating to soils, field and horticultural crops, education, information, and technologies and other phases of plant, soil and general agriculture. Graded S/U only.
PSAS582A - Colloq-Genetics/Plant Breed 582A-2 Colloquium in Plant and Soil Science-Genetics and Plant Breeding. Recent developments and trends in specialized areas of plant and soil science will be discussed in genetics and plant breeding.

PSAS582B - Colloq-Research Methods 582B-2 Colloquium in Plant and Soil Science-Research Methods. Recent developments and trends in specialized areas of plant and soil science will be discussed in research methods.

PSAS582C - Colloq-Physiology & Ecology 582C-2 Colloquium in Plant and Soil Science-Physiology and Ecology. Recent developments and trends in specialized areas of plant and soil science will be discussed in physiology and ecology.

PSAS583 - Urban Eco Landscape Practicum 583-3 Urban Ecological Landscape Practicum. Critical analysis and innovative design/solutions of urban landscape practices and urban agriculture from an ecological perspective. This practicum culminates the objective of integrating natural systems in the design and practice of sustainable landscape systems including urban food production. Learning opportunities will be presented through site visits and case studies. Students will demonstrate practical application of theories and systems through discussions and presentations.

PSAS588 - InternatIonal Grad Studies 588-1 to 8 International Graduate Studies. Residential graduate study programs abroad. Approval of department required both for the nature of program and number of hours of credit. Special approval needed from the department. Graded S/U only.

PSAS590 - Readings 590-1 to 4 Readings. Contemporary books and periodicals on selected subjects within the fields of plant, soil and agricultural systems. Special approval needed from the department.

PSAS592 - Special Problems 592-1 to 3 Special Problems. Directed study of specialized areas of crop production, horticulture, soils or agricultural systems depending on the program of the student. Discussion, seminars, readings and instruction in research techniques. Special approval needed from the department.

PSAS593 - Individual Research 593-1 to 6 Individual Research. Directed research on approved projects investigating selected fields of plant, soil and agricultural systems. Special approval needed from the department.

PSAS595 - Agricultural Occupation Intern 595-1 to 4 Agricultural Occupation Internship. Prepares coordinators to fulfill their responsibilities in selected areas in agricultural related occupations through an internship in the area of specialization and through orientation to related technical information. Special approval needed from the department.

PSAS599 - Thesis 599-1 to 6 Thesis. At least three hours of thesis credit is required for the Master's degree under the thesis option. Special approval needed from the department.

PSAS601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Plant, Soil, and Agricultural Systems Faculty

Bond, Jason P., Professor, Ph.D., Louisiana State University, 1999; 2000. Nematology and plant pathology.

Chong, She-Kong, Professor, Emeritus, Ph.D., University of Hawaii, 1979; 1979.

Choudhary, Ruplal, Professor, Ph.D., Oklahoma State University, 2004; 2008. Biosystems Engineering.

Diesburg, Kenneth L., Assistant Professor, Emeritus, Ph.D., Iowa State University, 1987; 1989. Turfgrass science.
Political Science

The Department of Political Science offers graduate work leading to M.A. and Ph.D. degrees. The department endeavors to accommodate the special and general interests of students through a broad curriculum, individualized programs, and varied teaching and research assistantships. The department takes a personal interest in its students throughout their period of enrollment and assists them in finding satisfying professional employment upon graduation. Graduates now hold academic appointments in 60 American universities and colleges and more than a dozen foreign institutions of higher education. The professional interests of the faculty range across most fields of political science, and have resulted in significant scholarly publications and presentations at professional meetings.
Application Procedures

The Department of Political Science and Graduate School applications form one combined application that should be submitted electronically. The link is available at the Graduate School website. There is a supplemental application (Part Two), specific to the Department of Political Science that must be submitted along with the main online application. Separate forms are not required for application for financial assistance, except for Graduate School fellowships. Students will be accepted for graduate work in political science only upon approval by the department as well as the Graduate School. This program requires a nonrefundable $65 application fee; applicants must pay this fee by credit card.

All applicants must submit all post-secondary education transcripts, three letters of recommendation from persons who can evaluate the applicant's academic ability and a statement of purpose. Applicants for the M.A. and Ph.D. programs must also submit scores on the Graduate Record Examination (GRE), verbal and quantitative tests, and an example of written work that demonstrates the applicant's analytical and writing skills. Foreign students must have taken the Test of English as a Foreign Language (TOEFL) and are expected to have a score of at least 600 (paper score) or 250 (computer score).

Applications and supporting materials for the M.A. and Ph.D. programs that are submitted by January will be given full consideration for admission and funding.

Master of Arts Degree Requirements

Admission

Applicants for the Master of Arts degree program are admitted only with the approval of the graduate studies committee of the department. The department imposes requirements for admission in addition to those of the Graduate School. The department will ordinarily accept as candidates for the Master of Arts degree only those applicants who (1) have graduated from an accredited four year college or university; (2) have completed four or more courses in social science, humanities, or related disciplines; (3) have a 2.7 (4-point scale) overall grade point average or, alternatively, have a 2.9 overall grade point average for the last two years of undergraduate work; and (4) have a 3.0 average in government or political science.

Retention

Retention is governed by the rules of the Graduate School. Students should avoid the accumulation of incomplete grades. No student with more than two incomplete grades can be awarded a graduate assistant appointment, and a student holding a graduate assistant appointment is subject to having the appointment terminated upon acquiring two or more incomplete grades.

Course Work

The Director of Graduate Studies serves as advisor to each M.A. student until an advisory committee has been selected by the student with the approval of the director, normally no later than the middle of the student’s first semester in residence. The advisory committee must approve the student’s program. Each candidate for the Master of Arts degree must complete six hours for research tools and methods requirements (POLS 500A and POLS 500B), a one hour pre-professional requirement (POLS 593), and six hours of two pro-seminars. No more than nine credit hours of elective coursework may be taken at the 400 level. A maximum of nine credit hours from courses offered by other departments will count toward the MA degree.

Program of Study:

- Pre-Professional Preparation - 1
- Research Tools and Methods - 6
- Pro-Seminars (2) - 6
- Elective Coursework - 14
Research Paper

A Master of Arts degree will be awarded upon completion of a research paper and the course and hour requirements. The research paper is developed from a paper produced in a seminar or through independent readings/research with a faculty member. Students will select an advisor for the Master’s Research Paper (e.g., the person who taught the course or supervised the readings/research project). Students will enroll with this faculty member for three semester hours in POLS 591, Individual Research, for the completion of the research paper. This course can be taken concurrently with or after the research seminar. The selection of the advisor requires paperwork that must be filed with the Director of Graduate Studies. The research paper will then be submitted for evaluation to another faculty member selected in concurrence with the faculty advisor for the paper. In case of disagreement over the evaluation (pass/fail) of the paper, the graduate studies committee will appoint a third reader. The master’s research paper normally is 30 to 80 pages in length. All research papers must have an original approval form signed by the student’s committee and the department chair which must be submitted to the Graduate School. Guidelines for submission of the final research paper are found on the website.

Exceptions

An exception from these rules must be justified in a petition approved and signed by the student’s committee members, submitted to the Director of Graduate Studies and approved by the members of the graduate studies committee at a scheduled meeting.

Ph.D./J.D. in Political Science and Law

Students who have been admitted separately to the Southern Illinois University School of Law and doctoral program in political science may study concurrently for the Juris Doctor and Doctor of Philosophy degrees. Students interested in concurrent study should inform both programs before entering the fourth semester of law school. Each program will maintain records and evaluate final degree requirements as if the student were enrolled in only one program.

Concurrent study students must complete a minimum of 81 semester hours of School of Law credits which meet all law area requirements, as well as all Ph.D. area requirements, to receive the J.D. degree. Students will not be permitted to take course work outside the prescribed law curriculum during the first year of law class work. Students may enroll for both law and graduate course work during subsequent years provided a minimum of 10 semester hours of law and 12 semester hours total are taken in any term which has law course enrollment.

Concurrent study students must complete the entire first year law curriculum with a law grade point average of 2.5 before being eligible to register for any political science graduate courses; and must complete a minimum of 60 semester hours which meet the distribution requirements of the Ph.D. program, as well as all law area requirements, to receive the Ph.D. degree. A maximum of 9 semester hours of School of Law credits of a political science nature (for example: administrative law, environmental law, labor law, natural resources law) may be applied to both J.D. and Ph.D. requirements if approved by the director of the Ph.D. program. All concurrent study students will complete a doctoral dissertation.

Doctor of Philosophy Degree Requirements

Admission

Applicants for the doctoral degree must meet all applicable department and graduate school rules and admission requirements. Department regulations and procedures governing the Ph.D. degree program are stated in the Political Science Department’s “Regulations and Procedures of the Graduate Studies Program.” Applicants are admitted only fall semester with the approval of the graduate studies committee. Successful completion of the Ph.D. Degree Program requires that students remain in good standing with the Graduate School and make reasonable progress toward completion of the degree; form and
execute the program of study established with their advisory committee; complete a total of 52 required course, elective course, and dissertation credit hours; successfully pass preliminary examinations; and successfully defend the dissertation.

Retention

Retention is governed by Graduate School rules and department standards of reasonable progress toward degree. Students failing to make reasonable progress toward completion of the degree are removed from the program.

Coursework

Each candidate for the doctoral degree must complete 37 credit hours of graduate level coursework and 24 dissertation credit hours. Of the 37 credit hours of graduate coursework, students must complete one hour of pre-professional coursework (POLS 593), nine hours of research tools and methods (POLS 500A, POLS 500B, and 500C, or the equivalent of each), 24 hours of 5xx graduate seminars in the department, a classics readings course (POLS 592A-E) and 24 hours of dissertation credit.

- Pre-professional Requirement - 1 credit hour
  # POLS 593-1
- Research Methods and Tool Requirement - 6 credit hours
  # POLS 500A-3
  # POLS 500B-3
  # POLS 500C-3
- Seminar Requirement - 21 credit hours
- Reading Requirement - 3 credit hours
  # POLS 592A-E
- Dissertation Requirement - 24 credit hours
  # POLS 600-1 (1 to 12 per semester)

Preliminary Examinations

Ph.D. students must take written preliminary examinations in one of the following concentrations: 1) ethnicity and nationalism, 2) political communication, 3) judicial behavior, or 4) public management. Before preliminary examinations can be scheduled, a student must have completed all coursework, have been in residence for at least one year, and have a grade point average of at least 3.5. A student may not take preliminary examinations if there are any incomplete grades on his or her record. The Director of Graduate Studies assigns two readers to write and grade each written subfield examination. When possible, at least one reader for each exam will be a member of the student’s advisory committee. The Director of Graduate Studies will appoint a third reader if the first and second readers are unable to agree on a result.

Students must notify the Director of Graduate Studies and all members of the Advisory Committee in writing the semester before they wish to sit for the comprehensive examination. The Director of Graduate Studies schedules written exams to begin no later than the first week of October in fall semester and March in spring semester. The oral examination shall take place not more than two weeks after the student has passed their last written examination. All scheduling exemptions must be approved by the Director of Graduate Studies. Passing written and oral examinations advances the student to candidacy for the Ph.D. degree. Students who do not pass exams may be allowed to retake them or withdraw from the program at the discretion of the Director of Graduate Studies upon advice from the student’s Advisory Committee.

Dissertation

Students must complete a dissertation within five years following their admission to candidacy for the Ph.D., or the students must retake preliminary examinations. Students select five faculty members to serve on their dissertation committee. One faculty member may be from another department. The candidate’s dissertation prospectus must be approved by the dissertation committee and filed with the Director of Graduate Studies.
The student works closely with the Chairperson of the dissertation committee throughout the process. The final draft of the dissertation is presented to committee members after the Chairperson of the dissertation committee determines that it is complete and acceptable form at least two-weeks prior to the oral dissertation defense. The success of a final oral defense of the dissertation will complete the requirements for the doctoral degree. The defense must be open to the public.

All dissertations must have an original approval form signed by the student’s committee and the department chair. Guidelines for submission to the Graduate School are found on the website.

Application of Rules and Exceptions

The department’s rules in force at the time of the student’s admission to the Ph.D. program will apply while the student is in the program unless 1) the student voluntarily selects a newer set of rules before graduation or 2) the time between admission to the Ph.D. program and passing preliminary examinations exceeds five years. In the latter case, the student will automatically come under the rules in force at the beginning of the sixth year and every fifth year thereafter until they pass preliminary examinations. Students requesting any exemptions to these rules must submit a petition signed by the members of their Advisory Committee to the Director of Graduate Studies for approval by the Graduate Studies Committee.

Cooperative Program with University of Illinois at Springfield

The Department of Political Science at SIU has an agreement with the political studies program at University of Illinois at Springfield (UIS) to facilitate the entry of UIS political studies students into the SIU political science Ph.D. degree program. SIU will accept appropriate UIS graduate credits to fulfill course work, methodology, and research tool requirements. UIS students can qualify for accelerated entry into the SIU doctoral program after two semesters of study at UIS with 24 semester hours completed, a 3.5 GPA, two proseminars, and written evaluations from course instructors. A number of UIS faculty are eligible to serve on graduate student examination and dissertation committees. SIU will accept up to 12 hours credit for course work, research projects, and internships completed under UIS faculty direction towards the SIU political science Ph.D. degree. Other course work, residency, and dissertation requirements of the SIU program must be met as described in other sections of this catalog. For more detailed information, ask the Director of Graduate Studies, Department of Political Science, SIU.

Political Science Courses

POLS403 - Philosophy of Politics 403-3 Philosophy of Politics. (See PHIL 441)

POLS405 - Democratic Theory 405-3 Democratic Theory. (Same as PHIL 405) An examination of various aspects of democratic thought, including the liberal tradition and its impact upon the United States. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement. Prerequisite: POLS 114 or consent of instructor.

POLS406 - American Political Thought 406-3 American Political Thought. This course is an advanced seminar in American political thought. The course focuses on the founding ideals and practices of the American republic and how these ideals functioned in subsequent social movements, political struggles, and ideological conflicts in American political history. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

POLS435 - Judicial Process & Behavior 435-3 Judicial Process and Behavior. An examination of the process by which judges in both trial and appellate courts at federal and state levels are selected and of the ways in which they make decisions. Attention to the structure of the courts. Study of the communication and impact of judicial decisions. The course provides some insight into the methods used to study judicial behavior. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement. POLS 114 and 230 recommended prerequisites.

POLS436 - Administrative Law 436-3 Administrative Law. The procedural law of public agencies, particularly the regulatory commissions but also executive branch agencies exercising regulatory
functions. The exercise of discretion and its control through internal mechanisms and judicial review. POLS 114 and 230 recommended. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS437 - Jurisprudence (Law Theories)** 437-3 Jurisprudence (Theories of Law). This course provides an examination of the major schools in legal thinking. We will investigate classic jurisprudential questions, including: theories of how judges decide cases, the role of morality and natural rights in determinations of law, and the role of legislative and judicial actors in the creation of law. POLS 114 and POLS 230 are recommended prerequisites. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS438 - Women and the Law** 438-3 Women and the Law. (Same as WGSS 438) This course is an advanced seminar in public law with a focus on gender, law and society. The course will engage with issues in feminist legal practice and the development of legal theories regarding gender. We will interrogate the relationship between theory and practice and the ways in which feminist jurisprudence has taken shape in the dynamics of this relationship. POLS 114 and 230 recommended prerequisites.

**POLS439 - Comparative Law & Courts** 439-3 Comparative Law and Courts. In the United States, topics ranging from abortion to gay rights and government surveillance are inevitably "solved" by the Supreme Court. Yet for many years the Supreme Court stood alone in the world in being able to overturn government policy. Increasingly, courts all over the world-often prodded by social actors-have begun developing their own unique solutions to these constitutional questions, in many cases challenging accepted social values and mores along the way. In this course we will investigate the development of courts and constitutional rights around the world, including both national rights and international human rights.

**POLS444 - Policy Analysis** 444-3 Policy Analysis. An examination of basic concepts in the policy sciences, approaches to policy analysis, applications to selected areas of policy, and instruments of policy development. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS455 - Democratization** 455-3 Democratization. An examination of transitions to democracy from authoritarian rule in countries around the world. Emphasis is on understanding from a comparative perspective on the social, economic, institutional, political, cultural and international circumstances that promote, inhibit and even reverse the spread of democratic forms of government. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS456 - Gender & Global Politics** 456-3 Gender and Global Politics. (Same as WGSS 446) An advanced course examining gender systems and women's situations across cultures and countries. This course also studies the impact globalization has had on gender issues by looking at women's activism at international and transnational levels. Topics covered include women's political representation, gender and culture, women's social movements, and gendered policy issues. POLS 250 recommended.

**POLS459 - Russia & Post-Soviet States** 459-3 Russia and the Post-Soviet States. This course examines political developments in Russia and the other fourteen Soviet successor states that gained (or regained) independence following the demise of the Soviet Union in 1991. Particular attention is paid to the degree to which Soviet legacies of communist political institutions, state socialist economic policies and ethno-federalism continue to shape the politics and economics of these countries in the post-independence period. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS460 - European Politics** 460-3 European Politics. This course provides students an overview of European integration and a better understanding of the functioning of the European Union. The course opens with a survey of historical developments in both Eastern and Western Europe from 1914 to 1989. After this historical overview, the institutions and policies of the European Union are studied in detail. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS466 - Latin American Politics** 466-3 Latin American Politics. An in-depth analysis of specific problem areas in Latin American political processes as well as comparative study of selected Latin American nation-states. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS467 - Middle East Politics** 467-3 Middle East Politics. This course is designed to examine the regional politics and security of the Middle East and North Africa in a historical and comparative context. This course discusses the historical evolution of the modern states in the region, the dynamics of inter-
Arab and Arab-Israeli politics and security, the role of ethnicity and religion in domestic and regional politics, and great powers' penetration of the region.

**POLS475 - International Law** 475-3 International Law. Rules and practices governing states in their relations in peace and war. Prerequisite: POLS 270 recommended. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS477 - American Foreign Policy** 477-3 American Foreign Policy. This course surveys the conduct, goals and evolution of American foreign policy since World War II. It analyzes such issues as the role of institutions, culture and individuals in the formulation of American foreign policy, the interaction between domestic and foreign politics, and the debate over American grand strategy. Prerequisite: POLS 270 recommended.

**POLS480 - Seminar in Int'l Relations** 480-3 Seminar in International Relations. Discussion-based course analyzing empirical and normative (ethical) issues in the study of international relations. Particular emphasis is placed on developing students' critical thinking skills. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement. Prerequisite: POLS 270 recommended.

**POLS500A - Political Methodology-Research** 500A-3 Political Methodology. Seminars in empirical research methods (A) Research Design. Course covers quantitative and qualitative empirical studies of politics.

**POLS500B - Political Methodology-Stats** 500B-3 Political Methodology. Seminars in empirical research methods (B) Statistical Data Analysis in Political Science I. Provides a foundation in univariate and bivariate descriptive statistics; inferential statistics including hypothesis testing about population parameters, bivariate and multivariate relationships, measures of association, and correlation; and an introduction to linear regression. Lab fee: $50.

**POLS500C - Political Methodology-Stats** 500C-3 Political Methodology. Seminars in empirical research methods. (C) Statistical Data Analysis in Political Science II. Provides in-depth instruction in multiple regression including assumptions of linear model, diagnostics and corrections for violation; estimating models using categorical dependent variables, nonlinear relationships, interactions, and extensions to advanced techniques as time allows. Prerequisite: POLS 500B (or permission of instructor). Lab fee: $50.

**POLS502 - Research Methods Topics** 502-3 to 6 Topical Seminar in Research Methods. Advanced seminar in empirical research methods. Topics will vary by instructor. Lab fee: $50.

**POLS503 - Research Methods for PA** 503-3 Research Methods for Public Administrators. The course aims to familiarize students with analytical techniques and research methods used currently by public administrators. Provides an introduction to applied statistics and data analysis for problems of interest to public administrators. Restricted to enrollment in MPA graduate program or consent of the department. Lab fee: $50.

**POLS513 - Topical Political Behavior** 513-3 to 6 Topical Seminar in Political Behavior. Topic will vary with instructor. Student should see director of graduate studies for advanced syllabus.

**POLS514 - Sem in Intergovernmental Rels** 514-3 Seminar in Contemporary Intergovernmental Relations. An examination of relationships among national, state, and local governments in the American federal system, with emphasis on recent literature and contemporary issues. Prerequisite: POLS 340. Restricted to enrollment in MPA graduate program or consent of department.

**POLS516 - Pro-Seminar Political Behavior** 516-3 Pro-Seminar in Political Behavior. An overview of the study of political behavior in American and comparative politics.

**POLS517 - Political Communication** 517-3 Political Communication. Provides an introduction to the academic study of media and politics. The primary objective is to introduce graduate students to seminal theory and research and contemporary contributions in the study of media, politics, and political communication.

**POLS519 - Survey Methodology** 519-3 Survey Methodology for Political Science. Provides an overview of survey methodology. Students will learn how to administer surveys for use in political science and public administration. Topics include psychology of asking and answering questions; constructing
questions and questionnaires; evaluating surveys; criteria for survey modes; sampling frames and
sampling designs; and ethics for survey research methods.

**POLS522 - NPOs and NGOs** 522-3 Rethinking NPOs and NGOs: Doing Good Better. This course
examines the question, can NPOs and NGOs do their good works better? In looking for the answer,
students consider how perspective shapes reality, the need for a new framework for action, the conflict
between limited resources and seemingly unlimited need, importance of local focus, conflicts between
donors' demand for short term results with a situation's requirement for a long term program, issues
casted by public policy, roles of gender and ethnicity in solving problems and the role of simplicity.
Students will do this in anticipation of becoming leaders/managers of NPOs or NGOs.

**POLS530 - Pro-Seminar in Public Law** 530-3 Pro-Seminar in Public Law. A survey of the major
literature in the field of public law at the graduate level.

**POLS532 - Nonprofit/Public Grant Writing** 532-3 Nonprofit and Public Grant Writing. Examines the
theories, skills and practices for writing grants for nonprofit and public organizations. Students practice
these skills by actually preparing grants for a nonprofit or a public organization. Prerequisite: POLS 537
with a grade of B or better.

**POLS534 - Governance Networks** 534-3 Governance Networks in Public Administration. Explores the
shifting locus of public service delivery over time, and examines alternative organizational arrangements
through which public services are provided to citizens. Emphasis is placed on the environment, structure
and management of service delivery networks including combinations of public, private, and not-for-profit
actors. Explores joint agreements, public-private partnerships, and contracting regimes as elements that
bind network actors in the process of delivering high quality public services. Additional focus is invested
in evaluating the leadership and management strategies that can ensure accountable and ethical public
policy implementation by non-governmental organizations that act with the authority of government. The
factors that facilitate network performance are also explored. Prerequisite: POLS 537.

**POLS535 - Administrative Ethics** 535-3 Ethical Foundations of Public Service. Examines the ethical
dimensions of public service, particularly as it relates to the cultural context of the United States, while
emphasizing the responsibility of the public manager to act with integrity. Assesses the virtues necessary
for moral leadership in the public sector, as well as managerial strategies that reinforce ethical climates
in public organizations and ethical behavior among public employees. Focuses on contemporary cases
to explore the practical relevance of theories of morality and ethics. Special attention will be invested
in examining the ethical implications of contemporary modes of governance and tensions between
managerial and democratic values. Prerequisite: POLS 537.

**POLS536 - Comparative Public Law** 536-3 Seminar in Comparative Public Law. An examination of legal
systems around the world.

**POLS537 - Foundations of PA** 537-3 Foundations of Public Administration. Introduction to the study and
practice of administrative process and public management. Theoretical, political, and practical issues of
organizing, staffing, financing and implementing government decisions and other issues are surveyed.

**POLS538 - Public Law Topics** 538-3 Topical Seminar in Public Law. Advanced seminar in public law.
Topics will vary by instructor.

**POLS539 - Program Evaluation** 539-3 Program Analysis and Evaluation. The analysis and evaluation
of governmental programs. Emphasis is placed upon use of analytical techniques to determine program
impact and the use of evaluation in governmental decision making. Prerequisite: POLS 503. Restricted to
enrollment in MPA graduate program or consent of department. Lab fee: $50.

**POLS540 - Seminar Public Management** 540-3 Seminar in Public Management. Course is designed for
advanced MPA students and examines social, political, legal and managerial constraints on the behavior
of public administrators. Issues in ethics and the public's expectations of professional administrators are
also examined. Restricted to students who are in the MPA program who have completed at least three
required MPA courses, or the consent of the department.

**POLS541 - Sem Applied Probs Public Admin** 541-3 Seminar in Applied Problems of Public
Administration. Study of selected problems in public administration and policy. Emphasis placed on
the practitioner’s perspective. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department.

**POLS542 - Public Budget & Fiscal Mgt** 542-3 Public Budgeting and Fiscal Management. An examination of the theory and practice of budgeting in the public sector and of selected elements of fiscal management. The course focuses on administrative aspects of budgeting and is oriented toward preparation of students for careers in the public service. Students utilize primary materials in conducting individual or class projects aimed at development of budgetary skills. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department. Lab fee: $50.

**POLS543 - Human Resource Management** 543-3 Human Resource Management. A study of the processes and procedures used in contemporary public personnel systems. Emphasis is placed on examination of competing models of personnel administration, application of personnel management strategies to specific case problems and public sector labor relations. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department.

**POLS544 - Policy Analysis** 544-3 Policy Analysis. This course focuses on the development and analysis of public policy alternatives and how they are used in governmental decision making.

**POLS545 - Organization Theory & Behavior** 545-3 Organization Theory and Behavior. An examination of various approaches to describing and understanding public organizations and the individuals within them. Emphasis is placed on study of the important theoretical literature in the field and on the applications of the theory of practical management problems in governmental units and agencies. Prerequisite: POLS 340. Restricted to enrollment in MPA graduate program or consent of department.

**POLS546 - Leadership Public Admin** 546-3 Leadership in Public Administration. An examination of contemporary theories of leadership and their applicability on the public and non-profit sectors. The course emphasizes the range of behaviors and actions relevant to leadership in contemporary governmental organizations and the analysis of factors resulting in leadership success or failure. Restricted to enrollment in MPA graduate program or consent of the department.

**POLS547 - Nonprofit Fundraising** 547-3 Nonprofit Marketing and Fundraising. This course examines the unique resource development needs of nonprofit organizations and public organizations and looks at the principles and practical sides of meeting those through relationship management, marketing and fundraising. Time will be taken to look at all the aspects of a successful relationship, fundraising and marketing management plan. Students will be expected to participate in at least one fundraiser for a local nonprofit during the semester.

**POLS549 - Admin Nonprofit Organizations** 549-3 Administration of Nonprofit Organizations. Examines the characteristics of nonprofit organizations that distinguish them from the public and for-profit sectors. Explores social and economic functions of nonprofits and such administrative issues as fundraising, working with volunteers and governing boards, satisfying tax codes and service distribution. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department.

**POLS550 - Pro-Seminar in Public Admin** 550-3 Pro-Seminar in Public Administration. A survey of the major literature in the field of public administration. The course will synthesize and integrate the literature and provide an overview of topics to be covered in greater detail in other seminars. Required of M.A. and Ph.D. students offering public administration as a graduate area before enrolling in more advanced subject-matter seminars.

**POLS551 - Aviation Policy Law Reg** 551-3 Aviation Policy, Law and Regulation. (Same as AVM 551) Examination of the history of American aviation policy, law and regulation. The course focuses primarily on the development, implementation and enforcement of aviation policies and regulations at the federal level. Special attention is paid to the interaction of various government agencies and constituency groups, such as the aircraft industry, airport authorities, airlines, private pilots and passengers. In addition to the historical survey, students will analyze current policy and regulatory trends and identify future problems and opportunities for American aviation policy. Restricted to enrollment in MPAA graduate program or consent of instructor.

**POLS552 - Adv Airport Administration** 552-3 Advanced Airport Administration. (Same as AVM 552) This course will address the role and function of the airport administrator, especially related to the tasks
of developing, operating and maintaining various airport services to meet the needs of key airport users. This course will study key airport administration cases at primary, commercial service, reliever and general aviation airports. Meeting key airport regulations concerning operations and security will be a focus of the course. Restricted to enrollment in MPAA graduate program or consent of instructor.

POLS553 - Adv Airport Safety Admin 553-3 Advanced Airport Safety Administration. (Same as AVM 553) The Aviation Safety Administrator's job function and responsibility for safety and accident prevention within an aviation organization is examined using the case study method. The relevant theory, concepts, procedures and techniques of resource allocation, organizational design, decision modeling, task assignment, delegation of authority and responsibility, establishment of organizational goals and priorities and risk management as they relate to Aviation Safety are included. The job functions of an Aircraft Accident Investigation Team and of an Aviation Safety Inspector will be studied. Aviation safety administration literature will be reviewed. Restricted to enrollment in MPAA graduate program or consent of instructor.

POLS554 - Aviation Planning 554-3 Aviation Planning. (Same as AVM 554) This course fulfills a need for a semester length course on aviation planning for students concentrating in aviation administration. Airports and the aviation industry are rapidly expanding, and aviation is growing in importance on the nation's transportation agenda. Broader issues of law and regulation will be covered in an existing course, POLS 551. Restricted to enrollment in MPAA graduate program or consent of instructor.

POLS557 - Public Financial Admin 557-3 Public Financial Administration. The seminar provides a basic understanding of the public budgeting decision-making processes and financial management practices. It provides students with knowledge and hands-on experience of collecting and analyzing governmental data, generating financial reports, and presenting findings. It also provides students with an understanding of revenue sources and different factors that could potentially influence collections. Moreover, it gives students the opportunity to acquire experience in revenue forecasting and budget decision-making through homework assignments and in-class exercises. Prerequisites: POLS 542 and POLS 503 with grades of B or better. Lab fee: $50.

POLS560 - Pro-Sem in Comparative Politics 560-3 Pro-Seminar in Comparative Politics. Survey of the major literature in comparative politics at the graduate level.

POLS569 - Top Sem in Comparative Politics 569-3 to 9 (3,3,3) Topical Seminar in Comparative Politics. Advanced seminar in comparative politics. Topics will vary by instructor.

POLS570 - Pro Seminar Intl Relations 570-3 Pro-Seminar in International Relations. Survey of the major literature in international relations at the graduate level.

POLS576 - Religion and Politics 576-3 Religion and Politics. Examines empirical studies of religion and politics, including research on behavior, institutions, and movements. Topics include theories of religion, case studies of religious traditions, church and state relations, measurement of religion, and other topics on the intersection of religion and politics.

POLS580 - IR Topics 580-3 to 9 (3,3,3) Topical Seminar in International Relations. Advanced seminar in empirical international relations. Topics will vary by instructor.

POLS590 - Readings 590-1 to 6 Readings. Supervised readings in selected subjects. Prerequisites: POLS 592A-D for specific field, or POLS 545 or POLS 500A.

POLS591 - Individual Research 591-1 to 9 Individual Research. Selection, investigation and writing of a research paper under the personal supervision of a member of the department graduate staff. Prerequisite: completion of the appropriate pro-seminar for the field in which readings or individual research is to be done.

POLS592B - Found Pol Sci-Comp Poli 592B-3 Foundations of Political Science-Comparative Politics. Supervised readings in "classics" of the discipline.
POLS592C - Founds Poli Sci-Intl Relations 592C-3 Foundations of Political Science-International Relations. Supervised readings in "classics" of the discipline.

POLS593 - Preprofessional Sem Pol Sci 593-1 Preprofessional Seminar in Political Science. Designed to give the student an introduction to the major professional roles in the discipline. The requirements of teaching, research, publication and service are covered with discussion of where each fits into the professional role requirements and examples of how each is accomplished. Required of all Ph.D. and M.A. students in political science and other teaching assistants in political science. Graded S/U only.

POLS594 - Preprofessional Sem Public Admin 594-1 Preprofessional Seminar in Public Administration. Guides new students in preparing for the Comprehensive Exam and Professional Portfolio displaying competencies developed through their course work. Assists students writing a Research Paper through the proposal and committee process. Preparation of resume, conducting job searches and other professional development topics are also addressed. Required of all MPA students. Graded S/U only. Restricted to enrollment in MPA graduate program or consent of department.

POLS595 - Internship in Public Affairs 595-1 to 6 Internship in Public Affairs. Fieldwork in the office of a governmental or quasi-governmental agency. The internship is arranged by the field representative of the M.P.A. degree program. A paper in which the student correlates academic knowledge with practical internship experience is required. Mid-career M.P.A. students may receive credit upon completion of a paper relating previous work experience to public administration literature and theory. Restricted to enrollment in M.P.A. graduate program or consent of department. Graded S/U only.

POLS596 - Research Paper-Public Affairs 596-3 Research Paper in Public Affairs. Upon successful completion of core courses, the student expands and develops a previously written MPA graduate program paper. The project involves an issue or problem in public administration and is written with the approval and under the supervision of the student's committee chair. Restricted to enrollment in MPA graduate program or consent of department.

POLS598 - Dissertation Prospectus 598-1 Dissertation Prospectus. Workshop in dissertation topic selection and prospectus writing; enrollment required prior to completing preliminary examinations.

POLS599 - Thesis 599-1 to 6 Thesis. Maximum of six hours to be counted toward a degree. Special approval needed from the instructor.

POLS600 - Dissertation 600-1 to 40 (1 to 12 per semester) Dissertation. Minimum of 24 hours to be earned for the Doctor of Philosophy degree.

POLS601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

POLS699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Political Science Faculty

Bloom, Stephen, Associate Professor, Ph.D., University of California, LA, 2004.
Bricker, Benjamin, Assistant Professor, Ph.D., Washington University, 2013.
Burnside, Randolph, Associate Professor, Ph.D., University of New Orleans, 2004; 2005.
Comparato, Scott A., Associate Professor, Ph.D., Washington University, 2000; 2000.
Davis, Randall S., Associate Professor, Ph.D., University of Kansas, 2011; 2013.

Tilley, Virginia Q., Professor, Ph.D., University of Wisconsin, 1997; 2014.

Psychology

The School of Psychological and Behavioral Sciences offers graduate work leading to the Master of Arts, Master of Science, and Doctor of Philosophy degrees in Psychology with concentrations in the following areas: Applied Psychology, Brain and Cognitive Sciences, Clinical Psychology, and Counseling Psychology. The primary emphasis is on doctoral training, for which the master's degree is a prerequisite usually earned en route to the doctorate. We do not admit students who seek a terminal master’s degree.

The goal of graduate study in Psychology at SIU is to develop psychologists who will have a broad perspective and scientific sophistication as well as the requisite skills to advance the field of psychology and meet changing needs. The program emphasizes formal course work in the core curriculum and in the concentrations, preprofessional activities in training assignments, research, teaching, and practicum opportunities.

Admission and Advisement

The Psychology program and Graduate School applications form one combined application that should be submitted electronically through the Radius system. The link to Radius is available at the Graduate School website. There is a supplemental application (Part Two), specific to the Psychology program that must be submitted along with the main online application. Separate forms are not required for application for financial assistance, except for Graduate School fellowships. Students will be accepted for graduate work in psychology only upon approval by the departmental admissions committee as well as the Graduate School. Evaluations of applicants by the departmental admissions committee are based on information from the application form, GRE scores, transcripts, and letters of recommendation. This program requires a nonrefundable $65 application fee; applicants must pay this fee by credit card through Radius.

Upon admission to the program, each student is assigned to a faculty adviser, who assists in academic matters, including the planning of the student’s program of study: required courses, planned electives, anticipated dates for fulfillment of specified requirements, and so forth.

A new adviser may be assigned to a student for two reasons: (a) the student or adviser may request a change of adviser; (b) the student may change to a different area of concentration. Requests for a change of adviser should be made in writing to the student's area committee. To change area of concentration, the student should petition the sub-committee of the new area.

Core Curriculum

All students must complete the following minimum requirements which may be supplemented by requirements specific to concentration areas:

1. Two of three courses from PSYC 522, PSYC 524, and QUAN 507.
2. PSYC 509 for students who have not completed a course in the history and systems of psychology.
3. Thesis (PSYC 599) registration; students enrolled in the master’s degree program should complete the thesis requirement (PSYC 599, four to six hours) by the end of the second year.
4. (Students in the Clinical and Counseling areas only) one course from each of the four core coverage areas specified by the American Psychological Association. A list of courses which meet core coverage requirements is maintained by the department.

Areas of Concentration

Applied Psychology Concentration

The Applied Psychology (AP) concentration program is designed for students interested in research careers dealing with applied problems in non-academic and academic settings. The program provides students with training in research and data analysis methods that can be applied to a variety of problems in the public and private sectors.

Students in the AP concentration take the following courses in addition to departmental requirements described above. (a) Statistics and measurement: PSYC 522, PSYC 524, PSYC 525, and either PSYC 529 or PSYC 575; (b) Program evaluation and research methods: PSYC 465, PSYC 523, and PSYC 564; (c) At least three of the following Psychology content courses: PSYC 411, PSYC 461, PSYC 511, PSYC 515, PSYC 553, PSYC 565, PSYC 566, PSYC 567, PSYC 568, or other courses approved by the faculty. In addition AP students take PSYC 571 (Proseminar in Applied Experimental Psychology) during their first semester in the program, and PSYC 569 (Applied Research Consultants) from their second year until admission to the doctoral program or for two summers and four semesters, whichever is longer. AP students develop a specialization consisting of at least three graduate courses, additional readings, and/or independent study. A specialization plan and paper is developed with and approved by a specialization committee.

Accelerated M.S. with Applied / Quantitative Psychology Concentration and Non-Thesis Option

The accelerated five-year B.A.-M.S. non-thesis degree program is designed to provide practical experience in consulting and program evaluation as well as an educational background in research methods, statistics and program evaluation. This program leads to an undergraduate Bachelor of Arts and a Master of Science degree with a Major in Psychology with an additional year of master’s study. During the Spring semester, undergraduate students who have junior status will be able to apply to enter the Master’s program. To complete this five-year plan, 120 credits are required for the bachelor’s degree and an additional 31-32 credits for the master’s degree. Nine credit hours are double counted toward an undergraduate and a Master’s degree. Twenty-two to twenty-three hours are taken after undergraduate graduation.

The option requires satisfactory completion of nine hours in 400-level Psychology courses. This will be followed by 13 required statistics and methods credit hours of coursework [10 credit hours from PSYC 522, PSYC 523 and POLS 519 or POLS 539 and 3 elective credit hours from PSYC 505, PSYC 507, PSYC 574, PSYC 421, BA 540, POLS 519, or POLS 539 (POLS 519 or POLS 539 can only be applied to this requirement if not taken as required credit hours for statistics and methods above)]. Students will also complete 10 credit hours of coursework in Applied Research Consultants (the Applied Psychology in-house consulting firm). Students will complete 1 credit hour in Spring semester of their senior year which will not count towards the completion of the master’s degree. This will be followed by 9 credit hours in the Fall and 3 credit hours in Spring of their fifth year. Students will complete a written report describing their accomplishments and completed projects in ARC at the end of the master’s program.

This accelerated BA-MS non-thesis degree program is designed for students who desire an advanced degree including consulting experience and training in research methods, statistics and program evaluation that may lead to higher entry positions in their chosen career path. An associated benefit of the accelerated BA-MS degree program to students that have advanced degree aspirations is the ability to save time and money by completing their studies more quickly at the same institution and double-counting 9 credit hours. This accelerated BA-MS non-thesis degree program is NOT designed for students who may wish to transition to a Ph.D. program in Psychology.

Brain and Cognitive Sciences Concentration

The Brain and Cognitive Sciences program (BCS) emphasizes cognitive behavior approached from a combination of developmental (infancy and childhood, adolescence and aging), neurobiological
(neurophysiology, neuropsychology, genetics), behavioral (human and animal experimentation) and computational (neural networks, statistical analyses, intelligent software agents) perspectives. Students specializing in Brain and Cognitive Sciences typically pursue careers in academic settings such as departments of psychology, neuroscience, cognitive science or medical schools, or in non-academic settings such as pharmaceutical companies, hospitals, or in government research facilities.

In addition to department requirements, BCS students will take four courses from the following three pairs: PSYC 511 and PSYC 515 (Cognitive), PSYC 554 and PSYC 555 (Developmental), and PSYC 514 and PSYC 516 (Biopsychology). They must choose at least one course from each pair. Students will get experience with at least two different research methodologies (behavioral/cognitive experimentation, computational modeling, neurobiological experimentation, psychological assessment) either through individual research or appropriate course work, and must enroll for PSYC 572 (BCS Proseminar) throughout their tenure in the department. An additional four to six courses are required for the specialization.

Clinical Psychology Concentration

The Clinical Psychology program, accredited since 1961 by the American Psychological Association and the current Commission on Accreditation, is designed to train clinical psychologists for careers in clinical service, teaching and research. In addition to completing a required departmental core (designed in accordance with APA accreditation and state licensing board requirements), students take required courses in clinical skills, psychopathology, assessment, therapy, advanced/integrative discipline-specific knowledge, and ethical/professional issues (PSYC 594C, PSYC 535 or PSYC 581, PSYC 540, PSYC 580, and PSYC 598).

Students in the Adult Clinical Psychology specialization take required courses in psychotherapy and assessment (PSYC 530 and PSYC 544), in addition to two clinically relevant electives. Students in the Child Clinical Psychology specialization take two required developmental psychology courses (one of which usually fulfills a core requirement), and several courses in child assessment plus child treatment (PSYC 543, PSYC 556, and PSYC 559).

Counseling Psychology Concentration

The Counseling Psychology program, accredited since 1961 by the Accreditation Committee, Education Directorate of the American Psychological Association, is designed to teach students a wide range of skills which will prepare them to function as scientist-practitioners. Graduates are qualified for employment in a university setting (either in an academic department or a counseling center), in hospitals, community agencies, and educational and correctional institutions. The student is expected to develop competence in counseling, psychological assessment, research, and teaching. The required courses are as follows: PSYC 523, PSYC 525, PSYC 526, PSYC 530, PSYC 536, PSYC 537, PSYC 538, PSYC 540, PSYC 548, PSYC 553, PSYC 558, PSYC 561, PSYC 594F, and PSYC 598.

Research, Practicum, and Training Assignments

Research or practica are required in each area of concentration. In addition, each term the student must be engaged in a training assignment which supplements formal course work by professional activities such as research, teaching, or clinical service. The assignment varies according to the needs, professional goals, and competencies of the student, and increases in responsibility as the student progresses. The assignments require from 10 to 20 hours of service per week. This is a degree requirement of all students each term and is independent of any financial support. Therefore, each term the student signs up for one hour of PSYC 597.

Thesis and Dissertation Committee

Because the thesis or dissertation project and the proposed committee composition must be formally approved by the department chair, the student should submit the proposed committee in writing for approval by the chair well in advance of the prospectus meeting.

A master’s thesis committee consists of three or more faculty members and a dissertation committee of five or more faculty members (counting the committee chair). Committee chairs and a majority of committee members must be tenure-track faculty of the Department of Psychology. Thesis and dissertation committees must have one Psychology faculty member outside the student’s program area.
—to better reflect the diversity of departmental perspectives. Dissertation committees also must have a faculty member from a department other than Psychology.

**Prospectus**

Prior to starting the empirical research on a thesis or dissertation, a student must submit a written prospectus to each member of the committee at least one week prior to the prospectus meeting. A carefully written prospectus ordinarily serves as the opening chapters of the thesis or dissertation. The approval of the prospectus indicates that the committee members accept the research design. Faculty members not on the committee may attend the prospectus meeting, or may forward suggestions and comments to the committee chair prior to the meeting. Prospectus meetings are not scheduled during the recess period between semesters.

If the prospectus is approved with no major modifications, a letter of approval, noting any minor modifications is sent by the committee chair to the department chair for filing in the student’s permanent records. If major modifications are needed, the student may be asked to rewrite the prospectus, circulate the revised prospectus and arrange another committee meeting. A prospectus must be approved at least one semester before graduation.

**Style**

The student has the option of writing the thesis or dissertation in the traditional fashion or in journal style. In the latter case, ancillary material (full survey of literature, subsidiary analyses, etc.) are placed in the appendices, although figures and tables appear in the text. The Psychology department prefers that citations, table headings, etc. follow the APA style (Publication Manual of the American Psychological Association, latest edition, Washington, D.C.).

**General Procedures**

Students should not register for PSYC 599 or PSYC 600 hours until they have supervisors and will actually be using University facilities, or faculty time for assistance and direction.

Prior to graduation (a minimum of five weeks for master’s students and eight weeks for doctoral students), and at least one week prior to the oral defense meeting, the candidate must submit a final draft of the thesis or dissertation to the full committee so that appropriate suggestions can be made.

**Number of Copies**

Two bound copies of the complete thesis or dissertation are required: one for the committee chair, and one for the departmental thesis and dissertation library.

**Oral Examination**

The Department of Psychology requires an oral examination, conducted by the student’s thesis or dissertation committee, for each M.A. and Ph.D. candidate. The examination covers the thesis or dissertation and also includes questions designed to ascertain the student’s general competence in psychology.

Oral examinations are open to all interested observers. Notices of the time and place of the examination, and abstracts of the thesis or dissertation, are circulated throughout the department and, in the case of Ph.D. examinations, throughout the University. Two copies of the abstract should be given to the Graduate Program Coordinator at least one week prior to the oral defense meeting.

The Graduate Program Coordinator delivers the oral examination form and the thesis or dissertation evaluation form to the committee chair the day before the orals are scheduled. Orals meetings are not scheduled during the recess period between semesters.
General Information

Waiving of Course Requirements

Students who wish to have a course waived should consult with their advisers, the course instructor, and the head of their major area. One of the following recommendations will be made: (a) the course will be waived; (b) a proficiency examination (theoretical, practical, or both) will be given prior to deciding on the student’s request; (c) the request will be refused and the student will take the course. A student may appeal the decision by writing a letter to the department chair requesting that the case be reviewed.

Grading Policies

Any student who receives a grade of Inc. is responsible for contacting the instructor to determine the time allowed for the completion of the course (normally not more than one year).

For internal records to be used within the department only, pluses and minuses are added to the standard A, B, C grades reported to the Office of Admissions and Records.

Student Evaluation

All students are evaluated by the faculty at least once a year, normally during fall semester. New students are evaluated in the beginning of spring semester (first year) and students on departmental probation at times specified in their probation. The evaluation is based on the following criteria: (1) academic performance on a 10 point rating scale (A+ = 10); (2) ratings on the training assignment; and (3) progress toward the degree. The student’s evaluation may also be based upon evidence relating to professional attitudes or ethical behavior.

Each student’s adviser informs the student of the evaluation and of any faculty recommendations as soon as possible after the meeting. In addition, the department chair writes a formal letter notifying the student of the evaluation and recommendations.

Master’s Degree Requirements

The master’s degree requires a minimum of 48 semester hours of acceptable graduate credit, distributed according to the requirements of the student’s major area, and the completion of an approved thesis. The master’s thesis may be either original research or the replication of an important study. The master’s degree is a prerequisite for the doctorate.

Doctoral Requirements

Admission

Admission to the Ph.D. program requires a master’s degree, a grade point average of 3.25 or above in graduate studies, and acceptance by the department. A student who receives the master’s degree from SIU must apply formally to the Graduate School for admission to doctoral-level study, and must be approved by the faculty.

Records of students entering the program with a master’s degree from another institution are evaluated by the departmental admissions committee which notes deficiencies, recommends methods for removing them, and specifies a time limit to do so. Such deficiencies must be removed before the student can be classified as a Ph.D. candidate. The student is recommended to the graduate dean for admission to Ph.D. candidacy only when core curriculum requirements and the preliminary examination(s) have been satisfactorily completed.

Accelerated Entry into Ph.D. Degree Program

Students enrolled in the M.A. degree program may be admitted directly to the Ph.D. degree program following departmental certification of graduate work comparable to a master’s degree in psychology
at SIU. Accelerated entry is acceptable only for students who have completed substantial work in other programs in psychology which grant the Ph.D. degree but not a master’s degree. Students seeking accelerated entry may apply after enrollment at the master’s level for one semester. Applications for accelerated entry are reviewed and decided by a faculty committee appointed by the department chair.

**Internship**

Doctoral students who are concentrating in counseling or clinical psychology must complete an approved internship. The internship is viewed as an integral part of training and the Ph.D. degree is not awarded until the completion of all academic work and the internship. Students are responsible for scheduling and obtaining internships. Internships in counseling and clinical psychology require a full-time experience either for one calendar year, or for two years of half-time experience. Counseling and clinical students are approved for internship after completion of their master’s degree, major and minor preliminary examinations, and all courses required for the Ph.D. Clinical students must have an approved dissertation prospectus before applying for internship.

Students in applied psychology are encouraged to complete an internship in an applied setting away from campus that is selected with the help of their faculty advisers in their major area of concentration.

**Preliminary Examinations**

Ph.D. candidacy is contingent upon successful completion of a written preliminary examination in the student’s major area of concentration. The examination is composed primarily of essay questions requiring substantive knowledge of empirical and theoretical topics. Questions are not limited to course content.

Every student is expected to pass each examination on first taking. In any event a second failure on a preliminary examination will result in a thorough faculty review of the student's entire academic record in order to determine whether the student will be allowed to continue in the program and, if continued, under what conditions.

**Major/Comprehensive**

Fields of concentration for the major/comprehensive preliminary examination are listed below:

1. **Experimental.** Either applied psychology or brain and cognitive science may be selected for the comprehensive examination.
2. **Clinical.** The major examination includes the following: psychological assessment, psychotherapy, psychopathology, research methods, and professional/ethical issues. In addition, the examination reflects the student’s specialization emphasis, i.e., adult or child.
3. **Counseling.** The major examination includes the following areas: (a) adult personal, social, and career development; (b) assessment; (c) group and individual counseling theories and techniques; (d) research methodology and measurement; and (e) professional issues.

Major/comprehensive examinations are scheduled by the department once a term. Notices are posted well in advance and students are expected to notify the Graduate Program Coordinator of their intention to take the examination. Examination committees are appointed by the chair.

**Minor / Specialization**

In addition to the major/comprehensive preliminary examination, a specialization paper is required in the experimental area.

**Dissertation**

Each candidate for the Ph.D. degree must write a dissertation showing high attainment in independent, original scholarship and creative effort. A total of 24 semester hours is required. A maximum of six hours of dissertation credit taken prior to passing the major preliminary examination will count. A student may not hold a prospectus meeting before successful completion of the preliminary examination.
Psychology Courses

PSYC402 - Psychology and Medicine 402-3 Psychology and Medicine. This course is an extensive review of psychology concepts as they relate to medicine and medical training. The overall goal of this course is to provide review of psychology concepts as they appear in the new form of the MCAT.

PSYC405 - Psychology and Law 405-3 Psychology and Law. (Same as CCJ 405, PSYC 505) This course surveys psychological theory and research as applied to the cognitions, emotions, and behavior of individuals in the legal system. The implications of social psychology for legal settings, such as police departments, courtrooms, and jury rooms are explored.

PSYC407 - Theoretical Issues in Learning 407-3 Theoretical Issues in Learning. An introduction to the major theoretical issues in learning and their importance. A brief review of the history of such problems will be followed by a summary of the current research concerning these issues. Traditional figures in learning theory will be considered within the context of their positions on specific questions. Prerequisite: PSYC 211 and PSYC 309 or equivalent or graduate status.

PSYC409 - History/Systems of Psychology 409-3 History and Systems of Psychology. A review of the conceptual and empirical antecedents of modern psychology. Prerequisite: PSYC 211. Restricted to senior status, or graduate status.

PSYC411 - Applied Learning 411-3 Applied Learning. An in-depth coverage of practical problems concerned with training to which the principles of learning derived from pure laboratory investigations can be applied. Prerequisite: PSYC 211 and PSYC 309 or graduate status.

PSYC415 - Psychopharmacology 415-4 Psychopharmacology. A survey of the effects of drugs on the normal and abnormal behavior of humans and animals. A primary focus is upon understanding drug influences on behavior in relation to actions on the nervous and endocrine systems. Prerequisite: PSYC 302 or graduate status.

PSYC416 - Recovery of Function 416-3 Recovery of Function Following Brain Damage. A survey of experimental animal and human clinical research as they relate to behavioral recovery following damage in the central nervous system. Recent theories and literature are stressed. Prerequisite: PSYC 302 or consent of instructor, or graduate status.

PSYC417 - Neuroscience Learn & Memory 417-3 Neuroscience of Learning and Memory. This course will serve as an advanced discussion on the research related to the neuroscience of how learning and memory operate. Topics will discuss how the principles surrounding learning and memory are explained in terms of cellular, neural systems, and behavioral levels. Prerequisite: PSYC 302 or consent of instructor or graduate status.

PSYC419 - Behavioral Genetics 419-3 Behavioral Genetics. Provides an overview of the experimental and quantitative methods used in studying behavioral differences associated with genetic variables. Elementary aspects of genetics will be included in the course, which will examine several aspects of both human and nonhuman behavior. Prerequisite: PSYC 211 or consent of instructor, or graduate status.

PSYC420 - Industrial/Organizational Psych 420-3 Industrial/Organizational Psychology. Topics in industrial and organizational psychology; applications of psychology to human resource management, such as job analysis, performance appraisal systems, personnel selection and training. Prerequisite: PSYC 211.

PSYC421 - Tests & Measurements 421-3 Psychological Tests and Measurements. Introduction to measurement theory and test development. Detailed coverage of selected tests from such areas as intelligence, aptitude and personality, and the use of psychological tests in various settings. Prerequisite: PSYC 211 or graduate status.

PSYC425 - Psychology of Parenting 425-3 Psychology of Positive Parenting. This course will provide a comprehensive overview of key concepts in parenting, the nature of parenting across the lifespan and specific challenges for parents with children in each of the developmental stages. We will discuss effective strategies for addressing these challenges in addition to programs and approaches that demonstrate a strong evidence base. Special focus will additionally be given to diversity issues, parenting
in high risk families and in families with exceptional children. Prerequisites: PSYC 102, PSYC 301 with grades of C or better.

**PSYC431 - Advanced Psychopathology** 431-3 Advanced Psychopathology. An advanced presentation of theoretical and empirical issues in contemporary psychopathology research. Explores the role empirical research plays in understanding the features of major psychological disorders and their treatment. Provides a broad understanding of the many factors that contribute to the development and maintenance of abnormal behaviors. Prerequisite: PSYC 211, PSYC 331 or consent of instructor or graduate status.

**PSYC432 - Childhood Psychopathology** 432-3 Psychopathology of Childhood. An extensive review and systematic evaluation of theories and research pertaining to the behavior disorders of childhood. Emphasis will be upon empirical data and the implications of these data for the classification and treatment of these disorders. Prerequisite: PSYC 211, PSYC 301, PSYC 311 or graduate status.

**PSYC440 - Advanced Personality** 440-3 Advanced Personality. Advanced presentation of theoretical and research issues related to current issues in personality psychology. The overarching focus of the course is presentation and discussion of a scientific approach to understanding what personality is, how it can be measured, how it develops and how it relates to various aspects of individual functioning. Prerequisite: PSYC 211 or consent of instructor.

**PSYC441 - Helping Skills Clin/Couns Psyc** 441-3 Helping Skills in Clinical and Counseling Psychology. (Same as COUN 493) Provides systematic training in helping skills for students considering clinical or counseling psychology as a career. Students learn to identify and demonstrate such skills as paraphrasing, reflection of feeling, interpretation, and confrontation, and will use them in practice situations. Prerequisite: PSYC 211 and PSYC 340. Restricted to senior standing in psychology.

**PSYC443 - Bilingualism** 443-3 Bilingualism. (Same as LING 443) Examines the linguistic, psycholinguistic, sociolinguistic and educational aspects of bilingualism, particularly as pertaining to the care and education of bilingual children. Useful for teachers, speech therapists, doctors, psychologists, counselors, and others working with bilinguals. Practical applications and data-based research. Prerequisite: PSYC 211.

**PSYC445 - Psycholinguistics** 445-3 Psycholinguistics. (Same as LING 445) A broad spectrum introduction to psycholinguistics. Topics to be covered include general methodology for the study of psycholinguistics, the nature of language, theories of human communication, language comprehension and production, first and second language acquisition, meaning and thought, natural animal communication systems and language of the brain. Prerequisite: PSYC 211.

**PSYC451 - Advanced Child Psychology** 451-3 Advanced Child Psychology. An assessment of concepts, methods, and research techniques within selected topic areas of developmental psychology. Prerequisite: PSYC 211 and PSYC 301, or graduate status.

**PSYC453 - Adv Topics Developmental Psyc** 453-3 Advanced Topics in Developmental Psychology. This course explores a variety of areas in developmental psychology that involve some controversy, from infancy through adolescence. Issues central to understanding developmental psychology as a discipline or specific areas of research within developmental psychology will also be considered.

**PSYC461 - Advanced Social Psychology** 461-3 Advanced Social Psychology. Critical examination of contemporary theories and research in social psychology. Practice in application of scientific findings to real-life problems of individuals and groups. Issues treated in depth are chosen for relevance to student's personal needs and career interests. Prerequisite: PSYC 211 and PSYC 307 or graduate status.

**PSYC470 - Psych of Race & Racism** 470-3 Psychology of Race and Racism. (Same as AFR 472) This course reviews the history and evolution of the construct of race as a psychological phenomenon. While the course will be largely psychological in nature, the pervasiveness of race in practically every sphere of life necessitates a multidisciplinary approach. The course will emphasize a theoretical and conceptual approach toward understanding the psychology of racialized thinking. Prerequisite: PSYC 211.

**PSYC471 - Judgment & Decision Making** 471-3 Judgment and Decision Making. A survey of the academic field of judgment and decision making, its major methods, theories, results, and controversies. We will examine the generality of experimental results across various domains including gambling, clinical
prediction, perception of randomness, and medical decision making. Prerequisite: PSYC 211 or graduate status.

**PSYC480 - Effective Correctional Practices** 480-3 Effective Correctional Practices. (Same as CCJ 480) Exploration and evaluation of correctional intervention strategies developed for the sentencing of adjudicated persons. Particular emphasis on examining empirical research literature on effective correctional practices, including programs currently implemented in institutional settings, alternatives to institutional corrections, and community based programs. Prerequisite: PSYC 211.

**PSYC489 - Seminar: Selected Topics** 489-1 to 12 Seminar: Selected Topics. Varied content. Offered as need exists and as faculty interests and time permit. Prerequisite: PSYC 211. Special approval needed from the instructor.

**PSYC503 - Individual Differences** 503-3 Individual Differences. Reviews the reliable and theoretically significant individual and group difference that have been revealed by research in the behavioral sciences. Examines differences in general intelligence, specific verbal and spatial abilities, stylistic and personality characteristics, as well as such group differences as sex, race and socioeconomic status. Restricted to graduate status in Psychology.

**PSYC505 - Psychology and Law** 505-3 Psychology and Law. (Same as CCJ 405, PSYC 405) This course surveys psychological theory and research as applied to the cognitions, emotions, and behavior of individuals in the legal system. The implications of social psychology for legal settings, such as police departments, courtrooms, and jury rooms are explored.

**PSYC507 - Advanced Social Psychology** 507-3 Advanced Social Psychology. Review of new and traditional theories and research findings within social psychology. Provides an overview of major areas of study and consideration of more recent topics of study. Topics include (but are not limited to) cultural and evolutionary perspectives in social psychology, motivation, social cognition, self-knowledge, person-perception, cognitive consistency, attitudes, intergroup relationships, stereotyping, and group behavior. Restricted to graduate standing.

**PSYC509 - History & Systems of Psych** 509-3 History and Systems of Psychology. A review of conceptual and empirical antecedents of modern psychology. Students research and summarize topics on 20th Century systematic developments. Restricted to graduate status in Psychology.

**PSYC511 - Human Learning & Memory** 511-3 Human Learning and Memory. Reviews principles of learning and memory. Covers both human and animal research literature from experimental and theoretical perspectives.

**PSYC512 - Sensory Processing** 512-3 Sensory Processing. A study of the structure and functions of the sense organs. Emphasizes the psychological data, which describe the function of these organs.

**PSYC513 - Human Psychophysiology** 513-3 Human Psychophysiology. Physiology, instrumentation, and methodology of psychophysiological measurements including both autonomic and central nervous systems. Attention will be given to basic and applied research. Restricted to graduate standing.

**PSYC514 - Neurobiological Bases Behavior** 514-4 Neurobiological Bases of Behavior. An advanced study of neuroanatomical and neurophysiological principles underlying behavior. Topics covered include structure and function of neurons, synaptic transmission, sensory processing, motor control, development and plasticity of the nervous system and other current topics in neurobiology. Prerequisite: PSYC 302 or equivalent. Special approval needed from the instructor.

**PSYC515 - Theory & Research Cognitive Psych** 515-3 Theory and Research in Cognitive Psychology. A detailed survey of current studies of attention, short-term memory and thought processes. Special approval needed from the instructor.

**PSYC516 - Human Clinical Neuroanatomy** 516-4 Human Clinical Neuroanatomy. Basic functioning of the nervous system, detailed gross anatomy and dissection of the human brain, functional disorders following brain damage, noninvasive cranial nerve examination. The course includes a lab component. Restricted to graduate standing.
PSYC517 - Aging, Memory & Cognition 517-3 Aging, Memory and Cognition. (Same as GRON 517) A detailed survey of current methodology, research and theory dealing with cognitive and memory processes in later adulthood. Topics covered include attention, memory, reasoning and problem solving, language processing and inference and age-associated pathologies affecting cognition and memory. Special approval needed from the instructor.

PSYC518 - Psychopharmacology & Behavior 518-4 Psychopharmacology and Behavior. A detailed survey of the effects of drugs on the normal and abnormal behaviors of humans and animals. A primary focus is upon understanding drug influences on behavior in relation to actions on the nervous system, endocrine system and behavior pathology. Students review and summarize original research in the area. Restricted to graduate status in psychology or permission of instructor.

PSYC519 - Research on Indiv Differences 519-3 Research on Individual Differences. Reviews the reliable and theoretically significant individual and group differences that have been revealed by research in the behavioral sciences. Examines difference in general intelligence, specific verbal and spatial abilities, stylistic and personality characteristics, as well as such group differences as gender, race and socioeconomic status. Students review and summarize original research in the area and lecture on that topic. Restricted to graduate status in psychology or permission of instructor.

PSYC520 - Apps Psyc Learning & Memory 520-3 Applications of the Psychology of Learning and Memory. A survey of the theories and methods of training that have resulted from research in the areas of learning and memory. Students will review some of the very recent methods as well as those that are better developed. Practice will be provided. Prerequisite: PSYC 309 or consent of instructor.

PSYC522 - Experimental Design & Analysis 522-4 Experimental Design and Analysis. (Same as QUAN 508) In-depth coverage of the rationale underlying the design and analysis of complex experimental designs used in psychological research. Restricted to Psychology graduate students.

PSYC523 - Res Methods: Appl & Prof Psyc 523-3 Research Methods in Applied & Professional Psychology. Discussion of problems in experimental and quasi-experimental design, control and analysis that are encountered by researchers and professional psychologists. The course covers critical evaluation of internal, construct, and external validity and the application of randomized and non-randomized designs for causal inference. Passive-observational and qualitative designs are covered at the instructor's discretion. Examples of current research practice from applied, counseling and clinical psychology are reviewed. Restricted to graduate status in psychology or consent of instructor.

PSYC524 - Multivariate Methods Psych 524-4 Multivariate Methods of Psychology. Detailed treatment of multiple-factor analysis and multiple regression analysis. Also includes introduction to other multivariate methods such as discriminant analysis and cluster analysis. Prerequisite: PSYC 522. Restricted to Psychology graduate students.

PSYC525 - Psychological Measurement 525-3 Psychological Measurement. (Same as QUAN 531) Intensive coverage of such topics in test theory as item analysis, reliability, validity, problems of weighting in differential prediction, and problems in selection and classification. Prerequisite: PSYC 421 or consent of instructor.

PSYC526 - Research in Counseling Psyc 526-3 Research in Counseling Psychology. This course provides a basic foundation of research skills. The course includes extensive reading in counseling psychology research and coverage of research design, specific research techniques, technical writing and research ethics.

PSYC527 - Theory & Methods Scaling 527-3 Theory and Methods of Scaling. The theory of measurement, by which observed behavioral events can be translated into quantitative scales of psychological constructs. The course will cover several axiom systems that form the foundation for psychological measurement, including representation in more than one dimension. Prerequisite: PSYC 522. Restricted to graduate standing.

PSYC528 - Decision Analysis Techniques 528-3 Decision Analysis: Techniques for Aiding Decisions. A survey of formal methods for making decisions, based on subjective probability and multiattribute utility
assessments. Students will be given practice in using methods of decision analysis for solving decision problems. Special approval needed from the instructor.

**PSYC529 - Advanced Multivariate Stats** 529-3 Advanced Applied Multivariate Statistics. This course will introduce multivariate analyses such as structural equation modeling, hierarchical linear modeling and latent curve analysis, with additional topics addressed dependent upon student interest (e.g., missing data, categorical and/or dyadic data analysis). After presenting conceptual information on latent variable analysis, the course will focus on the application of advanced analytic techniques. Understanding of correlation and regression is essential for this course. Prerequisite: graduate level multivariate statistics course.

**PSYC530 - Theories of Couns/Psytherapy** 530-3 Theories of Counseling and Psychotherapy. A survey of the major theories of personality and systems of counseling and psychotherapy. Stresses relationship between theory and application. Special approval needed from the instructor.

**PSYC531 - Field Placement** 531-1 to 3 Community and Institutional Field Placement. Introduction to a variety of area agencies with each student affiliating with two agencies at least two days per week. Individual and group supervision with special attention to the variety of clinically related problems and approaches to treatment encountered in the course of their activities. Required for clinical students. Restricted to psychology graduate students in clinical or counseling.

**PSYC532 - Devel Pers & Psychopathology** 532-3 Development, Personality & Psychopathology. An extensive review and systematic evaluation of theories and research pertaining to developmental processes as they influence temperament, personality and psychopathology with emphasis on normal and disordered pathways. Restricted to graduate status or consent of instructor.

**PSYC533 - Exper Apprs: Psychopathology** 533-2 Experimental Approaches to Psychopathology. An examination of the research literature on several issues in clinical psychopathology. Restricted to psychology graduate or consent of instructor.

**PSYC534 - Cogn & Behavior Therapy** 534-3 Cognitive and Behavior Therapy. An extensive review and systematic evaluation of clinical methods including desensitization, assertion training, cognitive restructuring, and conditioning strategies. Restricted to graduate status (clinical/counseling) or consent of instructor.

**PSYC535 - Psychopathology** 535-3 Psychopathology. Surveys the following issues and content areas in psychopathology: categorical and dimensional models and definitions of psychopathology, anxiety and related disorders, depressive disorders, schizophrenia spectrum and psychotic disorders, substance-related disorders, and personality disorders. Also reviews diagnostic procedures, including differential diagnosis. This course is required for all clinical students within their first two years. Restricted to psychology graduate students or consent of instructor.

**PSYC536 - Fundamentals of Counseling** 536-4 Fundamentals of Counseling. An introduction to counseling psychology as a professional specialty. Professional and ethical issues in the training and work of counseling psychologists are examined. Basic counseling skills are acquired through practice interviewing. Restricted to psychology graduate students or consent of instructor.

**PSYC537 - Adv Treatment Planning** 537-3 Advanced Treatment Planning and Implementation. An advanced level course designed to help students grapple with the more complex issues of psychological practice in today's health care system. Students will practice comprehensive treatment planning and outcome management that is theoretically driven and evidence-based. Students will also gain specific knowledge and skills related to delivering therapy in a culturally relevant and time-limited manner. Restricted to psychology graduate status.

**PSYC538 - Theory/Practice Group Facilitatn** 538-3 Theory and Practice of Group Facilitation. Didactic presentation of group dynamics and group counseling/therapy. Restricted to Psychology graduate status.

**PSYC539 - Experimental Psychotherapy** 539-3 Experimental Approaches to Psychotherapy. A review and evaluation of empirical research related to the amelioration of maladjustment. Emphasis is on measurement and methodological problems. Prerequisite: PSYC 530 or consent of instructor.
PSYC540 - Psychological Assessment 540-4 Psychological Assessment. Basic theory, practice and research on psychological assessment with emphasis on objective, validated measures of intelligence and personality. Includes one hour laboratory section. Restricted to psychology graduate status. Course fee: $100.

PSYC542 - Prin & Prob-Personality Assmt 542-3 Principles and Problems in Personality Assessment. Critical review of research related to such topics as scale construction strategies, response styles, trait attribution, judgmental accuracy, and judgmental processes. Special approval needed from the instructor.

PSYC544 - Adv Adult Assessment 544-3 Advanced Adult Assessment. Practical experience at conceptualizing psychopathology from a standard clinical test battery and in writing clinically meaningful test reports. Prerequisite: PSYC 540. Restricted to Psychology graduate standing. Special approval needed from the instructor.

PSYC545 - Intro Neuropsyc Assessment 545-3 Introduction to Neuropsychological Assessment. Overview of the development of neuropsychology from signs to test batteries and methodology. Prerequisite: PSYC 540. Restricted to psychology graduate status. Special approval needed from the instructor.

PSYC546 - Human Clinical Neuropsychology 546-3 Human Clinical Neuropsychology. This course will familiarize students with the basic concepts, empirical foundations, and clinical applications of human clinical neuropsychology. The neurobehavioral manifestations of both acute and chronic conditions will be covered. Prerequisite: PSYC 540. Restricted to psychology graduate status. Special approval needed from the instructor.

PSYC548 - Vocational Psyc & Career Dev 548-3 Vocational Psychology and Career Development. Introduces students to vocational psychology as an area of academic inquiry. Topics include theories of career development, occupational information, career assessment, research issues, and career counseling techniques. Restricted to graduate standing.

PSYC549 - Behavioral Assessment 549-3 Behavioral Assessment. A didactic and practicum course concerned with principles and methods of behavioral assessment including behavioral interviewing, questionnaires, self-monitoring, naturalistic and structured observation and psychophysiological assessment.

PSYC550 - Psych Construction of Gender 550-3 The Psychological Construction of Gender. (See WGSS 550)

PSYC552 - Social Development 552-3 Social Development. Advanced consideration of current methods, research, and theory in development psychology with emphasis on infancy through adolescence. Includes integration of social, developmental, and biological aspects of child development, with particular attention paid to social and personality development and parent-child relations. Special approval needed from the instructor.

PSYC553 - Cross-Cultural Psychology 553-3 Cross-Cultural Psychology. This course helps students increase their awareness of the importance of cross-cultural differences in psychology. The course also integrates theory and research from different fields of psychology (e.g., biological, social, developmental, cognitive, psychopathology) from the cross-cultural perspective. Special approval needed from the instructor.

PSYC554 - Life-Span Developmental Psych 554-3 Life-Span Developmental Psychology. Theories of human development, as well as current research trends and methodologies, will be examined from a life-span perspective.

PSYC555 - Language and Cognition 555-3 Language and Cognition. Current theoretical problems in language and cognitive developments are investigated from the perspective of psychology, physiology, linguistics and computer simulations. Special approval needed from the instructor.
PSYC556 - Child Psychotherapy 556-3 Child Psychotherapy. Survey and analysis of traditional and contemporary approaches to individual child psychotherapy. Includes psychodynamic, humanistic-nondirective, hypnotherapy-imagery and other perspectives as well as therapy outcome research. Restricted to psychology graduate status. Special approval needed from the instructor.

PSYC557 - Family Psychotherapy 557-3 Family Psychotherapy. Investigation of the psychosocial interior of the family. Evolution and dynamics of interaction in families. Study of the methods of therapeutic intervention with families. Restricted to psychology graduate status. Special approval needed from the instructor.

PSYC558 - Personality & Soci Dev Adults 558-3 Personality and Social Development of Adults. A lecture-discussion course which presents the major theoretical and empirical literature in the area of adult personality and social development. Students are encouraged to apply normal developmental constructs to understand individual adults, as well as to gain competence in research methods in this area. Restricted to psychology graduate students or consent of instructor.

PSYC559 - Behavioral Child Therapy 559-3 Behavioral Child Therapy. Survey and analysis of behavioral and cognitive-behavioral approaches to the treatment of child psychopathology. Restricted to psychology graduate status. Special approval needed from the instructor.

PSYC560 - Couples/Marital Therapy 560-3 Couples and Marital Therapy. This course is designed to provide doctoral level psychology students the basic theoretical and technical background necessary before beginning to work in supervised marital/couples therapy clinical practica. Restricted to psychology graduate status or consent of instructor.

PSYC561 - Supervision of Psychotherapy 561-3 Supervision of Psychotherapy. Presentation of the theories and techniques of psychotherapy supervision, as well as cultural, ethical and legal issues in supervision. Students will also provide individual supervision to beginning counselors and receive supervision of their supervision. Restricted to psychology graduate status.

PSYC562 - Adolescent Clinical Psychology 562-3 Adolescent Clinical Psychology. Discusses specific characteristics of adolescent psychopathology, techniques for psychological assessment, common and empirically supported treatment approaches. Restricted to psychology graduate students or consent of instructor.

PSYC563 - Resrch Attitudes & Persuasion 563-3 Research in Attitudes and Persuasion. Detailed review of current theory and research in social psychology of attitude formation and change and of persuasion techniques. Students will develop literature reviews and conduct original research. Restricted to graduate status in psychology or consent of instructor.

PSYC564 - Prog Eval:Exper & Quasi Apprch 564-3 Program Evaluation: Experimental and Quasi-Experimental Approaches. Review of experimental and quasi-experimental designs for assessment of program impact. Discussion of design, logistic, and political implementation problems. Detailed examination of a number of attempts at program evaluation. Prerequisite: 500-level statistics course.

PSYC565 - Research Organizational Psych 565-3 Research in Organizational Psychology. In-depth examination of theoretical and research literature in organizational psychology. Topics include, but are not limited to, theory and research literature on work motivation, job attitudes, leadership, group processes, organizational stress and women and minorities in the work place. Restricted to graduate status in psychology or permission of instructor.

PSYC566 - Health Psychology 566-3 Health Psychology. This course will explore the interface between psychological theory and research and health issues including health behavior, prevention and intervention, stress and coping, management of chronic and terminal illness, health care service utilization, and patient/provider interaction. Graduate standing required.

PSYC569 - Applied Research Consultants 569-1 to 3 Applied Research Consultants. Consulting firm which provides applied research experiences for advanced graduate students on planning, data gathering, evaluation, and decision making projects for units of university and area agencies and businesses. Students exercise decision making power in all aspects of the firm: project solicitation, fee setting, expenditures. Graded S/U only. Prerequisite: PSYC 571 or consent of instructor.
PSYC570 - Early Cognitive Development 570-3 Early Cognitive Development. Surveys the major theories, methods, and data in the field of human cognitive development, with a particular emphasis on the qualitative changes that occur during infancy and early childhood. Special approval needed from the instructor.

PSYC571 - Prosem in Applied Exper Psych 571-6 (2,2,2) Proseminar in Applied Experimental Psychology. A survey of the problem areas to which applied experimental psychology is applicable and of the principal methods employed by applied experimental psychologists. Integration of these approaches within a comprehensive metatheory. Case studies apply the information to actual and simulated application problems. Graded S/U.

PSYC572 - Prosem Brain & Cognitive Sci 572-1 Proseminar in Brain and Cognitive Sciences. Discussions of various research topics within the brain and cognitive sciences. Presentations of current research by faculty and graduate students.

PSYC573 - Personnel Psychology 573-3 Personnel Psychology. This course will give an in-depth treatment of modern theories and practice of personnel selection. Students will learn about the psychological variables used in personnel selection as well as how to apply these findings in modern organizations. Course content will include individual difference traits related to subsequent job performance, methods used to select employees, personnel selection practices, adverse impact, and other related topics. Restricted to graduate students in Psychology or instructor's permission.

PSYC574 - Groups and Teams 574-3 The Psychology of Groups and Teams. This course examines the good, the bad and the ugly with groups and teams, with an emphasis on group dynamics and performance. Topics include: leadership, group composition and performance, group decision-making, ostracism, minority influence, groups and technology, and creativity. Restricted to graduate students in psychology or permission of instructor.

PSYC575 - Computational Modeling 575-3 Computational Modeling. Introduction to computational modeling of cognitive processes. Covers theoretical and methodological issues in computational simulations of psychological behavior. Lectures and practical simulation assignments. Special approval needed from the instructor.

PSYC577 - Second Language Acquisition 577-3 Second Language Acquisition. (Same as LING 541) Introduction to key concepts and major theoretical and methodological issues in second language acquisition. Major developments in SLA in the areas of phonology, morphology, lexis, syntax, semantics and discourse and provides students with hands-on experience in describing and accounting for second language data. Prerequisite: Introduction to linguistics or consent of instructor.

PSYC578 - Bilingualism 578-3 Bilingualism. (Same as LING 543) A comprehensive introduction to the study of bilingualism. Course will examine the linguistics, psycholinguistic, sociolinguistic and educational aspects of bilingualism, particularly as pertaining to the care and education of bilingual children. Prerequisite: one previous course in linguistics or consent of instructor.

PSYC580 - Cognition Affect & Behavior 580-3 Cognition, Affect and Behavior. Provides an integrative exploration of the relations among cognition, affect and behavior (CAB). Foundations of this integration are provided, including examination of basic principles, experimental evidence, and biological bases. Emphases will be placed on learning, stability, self-regulation, and change of CAB, and relationships to individual differences, personality, psychopathology, and genetically influenced temperaments. Restricted to psychology graduate student status or instructor permission.

PSYC581 - Developmental Psychopathology 581-3 Developmental Psychopathology. An extensive review and systematic evaluation of theories and research pertaining to developmental psychopathology. Emphasis will be on empirical data and the implications of these data for the classification and treatment of disorders. Restricted to graduate status. Special approval needed from the instructor.

PSYC584 - Pediatric Psychology 584-3 Pediatric Psychology. This course is an introduction to pediatric psychology. Clinical and research applications to working with youth and their families in medical settings will be covered. Topics include clinical roles and settings in pediatric psychology, pediatric medical and developmental conditions and role of the pediatric psychologist, consultation-liaison in the pediatric medical setting, assessment and intervention approaches for children with medical conditions, and ethical
issues in pediatric psychology. Prerequisite: PSYC 556 or PSYC 559. Restricted to psychology graduate student status or instructor permission.

**PSYC585 - Advanced Seminar** 585-1 to 18 Advanced Seminar. Seminars of varied content for advanced students. Special approval needed from the instructor.

**PSYC586 - Proseminar Clinical Psychology** 586-1 Proseminar in Clinical Psychology. Required seminar for first-year graduate students enrolled in the Clinical Psychology program. Graded S/U. Restricted to psychology graduate status.

**PSYC587 - Systems, Admin, & Advocacy** 587-1 Advanced Professional Seminar in Psychology: Systems, Administration, and Advocacy. The purpose of this professional seminar is to provide students with an opportunity to consider and consolidate their various training, experiences related to interdisciplinary systems, management and administration, and advocacy. These core competencies are relevant to all professional psychology work settings. Students will bring in case examples from their applied work, professional meetings, and personal reading. Learning will be facilitated via readings, case examples, and discussion. Restricted to Doctoral Student in Counseling or Clinical Psychology.

**PSYC590 - Readings in Psychology** 590-1 to 12 Readings in Psychology. Readings in selected topics in psychology under staff supervision. Graded S/U only. Special approval needed from the instructor.

**PSYC591 - Readings on Culture/Diversity** 591-3 Readings on Culture and Diversity. Readings on multicultural and diversity issues in Clinical Psychology, which may include, but not necessarily be limited to issues of racial and ethnic differences, gender, sexual orientation, socioeconomic status, religious affiliation, and disability, as they impact the assessment and treatment of psychopathology. Special approval needed from the instructor.

**PSYC593 - Research in Psychology** 593-1 to 24 Research in Psychology. Research under staff supervision in selected areas of psychology. Graded S/U only. Special approval needed from the instructor.

**PSYC594A - Pract-Applied Exper Psyc** 594A-1 to 16 Practicum in Psychology-Applied Experimental Psychology. Practicum experience in a professional setting is offered under staff supervision. Graded S/U only. Special approval needed from the instructor.

**PSYC594C - Practicum-Clinical Skills** 594C-3 Practicum in Psychology-Clinical Skills. Practicum experience in a professional setting is offered under staff supervision. Introduction to the professional skills and issues of clinical psychology, including ethics, interviewing, change processes, diversity issues. Special approval needed from the instructor.

**PSYC594E - Practicum-Clinical Psychology** 594E-1 to 16 Practicum in Psychology-Clinical Psychology. Practicum experience in a professional setting is offered under staff supervision. Graded S/U only. Special approval needed from the instructor.

**PSYC594F - Practicum-Counseling Psychology** 594F-1 to 16 Practicum in Psychology-Counseling Psychology. Practicum experience in a professional setting is offered under staff supervision. Graded S/U only. Special approval needed from the instructor.

**PSYC594L - Practicum-Teaching of Psy** 594L-1 to 16 Practicum in Psychology-Teaching of Psychology. Practicum experience in a professional setting is offered under staff supervision. Graded S/U only. Special approval needed from the instructor.

**PSYC595 - Internship** 595-1 to 12 Internship. Placement in an approved setting required of all students in clinical and counseling psychology. Graded S/U only. Restricted to psychology graduate students.

**PSYC597 - Preprofessional Training** 597-1 to 15 Preprofessional Training. Experience given in research, teaching, or clinical or counseling activities. One hour required each semester of residence. Graded S/U only. Restricted to psychology graduate students.

**PSYC598 - Ethical & Professional Probs** 598-3 Ethical and Professional Problems in Psychology. The code of ethics in professional practice, in teaching and research; problems and issues of the field are
discussed; and relations to other professions and the public are considered. Special approval needed from the instructor.

PSYC600 - Dissertation 600-1 to 16 Dissertation.

PSYC601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

PSYC699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Psychology Faculty

Cashel, Mary Louise, Associate Professor, Ph.D., University of North Texas, 1997; 1997. Child and adolescent assessment; juvenile delinquency and preventative interventions; PTSD.

Chwalisz Rigney, Kathleen, Professor, Ph.D., University of Iowa, 1992; 1992. Health psychology; neuropsychology; group process and intervention; personality.

Clancy Dollinger, Stephanie, Associate Professor, Ph.D., Syracuse University, 1989; 1989. Successful aging; lifespan identity development; caregiving.

DiLalla, David, Associate Professor, Associate Provost, Ph.D., University of Virginia, 1989; 1990. Personality and psychopathology; personality assessment; computer-assisted assessment; behavioral genetics; sexual violence; social development.

DiLalla, Lisabeth, Professor, Ph.D., University of Virginia, 1987; 1992. Behavioral genetics, social cognitive development.

Dillon, Ronna, Professor, Emerita, Ph.D., University of California, Riverside, 1978; 1978.

Dollinger, Stephen J., Professor, Emeritus, Ph.D., University of Missouri, 1977; 1977.

Drake, Chad, Associate Professor, Ph.D., University of Mississippi, 2008. Acceptance and Commitment Therapy and Training; Relational Frame Theory; contextual behavioral science; behavioral measures of cognition; therapeutic change.

Fehr, Karla, Assistant Professor, Ph.D., Case Western Reserve University, 2013. Psychosocial outcomes for children with medical conditions, including risk and resiliency factors, coping, and intervention development and dissemination; the importance of pretend play for children’s socioemotional development; the development of play intervention protocols to improve pretend play skills.

Gannon, Linda, Professor, Emerita, Ph.D., University of Wisconsin, 1975; 1975.

Gilbert, Brenda O., Associate Professor, Emerita, Ph.D., University of Florida, 1985; 1986.

Gilbert, David G., Professor, Emeritus, Ph.D., Florida State University, 1978; 1985. Brain, genetic, personality, and stimulus/environmental factors promoting substance use, smoking, and marijuana; emotions; EEG; brain imaging; eyetracking and attention.

Greer-Medley, Tawanda M., Associate Professor, Ph.D., Southern Illinois University at Carbondale, 2003. Perceived racism in health care; the contribution of racism and chronic oppression to existing health disparities; the impact of minority stressors on African American college students; racial and ethnic concerns in mental health counseling, and neural correlates of stress and cardiovascular responses for African Americans diagnosed with hypertension.

Habib, Reza, Associate Professor and Director of University Core Curriculum, Ph.D., University of Toronto, 2000; 2003. Cognitive neuroscience; brain imaging; cognition and memory.

Hylin, Michael, Assistant Professor, Ph.D., Northern Illinois University, 2010. Biochemical systems that underlie neurocognitive dysfunction following traumatic brain injury (specifically mild and repetitive injury); pathways associated with the extracellular matrix, inflammation and axonal injury; development of novel strategies for neurocognitive rehabilitation following traumatic brain injury.
Jacobs, Eric A., Associate Professor, Ph.D., University of Florida, 1997; 1999. Experimental analysis of behavior; human operant behavior; verbal behavior; choice and selfcontrol; behavioral ecology; behavioral economics; behavioral pharmacology; contingency management; radical behaviorism; cultural materialism.

Jensen, Robert, Professor, Emeritus, Ph.D., Northern Illinois University, 1976; 1981.

Kertz, Sarah, Associate Professor, Ph.D., University of Louisville, 2011. Development and treatment of anxiety disorders; developmental psychopathology of worry in children; conceptual models of generalized anxiety and worry; treatment outcomes for anxiety disorders.

Kibby, Michelle Y., Associate Professor, Ph.D., The University of Memphis, 1998; 2004. Neuropsychology; brain-behavior relations; reading disorders; ADHD; child assessment.

Knutson, Douglas, Assistant Professor, Ph.D., Oklahoma State University, 2008, 2012, 2017. Research interests include investigating health and resiliency among transgender, lesbian, bisexual, and gay identified populations.

Komarraju, Meera, Professor and Interim Provost and Vice Chancellor for Academic Affairs, Ph.D., Osmania University Hyderabad, India, 1983; Ph.D., University of Cincinnati, 1987; 2006. Personality and cross-cultural differences in academic motivation and achievement; gender, ethnicity, and leadership in the workplace.

Lakshmanan, Usha, Professor, Ph.D., University of Michigan, 1989; 1990. Psycholinguistics; bilingualism; child first language acquisition (monolingual & bilingual); child and adult second language acquisition; language and cognition.

Lee, Yueh-Ting, Professor and Dean, Ph.D. State University of New York at Stony Brook, 1991. Categorical thinking and evolutionary psychology, stereotype accuracy/inaccuracy, and judgment/decision-making, intergroup and cultural relations and identity, human beliefs (religion and spirituality), and applied psychology (e.g., health, leadership).

McHose, James H., Professor, Emeritus, Ph.D., University of Iowa, 1961; 1961.

McKillip, John A., Professor, Emeritus, Ph.D., Loyola University of Chicago, 1974; 1975.

O'Donnell, James P., Associate Professor, Emeritus, Ph.D., University of Pittsburgh, 1965; 1965.

Peter-Hagene, Liana, Assistant Professor, Ph.D., University of Illinois Chicago, 2011; 2016. Research interests include applications of social psychological theories and methods to legal contexts. She studies extra-legal psychological factors (such as emotions, attitudes, and regulatory processes) that affect jurors' decision making in criminal cases.

Ramanaiah, Nerella, Professor, Emeritus, Ph.D., University of Oregon, 1971; 1971.

Schill, Thomas R., Professor, Emeritus, Ph.D., Oklahoma State University, 1963; 1963.

Schmidt, Kathleen, Assistant Professor, Ph.D., University of Virginia, 2011; 2014. Research interests include implicit social cognition, race attitudes, self-knowledge, social perception, reproducibility.

Snyder, John F., Associate Professor, Emeritus, Ph.D., Loyola University, 1965; 1968.

Swanson, Jane L., Professor, Emerita, Ph.D., University of Minnesota, 1986; 1986. Career choice and development; career assessment; adolescent career exploration.

Vaux, Alan, Professor and Dean, College of Liberal Arts, Emeritus, Ph.D., Trinity College Dublin, 1979; Ph.D., University of California/Irvine, 1981; 1980.

Yanico, Barbara, Associate Professor, Emerita, Ph.D., The Ohio State University, 1977; 1978.

Public Administration
Application Procedures

There is a supplemental application (Part Two), specific to the Department of Political Science that must be submitted along with the main online application. Separate forms are not required for application for financial assistance, except for Graduate School fellowships. Students will be accepted for graduate work in political science only upon approval by the department as well as the Graduate School. This program requires a nonrefundable $65 application fee; applicants must pay this fee by credit card.

All applicants must submit all post-secondary education transcripts, three letters of recommendation from persons who can evaluate the applicant’s academic ability and a statement of purpose. Applicants for the M.A. and Ph.D. programs must also submit scores on the Graduate Record Examination (GRE), verbal and quantitative tests, and an example of written work that demonstrates the applicant’s analytical and writing skills. Foreign students must have taken the Test of English as a Foreign Language (TOEFL) and are expected to have a score of at least 600 (paper score) or 250 (computer score).

Applications and supporting materials for the M.A. and Ph.D. programs that are submitted by January will be given full consideration for admission and funding. Applicants should contact the M.P.A. program office for the deadlines pertaining to the application term.

Master of Public Administration Degree

mpaprog@siu.edu

Admission

Students applying to the M.P.A. Program are admitted as either pre-service or in-service. To be admitted as in-service, the student must have significant professional experience in a public or quasi-public agency. This can generally be defined as at least one year of full-time administrative work experience. Students having less than one year of professional experience are admitted as pre-service.

To be considered for admission, applicants must have: (1) graduated from an accredited four-year college or university and (2) received an overall grade point average of 3.0 on a 4.0 scale, or a 3.0 overall grade point average for the last two years of undergraduate work. In instances where a candidate’s promise is indicated by professional experience rather than undergraduate record, consideration for admission will be given on an individual basis. Admission exceptions may be granted by the director upon careful review of the student’s entire application including: letters of recommendation, a personal statement, and a writing sample. All international MPA applicants, except those from English-only speaking countries, must submit either an Internet-based TOEFL or IELTS official score report. If you obtained (or are obtaining) an undergraduate or a graduate degree in an English-only speaking country, your TOEFL/IELTS score requirement will not be waived. The MPA program requires a minimum TOEFL score of 80(internet based) overall or minimum IELTS score of 6.5. The program requires a nonrefundable $65 application fee that must be submitted with the Application for Admission to Graduate Study in Public Administration. A GRE score is required of all applicants wishing to be considered for a graduate assistantship or fellowship.

Degree Requirements

M.P.A. students complete a 40 semester hour program of study as follows: (1) nine required courses totaling 25 semester hours; (2) 12 semester hours of elective course work; (3) an internship for three semester hours; and (4) successfully passing a comprehensive final examination. Of the 40 hours of graduate level coursework, at least 19 semester hours must be taken in the Department of Political Science. Each of these requirements is described below. In-service students are not required to complete an internship, reducing the total number of semester hours needed to graduate to 37.

Retention

All M.P.A. students are required to maintain a minimum level of academic performance. Any student earning a C grade or below in two or more M.P.A. required courses will be dismissed from the program. Students must otherwise conform to the standards set out in the M.P.A. Student Handbook. Issues not addressed by the Handbook fall under retention policy provisions in the Graduate School Catalog.

Prerequisites

Students lacking undergraduate preparation in public administration must complete POLS 537 (Foundations of Public Administration) during their first semester of study. Exceptions to this may be granted to in-service students, on a case-by-case basis. Additionally, POLS 503 is a prerequisite to
enrollment in POLS 539 and is recommended prior to enrollment in POLS 542. POLS 540 can only be taken after at least three other core courses have been successfully completed.

Core Requirements - 25 credit hours

- POLS 503-3 Research Methods for Public Administrators
- POLS 535-3 Ethical Foundations of Public Service
- POLS 539-3 Program Analysis and Evaluation
- POLS 540-3 Seminar in Public Management
- POLS 542-3 Public Budgeting and Fiscal Management
- POLS 543-3 Human Resource Management
- POLS 545-3 Organization Theory and Behavior
- POLS 546-3 Leadership in Public Administration
- POLS 594-1 Preprofessional Seminar in Public Administration

Internship Requirement - 3 credit hours

- POLS 595-3 Internship in Public Affairs

Elective Requirements - 12 credit hours

- Elective courses are selected by the student and the Field Representative.

To facilitate the work of employed students, each of the required courses is offered in the evening at least once every three years. A substitution for one core course may be allowed if the substituted course is similar in content to the particular core course, or if competence in the subject matter of the course is clearly evident. All substitutions must be approved by the director of the program. M.P.A. students concentrating in aviation administration will substitute POLS 557 (Public Financial Administration) for POLS 539 (Program Analysis and Evaluation).

Electives

Elective courses may be selected from the offerings of various departments across the University, as well as those in the Department of Political Science. The student and the MPA Director consult in selecting courses best suited to the student’s individual career goals. 400-level courses, of an introductory technical nature and other specialized courses especially relevant to the public administration profession, may be taken with the consent of the director of the program. Students may count no more than six hours of 400-level credits toward fulfillment of the degree.

MPA Comprehensive Exam Policy

All Masters of Public Administration (MPA) students must successfully complete a comprehensive examination as a part of their degree requirements. The examination will be taken in the semester in which the student completes all coursework (with the possible exception of one substantive course) for the program. The examination will consist of questions from the core courses in the program. A follow-up oral examination may be required at the discretion of the MPA faculty. In order to pass the exam, students must score at least an 80 out of 100 possible points. If a student fails the examination, they may retake the comprehensive examination one time during the next regularly scheduled examination period.

Internship

Pre-service students must register for POLS 595 and serve an internship in a governmental agency, nonprofit organization or quasi-governmental agency. The internship requires a minimum of 300 hours of work and must be approved by the director of the program. In extraordinary circumstances, a pre-service student may substitute three semester hours of coursework for the internship if a request is approved by the director.

MPA Aviation Administration Concentration

To be considered for admission into the aviation concentration, pre-service applicants will have graduated from an accredited four year college or university with a major in some aspect of aviation, with a minimum grade point average of 3.0. Inservice applicants with strong professional experience may be admitted with undergraduate grade point averages below 3.0, and with undergraduate majors outside of the aviation
field. Prerequisite coursework including POLS 537 and additional aviation administration courses may be required in these situations.

**Core Requirements - 25 credit hours**

- POLS 503-3 Research Methods for Public Administrators
- POLS 535-3 Ethical Foundations of Public Service
- POLS 540-3 Seminar in Public Management
- POLS 542-3 Public Budgeting and Fiscal Management
- POLS 543-3 Human Resource Management
- POLS 545-3 Organization Theory and Behavior
- POLS 546-3 Leadership in Public Administration
- POLS 557-3 Public Financial Administration
- POLS 594-1 Preprofessional Seminar in Public Administration

**Aviation Requirements - 12 credit hours**

(Select four of the five aviation courses, register for crosslisted AVM courses.)

- AVM/POLS 551-3 Aviation Policy, Law and Regulation
- AVM/POLS 552-3 Advanced Airport Administration
- AVM/POLS 553-3 Advanced Airport Safety Administration
- AVM/POLS 554-3 Aviation Planning
- AVM/POLS 555-3 I International Aviation

**Internship Requirement - 3 credit hours**

- POLS 595-3 Internship in Public Affairs

**Concurrent Degrees in Law and Public Administration**

Students who have been admitted separately to the Southern Illinois University School of Law and the Master of Public Administration program may study concurrently for the Juris Doctorate and M.P.A. degrees. Students interested in concurrent study should inform both programs before entering the second academic year as law students. Students will not be permitted to take course work outside the prescribed law curriculum during the first year of law school. The required courses for joint degree students are as follows:

**Core Requirements - 22 credit hours**

- POLS 503-3 Research Methods for Public Administrators
- POLS 539-3 Program Analysis and Evaluation
- POLS 540-3 Seminar in Public Management
- POLS 542-3 Public Budgeting and Fiscal Management
- POLS 543-3 Human Resource Management
- POLS 545-3 Organization Theory and Behavior
- POLS 546-3 Leadership in Public Administration
- POLS 594-1 Preprofessional Seminar in Public Administration

**Law Requirements - 15 credit hours**

(Select five law courses from the list below)

- LAW 533, LAW 539, LAW 548, LAW 552, LAW 553, LAW 558, LAW 568, LAW 579, LAW 585, LAW 589, LAW 593, LAW 596, LAW 600, LAW 619, LAW 620, LAW 622, LAW 642, LAW 650, LAW 651, LAW 662, and LAW 668

**Internship Requirement - 3 credit hours**

- POLS 595-3 Internship in Public Affairs
Additionally, students without any background in public administration may be required to enroll in POLS 537 as a prerequisite to the program. Students with prior public sector administrative experience may petition to waive the internship requirement in their first semester in the program.

Public Administration Courses

POLS403 - Philosophy of Politics 403-3 Philosophy of Politics. (See PHIL 441)

POLS405 - Democratic Theory 405-3 Democratic Theory. (Same as PHIL 405) An examination of various aspects of democratic thought, including the liberal tradition and its impact upon the United States. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement. Prerequisite: POLS 114 or consent of instructor.

POLS406 - American Political Thought 406-3 American Political Thought. This course is an advanced seminar in American political thought. The course focuses on the founding ideals and practices of the American republic and how these ideals functioned in subsequent social movements, political struggles, and ideological conflicts in American political history. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

POLS435 - Judicial Process & Behavior 435-3 Judicial Process and Behavior. An examination of the process by which judges in both trial and appellate courts at federal and state levels are selected and of the ways in which they make decisions. Attention to the structure of the courts. Study of the communication and impact of judicial decisions. The course provides some insight into the methods used to study judicial behavior. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement. POLS 114 and 230 recommended prerequisites.

POLS436 - Administrative Law 436-3 Administrative Law. The procedural law of public agencies, particularly the regulatory commissions but also executive branch agencies exercising regulatory functions. The exercise of discretion and its control through internal mechanisms and judicial review. POLS 114 and 230 recommended. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

POLS437 - Jurisprudence (Law Theories) 437-3 Jurisprudence (Theories of Law). This course provides an examination of the major schools in legal thinking. We will investigate classic jurisprudential questions, including: theories of how judges decide cases, the role of morality and natural rights in determinations of law, and the role of legislative and judicial actors in the creation of law. POLS 114 and POLS 230 are recommended prerequisites. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

POLS438 - Women and the Law 438-3 Women and the Law. (Same as WGSS 438) This course is an advanced seminar in public law with a focus on gender, law and society. The course will engage with issues in feminist legal practice and the development of legal theories regarding gender. We will interrogate the relationship between theory and practice and the ways in which feminist jurisprudence has taken shape in the dynamics of this relationship. POLS 114 and 230 recommended prerequisites.

POLS439 - Comparative Law & Courts 439-3 Comparative Law and Courts. In the United States, topics ranging from abortion to gay rights and government surveillance are inevitably “solved” by the Supreme Court. Yet for many years the Supreme Court stood alone in the world in being able to overturn government policy. Increasingly, courts all over the world—often prodded by social actors—have begun developing their own unique solutions to these constitutional questions, in many cases challenging accepted social values and mores along the way. In this course we will investigate the development of courts and constitutional rights around the world, including both national rights and international human rights.

POLS444 - Policy Analysis 444-3 Policy Analysis. An examination of basic concepts in the policy sciences, approaches to policy analysis, applications to selected areas of policy, and instruments of policy development. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

POLS455 - Democratization 455-3 Democratization. An examination of transitions to democracy from authoritarian rule in countries around the world. Emphasis is on understanding from a comparative perspective on the social, economic, institutional, political, cultural and international circumstances that
promote, inhibit and even reverse the spread of democratic forms of government. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS456 - Gender & Global Politics** 456-3 Gender and Global Politics. (Same as WGSS 446) An advanced course examining gender systems and women's situations across cultures and countries. This course also studies the impact globalization has had on gender issues by looking at women's activism at international and transnational levels. Topics covered include women's political representation, gender and culture, women's social movements, gender and development, and gendered policy issues. POLS 250 recommended.

**POLS459 - Russia & Post-Soviet States** 459-3 Russia and the Post-Soviet States. This course examines political developments in Russia and the other fourteen Soviet successor states that gained (or regained) independence following the demise of the Soviet Union in 1991. Particular attention is paid to the degree to which Soviet legacies of communist political institutions, state socialist economic policies and ethno-federalism continue to shape the politics and economics of these countries in the post-independence period. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS460 - European Politics** 460-3 European Politics. This course provides students an overview of European integration and a better understanding of the functioning of the European Union. The course opens with a survey of historical developments in both Eastern and Western Europe from 1914 to 1989. After this historical overview, the institutions and policies of the European Union are studied in detail. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS466 - Latin American Politics** 466-3 Latin American Politics. An in-depth analysis of specific problem areas in Latin American political processes as well as comparative study of selected Latin American nation-states. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS467 - Middle East Politics** 467-3 Middle East Politics. This course is designed to examine the regional politics and security of the Middle East and North Africa in a historical and comparative context. This course discusses the historical evolution of the modern states in the region, the dynamics of inter-Arab and Arab-Israeli politics and security, the role of ethnicity and religion in domestic and regional politics, and great powers' penetration of the region.

**POLS475 - International Law** 475-3 International Law. Rules and practices governing states in their relations in peace and war. Prerequisite: POLS 270 recommended. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**POLS477 - American Foreign Policy** 477-3 American Foreign Policy. This course surveys the conduct, goals and evolution of American foreign policy since World War II. It analyzes such issues as the role of institutions, culture and individuals in the formulation of American foreign policy, the interaction between domestic and foreign politics, and the debate over American grand strategy. Prerequisite: POLS 270 recommended.

**POLS480 - Seminar in Int'l Relations** 480-3 Seminar in International Relations. Discussion-based course analyzing empirical and normative (ethical) issues in the study of international relations. Particular emphasis is placed on developing students' critical thinking skills. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement. Prerequisite: POLS 270 recommended.

**POLS500A - Political Methodology-Research** 500A-3 Political Methodology. Seminars in empirical research methods (A) Research Design. Course covers quantitative and qualitative empirical studies of politics.

**POLS500B - Political Methodology-Stats** 500B-3 Political Methodology. Seminars in empirical research methods (B) Statistical Data Analysis in Political Science I. Provides a foundation in univariate and bivariate descriptive statistics; inferential statistics including hypothesis testing about population parameters, bivariate and multivariate relationships, measures of association, and correlation; and an introduction to linear regression. Lab fee: $50.

**POLS500C - Political Methodology-Stats** 500C-3 Political Methodology. Seminars in empirical research methods. (C) Statistical Data Analysis in Political Science II. Provides in-depth instruction in multiple regression including assumptions of linear model, diagnostics and corrections for violation; estimating
models using categorical dependent variables, nonlinear relationships, interactions, and extensions to advanced techniques as time allows. Prerequisite: POLS 500B (or permission of instructor). Lab fee: $50.

**POLS502 - Research Methods Topics** 502-3 to 6 Topical Seminar in Research Methods. Advanced seminar in empirical research methods. Topics will vary by instructor. Lab fee: $50.

**POLS503 - Research Methods for PA** 503-3 Research Methods for Public Administrators. The course aims to familiarize students with analytical techniques and research methods used currently by public administrators. Provides an introduction to applied statistics and data analysis for problems of interest to public administrators. Restricted to enrollment in MPA graduate program or consent of the department. Lab fee: $50.

**POLS513 - Topical Political Behavior** 513-3 to 6 Topical Seminar in Political Behavior. Topic will vary with instructor. Student should see director of graduate studies for advanced syllabus.

**POLS514 - Sem in Intergovernmental Rel** 514-3 Seminar in Contemporary Intergovernmental Relations. An examination of relationships among national, state, and local governments in the American federal system, with emphasis on recent literature and contemporary issues. Prerequisite: POLS 340. Restricted to enrollment in MPA graduate program or consent of department.

**POLS516 - Pro-Seminar Political Behavior** 516-3 Pro-Seminar in Political Behavior. An overview of the study of political behavior in American and comparative politics.

**POLS517 - Political Communication** 517-3 Political Communication. Provides an introduction to the academic study of media and politics. The primary objective is to introduce graduate students to seminal theory and research and contemporary contributions in the study of media, politics, and political communication.

**POLS519 - Survey Methodology** 519-3 Survey Methodology for Political Science. Provides an overview of survey methodology. Students will learn how to administer surveys for use in political science and public administration. Topics include psychology of asking and answering questions; constructing questions and questionnaires; evaluating surveys; criteria for survey modes; sampling frames and sampling designs; and ethics for survey research methods.

**POLS522 - NPOs and NGOs** 522-3 Rethinking NPOs and NGOs: Doing Good Better. This course examines the question, can NPOs and NGOs do their good works better? In looking for the answer, students consider how perspective shapes reality, the need for a new framework for action, the conflict between limited resources and seemingly unlimited need, importance of local focus, conflicts between donors' demand for short term results with a situation's requirement for a long term program, issues caused by public policy, roles of gender and ethnicity in solving problems and the role of simplicity. Students will do this in anticipation of becoming leaders/managers of NPOs or NGOs.

**POLS530 - Pro-Seminar in Public Law** 530-3 Pro-Seminar in Public Law. A survey of the major literature in the field of public law at the graduate level.

**POLS532 - Nonprofit/Public Grant Writing** 532-3 Nonprofit and Public Grant Writing. Examines the theories, skills and practices for writing grants for nonprofit and public organizations. Students practice these skills by actually preparing grants for a nonprofit or a public organization. Prerequisite: POLS 537 with a grade of B or better.

**POLS534 - Governance Networks** 534-3 Governance Networks in Public Administration. Explores the shifting locus of public service delivery over time, and examines alternative organizational arrangements through which public services are provided to citizens. Emphasis is placed on the environment, structure and management of service delivery networks including combinations of public, private, and not-for-profit actors. Explores joint agreements, public-private partnerships, and contracting regimes as elements that bind network actors in the process of delivering high quality public services. Additional focus is invested in evaluating the leadership and management strategies that can ensure accountable and ethical public policy implementation by non-governmental organizations that act with the authority of government. The factors that facilitate network performance are also explored. Prerequisite: POLS 537.

**POLS535 - Administrative Ethics** 535-3 Ethical Foundations of Public Service. Examines the ethical dimensions of public service, particularly as it relates to the cultural context of the United States, while
emphasizing the responsibility of the public manager to act with integrity. Assesses the virtues necessary for moral leadership in the public sector, as well as managerial strategies that reinforce ethical climates in public organizations and ethical behavior among public employees. Focuses on contemporary cases to explore the practical relevance of theories of morality and ethics. Special attention will be invested in examining the ethical implications of contemporary modes of governance and tensions between managerial and democratic values. Prerequisite: POLS 537.

POLS536 - Comparative Public Law 536-3 Seminar in Comparative Public Law. An examination of legal systems around the world.

POLS537 - Foundations of PA 537-3 Foundations of Public Administration. Introduction to the study and practice of administrative process and public management. Theoretical, political, and practical issues of organizing, staffing, financing and implementing government decisions and other issues are surveyed.

POLS538 - Public Law Topics 538-3 Topical Seminar in Public Law. Advanced seminar in public law. Topics will vary by instructor.

POLS539 - Program Evaluation 539-3 Program Analysis and Evaluation. The analysis and evaluation of governmental programs. Emphasis is placed upon use of analytical techniques to determine program impact and the use of evaluation in governmental decision making. Prerequisite: POLS 503. Restricted to enrollment in MPA graduate program or consent of department. Lab fee: $50.

POLS540 - Seminar Public Management 540-3 Seminar in Public Management. Course is designed for advanced MPA students and examines social, political, legal and managerial constraints on the behavior of public administrators. Issues in ethics and the public's expectations of professional administrators are also examined. Restricted to students who are in the MPA program who have completed at least three required MPA courses, or the consent of the department.

POLS541 - Sem Applied Probs Public Admin 541-3 Seminar in Applied Problems of Public Administration. Study of selected problems in public administration and policy. Emphasis placed on the practitioner's perspective. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department.

POLS542 - Public Budget & Fiscal Mgt 542-3 Public Budgeting and Fiscal Management. An examination of the theory and practice of budgeting in the public sector and of selected elements of fiscal management. The course focuses on administrative aspects of budgeting and is oriented toward preparation of students for careers in the public service. Students utilize primary materials in conducting individual or class projects aimed at development of budgetary skills. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department. Lab fee: $50.

POLS543 - Human Resource Management 543-3 Human Resource Management. A study of the processes and procedures used in contemporary public personnel systems. Emphasis is placed on examination of competing models of personnel administration, application of personnel management strategies to specific case problems and public sector labor relations. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department.

POLS544 - Policy Analysis 544-3 Policy Analysis. This course focuses on the development and analysis of public policy alternatives and how they are used in governmental decision making.

POLS545 - Organization Theory & Behavior 545-3 Organization Theory and Behavior. An examination of various approaches to describing and understanding public organizations and the individuals within them. Emphasis is placed on study of the important theoretical literature in the field and on the applications of the theory of practical management problems in governmental units and agencies. Prerequisite: POLS 340. Restricted to enrollment in MPA graduate program or consent of department.

POLS546 - Leadership Public Admin 546-3 Leadership in Public Administration. An examination of contemporary theories of leadership and their applicability on the public and non-profit sectors. The course emphasizes the range of behaviors and actions relevant to leadership in contemporary governmental organizations and the analysis of factors resulting in leadership success or failure. Restricted to enrollment in MPA graduate program or consent of the department.
POLS547 - Nonprofit Fundraising 547-3 Nonprofit Marketing and Fundraising. This course examines the unique resource development needs of nonprofit organizations and public organizations and looks at the principles and practical sides of meeting those through relationship management, marketing and fundraising. Time will be taken to look at all the aspects of a successful relationship, fundraising and marketing management plan. Students will be expected to participate in at least one fundraiser for a local nonprofit during the semester.

POLS549 - Admin Nonprofit Organizations 549-3 Administration of Nonprofit Organizations. Examines the characteristics of nonprofit organizations that distinguish them from the public and for-profit sectors. Explores social and economic functions of nonprofits and such administrative issues as fundraising, working with volunteers and governing boards, satisfying tax codes and service distribution. Prerequisite: POLS 340 or equivalent. Restricted to enrollment in MPA graduate program or consent of department.

POLS550 - Pro-Seminar in Public Admin 550-3 Pro-Seminar in Public Administration. A survey of the major literature in the field of public administration. The course will synthesize and integrate the literature and provide an overview of topics to be covered in greater detail in other seminars. Required of M.A. and Ph.D. students offering public administration as a graduate area before enrolling in more advanced subject-matter seminars.

POLS551 - Aviation Policy Law Reg 551-3 Aviation Policy, Law and Regulation. (Same as AVM 551) Examination of the history of American aviation policy, law and regulation. The course focuses primarily on the development, implementation and enforcement of aviation policies and regulations at the federal level. Special attention is paid to the interaction of various government agencies and constituency groups, such as the aircraft industry, airport authorities, airlines, private pilots and passengers. In addition to the historical survey, students will analyze current policy and regulatory trends and identify future problems and opportunities for American aviation policy. Restricted to enrollment in MPAA graduate program or consent of instructor.

POLS552 - Adv Airport Administration 552-3 Advanced Airport Administration. (Same as AVM 552) This course will address the role and function of the airport administrator, especially related to the tasks of developing, operating and maintaining various airport services to meet the needs of key airport users. This course will study key airport administration cases at primary, commercial service, reliever and general aviation airports. Meeting key airport regulations concerning operations and security will be a focus of the course. Restricted to enrollment in MPAA graduate program or consent of instructor.

POLS553 - Adv Airport Safety Admin 553-3 Advanced Airport Safety Administration. (Same as AVM 553) The Aviation Safety Administrator's job function and responsibility for safety and accident prevention within an aviation organization is examined using the case study method. The relevant theory, concepts, procedures and techniques of resource allocation, organizational design, decision modeling, task assignment, delegation of authority and responsibility, establishment of organizational goals and priorities and risk management as they relate to Aviation Safety are included. The job functions of an Aircraft Accident Investigation Team and of an Aviation Safety Inspector will be studied. Aviation safety administration literature will be reviewed. Restricted to enrollment in MPAA graduate program or consent of instructor.

POLS554 - Aviation Planning 554-3 Aviation Planning. (Same as AVM 554) This course fulfills a need for a semester length course on aviation planning for students concentrating in aviation administration. Airports and the aviation industry are rapidly expanding, and aviation is growing in importance on the nation's transportation agenda. Broader issues of law and regulation will be covered in an existing course, POLS 551. Restricted to enrollment in MPAA graduate program or consent of instructor.

POLS557 - Public Financial Admin 557-3 Public Financial Administration. The seminar provides a basic understanding of the public budgeting decision-making processes and financial management practices. It provides students with knowledge and hands-on experience of collecting and analyzing governmental data, generating financial reports, and presenting findings. It also provides students with an understanding of revenue sources and different factors that could potentially influence collections. Moreover, it gives students the opportunity to acquire experience in revenue forecasting and budget decision-making through homework assignments and in-class exercises. Prerequisites: POLS 542 and POLS 503 with grades of B or better. Lab fee: $50.
POLS560 - Pro-Sem in Comparative Politics 560-3 Pro-Seminar in Comparative Politics. Survey of the major literature in comparative politics at the graduate level.

POLS569 - Top Sem in Comparative Politics 569-3 to 9 (3,3,3) Topical Seminar in Comparative Politics. Advanced seminar in comparative politics. Topics will vary by instructor.

POLS570 - Pro Seminar Intl Relations 570-3 Pro-Seminar in International Relations. Survey of the major literature in international relations at the graduate level.

POLS576 - Religion and Politics 576-3 Religion and Politics. Examines empirical studies of religion and politics, including research on behavior, institutions, and movements. Topics include theories of religion, case studies of religious traditions, church and state relations, measurement of religion, and other topics on the intersection of religion and politics.

POLS580 - IR Topics 580-3 to 9 (3,3,3) Topical Seminar in International Relations. Advanced seminar in empirical international relations. Topics will vary by instructor.

POLS590 - Readings 590-1 to 6 Readings. Supervised readings in selected subjects. Prerequisites: POLS 592A-D for specific field, or POLS 545 or POLS 500A.

POLS591 - Individual Research 591-1 to 9 Individual Research. Selection, investigation and writing of a research paper under the personal supervision of a member of the department graduate staff. Prerequisite: completion of the appropriate pro-seminar for the field in which readings or individual research is to be done.

POLS592B - Founds Poli Sci-Comp Politics 592B-3 Foundations of Political Science-Comparative Politics. Supervised readings in "classics" of the discipline.

POLS592C - Founds Poli Sci-Intl Relations 592C-3 Foundations of Political Science-International Relations. Supervised readings in "classics" of the discipline.

POLS593 - Preprofessional Sem Pol Sci 593-1 Preprofessional Seminar in Political Science. Designed to give the student an introduction to the major professional roles in the discipline. The requirements of teaching, research, publication and service are covered with discussion of where each fits into the professional role requirements and examples of how each is accomplished. Required of all Ph.D. and M.A. students in political science and other teaching assistants in political science. Graded S/U only.

POLS594 - Preprofessnl Sem Public Admin 594-1 Preprofessional Seminar in Public Administration. Guides new students in preparing for the Comprehensive Exam and Professional Portfolio displaying competencies developed through their course work. Assists students writing a Research Paper through the proposal and committee process. Preparation of resume, conducting job searches and other professional development topics are also addressed. Required of all MPA students. Graded S/U only. Restricted to enrollment in MPA graduate program or consent of department.

POLS595 - Internship in Public Affairs 595-1 to 6 Internship in Public Affairs. Fieldwork in the office of a governmental or quasi-governmental agency. The internship is arranged by the field representative of the M.P.A. degree program. A paper in which the student correlates academic knowledge with practical internship experience is required. Mid-career M.P.A. students may receive credit upon completion of a paper relating previous work experience to public administration literature and theory. Restricted to enrollment in M.P.A. graduate program or consent of department. Graded S/U only.

POLS596 - Research Paper-Public Affairs 596-3 Research Paper in Public Affairs. Upon successful completion of core courses, the student expands and develops a previously written MPA graduate program paper. The project involves an issue or problem in public administration and is written with the
approval and under the supervision of the student's committee chair. Restricted to enrollment in MPA graduate program or consent of department.

**POLS598 - Dissertation Prospectus** 598-1 Dissertation Prospectus. Workshop in dissertation topic selection and prospectus writing; enrollment required prior to completing preliminary examinations.

**POLS599 - Thesis** 599-1 to 6 Thesis. Maximum of six hours to be counted toward a degree. Special approval needed from the instructor.

**POLS600 - Dissertation** 600-1 to 40 (1 to 12 per semester) Dissertation. Minimum of 24 hours to be earned for the Doctor of Philosophy degree.

**POLS601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**POLS699 - Postdoctoral Research** 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

**Public Administration Faculty**

- **Bloom, Stephen**, Associate Professor, Ph.D., University of California, LA, 2004.
- **Bricker, Benjamin**, Assistant Professor, Ph.D., Washington University, 2013.
- **Burnside, Randolph**, Associate Professor, Ph.D., University of New Orleans, 2004; 2005.
- **Comparato, Scott A.**, Associate Professor, Ph.D., Washington University, 2000; 2000.
- **Davis, Randall S.**, Associate Professor, Ph.D., University of Kansas, 2011; 2013.
- **Foster, John L.**, Associate Professor, Emeritus, Ph.D., University of Minnesota, 1971; 1975.
- **Grant, J. Tobin**, Professor, Ph.D., The Ohio State University, 2001; 2001.
- **Hamman, John**, Associate Professor, Ph.D., University of Illinois, 1988; 1989.
- **Jackson, John S., III**, Professor, Emeritus, Ph.D., Vanderbilt University, 1971; 1969.
- **McClurg, Scott D.**, Professor, Ph.D., Washington University, 2000; 2001.
- **Mulligan, Kenneth**, Associate Professor, Ph.D., Ohio State University, 2004; 2006.
- **Shulman, Stephen**, Associate Professor, Ph.D., University of Michigan, 1996; 1997.
- **Stewart, LaShonda M.**, Professor, Ph.D., Mississippi State University, 2008; 2008.
- **Tilley, Virginia Q.**, Professor, Ph.D., University of Wisconsin, 1997; 2014.

**Public Health**

The School of Human Sciences program offers graduate programs leading to a PhD in Education with an emphasis in Health Education, a Master of Public Health (MPH), a concurrent MPH/PhD in Health Education open to persons with a previous master's degree in a field other than public health, and an MPH/MD (must first be admitted to the SIU School of Medicine). Persons interested in pursuing any of these degrees should initially consult the Director of Graduate Studies regarding appropriate courses and assignment to an advisor.

**Application/Admission**

Requirements for admission to the PhD program in health education or the MPH program are:
1. Completion and submission of Graduate School admission application; a nonrefundable $65 application fee must be submitted with the application for those applying for the Doctoral of Philosophy in Education degree, the Master of Public Health degree, or the concurrent MPH/PhD program. Applicants must pay this fee by credit card.
2. Submission of three letters of recommendation to the School of Human Sciences Director at Human.Sciences@siu.edu.
3. Submission of all official transcripts for previous undergraduate and graduate work.
4. Submission of supplemental essays.

Whereas applications are reviewed continuously throughout the year, actual admissions for the MPH program, PhD program, MPH/PhD program, and MPH/MD occur only for the fall semester. Some exceptions to this timeframe can occur under special circumstances. Contact the School of Human Sciences Director for more information at Human.Sciences@siu.edu.

**Doctor of Philosophy Degree in Education**

The Health Education program participates in the School of Education doctoral program with a concentration in health education. In addition to general requirements of the Graduate School and of the School of Education for all PhD degrees in education, the program requires satisfactory completion of PH 512, PH 513, PH 515, PH 525, PH 533B, PH 597, PH 598, and QUAN 506. Each student in conjunction with their committee chair selects elective courses required for the degree. The successful completion of EDUC 505, EAHE 587, and one additional course in quantitative or qualitative methods is required for fulfillment of the research tool for students in the Health Education program. A minimum of a B average is required in all PhD courses.

See the description of the PhD degree in Education for further details.

Inquiries regarding application should be directed to the director of doctoral studies for Public Health/Health Education.

**Master of Public Health Degree**

Applicants for the Master of Public Health degree must have a 3.00 undergraduate grade point average (A = 4.0) to be admitted in good standing.

Only graduate level courses taken after a student’s admission to the program will be included automatically in the student’s degree program. “Nondeclared” hours or hours from other degree programs must be petitioned into the program. Courses eligible for inclusion in a degree program must be graduate level and cannot have been applied toward another degree. The MPH program offers fall semester admissions only.

**Master of Public Health Degree Requirements**

A student must complete a minimum of 42 semester hours consisting of at least the following courses:

- PH 505-3 Foundations of Public Health Knowledge
- PH 506-3 Communicating Public Health
- PH 507-1 MPH Experiential Learning Seminar
- PH 508-2 Leadership in Public Health
- PH 512-3 Public Health Program Planning
- PH 513-3 Public Health Analytics I
- PH 514-3 Public Health Analytics II
- PH 525-3 Applied Theoretical Foundations of Public Health
- PH 526-3 Evidence-based Research and Evaluation in Public Health
- PH 532-3 Public Health Administration: Principles and Practices
- PH 583-3 U.S. Health Systems: Organization, Delivery, and Policy
- PH 593-3 Principles of Epidemiology in Public Health
- PH 598-3 Grant Writing in Public Health
- PH 599A-1 MPH Applied Practical Experience (APE) Seminar
• PH 599B-2 MPH Applied Practical Experience (APE)
• PH 599C-3 MPH Integrative Learning Experience (ILE)

Each student will work with an advisor to select an additional three hours from courses within Health Education or related courses.

Requirements for Admission

Besides the current admission criteria, students who are interested in applying to the Concurrent M.P.H./Ph.D. program must have the following:

• GPA overall 3.5 as undergraduate or 3.6 masters
• Undergraduate degree in public health (or closely-related field) and five years health-related work experience OR a graduate degree in health education (or closely-related field) and three years health-related work experience

Concurrent MPH/PhD

Persons with a previous master’s degree (in a non-public health field) may apply for the concurrent MPH (Public Health)/PhD (Health Education) program. Students will earn the MPH degree as well as a PhD in Education, with a concentration in Health Education. The selection and sequencing of coursework enables students to complete both degrees in a timely manner.

Concurrent MPH/MD

Applicants may apply for a concurrent degree in Medicine and Public Health (must first be admitted to the SIU School of Medicine). Applicants for the Master of Public Health degree must have a 3.00 undergraduate grade point average (A = 4.0) to be admitted in good standing. Only graduate level courses taken after a student’s admission to the program will be included automatically in the student’s degree program. “Nondeclared” hours or hours from other degree programs must be petitioned into the program. Courses eligible for inclusion in a degree program must be graduate level and cannot have been applied toward another degree.

Concurrent Degree Requirements

For the medical degree, all students must complete all requirements outlined by the SIU School of Medicine. For the MPH degree, a student must complete a minimum of 42 semester hours with the following courses being required during the first year:

• PH 505-3 Foundations of Public Health Knowledge
• PH 506-3 Communicating Public Health
• PH 507-1 MPH Experiential Learning Seminar
• PH 508-2 Leadership in Public Health
• PH 512-3 Public Health Program Planning
• PH 513-3 Public Health Analytics I
• PH 514-3 Public Health Analytics II
• PH 525-3 Applied Theoretical Foundations of Public Health
• PH 526-3 Evidence-based Research and Evaluation in Public Health
• PH 532-3 Public Health Administration: Principles and Practices
• PH 583-3 U.S. Health Systems: Organization, Delivery, and Policy
• PH 593-3 Principles of Epidemiology in Public Health
• PH 598-3 Grant Writing in Public Health

In addition, the student must complete the following courses during the fifth year:

• PH 599A-1 MPH Applied Practical Experience (APE) Seminar
• PH 599B-2 MPH Applied Practical Experience (APE)
• PH 599C-3 MPH Integrative Learning Experience (ILE)
• 10 hours selected from the following electives:
  # Public Health Leadership elective, 3 weeks/hours, SIU-SOM
  # Clinical Epidemiology elective, 3 weeks/hours, SIU-SOM
  # Health Policy and Law elective, 3 weeks/hours, SIU-COM
  # Advanced Biostatistics, 2 weeks/hours, SIU-SOM
  # State Agency Management and Engagement, 1 week/hour, SIU-SOM
  # Emerging Trends in Public Health, 2 weeks/hours, SIU-COM
  # Ethical Issues in Public Health Practice and Research, 1 week/hour, SIU-SOM
  # Crisis and Disaster Response and Management, 1 week/hour, SIU-SOM
  # Roles and Integration of National, State and Local Health Agencies, 1 week/hour

Certificate in Gerontology

The School of Human Sciences offers a Certificate in Gerontology interdisciplinary program. PH 440, Health Issues in Aging, is a Certificate requirement for the certificate program. For more information on this Certificate program, please see the Post-Baccalaureate Certificate Programs tab.

Public Health Courses

PH402 - Death Education 402-3 Death Education. (Same as GRON 402) Designed to prepare educators to conduct learning experiences about death and dying in a variety of school, college, medical care, and community settings. Stress will be placed on developing brief, functional curricula and usable, imaginative, teaching-learning materials and on evaluating resource materials for use in educating at various levels of maturity.

PH403 - Health Advocate Training 403-3 Health Advocate Training. Provides students with knowledge and skills in the areas of peer health education, health advocacy, and referral. Instruction includes health care information from a wellness point of view. Prepares students for practicum in health advocate program. Credit will not count toward a master's degree in health education. Special approval needed from the instructor.

PH410 - Human Sexuality 410-3 Human Sexuality. (Same as WGSS 411) Provides detailed information on dimensions of sexuality; characteristics of healthy sexuality; anatomy and physiology; gender roles; relationships; sexually transmitted infections/diseases; contraceptive issues and concerns; sexual victimizations; and sexuality through the life cycle.

PH411 - EMT in the Wilderness 411-6 Emergency Medical Technician in the Wilderness. Placement of trained emergency medical technicians into a wilderness situation and having them adopt previously learned skills and newly developed skills. Prerequisite: PH 334 or PH 434.

PH412S - Driving Task Analysis 412S-3 Driving Task Analysis: An Introduction. An introductory course that deals with the highway transportation system, traffic problems, the driving task, perception and implementation of the driver education classroom program. Observation of a teaching environment is included. A valid driver's license is required.

PH413S - Injury Prevention & Safety 413S-3 Injury Prevention and Safety. Introduces the concepts and topics of injury prevention and safety. Course areas include: school, farm, consumer, fire, home, traffic, occupational, recreational, and disaster.

PH414 - Sexuality Education 414-3 Sexuality Education. Focuses on knowledge/skills needed to address complex issues of sexuality education. Discussion will include challenges/resources for all
health education settings and related disciplines. Purposes/goals, the nature of sexuality education teachers/learners, and "best practice" will be covered. Emphasis on developing competencies essential for professional practice.

**PH415 - Health Counseling** 415-3 Health Counseling. This course teaches basic communication skills and intervention strategies for helping people make positive health related lifestyle changes. It is not a course in therapeutic counseling; it focuses on helping average people to function in the healthiest way possible.

**PH430 - Hlth/Injry Cntrl: Work Setting** 430-3 Health and Injury Control in a Work Setting. (Same as IMAE 430) Assesses the health and injury control programs present in a work setting. Emphasis given to employee programs in health, wellness, and injury control that are effective. Field trips to work sites are included.

**PH434 - Adv First Aid & Emerg Care** 434-4 Advanced First Aid and Emergency Care. Meets the needs of those in positions where advanced first aid and emergency care is required. A nationally recognized First Aid and CPR “First Responder” certification may be obtained with successful completion of the course. Purchase of first aid kits and protective equipment are necessary. Prerequisite: PH 334 or consent of instructor. Students will be required to pay a laboratory fee of $20.

**PH435 - Worksite Safe/Hlth Eval** 435-2 Work Site Safety and Health Evaluation. This course covers methods of inspecting and evaluating health and safety hazards at a work site including analysis of specific job assignments. It also introduces the student to injury and incident investigation techniques. The course will include hands-on work site evaluation.

**PH440 - Health Issues in Aging** 440-3 Health Issues in Aging. (Same as GRON 440) Course content includes demographic trends; physiological changes associated with aging; health care and consumer challenges; cultural differences; psychological effects of aging; housing; long-term care; retirement; care giving; and formal, informal, and community-based support systems.

**PH441 - Women's Health** 441-3 Women's Health. The course deals with a wide variety of health concerns of American women as consumers in the current health marketplace. Major categories of topics include health products, health services, and sources of health information of particular interest to women. Emphasis is also placed on current health related issues of women. The major purpose of the course is to provide a basis for informed decision-making by the female consumer.

**PH442S - Dev Vehicle Oper Skills** 442S-3 Developing Vehicle Operational Skills: Driver Education Laboratory Experiences. Learning activities will focus on preparing the prospective driver educator to conduct activities that develop operational skills for a novice driver. Emphasis is placed on laboratory organization and administration, maintaining a learning environment, developing laboratory instructional modules, and conducting learning experiences. Prerequisite: PH 412S.

**PH443S - Driver Ed Classroom** 443S-3 Developing Classroom Skills: Driver Education Classroom Experience. Learning activities will focus on preparing the prospective driver educator with the skills to teach in the driver education classroom with application to classroom organization, maintaining a safe learning environment, developing instructional modules, and conducting learning experiences. Prerequisite: PH 412S with a grade of C.

**PH445 - Adv Driver Ed Instructor Trn** 445-3 Advanced Driver Education Instructor Training. Prepares prospective instructors of advanced driving techniques. Emphasis is placed upon safe driving practices, vehicle dynamics, emergency vehicle operation, in-car response to simulated driving emergencies, and instructional techniques. Special approval needed from the instructor.

**PH461 - Health Education Workshop** 461-1 to 12 Health Education Workshop. A different focal theme each year; e.g., mood modifying substances, ecology, human sexuality, emotional and social health dimensions. Information, ideas, and concepts are translated into teaching-learning materials and approaches; continuing opportunity for interaction between prospective and experienced teachers.

**PH470S - Highway Safety:Alcohol/Drugs** 470S-3 Highway Safety as Related to Alcohol and Other Drugs. Relationship between alcohol and other drugs and traffic accident causes. A review of education
programs designed to minimize drug related accidents. Restricted to advanced standing or consent of instructor.

**PH471 - PH Instructional Strategies** 471-2 Public Health Instructional Strategies. This course is designed for graduate students who are teaching assistants in Public Health. The purpose of the course is to enhance professional skills of those who are responsible for teaching health education, general education, and first aid.

**PH476 - Stress Management** 476-3 Stress Management. A study of the physiological, emotional and sociological stressors and their underlying mechanisms in states of disease and health. Particular emphasis is placed upon prevention and control of stress via self assessment techniques and proficiency in self control techniques such as biofeedback, autogenic training, meditation and progressive muscle relaxation.

**PH480S - Traffic & Driver Ed Prog Dev** 480S-3 Traffic and Driver Education Program Development. Acquaints students with curriculum innovation, current philosophy, learning and teaching theories, and instructional designs. Students will develop learning packages and modules. Prerequisite: PH 443S or consent of instructor.

**PH484 - Preventing Violence Ed Setting** 484-3 Preventing Violence in Educational Settings. Designed to prepare educators, administrators, and other professionals to plan, implement, and evaluate violence prevention, conflict resolution, and crisis intervention programs in educational settings. Incidence/prevalence, etiology, and risk/protective factors related to youth violence will be examined. Current theories and models related to program planning and implementation will be applied to design coordinated, integrated school/community programs. Based on current research, key elements of effective curricula and other program components will be reviewed.

**PH490A - Field Experience** 490A-2 to 12 Field Experiences in Schools, Community Health. Field observation, participation, and evaluation of current school or community health education or safety programs in agencies relevant to student interests. Prerequisite: all required health education courses. Special approval needed from the instructor.

**PH490B - Adv Fieldwork Sch Com IP** 490B-2 to 6 Advanced Field Experience in School, Community Health or Injury Prevention Education. Advanced field observation, participation and evaluation of current school or community health education or injury prevention programs in agencies relevant to student interests. Prerequisite: grade of B or better in PH 490A. Special approval needed from the instructor.

**PH491 - Health Teaching/Learning** 491-3 Health Teaching/Learning: School and Community. Teaching and learning strategies at secondary school levels and in other community group settings. Opportunities to examine and observe a variety of educational strategies applicable to health education.

**PH496 - Industrial Hygiene** 496-4 Industrial Hygiene. Provides a background in the recognition, evaluation, and control of toxic materials and hazardous physical agents in the work environment. Special approval needed from the instructor.

**PH499 - Rx: Ed in Health Care Settings** 499-3 Rx: Education in Health Care Settings. Designed for members and potential members of the health care team to explore educational concepts and strategies applicable to a variety of health care settings. Includes rights and responsibilities of consumer and professional, determinants of health behavior, contrasting models of health care, communication skills, media and materials and planning, implementing and evaluating educational programs. Open to medical and dental personnel, nurses, health educators, dieticians, therapists, pharmacists, social workers, and related professionals.

**PH505 - Foundations PH Knowledge** 505-3 Foundations of Public Health Knowledge. This course provides an overview of the interdisciplinary field of public health. History and ongoing evolution of public health services and delivery systems in the U.S., essentials of public health practice, and federal, state, and local public health functions are considered. Emerging health problems, changing population dynamics, and global health context will be examined.

**PH506 - Communicating PH** 506-3 Communicating Public Health. This course assists students in developing skills and identifying opportunities for communicating public health messages through the
preparation of technical papers for public health, other health science-related, area-specific, and cross-disciplinary journals, as well as communicating other professional and lay publications. Additional skills relate to the development of press releases, letters to the editor, preparation of posters, development of oral presentations for diverse audiences, estimating readability of written materials, assessing health literacy, preparing pamphlets and other written materials, designing messages for distribution by mass media, including but not limited to social media and social marketing.

PH507 - Experiential Learning Seminar 507-1 MPH Experiential Learning Seminar. This course will introduce Master of Public Health (MPH) students to public health resource identification and utilization to understand and engage in public health fieldwork and service. MPH students will develop a professional portfolio to build upon through the tenure of the program.

PH508 - Leadership in Public Health 508-2 Leadership in Public Health. This course provides an overview of the core principles in Public Health Leadership. Major theories and concepts in leadership and methods for applying these to public health will be discussed.

PH512 - Public Health Program Planning 512-3 Public Health Program Planning. This course will present theories/models for health promotion program planning and implementation in community/public health settings. Steps to program planning, including: logic models, needs assessment, community organizing, evaluation/assessment, and social marketing will be addressed.

PH513 - Public Health Analytics I 513-3 Public Health Analytics I. An introduction to biostatistics; examination of theories of population projections; collection, organization, interpretation, summarization, and evaluation of data relative to public health happenings with emphasis on graphic presentation.

PH514 - Public Health Analytics II 514-3 Public Health Analytics II. The application of technology to engage communities and individuals in behavioral and environmental change processes. The course will focus on the use of technology to describe the magnitude of health problems and their sources; analyze risk factors; identify community strengths from which strategies may be defined and tools created to intervene, prevent problems, and promote health and well-being; and continuously evaluate, refine, and implement what works. Prerequisite: PH 513 with a grade of B or better or consent of instructor.

PH515 - Contemp Issues in Health 515-3 Contemporary Issues in Health-Related Fields. This course is designed to expand the conceptual framework for health education research, practice, and professional development by examining contemporary issues in health and related fields. It includes reading, analyzing, interacting, and reflecting about selected critical issues and future concerns as they relate to the health education profession as well as individual, community, and societal health-related needs.

PH520 - Special Topics 520-6 Special Topics/Independent Study. An area of study to be determined by students in consultation with the health education faculty that goes beyond the current health education course offerings. 1-3 credits; may be repeated twice for maximum of 6 hours. Special approval needed from the instructor.

PH525 - Appl Theoretical Found PH 525-3 Applied Theoretical Foundations of Public Health. Examines health-related motivation and behavior through the study of relevant psychological, sociological, and educational theory and research. Emphasis is on application of behavioral and behavior-change theories and constructs in designing effective health education and promotion programs.

PH526 - Evidence-based Res Eval PH 526-3 Evidence-based Research and Evaluation in Public Health. Introduction to research and evaluation. Includes survey and analyses of health testing and research/evaluation procedures, uses and limitations of knowledge and attitude tests, behavioral inventories, checklists, questionnaires, interviews, and other techniques.

PH530S - Research: Traffic Safety 530S-3 Research in Traffic Safety. A study of unique problems related to traffic safety and a review and evaluation of contemporary studies. Restricted to graduate standing or consent of instructor.

PH532 - Public Health Admin 532-3 Public Health Administration: Principles and Practices. This course is designed to provide a broad overview of key administrative issues in public health, including building and sustaining a public health workforce, disease control and prevention, emergency preparedness, legal
issues, and financial considerations. Attention will be given to the application of management concepts and principles related to public health organizations at the national, state, and local levels.

**PH533B - Foundations of PH II** 533B-4 Foundations of Public Health II. This course will provide a broad overview of quantitative research in public health, including research designs, research questions, assumptions, limitations, data collection methods, sampling, instrument development, and data analysis and interpretation. Discussion of health-related theories/models and ethical considerations will be integrated throughout the course.

**PH541 - Issues in Health Care** 541-3 Issues in Health Care. Examination of current and continuing issues in the provision, administration, financing, and regulation of health care services. Prerequisite: PH 583 with grade of C or better or consent of instructor.

**PH550S - Current Developments in Traffic and Safety Education** 550S-3 Current Developments in Traffic and Safety Education. Current problems, trends and research studies in traffic and safety education are reviewed, critiqued and evaluated. Restricted to graduate standing or consent of instructor.

**PH555S - Traffic Safety Management** 555S-3 Traffic Safety Management. Course deals with highway safety legislation and other acts related to traffic safety. Application of safety management techniques, procedures and structure of federal and state agencies are emphasized. Special approval needed from the instructor.

**PH561 - Advanced Public Health Workshop** 561-1 to 12 Advanced Public Health Workshop. A different focal theme each year; e.g., technology and health education; coordinated school health programs; social marketing; mental health. Information, ideas and concepts are translated into teaching/learning materials and approaches; continuing opportunity for interaction between prospective and experienced health educators.

**PH571 - Professional Development for Teaching Assistants** 571-3 Professional Development for Teaching Assistants. This course is designed to assist graduate teaching assistants to develop and improve skills necessary for performing their responsibilities. Emphasis will be placed on teaching/learning processes; classroom strategies and skill development; responding to diverse student populations; communication across the curriculum; teaching outside the classroom; identifying campus and community resources, support services, media, and technologies; evaluation and assessment. Restricted to graduate teaching assistants. Special approval needed from the instructor.

**PH583 - U.S. Health System** 583-3 U.S. Health System: Organization, Delivery, and Policy. This course examines dynamics and trends in organization, financing, and delivery of health care in the United States. Specific current health policy issues and the political, social, and economic forces that affect them are analyzed. Practical implications for public health professionals will be considered.

**PH585 - Global Health Issues** 585-3 Global Health Issues. This course is designed to introduce students to current health concerns in economically developing nations by examining socioeconomic, cultural, and political issues impacting health. Basic epidemiologic principles will be used to study disease and adverse health conditions in developing countries as well as understand and critique possible intervention strategies. Implications for health educators working in international settings will be discussed.

**PH588 - Issues in Environmental Health** 588-3 Current Issues in Environmental Health. This course will address core principles and concepts of environmental health disciplines, analyze environmental factors impacting human and ecological health, and explore environmental health tools through their application to current issues of concern to government agencies.

**PH592 - Practicum: Safety/Industrial Health** 592-8 Practicum in Safety and Industrial Health. Students are assigned full-time to a safety agency or industry for experience in either safety or industrial health. Restricted to those specializing in safety industrial health. Special approval needed from the instructor.
PH593 - Principles Epidemiology in PH 593-3 Principles of Epidemiology in Public Health. This course will present principles and practices related to the study, prevention and control of health-related conditions in the human population. Emphasis will be placed on understanding the principal concepts of epidemiology, including aspects of disease distribution, epidemiologic methods, risk assessment of disease and injury, descriptive and analytic epidemiologic methods and study designs, and application of epidemiologic data to the prevention and control of disease and injury. Format for the class will include lecture and small group seminars.

PH597 - Seminar in PH 597-2 Seminar in Public Health. Advanced graduate students discuss individual health projects and present research problems. Each will present a dissertation prospectus. The course will cross two semesters. The first semester will require class attendance. The second will require attending dissertation prospectus and defense meetings and writing individual reports. Prerequisite: PH 533B.

PH598 - Grant Writing 598-3 Grant Writing in Public Health. Consideration is given to funding sources, proposal guidelines, procedures for support, budgetary requirements and evaluation procedures. Students examine different types of funded projects, develop a research proposal and analyze the art of grantsmanship and political action.

PH599A - Appl Practical Exp Seminar PH 599A-1 MPH Applied Practical Experience (APE) Seminar. The purpose of the MPH Applied Practice Experience Seminar is to prepare students for their applied practice experience and for a future as a public health professional. This seminar serves as one of the prerequisites for enrolling in the MPH Applied Practical Experience (PH 599B). Through this semester, students will prepare the components of the applied practice experience learning agreement. This seminar provides students with useful skills needed to complete an applied practice experience and to work in a public health or community setting. Students will have a specific topic, project(s) and/or site in mind prior to taking this course, which is typically taken in the second semester of Year 1. Prerequisite: PH 507 with a grade of B or better.

PH599B - Applied Practical Exp PH 599B-2 MPH Applied Practical Experience (APE). Master of Public Health (MPH) students will demonstrate competency attainment through applied practice experiences. All MPH students are required to complete a 240-hour experience with a community-based component. The Applied Practice Experience (APE) provides a practical experience in a public health setting where students apply skills and knowledge they gained during didactic courses to attain at least five competencies. Dual degree students have opportunities to integrate and apply their learning from both degree programs through applied practice experiences. Students meet the APE requirements by supporting the Program's mission and students' career goals, to the extent possible. Prerequisite: PH 599A with a grade of B or better.

PH599C - Integrative Learning Exp PH 599C-3 MPH Integrative Learning Experience. During the final semester(s) of study, students are required to complete an integrative learning experience (ILE) that demonstrates synthesis of foundational and program competencies. ILEs require two products: 1) a high-quality written product and 2) a presentation on the ILE. Prerequisite: PH 599B with a grade of B or better.

PH600 - Dissertation 600-1 to 32 (1 to 16 per semester) Dissertation.

PH601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

PH699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.
Public Health Faculty

Gary, Mallory, Assistant Professor, PhD, Southern Illinois University Carbondale, 2012; 2019.
McDermott, Robert J., Professor, PhD, University of Wisconsin-Madison, 1981; 2017.
McDaniel, Justin T., Associate Professor, PhD, Southern Illinois University Carbondale, 2016; 2017.
Patrick, Sarah L., Assistant Professor, PhD, University of Pittsburgh, 1992; 2019.

Public Safety and Homeland Security Administration

Graduate work leading to a Master of Science in Public Safety and Homeland Security Administration (PSHSA) is offered by the School of Justice and Public Safety. The program prepares its graduates with the analytic capabilities and problem solving skills that will enable them to succeed and progress in their professional career. The 30-hour curriculum develops advanced administrative, managerial, and leadership skills critical to career advancement and promotion within these industries. The academic setting of this program will foster creative thinking and communication skills in our pursuit of excellence. The program culminates in an applied practicum as opposed to a thesis.

Criteria for Unconditional Admission

In order to be admitted to a degree program, an applicant must meet Graduate School and program admission requirements.

General requirements for domestic student admission to SIU Graduate School include: a 2.7 grade point average (on a 4.0 grading scale) on the last two years of Bachelor’s degree coursework or a 3.0 grade point average on all previous graduate work. Specific requirements or equivalences for foreign student admissions and early admission consideration may be found on the SIU Graduate School website at gradschool.siu.edu/apply/.

Applicants to master’s degree level study may begin the admissions process when they need no more than 32 semester hours beyond the credit shown on their transcript at the time of application to complete all requirements for the bachelor’s degree.

Any applicant who has completed 12 or more semester hours of graded graduate work at an accredited U.S. educational institution, and who has a GPA of 3.00 or better on all graduate work, may be exempted from the 2.7 undergraduate grade point average requirement. Any student with fewer than 12 hours of graduate work may be admitted to the Graduate School on the basis of undergraduate GPA only.

To meet program requirements, candidates must have a baccalaureate degree from an accredited institution or have completed all undergraduate degree requirements prior to the beginning of the classes for the term for which admission is sought. Preferred consideration is given to applicants with a bachelor’s degree in Fire Science, Fire Service, Emergency Management, Emergency Medical Services (EMS) and Homeland Security, or individuals with other baccalaureate degrees with direct experience in fire fighting, public safety, EMS or related experience. All applicants will submit an essay outlining the individual’s background in the field and future career goals as part of the application process.

Degree Requirements

Required Core Courses

All candidates for the Master of Science in Public Safety and Homeland Security Administration degree are required to complete five core courses (15 credits).

- PSM 501 Legal/Administrative Law
- PSM 503 Public Policy/Ethics
- PSM 504 Fiscal/Financial Management
- PSM 509 Strategic Planning
- PSM 512 Practicum Exercise
Elective Courses

Students must complete an additional 15 credit hours of graduate (500-level or above) Public Safety Management courses. With the consent of the program coordinator, students may be permitted to satisfy the elective course requirements with graduate courses outside of Public Safety Management and/or with up to six credits of 400-level Public Safety Management credits taken for graduate credit in accordance with graduate school regulations.

Practicum

All students must complete a practicum capstone during their final semester in the program where they undertake a major simulation or drill to demonstrate their leadership, planning, and evaluation.

Public Safety and Homeland Security Administration Courses

PSM401 - Apps of Fire Research 401-3 Applications of Fire Research in Fire and Emergency Services. This course examines the rationale for conducting fire research, various fire protection research activities, and research applications, including the test standards and codes, structural fire safety, automatic detection and suppression, life safety, and firefighter health and safety. May be independent study. Prerequisite: PSM 350.

PSM403 - EMS Education 403-3 Emergency Medical Services Education. This course is for students interested in Emergency Medical Services (EMS) education. This course introduces the EMS professional to the education system as it relates to EMS education. Students explore issues in curriculum development, teaching, program direction, and development. Restricted to PSM major or consent of program coordinator.

PSM406 - Mgmt of Emergency Services 406-3 Management of Emergency Services. This course is for students interested in the practice and principles of Emergency Services management and the processes that contribute to the effectiveness of day-to-day operations within an emergency service organization. This course introduces the public safety professional to topics that include government structure, strategic planning, injury prevention, risk management and safety, customer service, human resources management, financial management, fleet management, career development, quality management, data collection and research, labor relations, and special operations. Restricted to PSM major or consent of program coordinator.

PSM407 - Public Information 407-3 Emergency Services Public Information. This course is for students interested in public information and community relations in Emergency Services. This course introduces the public safety professional to benefits of community information and community relations. Students explore issues in marketing, crafting the message, identifying the audience, developing programs, and creating press releases. Restricted to PSM major or consent of program coordinator.

PSM410 - Response to Natural/Tech Event 410-3 Organizational Response to Natural and Technological Events. This course examines responses to natural and man-made disasters. It also looks at the unique role of the local first responder with other governmental agencies. Students will identify the common elements of a disaster response and the roles of each emergency responder and agency. Course emphasis is on the actions and procedures "at the scene" where decisions are made rather than concepts and policies applied by officials physically removed from the scene. Restricted to PSM major or consent of program coordinator.

PSM412 - Exercise and Evaluation 412-3 Fire Service Exercise and Evaluation. Students will be trained in determining public need during an emergency event through exercise. Students will learn the impact
that effective project and operational planning and management can have on the overall effectiveness of public safety organizational performance. Restricted to PSM major or consent of program coordinator.

**PSM416 - Domestic Terrorism** 416-3 Domestic Terrorism and Extremist Groups. This course traces the history, emergence, and growth of domestic terrorist and extremist groups within the United States. Students will assess various groups' intentions, capabilities, and activities within contexts of and ramifications on political, national security, and legal paradigms. "Domestic Terrorism and Extremist Groups" traces the roots of domestic political violence and terrorism in the United States, and will expose the student to academic works concerning contemporary domestic extremists and the terrorist threat they may pose. The course will explore how a radical nature has continued to persist in isolated pockets throughout our nation's history. Restricted to PSM major or consent of program coordinator.

**PSM421 - Professional Development** 421-3 Professional Development. Introduces students to the various elements involved in obtaining a position in their chosen fields. Topics included are: personal inventories, placement services, employment agencies, interviewing techniques, resumes, letters of application, references and employment tests. Each student will develop a portfolio, including personal and professional information related to career goals.

**PSM450 - Analytical Approaches Fire Protection** 450-3 Analytical Approaches to Public Fire Protection. This course examines tools and techniques of rational decision making in fire departments, including databases, statistics, probability, decision analysis, utility modeling, resource allocation, cost benefit analysis, and linear programming. May be independent study. Prerequisite: PSM 350 with a grade of C or better.

**PSM500 - Terrorism** 500-3 Terrorism, WMD, and Contemporary Issues. This course will begin by looking at the historical evolution of terrorism and weapons of mass destruction. We will analyze theories and mitigation, preparedness, and response tactics.

**PSM501 - Administrative Law** 501-3 Administrative Law. Administrative law is the law governing the powers, limits and operations of government administrative agencies, and the rights of individuals in dealing with those agencies. Much of this course is about two statutes and related court cases; The Administrative Procedure Act of 1946, governing federal agencies; and the Model State Administrative Procedures Act, governing Oklahoma and many other states.

**PSM502 - Emergency Management** 502-3 Emergency Management. This course examines historical and contemporary theories, principles, and practices of Emergency Management, particularly the all-hazards approach and the related processes of mitigation, preparedness, response and recovery. Using a case study approach, the course considers the evolution of Emergency Management and its practical application with government and private-sector institutions.

**PSM503 - Public Policy/Ethics** 503-3 Public Policy/Ethics. The focus of this course is on how public action takes place; what courses of action are available; and the implications, costs, and consequences of those actions. The Fire Service Executive of the future will require a more disciplined understanding of public policy. This course will encourage a familiarity with public issues that will be useful for the Fire Service Executives in making administrative or policy decisions.

**PSM504 - Fiscal Management** 504-3 Fiscal Financial Management. This advanced introduction to fundamentals of financial management emphasizes analysis of financial statements, organizational-departmental-divisional cash flows, taxes, the financial environment, bonds and their valuation, stocks and their valuation, and cost of capital.

**PSM505 - Executive Leadership** 505-3 Executive Leadership. This course includes leadership, multiple roles, decision making skills, influencing leaders, teaching leaders, storytelling, persuasion, succession planning, and evaluating.

**PSM506 - Disaster Preparedness** 506-3 Disaster Preparedness and Crisis Management. Students will receive the preparation necessary to uniquely manage and make critical decisions regarding a major incident or disaster. The course focuses on specialized decision-making processes involving analytical methods and information management. Interaction with other agencies and effective coordination of roles
and efforts within a structured command system enables the crisis manager to make decisions in an unstructured environment.

**PSM507 - Public Management** 507-3 Public Management. The purpose of the course is to provide a survey of the theory and practice of management in public sector organizations. Emphasis will be given to a comparison of management in the public and private sector, management functions, and the context in which the public manager must perform the functions. Students must complete pre-class, in-class, and post-class assignments.

**PSM508 - Homeland Security** 508-3 Critical Issues in Homeland Security. This course examines the evolving nature of the Homeland Security enterprise by examining a number of contemporary topical issues and their immediate and long-term impact on Homeland Security policies and practices. Particular attention is paid to the role of the media, law, governmental and non-governmental organizations, and political entities at the federal, state, and local levels in determining and shaping Homeland Security policy/practice.

**PSM509 - Strategic Planning** 509-3 Strategic Planning. This course examines and defines the steps, concepts, theory, and value of comprehensive strategic planning. Students will participate in the formulation, financial development, operational management, and evaluation of currently utilized strategic plans and take part in the outline and design of a mock strategic plan.

**PSM510 - Dispute Resolution** 510-3 Dispute Resolution/Mediation/Negotiation. This course is about labor relations and employment disputes in the public sector and the various methods for resolving labor and personnel conflicts. Collective bargaining, arbitration, mediation, and other alternative dispute resolution methods will be applied to cases and simulation exercises relevant to government employees.

**PSM511 - Critical Thinking** 511-3 Critical Thinking and Decision Making. This course is an examination of knowledge and research as they pertain to public safety. Exploration of the relationship between creative and critical thinking, analysis of scientific methodology and logic, language and interpretation and their influence on public safety organizations.

**PSM512 - Practicum** 512-3 Practicum. Under the supervision and direction of a member of the faculty, students will undertake a project involving substantive participation in managing a major simulation, exercise, or drill involving multiple agencies and institutions. Student involvement will include planning, designing, developing, conducting, and evaluating the simulation or drill. Requires the approval of the Director of Graduate Studies for PSM.

**PSM513 - Organizational Leadership** 513-3 Organizational Leadership. This is the third course in the series of Leadership and Management. This course will provide the participant with a deeper understanding of knowledge, skills, and abilities for effective organizational leadership.

**PSM514 - Challenge of Leadership** 514-3 Ethics and the Challenge of Leadership. This is the final course in the series of Leadership and Management. This course will provide the participant with a deeper understanding of personal and organizational ethics and the challenge of leadership. Prerequisite: PSM 513.

**PSM515 - Special Topics** 515-3 Special Topics in Public Safety Management. Specialized study for the investigation of management problems relating to the student's career objective. Studies of the management techniques as practiced in the profession. Topics may be suggested by both faculty and student. Restricted to approval of the Director of Graduate Studies for PSM.

**PSM601 - Continuing Enrollment** 601-1 Continuing Enrollment. For graduate students who have not finished their degree program and who are in the process of working on their thesis, research paper, or capstone project course (PSM 512). Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**Public Safety and Homeland Security Administration Faculty**

Laycoax, Lindsay M., Site Coordinator/Instructor, M.S., Governors State University, 2007.
Quality Engineering and Management

Graduate work leading to a Master of Science degree in quality engineering and management is offered by the College of Engineering. The objective of the program is to develop quality and management professionals who can plan, coordinate, design, implement, and control the quality function in manufacturing and service companies in order to increase productivity, optimize resources, decrease waste, and improve product quality. Course offerings and research are available in the areas of quality assurance, six sigma, lean manufacturing, project management, and reliability. The program provides advanced education for students with baccalaureate degrees in engineering, engineering technology, technology, and also an excellent continuing education opportunity for individuals with technical degrees who wish to expand their education in the area of quality and management systems.

Accelerated Masters

Industrial Management and Applied Engineering (IMAE) students with senior standing and a GPA of 3.5 will be permitted to take up to nine hours of graduate credit in Fall and Spring semesters. By doing so, students then pursuing their Master's degree in Quality Engineering and Management (QEM) after completing their Bachelor's degree in IMAE will have these graduate credits transferred to the QEM degree. This will allow the student to complete the degree requirements in about a year. Students must complete a Graduate School application and work with the graduate advisor on a program of study. Nine credit hours will be allowed to double count toward the undergraduate degree and the Master’s degree. The accelerated master's program allows students who have advanced degree aspirations the ability to save money by completing their studies quicker and to enter the job market sooner.

The Quality Engineering and Management accelerated program with the non-thesis option requires satisfactory completion of twelve hours in core courses: QEM 510, QEM 525, QEM 530 and QEM 540 and eighteen hours of elective graduate credit, which may include up to nine IMAE credit hours at the 400-level taken as an undergraduate.

The Quality Engineering and Management accelerated program with the thesis option requires satisfactory completion of twelve hours in core courses: QEM 510, QEM 525, QEM 530, and QEM 540, six hours of thesis and twelve hours of elective graduate credit, which may include up to nine IMAE credit hours at the 400-level taken as an undergraduate.

Admission

Candidates for this program must be accepted by the Graduate School and the School of Applied Engineering and Technology. Candidates should possess a bachelor's degree with a major in a technical area and have a GPA of no less than 3.0/4.0. A student whose undergraduate training is deficient may be required to take additional courses to compensate for deficiencies identified by the technology graduate program committee.

This program requires a nonrefundable $65 application fee that must be submitted with the application for admission to graduate study in quality engineering and management. Applicants must pay this fee by credit card.
Program Requirements

Graduate students who have been admitted into the Quality Engineering and Management master’s program must complete a total of 30 semester hours of graduate-level credit of which 15 hours must be at the 500 level.

Within the 30 semester hour requirement, students must complete the following four core courses:

- QEM 510-3 Quality Assurance
- QEM 525-3 Six Sigma Black Belt II
- QEM 530-3 Lean Manufacturing II
- QEM 540-3 Reliability Analysis

The remainder of the 30 semester-hours must consist of at least 18 credit hours of QEM and/or IMAE graduate elective courses as specified in the student’s program of study. Elective courses in QEM are:

- QEM 535-3 Service Quality
- QEM 545-3 Project Management II
- QEM 550-3 Project Leadership
- QEM 555-3 Human Safety and Risk Management
- QEM 565-3 Management of Information Technology Resources
- QEM 570-3 Energy Management and Conservation

Students not meeting specific requirements for the above core courses will be required to complete the following list of courses. These specific 400-level courses will count toward meeting the 30 semester hour acceptable graduate credit requirement:

- IMAE 450-3 Project Management
- IMAE 465-3 Lean Manufacturing
- IMAE 470A-3 Six Sigma Green Belt
- IMAE 470B-3 Six Sigma Green Belt II
- QEM 515-3 Six Sigma Black Belt

*Note: IMAE courses taken for undergraduate credit cannot be applied towards graduate credit hours, unless the student has been accepted into the accelerated program.

In the thesis option a program of study including the above required courses (12 semester hours), the master’s thesis (six semester hours), and the remaining 12 semester hours will be selected by the graduate adviser and the student.

Additional Information

Teaching or research assistantships and fellowships are available for qualified applicants. Additional information about programs, courses, assistantships, and fellowships may be obtained from the College of Engineering or from the chair of the department.

Quality Engineering and Management Courses

QEM505 - Research Methods 505-3 Research Methods. The objective of this course is to familiarize the students with the methods needed in research. Emphasis is placed on how these methods can be applied in the quality engineering & management area. Topics include development of research proposals, use of statistics in the analysis and communication of the results. Restricted to enrollment in quality engineering and management program or consent of instructor.

QEM510 - Quality Assurance 510-3 Quality Assurance. Study of recent advances in quality planning, quality measurement, design assurance, process control, participatory management, supplier quality, customer relations and improvement concepts. Prerequisite: IMAE 470A and IMAE 470B.
QEM515 - Six Sigma Black Belt 515-3 Six Sigma Black Belt. (Same as IMAE 480) The purpose of this course is to provide the student with a comprehensive coverage of the knowledge areas and tools of Six Sigma beyond green-belt training, focusing on descriptive and analytical methods to deal with variability including point and interval estimation, hypothesis testing, and design of experiments. Topics include: confidence intervals, hypothesis testing, regression analysis, analysis of variance, single factor experiments, block design of experiments. Prerequisite: IMAE 307 or equivalent and IMAE 470B with grades of C or better. Restricted to College of Engineering students or department approval required. Special approval needed from the department.

QEM525 - Six Sigma Black Belt II 525-3 Six Sigma Black Belt II. The purpose of this course is to provide the student with knowledge of the most advance areas of the Six Sigma black-belt training. Advanced fractional factorial experiments, response surface methodology, robust design and process, design for Six Sigma and other advance six sigma principles and techniques are covered in this course. Prerequisite: IMAE 470A, 470B, and 480.

QEM530 - Lean Manufacturing II 530-3 Lean Manufacturing II. This course will cover the principles and techniques of lean manufacturing. Major topics covered include value stream mapping, pull system/Kanbans, continuous improvement/Kaizen, lean six sigma, lean simulation, and other modern lean manufacturing techniques and issues. Prerequisite: IMAE 465.

QEM535 - Service Quality 535-3 Service Quality. This course examines how organizational leadership, strategic development and deployment of service management systems are used to achieve service quality. Key service quality management concepts of customer and market focus, employee focus, communication, and service delivery will be taught through the use of case studies, article reviews and team projects. Prerequisite: none.

QEM540 - Reliability Analysis 540-3 Reliability Analysis. The objective of this course is to provide the student with an overview of the basic techniques applied in the field of reliability and failure data analysis in a manufacturing environment. Prerequisite: IMAE 470B.

QEM545 - Project Management II 545-3 Project Management II. This course is an advanced study of the concepts in project management, building on the fundamentals established in prerequisite courses. Using MS Project, students will work individually and in teams to develop appropriate tools and documentation typically utilized to implement, control, and closeout projects. Computerized scheduling and cost control, quality systems, risks management, procurement, and project termination. Prerequisite: IMAE 450.

QEM546 - Project Mgmt Supply Chain Engr 546-3 Project Management for Supply Chain Engineering. The course is designed to provide students with an introduction to the project management process and an in-depth examination of the activities needed to successfully initiate, plan, schedule, and control the time and cost factors of the project as it relates to developing a supply chain system. Executing successful supply chain projects requires the management of technology, people, culture, stakeholders, and other diverse elements. This course takes an integrated approach to managing projects, merging both technical and managerial challenges. It emphasizes not only individual project execution, but also provides a strategic perspective, demonstrating means to manage supply chain projects at the program and portfolio levels.

QEM550 - Project Leadership 550-3 Project Leadership. This course is designed to develop a graduate student's human relationship skills for leading project teams. Through the use of case studies and practical applications, students will learn effective leadership, team development, motivational, organizational planning, and conflict resolution practices.

QEM555 - Human Safety & Risk Mgmt 555-3 Human Safety and Risk Management. Understanding risk and safety issues inevitably involves many disciplines, as does their effective management. Through the combination of scientific evidence, practical examples, and case studies presented in this course, students will be equipped to identify, assess and develop strategies to mitigate occupational and environmental risk. Methods used to effectively communicate and understand risk factors as presented by various agencies.

QEM560 - Supply Chain Engineering 560-3 Supply Chain Engineering. The objective of this course is to introduce the basic principles and techniques of the Lean methodologies and its application targeting specific needs of the Supply Chain professionals in executive sales and operations planning, forecasting,
customer relationships, leveling production, dependent demand materials management, capacity management, shop floor control, inventory management, lot sizing, warehousing, logistics, quality control, and purchasing.

QEM562 - Transportation/Logistics Systems 562-3 Transportation and Logistics Systems. The course covers different components of logistics and distribution; in particular, those dealing with material movement, associated moveable and immovable facilities/resources, procurement and material refurbishing, warehousing and distribution network systems, and transportation. The major thrust of the course is to explore the optimal planning, design and coordination of large scale warehousing operations and distribution logistics, supply transportation systems (shipping and materials tracking), multi-modal transportation systems and convoy movements.

QEM564 - Facilities & Location Planning 564-3 Facilities and Location Planning. The course encompasses the planning, design, development, management and control of production and distribution systems to effectively distribute goods and services from the producer to end user, whether in manufacturing or service systems. Topics include analytical approaches in site location, facility layout, material handling, and storage systems. Aspects of facilities for manufacturing, material handling, packing and distribution, concepts of group technology, and computer aided facility design are covered.

QEM565 - Management of Information Technology Resources 565-3 Management of Information Technology Resources. The use of information and communication technologies (ICT) dominates the world of business. There are ongoing fundamental changes in the way organizations execute their business processes and interact with each other. This course helps students understand the relationship between information systems and business performance. This will enable students to appreciate the importance of strategic implementation and proper manage of ICT resources.

QEM570 - Energy Management & Conservation 570-3 Energy Management and Conservation. This course covers the principles and policies of energy management and auditing. It covers development, implementation and economic analysis, using simple pay back and life-cycle cost models, of these programs and audits. It focuses on efficient operation of electric motors, lighting, boilers, furnaces, and facilities climate control. It surveys current energy policy with emphasis on LEED design and certification. Prerequisites: MATH 150 or IMAE 307, PHYS 203A,B or equivalents.

QEM580 - Seminar 580-1 to 4 Seminar. Collective and individual study of issues and problems related to quality engineering and management. Graded S/U. Restricted to enrollment in the M.S. degree in quality engineering and management.

QEM583 - Analysis of Statistical Quality Data 583-3 Analysis of Statistical Quality Data. Controlling and improving quality has become an important business strategy for many organizations: manufacturers, distributors, transportation companies, financial services organizations, health care providers, and government agencies. Maintaining a high level of product or service quality provides a competitive advantage. A business that can delight customers by improving and controlling quality can dominate its competitors. This course covers the technical methods for achieving success in quality control and improvement, and offers guidance on how to successfully implement these methods.

QEM585 - Advanced Data Analysis & Design of Experiments 585-3 Advanced Data Analysis & Design of Experiments. Experimentation plays an important role in product development and process realization and commercialization activities, which consist of new product design and formulation, manufacturing process development, and process improvement. The objective in many cases may be to develop a robust process, a process affected minimally by external sources of variability. The purpose of this course is to provide the student with a comprehensive coverage of the knowledge areas involved in these studies, focusing on Planning, Designing and Analyzing Experiments (DoE).

QEM592 - Special Investigations in Quality Engineering and Management 592-1 to 4 Special Investigations in Quality Engineering and Management. Advanced topics in quality engineering and management. Topics are selected by mutual agreement of the student and the instructor. Special approval needed from the adviser.

QEM599 - Thesis 599-1 to 6 Thesis.

QEM601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their
dissertation, thesis or research paper. The student must have completed a minimum of 24 hours of
dissertation research, or the minimum thesis, or research hours before being eligible to register for this
course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Quality Engineering and Management Faculty

Chang, Feng-Chang (Roger), Associate Professor, Emeritus, Ph.D., Ohio State University, 1985; 1991.
DeRuntz, Bruce, Professor, Ph.D., Southern Illinois University Carbondale, 2005; 1998.
Dunston, Julie K., Associate Professor and Chair, Ph.D., Florida State University, 1995; 1995.
Marusarz, Ronald K., Associate Professor, Emeritus, Ph.D., Southern Illinois University Carbondale, 1999.
Spezia, Carl J., Associate Professor, Ph.D., Southern Illinois University Carbondale, 2002; 2005.
Velasco, Tomas, Associate Professor, Ph.D., University of Arkansas, 1991; 1993.

Quantitative Methods

*Enrollments in Education with a concentration in Quantitative Methods (Ph.D.) have been
suspended indefinitely.*

The School of Education offers graduate studies leading to the Ph.D. degree in Education with a
concentration in Quantitative Methods. The purpose of this graduate program is to prepare professional
quantitative methodologists to pursue careers or research in their areas of interest.

Individualized courses of study are linked to the teaching and research capabilities of the faculty.
Sufficient latitude is provided so that students in concert with their advisor and committee plan programs
that capitalize on student interests and faculty capabilities.

Application

Students must apply to the program of Counseling, Quantitative Methods, and Special Education,
Southern Illinois University, Mail Code 4618, Carbondale, IL  62901. Phone: 618-536-7763. Specific
questions about the major in Education or the concentration in Quantitative Methods and how to apply
should be directed to the address identified above or by phone.

A non-refundable application fee of $65 must be submitted with the application. Applicants must pay this
fee with a credit card.

Admission and Retention

Applications are reviewed by the Quantitative Methods faculty and recommendations forwarded to the
School of Education and the Graduate School. Test scores from the Graduate Record Examination
are required. A personal interview with a candidate is required. Admission to the program is dependent
on (1) the applicant's grades in their graduate program, (2) GRE scores, (3) prior course work, and (4)
availability of qualified faculty to supervise the applicant's doctoral work. Applicants must also meet other
admission requirements of the program. The performance of each doctoral candidate is reviewed each
semester. Maintenance of a grade point average of 3.0 and compliance with policies of the department,
college, and Graduate School are also required.

Core Requirements

Specific courses or other degree requirements are determined by the program upon recommendation
from the student's doctoral committee.
Research and Teaching

Each student is required to demonstrate professional competence through supervised experiences. These experiences include research, teaching, and personal interactions in consulting or assessment situations.

Preliminary Examinations

All Ph.D. candidates must pass a preliminary examination over their doctoral course work before formal admission to candidacy. The doctoral committee with the concurrence of the program is responsible for the development and evaluation of the preliminary examination.

Doctoral Committees

Students are assigned a doctoral advisor upon admission to the program. Before the end of the first year of doctoral committee chairpersons based on the student's research interests. Each doctoral student works with his/her doctoral committee to develop and approve a rigorous program of study. The committee is also responsible for an oral examination over the completed dissertation and student's general knowledge of the professional field.

Certificate in Quantitative Methods (QM)

The Graduate Certificate in QM is designed to provide advanced training in quantitative methods for graduate students majoring in other programs. This certificate requires a minimum of 24 graduate credit hours. A total of 9 credits of QM courses may also count for credit toward a graduate degree program, as appropriately and jointly determined (as needed) by the QM Graduate Certificate Program faculty, the office of the School of Education, the Graduate School, the office of the Provost, and any particular graduate program advisory committee associated for a student. Further, the student must be currently enrolled in a graduate degree program at SIU or an individual holding a bachelor's degree and admitted to the Graduate School. Doctoral students enrolled in the Quantitative Methods concentration, however, are not eligible to earn this certificate. This certificate requires 18 credits in core courses:

- QUAN 506 Inferential Statistics (4 hours)
- QUAN 507 Multiple Regression (4 hours)
- QUAN 508 Experimental Design (4 hours)
- QUAN 531 Principles of Measurement (3 hours)
- QUAN 533 Survey Research Methods (3 hours)
- and a minimum of 6 credit hours in QUAN 580A-I "Selected Topics" (variable 2-4 hours per course)

Students admitted to the QM Graduate Certificate course must complete each with a letter grade of at least a B, and maintain an overall grade point average of at least 3.5 in courses taken under the auspices of the graduate certificate program. If a lower grade is obtained in any given course, then the same course must be repeated until this overall grade point average requirement is achieved. Otherwise, credit will not be given for the course(s) associated with this certificate and other course(s) would subsequently be required to be selected in lieu of course(s) where credit has not been earned.

Quantitative Methods Courses

**QUAN402 - Basic Statistics** 402-3 Basic Statistics. A master's level terminal statistics course. Emphasis on descriptive statistics, graphical representation of data, correlation, and simple regression. Includes an introduction to hypothesis testing procedures and analysis of variance.

**QUAN506 - Inferential Statistics** 506-4 Inferential Statistics. Covers basic descriptive techniques such as central tendency, measures of variability and graphical presentation of data. In addition, hypothesis testing, analysis of variance, nonparametrics and simple linear prediction will be covered.
QUAN507 - Multiple Regression 507-4 Multiple Regression. The general linear model is presented which allows for hypothesis testing including correlational analysis, analysis of variance and analysis of covariance. Non-linear relationships are presented. Emphasis is placed on testing the stated research hypotheses. Prerequisite: QUAN 506 or PSYC 522.

QUAN508 - Experimental Design 508-4 Experimental Design. (Same as PSYC 522) Strategies of designing research studies and the analysis of data from studies using linear models are examined. Emphasis will be placed on internal and external validity and factors that affect power in variance designs including completely randomized designs, Latin square, repeated measures and analysis of covariance with each of the above designs. Prerequisite: QUAN 506 or equivalent.

QUAN531 - Principles of Measurement 531-3 Principles of Measurement. (Same as PSYC 525) Intended to provide theoretical principles of measurement which are applicable to both teaching and research. Part of the course will be devoted to current issues in measurement and to practical applications to these theoretical principles. Prerequisite: QUAN 506 or PSYC 522.

QUAN533 - Survey Research Methods 533-3 Survey Research Methods. Overview of survey methods covering topics such as the purpose of survey research methods, the process of survey research, ethical considerations in survey research, questionnaire design and administration, sampling designs, data processing, and reporting of survey research. Prerequisite: QUAN 506 or PSYC 522 & QUAN 531 or PSYC 525, or equivalent.

QUAN580A - Doctoral Seminar-SEM 580A-3 to 4 Doctoral Seminar in Quantitative Methods-Structural Equation Modeling. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 507.

QUAN580B - Doctoral Seminar-Factor Analy 580B-3 to 4 Doctoral Seminar in Quantitative Methods-Factor Analysis. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 507.

QUAN580C - Doctoral Seminar-Quant Methods 580C-3 Doctoral Seminar in Quantitative Methods-Multivariate Methods. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 507.

QUAN580D - Bayesian Inference 580D-3 to 4 Doctoral Seminar in Quantitative Methods-Bayesian Inference. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 507.

QUAN580E - Program Evaluation 580E-3 Doctoral Seminar in Quantitative Methods-Program Evaluation. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 507 or PSYC 525.

QUAN580F - Adv Experimental Design 580F-3 to 4 Doctoral Seminar in Quantitative Methods-Advanced Experimental Design. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 508 or PSYC 522.

QUAN580G - Item Response Theory 580G-3 Doctoral Seminar in Quantitative Methods-Item Response Theory. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 531 or PSYC 525.

QUAN580H - Simulation Techniques 580H-3 to 4 Doctoral Seminar in Quantitative Methods-Monte Carlo and Simulation Techniques. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 507.

QUAN580I - Doctoral Seminar-Quant Methods 580I-2 to 6 Doctoral Seminar in Quantitative Methods-Selected Topics. A series of advanced seminars on statistics and measurement. Sections A through H may be taken only once each. Section I may be repeated as topics vary. Prerequisite: QUAN 507.
QUAN592 - Independent Study & Investigation 592-1 to 8 (1 to 6 per semester) Independent Study and Investigation. For advanced graduate students. Topics of interest to the individual student are studied under supervision of a department staff member. Special approval needed from the department.

QUAN593 - Individual Research 593-1 to 4 Individual Research. For advanced graduate students in Quantitative Methods. Formulating, investigating and reporting of research problems in the area of Quantitative Methods. Special approval needed from the department.

QUAN600 - Dissertation 600-1 to 32 (1 to 16 per semester) Dissertation.

QUAN601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Radiologic Sciences

The Radiologic Science professional is a member of the health care team who has knowledge of the characteristics and clinical relevance of radiographic imaging, is cognizant of patient care procedures and has the education and expertise necessary to generate diagnostic medical images including sonograms, computer and, MRI images, and x-rays. The mission of the Master of Science in Radiologic Sciences program through Southern Illinois University (SIU) is to provide a quality program integrating education, research, and service in order to meet the needs of the profession and improve health care of the people and communities we serve.

Several specific objectives and goals of the program would be to:

- Prepare the student to practice as a radiologic sciences educator or manager by offering a balanced curriculum and quality didactic/experiential instruction.
- Provide didactic and experiential opportunities that lead to research in educational, professional, or health care issues relating to radiologic sciences education and/or management.
- Provide avenues to students for development and growth within the profession.
- Provide avenues for students to develop and apply skills in effective communication, analytical and critical thinking, and problem solving necessary for successful allied health practice.
- Provide an experiential and didactic environment which leads to the refinement of skills and competence appropriate for an advanced educator/manager in the radiologic sciences.
- Provide an accessible opportunity for regional radiologic science professionals to acquire a terminal degree.
- Provide an accessible opportunity for regional radiologic sciences professionals to acquire the necessary means to succeed in a global and diverse workforce/workplace.

The minimum admission guidelines of the MSRS program mirror those of the Graduate School at SIU; however, to elaborate on those requirements, the following is provided:
• Candidates will be granted admittance to the SIU Graduate School.
• Candidates will possess a baccalaureate degree and have completed a program of study in an associated field to Allied Health, Radiology, Sonography, Medical Imaging, Health Care Management, or an equivalent field.
• Candidates will be nationally licensed by the ARRT, the ARDMS, the NMDCB, or an equivalent National or International Licensing Body in diagnostic imaging.
• Candidates will have a minimum cumulative grade point average (GPA) of at least 2.7 (where 4.0 = A).
• Student background checks will only be completed if required in the legal agreement to perform the internship.
• The GRE is not required for admission to this program.
• TOEFL score requirements will follow the requirements set forth by the SIU Graduate School.
• Transfer students will follow the same criteria as all other students.
• Students will complete and submit an application for enrollment in the MSRS program and submit a $65 application fee to the program.

The MSRS program is a comprehensive program that will prepare students to enter the professional workforce with a graduate degree in radiology, specializing in either management or education. The academic objectives of the program include:

1. Successful completion of 30 didactic credit hours (MHA 511, RAD 516, RAD 521, RAD 526, MHA 531, MHA 536, RAD 541, RAD 546, RAD 551, and RAD 556) plus objective 2
2. Successful completion of RAD 593 which consists of six credit hours of research/thesis project, culminating in a final scholarly work as outlined by the SIU Graduate School.

To facilitate completion of the objectives of the program, the course of instruction will consist of 36 semester hours. As part of these 36 semester hours, students will complete a research/thesis project.

The curriculum will consist of didactic courses. Course material will cover educational theory (including the foundations of education) and/or management theory. Additionally, advanced study of radiologic sciences coursework including radiation physics, radiation biology, anatomy, pharmacology, human disease/pathology, advanced imaging methods, advanced imaging modalities, and patient care will be undertaken for individuals choosing education as their area of specialization. Upon program completion, the student is expected to be fully capable of teaching these topics at an introductory level for basic radiologic science professionals. Special project assignments, conference attendance and presentations, and journal article reviews are an integral part of the curriculum.

All students graduating from the MSRS program will be required to meet the qualifications of the graduate school at SIU. Students will be required to complete a culminating scholarly work which may include a research/thesis paper, or graduate project.

Sample Schedule of Course Offerings

Master of Science in Radiologic Sciences (MSRS)
36 semesters hours are required for successful completion of this program.

Fall Semester
• MHA 511-3 Fundamentals of Health Care Systems
• RAD 516-3 Cultural Foundations and Theories of Education
• RAD 521-3 Advance Practice of Radiologic/Imaging Sciences I
• RAD 526-3 Seminar in Radiologic/Imaging Sciences I

Spring Semester
• MHA 531-3 Human Resources in Health Care
• MHA 536-3 Strategic Leadership in Healthcare
• RAD 541-3 Advance Practice of Radiologic/Imaging Sciences II
• RAD 546-3 Seminar in Radiologic/Imaging Sciences II

Summer Semester
• MHA 551-3 Legal and Ethical Fundamentals of Health Care
Final Portion of Program

- RAD 593-6 Individual Research

The delivery method will be through distance education via Desire2Learn or the current classroom management system in use at SIU.

Radiologic Sciences Courses

RAD444 - CNS Imaging in MRI 444-3 Central Nervous System Imaging in Magnetic Resonance Imaging. Lecture includes discussion of imaging applications of the central nervous system. Review of related anatomy and common pathologies. Special approval needed from the instructor.

RAD454 - Body Imaging in MRI 454-3 Body Imaging in Magnetic Resonance Imaging. Lecture includes discussion of the imaging applications of the gastrointestinal, genitourinary, hepatobiliary and musculoskeletal systems. Review of related anatomy and common pathologies. Special approval needed from the instructor.

RAD464 - Cardiac Imaging in MRI 464-3 Cardiovascular Imaging in Magnetic Resonance Imaging. Lecture includes discussion of the imaging applications of the heart and coronary arteries. Review of related anatomy and common pathologies. Special approval needed from the instructor.

RAD474 - Advanced MRI Internship 474-6 Advanced MRI Internship. During this clinical internship, the student will be assigned to a selected clinical education center for the entire semester. During this semester, while performing routine MRI procedures, the student will perform MRI procedures of the heart, body, and extremities. Special approval needed from the instructor.

RAD484 - Special Topics in MRI/MRA 484-3 Special Topics in MRI/MRA. Supervised readings of selected topics in MRI. Special approval needed from the instructor.

RAD494 - Independent Study in MRI 494-1 to 6 Independent Study in Magnetic Resonance Imaging. The selection and investigation of a topic related to MRI. Special approval needed from the instructor.

RAD510 - Sim/Cross Sectnl Anat/MD 510-2 Simulation and Cross Sectional Anatomy in Medical Dosimetry. This course covers the conventional and CT simulation techniques used in initiating radiation therapy for cancer patients. Identification of cross-sectional anatomy at different anatomical locations within the human body is also reviewed. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD515 - Medical Dosimetry Clinical I 515-4 Medical Dosimetry Clinical I. This is the first course of a three course sequence. During the three course sequence, students will complete eight clinical rotations including Brachytherapy, Simulation, Gamma Knife, Treatment Aids, IMRT, External Beam, Physics, Special Measurements and QA. The length of these rotations varies from one to eleven weeks. During this course students will perform two to four of these rotations depending on the rotation schedule. While in the clinical setting students will observe and work directly with a medical dosimetrist. Emphasis is given on learning and understanding the role and responsibilities of a medical dosimetrist in the clinical setting. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD516 - Cult Found/Theories of Educ 516-3 Cultural Foundations and Theories of Education. Seminar provides an examination of the historical, social, economic and psychological foundations of allied health education with emphasis given to the nature and role of education and training in preparing for the field of medical education. The objectives of this seminar will allow the student to explore the nature and theories of education, the behavioral aspects of education including the assumptions and practices which underlie education. Special approval needed from the instructor.
RAD520 - Physics/Medical Dosimetry I 520-3 The Physics of Medical Dosimetry I. This course covers the following topics: Radiologic Physics, production of x-rays, radiation treatment and simulation machines, interactions of ionizing radiation, radiation measurements, dose calculations, computerized treatment planning, dose calculation algorithms, electron beam characteristics, and brachytherapy physics and procedures. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD521 - Rad/Imaging Sciences I 521-3 Advance Practice of Radiologic/Imaging Sciences I. This course will include a review of the following topics: Radiation physics, radiation biology, anatomy, pharmacology, human diseases/pathology, advanced imaging methods, advanced imaging modalities, and patient care.

RAD525 - Seminars in MD I 525-3 Seminars in Medical Dosimetry I. (Same as RAD 526) This course consists of various seminars/literature reviews associated with radiation oncology. Topics include treatment techniques for various cancers, technological advances in cancer treatment, cancer treatment trends, and the role of a medical dosimetrist. This course is twenty weeks in length. Restricted to admission to the Medical Dosimetry Program.

RAD526 - Seminar Rad/Imaging I 526-3 Seminar in Radiologic/Imaging Sciences I. (Same as RAD 525) This course consists of various seminar/literature reviews associated with the radiologic/imaging sciences. Topics include imaging techniques, technological advances in the radiologic/imaging sciences, patient care trends, and the role of an imaging professional. This course is twenty weeks in length.

RAD530 - Essentials of Medicl Dosimetry 530-2 The Essentials of Medical Dosimetry. This course covers the various quality assurance procedures performed in a radiation oncology department. Also included are various statistics topics to educate the student in becoming a good consumer of medical dosimetry research literature. Professional development, billing/coding, HIPAA, and professional service are also addressed. This course is twenty weeks in length. Prerequisite: A grade of C or better in RAD 510, RAD 515, RAD 520, and RAD 525.

RAD535 - Medical Dosimetry Clinical II 535-4 Medical Dosimetry Clinical II. This is the second of a three course sequence. During the three course sequence, students will complete eight clinical rotations including Brachytherapy, Simulation, Gamma Knife, Treatment Aids, IMRT, External Beam, Physics, Special Measurements and QA. The length of these rotations varies from one to eleven weeks. During this course students will perform two to four of these rotations depending on the rotation schedule. While in the clinical setting students will observe and work directly with a medical dosimetrist. Emphasis is given on learning and understanding the role and responsibilities of a medical dosimetrist in the clinical setting. This course is twenty weeks in length. Prerequisite: A grade of C or better in RAD 515.

RAD540 - Physics Medical Dosimetry II 540-3 The Physics of Medical Dosimetry II. This course covers the following topics: Imaging for radiation oncology, IMRT, stereotactic radiosurgery, special procedures, particle therapy, hyperthermia, and radiation safety. This course is twenty weeks in length.

RAD541 - Rad/Imaging Sciences II 541-3 Advance Practice of Radiologic/Imaging Sciences II. This course will continue to cover the same topics that were reviewed in RAD 521 but to a greater level of understanding. Topics include: Radiation physics, radiation biology, anatomy, pharmacology, human disease/pathology, advanced imaging methods, advanced imaging modalities, and patient care.

RAD545 - Seminars in MD II 545-3 Seminar in Medical Dosimetry II. (Same as RAD 546) This course consists of various seminars associated with radiation oncology. Topics include treatment techniques for various cancers, technological advances in cancer treatment, cancer treatment trends, and the role of a medical dosimetrist. This course is twenty weeks in length.

RAD546 - Seminar Rad/Imaging II 546-3 Seminar in Radiologic/Imaging Sciences II. (Same as RAD 545) This course consists of various seminar/literature reviews associated with the radiologic/imaging sciences. Topics include imaging techniques, technological advances in the radiologic/imaging sciences, patient care trends, and the role of an imaging professional. This course is twenty weeks in length.

RAD550 - Medical Dosimetry Clinical III 550-2 Medical Dosimetry Clinical III. This is the third course of a three course sequence. During the three course sequence, students will complete eight clinical rotations including Brachytherapy, Simulation, Gamma Knife, Treatment Aids, IMRT, External Beam, Physics,
Special Measurements and QA. The length of these rotations varies from one to ten weeks. During this course students will perform one to two of these rotations depending on the rotation schedule. While in the clinical setting students will observe and work directly with a medical dosimetrist. Emphasis is given on learning and understanding the role and responsibilities of a medical dosimetrist in the clinical setting. his course is ten weeks in length. Prerequisite: A grade of “C” or better in RAD 535.

**RAD555 - Physics Med Dosimetry III** 555-2 The Physics of Medical Dosimetry III. This course covers the following topics: MU calculations, point dose calculations and radiation biology. This course is ten weeks in length. Prerequisite: A grade of C or better in RAD 540.

**RAD556 - HC Research** 556-3 Individual Research in Healthcare. This course requires students to complete a research project in the field of healthcare based upon student interest and instructor approval. Each project will have a written paper as a final product and this paper will be submitted for publication, as approved by the instructor, in one of the professional journals within the field of healthcare. Restricted to School graduate majors.

**RAD560 - Sem in Medical Dosimetry III** 560-2 Seminar in Medical Dosimetry III. This course consists of various seminars/literature reviews associated with radiation oncology. Topics include treatment techniques for various cancers, technological advances in cancer treatment, cancer treatment trends, and the role of a medical dosimetrist. This course is ten weeks in length. Prerequisite: A grade of C or better in RAD 545.

**RAD565 - Independent Study** 565-1 to 6 Independent Study. Directed independent study in selected areas of medical dosimetry studies. Special approval needed from the Program Director.

**RAD593 - Advanced Research** 593-6 Advanced Research. Students complete a research project including a special project related to administration in the student’s chosen field which meets Graduate School guidelines. Restricted to School graduate majors and School advisor.

**RAD601 - Continuing Enrollment** 601-1 Continuing Enrollment. This course is required to satisfy the Graduate School's requirement of continuous enrollment and is intended for those students who are enrolled in the program but cannot take a core academic course during a given semester. Prerequisite: Consent of Program Director.

**Radiologic Sciences Faculty**

Collins, Kevin Scott, Professor, Ph.D., Southern Illinois University Carbondale, 2011. Radiation therapy.

Collins, Sandra K., Professor, Ph.D., Southern Illinois University Carbondale, 2003; 2000. Health care management.

McKinnies, Richard, Associate Professor, Ph.D., Southern Illinois University Carbondale, 2000, 2003.

Mobile, Katherine, Lecturer, M.S., University of WisconsinLaCrosse, 2011.

**Recreation Professions**

The Recreation Professions program in the Department of Public Health and Recreation Professions offers a broad interdisciplinary program of studies preparing students for administrative careers in recreation management, therapeutic recreation or outdoor recreation leadership and management. The program leads to the Master of Science in Education degree with a major in recreation. This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Recreation Professions. Applicants can pay this fee by credit card when applying electronically.
**Master of Science in Education Degree**

Graduate work in recreation professions stresses administration and research and is open to highly-qualified students with a minimum 3.0 grade point average. All students must be admitted to the Graduate School in good standing.

Graduate students in recreation professions must complete a minimum of 36 semester hours including a theory core and a research core. The research core is completed by fulfilling requirements for the thesis, the non-paper, or the internship options.

The **thesis option** requires three semester hours of research methods and three semester hours of thesis. After completing the required research methods course, each student should select a chairperson for the thesis committee. A minimum of two additional graduate faculty members, one holding rank outside the faculty of recreation, is needed to form the full committee. After approval of a thesis topic, the students will conduct a research effort under the committee's guidance, followed by an oral examination.

The **non-paper option** requires three semester hours of research methods and three semester hours of project in recreation. The research project or paper may be field-based or applied and will be supervised by an academic adviser who is a graduate faculty member in recreation. The research project or paper must be approved by one additional graduate faculty member.

The **internship option** requires three semester hours of research methods and three semester hours of supervised field work. The field work must be completed under the supervision of a professional working in the student's area of professional interest and must be overseen by an academic adviser who is a graduate faculty member in recreation.

In addition to the completion of the theory and research core in either the thesis or non-paper option, the student will select an additional 21 emphasis hours. By utilizing electives, the student can focus on a specific option or emphasis. This emphasis may include recreation administration, focusing on skills necessary for management in the commercial and public sector including local, state, and federal recreation programs; outdoor leadership and management which focuses on skills necessary to manage or administer programs, facilities, and lands for a variety of outdoor recreation providers and organizations (this emphasis could lead to certifications); or therapeutic recreation which focuses on skills necessary in the management of therapeutic recreation (recreational therapy) programs in a variety of health care and human service organizations (this emphasis could lead to certification). Variations of these include campus recreation management, expedition leadership and facility management.

All students must maintain a minimum 3.0 (4.0 point scale) grade point average and earn a C or better in Theory and Research Core classes to be eligible to graduate.

**Recreation Graduate Degree (36 hours total)**

**Required Core Courses for all Tracks (18 hours)**

- REC 500-3 Modern Concepts of Leisure (Fall)
- REC 503-3 Management & Marketing (Spring)
- REC 508-3 Trends and Global Issues in Leisure Services (Fall)
- REC 550-3 Research in Recreation (Spring)

One of:

- REC 501, REC 502, REC 526, REC 560A, REC 560B, REC 560C, REC 565

One of:

- REC 599-3 Thesis
- REC 575-3 Project in Recreation
- REC 596-3 Internship in Recreation
- REC 597-3 Internship in Recreational Therapy

**Track Requirements (18 hours)**

Recreation Administration
• REC 425-3 Planning & Design of Recreation Facilities (Fall)
• REC 465-3 Human Resources for Recreation Professions (Spring)
• REC 466-3 Community Recreation (Fall)
• REC 467-3 Commercial Recreation (Spring)
• REC 468-3 Campus Recreation (Summer)

Elective

Outdoor Recreation

• REC 430-3 Outdoor Living Skills (Fall)
• REC 432-3 Environmental Issues and Ethics in Outdoor Recreation (Spring)
• REC 445-3 Outdoor Recreation Management (Spring)

Elective x 3

Therapeutic Recreation

• REC 404-3 Foundations of Recreational Therapy (Fall)
• REC 460-3 Administration of RT Services (Summer)
• REC 461-3 RT Assessment & Documentation (Spring)

3 courses from:

• REC 405 (Fall)
• REC 406 (Fall)
• REC 407 (Spring)
• REC 524
• REC 525

NCTRC Requirements:

• Allied Health 241*
• Public Health 311*
• Psychology 331*
  *not for graduate credit

Recreation Professions Courses

REC401 - Environmental Education 401-3 Fundamentals of Environmental Education. (Same as AGRI 401 and FOR 401) An experiential course designed to help students interested in conservation education understand and apply teaching principles for both inside and outside the classroom. The class includes certification in a nationally recognized environmental education program, and is suitable for students in natural resource, agriculture, recreation and education fields. Requires field trip transportation fee and supplemental expenditures not to exceed $25 per course registration. Offered alternate (odd) years.

REC404 - RT Foundations 404-3 Foundations of Recreational Therapy. An introductory course in the practice of recreational therapy. Concepts, history, and growth of RT as a healthcare profession, theories, treatment approaches in RT, an overview of the APIE process, and other professional issues will be introduced. This course covers the NCTRC exam content area of Foundation Knowledge. This course is ONLINE.

REC405 - RT: Cognitive, ID, DD 405-3 RT Implementation: Cognitive, Intellectual, and Developmental Disabilities. This course is designed to provide students with the skills to implement recreational therapy interventions for individuals with cognitive, intellectual, and developmental disorders. Students will learn how to complete activity assessments, select evidence-based interventions, and facilitate
interventions. Travel to local agencies may be required. This course covers the NCTRC exam content area of implementation.

**REC406 - RT: Physical Disorders** 406-3 RT Implementation: Physical Disorders & Chronic Illness. This course is designed to provide students with the skills to implement recreational therapy interventions for individuals with physical disorders or chronic illness. Students will learn how to complete activity assessments, select evidence-based interventions, and facilitate interventions. Travel to local agencies may be required. This course covers the NCTRC exam content area of implementation.

**REC407 - RT: Psych & Behavioral** 407-3 RT Implementation: Psychiatric & Behavioral Disorders. This course is designed to provide students with the skills to implement recreational therapy interventions for individuals with psychiatric or behavioral disorders. Students will learn how to complete activity assessments, select evidence-based interventions, and facilitate interventions. Travel to local agencies may be required. This course covers the NCTRC exam content area of implementation.

**REC423 - Environmental Interpretation** 423-3 Environmental Interpretation. (Same as AGRI 423 and FOR 423) Principles and technique of natural and cultural interpretation. Two hours lecture, three hours laboratory. Prerequisite: ten hours biological science or ten hours of recreation. Requires field trip transportation fee not to exceed $40 per course registration.

**REC425 - Plan & Design Rec Facilities** 425-3 Planning and Design of Recreational Facilities. An examination of major design considerations for a variety of recreation facilities such as recreation centers, recreation sport complexes, parks, visitors centers, and natatoriums. Special attention will be given to long range facility planning. Prerequisite: REC 300, REC 301, REC 303. Restricted to senior or graduate standing.

**REC426 - Land Based Recreation** 426-3 Outdoor Adventure Land Based Pursuits. This course provides a combination of theoretical background and technical aspects of outdoor adventure based pursuits in a vertical environment and will emphasize hands-on skill development such as movement on rock, rope systems, anchors, rappelling and belaying, protection placement, and lead climbing philosophy. Taught biennially. Course fee and field trips required. Fee: $100.

**REC427 - Water Based Recreation** 427-3 Outdoor Adventure Water Based Pursuits. This course provides a combination of theoretical background and technical aspects of outdoor adventure based pursuits in a water environment and will emphasize hands-on skill development such as equipment nomenclature, strokes, rescues, and reading/recognizing water features. Taught biennially. Course fee and field trips required. Fee: $100.

**REC428 - Challenge Based Recreation** 428-3 Outdoor Adventure Challenge Based Pursuits. This course provides a combination of theoretical background and technical aspects of outdoor adventure based pursuits in a challenge environment and will emphasize hands-on skill development-spotting/belaying, equipment management, program design/sequencing, facilitation strategies, and course design and maintenance. Taught biennially. Course fee and field trips required. Fee: $100.

**REC429 - Planning & Risk in Outdoor Rec** 429-3 Planning, Logistics, & Risk Management in Outdoor Recreation. This course provides an experiential approach in addressing the planning, logistics, and safety and risk management needed to design, implement, and prepare outdoor adventure based expeditions. Fulfills portions of the Wilderness Education Association's Planning and Logistics/Safety and Risk Management core competencies. Taught Biennially. Course fees and field trips required. REC 429 recommended before taking REC 430. Trip fee not to exceed $350.

**REC430 - Outdoor Living Skills** 430-3 Outdoor Living Skills. This course provides a foundation to basic outdoor living skills in backcountry environments. Topics include basic camping skills, equipment and clothing selection and use, weather, health and sanitation, travel techniques, navigation, and decision making/problem solving. Fulfills the Wilderness Education Association's Outdoor Living core competency. Taught Biennially. Course fees and field trips required. REC 429 recommended before taking REC 430. Trip fee not to exceed $350.

**REC431 - Expedition Leadership** 431-3 Expedition Leadership. This course focuses on professional leadership of highly adventurous wilderness trips. Emphasis is on development of leadership through sound judgment, decision-making, and teaching in a backcountry/wilderness environment on an extended expedition. Fulfills the Wilderness Education Association's Education and Leadership core competency.
Taught biennially. REC 429 & REC 430 recommended before taking REC 431. Course fee and field trips required. Trip fees not to exceed $750.

**REC432 - OR Env Issues & Ethics** 432-3 Environmental Issues and Ethics in Outdoor Recreation. This course will address the management and issues related to outdoor recreation and the importance of developing a land ethic that will ensure future use of outdoor resources. The history, background, and development of the recreation ecology movement will be addressed. Fulfills the WEA's Environmental Integration core competency and LNT's Master Educator curriculum. Taught Biennially. Course fee and field trip required. Fee: $35.

**REC433 - Adventure Education** 433-3 Adventure Education. This course provides a practical and theoretical background of adventure education. Topics that will be addressed and applied include the use of challenge and adventure in various situations, experiential education, activity sequencing, utilizing peak experiences, leadership styles and development, debriefing, and framing. Taught Biennially. Field trips required.

**REC434 - Wilderness First Responder** 434-3 Wilderness First Responder. This course addresses the practice of advanced medical techniques in a wilderness environment. The Wilderness First Responder is recognized as the industry standard for those who work in the backcountry or remote environments. Wilderness First Responder certification offered with successful completion. Course fee and field trips required. Fee: $30.

**REC435 - Advanced Outdoor Leadership** 435-3 Advanced Outdoor Leadership. This course focuses on advanced leadership techniques for outdoor leaders. Emphasis is on evaluation and assessment of leaders in backcountry/wilderness environments. Utilizes the Wilderness Education Association's assessment and evaluation curriculum. Field trip required. Special approval needed from the instructor.

**REC445 - Outdoor Rec Management** 445-3 Outdoor Recreation Management. This course addresses the philosophies and principles underlying the growth and development of outdoor recreation management. Outdoor recreation is examined in terms of historical values, long range planning, site design, visitor needs, and environment impact. Course fee and field trip required. A fee of up to $14 may be required.

**REC446 - Trail Stewardship** 446-3 Backcountry and Wilderness Trail Stewardship. This course provides a hands-on approach to aspects of volunteer trail stewardship in planning, implementing, and evaluating basic and advanced trail features and building projects. Rules, regulations, and potential hazards associated with working, traveling, and camping in the backcountry will be addressed. Students will be exposed to trail building tools and their proper usage and care. Field trips required. Special approval needed from the instructor.

**REC460 - RT Administration** 460-3 Administration of Recreational Therapy Services. Administration of recreation therapy programs in a variety of services areas. Topics will include: the TRAM model, US Healthcare system, organizational planning, personnel management, and advocacy for the profession. This course includes the NCTRC exam content areas of Administration of TR/RT Service and Advancement of the Profession. Prerequisite: REC 461 with a grade of C or better. This course is ONLINE.

**REC461 - RT Assessment & Documentation** 461-3 Assessment and Documentation for Recreational Therapy. This course is designed to provide students with the skills to assess client needs, design treatment plans, and complete documentation as an entry level recreational therapist (RT). Students will learn how to complete assessments of clients in a variety of treatment settings, write client goals and objectives, develop treatment plans, and write discharge plans. This course covers the NCTRC exam content areas of Assessment Process, and Documentation. Prerequisite: REC 404 with a grade of C or better. This course is ONLINE.

**REC465 - HR in Recreation** 465-3 Human Resources for Recreation Professions. An examination of current human resources topics in the recreation industry. Topics will include: planning and analysis, staffing, compensation, employee motivation, employee training, employee development, employee relations and compliance.
REC466 - Community Recreation 466-3 Community Recreation. Designed to examine current administrative topics in public and nonprofit recreation. Topics include: history and philosophical foundations of public parks, administrative practices, planning, budgeting, working with boards and commissions, community engagement, land acquisition, programming, and current trends in community recreation. This course is ONLINE.

REC467 - Commercial Recreation 467-3 Commercial Recreation. Trends in commercial recreation will be addressed in this class. Topics include: challenges and constraints in commercial recreation, starting a commercial recreation enterprise, financial management, marketing, operations, programming, and future trends in commercial recreation. This course is ONLINE.

REC468 - Campus Recreation 468-3 Campus Recreation. This course focuses on the administration, organization, planning, implementation, and evaluation of programs and facilities in the campus recreation field. Specific topics addressed include historical and philosophical aspects, administrative practices, competitive and non-competitive programming, future trends and issues, budgeting, public relations, professional associations, and examination of individual characteristics of campus recreation. This course is ONLINE.

REC475B - Workshop: Campus Rec 475B-3 Recreation Workshop-Campus Recreation. Critical examination and analysis of innovative programs and practices.

REC475C - Workshop: Commercial 475C-3 Recreation Workshop-Commercial Recreation. Critical examination and analysis of innovative programs and practices.

REC475F - Workshop: Personnel 475F-3 Recreation Workshop-Personnel. Critical examination and analysis of innovative programs and practices.

REC475I - Workshop: RT Special Rec 475I-3 Recreation Workshop-RT in Special Recreation Associations. Critical examination and analysis of innovative programs and practices.

REC475L - Workshop: RT Correction Ctrs 475L-3 Recreation Workshop-RT in Prisons and Correctional Facilities. Critical examination and analysis of innovative programs and practices.

REC475M - Workshop: RT in School System 475M-3 Recreation Workshop-RT in Schools and Special Education. Critical examination and analysis of innovative programs and practices.

REC485 - Practicum: Outdoor Education 485-2 to 12 Practicum in Outdoor Education. A supervised experience in a professional setting. Emphasis on administrative, supervisory, teaching, and program leadership in outdoor, conservation, or environmental education setting. Costs for travel are the responsibility of the student. Special approval needed from the instructor.
REC500 - Modern Concepts of Leisure 500-3 Modern Concepts of Leisure. This course explores the meaning of leisure, recreation, and play from a philosophical and psychological perspective. The historical and contemporary relationships among work, time, lifestyles and leisure are analyzed. In addition, the course attempts to develop students' viewpoints toward these topics in order that they formulate a philosophy of leisure. Required of all majors.

REC501 - Personnel in Leisure Services 501-3 Personnel in Leisure Services. This course will examine administrative issues regarding personnel in leisure delivery systems. Topics include: leadership theory, selection and training, legislation, collective bargaining, motivation, performance appraisal, power and gender.

REC502 - Revenue in Leisure Svc 502-3 Revenue Production for Leisure Service Organizations. An integrative view of revenue production for leisure service organizations. Numerous practices of generating income, such as fees and charges, facility rental, bonds, investments and public/private cooperative development will be examined in relationship to their ability to aid an organization in achieving its stated objectives.

REC503 - Manag/Mktg Leisure Services 503-3 Managing and Marketing Leisure Services. An examination of the critical functions of a manager in public and private leisure service organizations. Particular topics include goal and policy development, ethics, risk management, fiscal management and facility operations. Special attention is given to the leisure service managers role in marketing recreation.

REC508 - Trends in Recreation 508-3 Trends & Global Issues in Leisure Services. This course provides an examination of current issues, trends and professional concerns in the recreation industry. Topics include: professional issues, programming trends, legislative issues, and other topics.

REC524 - RT Professional Skills 524-3 Professional Skills in Recreational Therapy. This course focuses on professional skills necessary at the administrative and supervisory level. The NCTRC exam content area of advocacy for the profession will also be addressed. Specific focus areas will include recreational therapy education, practice, and research.

REC525 - RT Program Design 525-3 Program Design in Recreational Therapy Practice. Planning, organizing, selecting, evaluating, and adapting activities to a variety of treatment settings. Topics include the TRAM model, comprehensive program design, specific program design, and WPO for the recreational therapy department.

REC526 - RT Practice Settings 526-3 Recreational Therapy Practice Settings. This course focuses on current trends and issues in recreational therapy practice settings. Special attention will be on RT protocol development. This course includes the NCTRC content area of implementation.

REC550 - Research in Recreation 550-3 Research in Recreation. This course focuses on research concepts and methods (quantitative and qualitative). Students will complete a critical analysis of significant research in recreation or therapeutic recreation, and will develop a tentative research proposal. Prerequisite: REC 500.

REC560A - Park & Community Rec 560A-3 Seminar in Recreation-Park & Community. Major issues and trends in recreation.

REC560B - Campus Recreation 560B-3 Seminar in Recreation-Campus Recreation. Major issues and trends in recreation.

REC560C - Seminar: Commercial Rec 560C-9 (3 per topic) Seminar in Recreation-Commercial Recreation. Major issues, trends, and cultural, economic and social significance. Prerequisite: REC 500 or consent of department.

REC565 - Envir Issues Outdoor Rec 565-3 Environmental Issues in Outdoor Recreation. Seminar in environmental issues and problems that affect outdoor recreation. Content includes history of the environmental movement in relation to outdoor recreation and specific problems affecting recreation on national parks, forest and wildlife refuges. Special approval needed from the instructor.

REC575 - Project in Recreation 575-3 Project in Recreation. A project is a culmination of the Master's degree. It can be either a practice-based service product or an applied research study that does not
require a thesis format. Examples of projects may include grant proposals, program development, curriculum development, landscape design, manuals, visual productions, web page development, organizing special events or fund raising. Special approval needed from the instructor.

REC580 - Readings in Recreation 580-1 to 3 Readings in Leisure and Recreation. Readings in selected topics in leisure and recreation under staff supervision. Not more than three hours may count toward Master's degree. Special approval needed from the instructor.

REC596 - Internship in Recreation 596-3 Internship in Recreation. A course on professional development in the recreation industry. This course is a combination of academic assignments and experiential learning. Students will be under the joint supervision of the academic course instructor, and a recreation professional. For graduate credit only. Special approval needed from the instructor.

REC597 - Internship in RT 597-3 Internship in Recreational Therapy. An introduction to professional development in recreational therapy. This course is required for eligibility to sit for the NCTRC exam. This course is a combination of academic assignments and experiential learning. It is supervised by a CTRS at the site AND at the academic institution. For graduate credit only. Prerequisite: majority of RT coursework completed; Special approval needed from the instructor.

REC599 - Thesis 599-3 Thesis. Selecting, investigating, and writing on a research topic under the personal supervision of a member of the department. Designed to help the student to develop ability to design, conduct, analyze and interpret research related to recreation and therapeutic recreation. Special approval needed from the department.

REC601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

Recreation Professions Faculty

Colson, Tina, Associate Lecturer, MS, Southern Illinois University Carbondale, 2004; 2005.
Croft, Brian, Lecturer, MS, Southern Illinois University, 2013.
Glover, James M., Associate Professor, Emeritus, Ph.D., University of Maryland, 1980; 1984.
Glover, Regina B., Associate Professor, Emerita, Ph.D., University of Maryland, 1983; 1983.
Hollman, Alissa, Lecturer, MS, Illinois State University, 2011.
Kim, Jun, Assistant Professor, Ph.D., University of Utah, 2013; 2015.
McEwen, Douglas N., Professor, Emeritus, Ph.D., Michigan State University, 1973; 1975.
Tanner, Emily, Assistant Lecturer, M.S.Ed., Southern Illinois University Carbondale, 2006; 2017.

Rehabilitation

In response to pressing human and social needs, the applied field of rehabilitation has solidly entrenched itself as a professional discipline. Multidisciplinary courses of study have been drawn together from the behavioral, social, and medical sciences appropriate to the development of competent practitioners, supervisors, and programmers in rehabilitation and welfare agencies. The overall program is left purposely broad and flexible to permit the inclusion of training innovations and emerging career patterns. This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study.
The Master's Degree Program

The master's degree program rehabilitation counseling is 51 semester hours. Candidates have the option of a research paper or a thesis. Candidates concentrating primarily on preparation for entry into the helping profession ordinarily opt to complete a research paper in their area of concentration. The thesis option typically requires a thesis of an experimental nature, a survey, or other form of research in which empirical data are collected and analyzed. Candidates must demonstrate their skills in formulating researchable questions or hypotheses, in identifying and/or manipulating relevant variables, and in the analysis and reporting of the results.

Rehabilitation Counseling

Rehabilitation counseling is a process which assists individuals with disabilities to cope constructively with their disability, to maximize their abilities, and to enhance their quality of life physically, psychologically, socially, and vocationally. Through training, professional rehabilitation counselors obtain skills in counseling, evaluation, career exploration, job development and placement, and case management.

The focus of the rehabilitation counselor training program is to prepare professional rehabilitation counselors with the knowledge, skills, and attitudes needed to enter the field. During the training program, students acquire counseling skills, knowledge and understanding of medical and psychological impact of chronic illness and disability on all areas of the individual's life including vocational and independent living issues, as well as skills related to assessment and evaluation, and an understanding of the legislative, historical, and philosophical background of rehabilitation. Student's professional development is encouraged through participation in professional rehabilitation counseling organizations.

General Requirements

The course of study within the rehabilitation counselor training program consists of a minimum of 51 semester hours and involves a blend of academic and clinical experiences. Students in the Rehabilitation Counseling Program must complete 42 hours after admission to the Rehabilitation Counseling Program. Students may transfer a maximum of six credit hours of credit taken prior to admission to the program to their 51-hour requirement if the course work is appropriate to Rehabilitation Counseling. Under no circumstances may previous work experience serve as equivalency for any credit hours or clinical practicum or internship experience. In addition to course work, students must complete one semester of practicum, one semester of internship, and a thesis, research paper, or research class in Rehabilitation. Before graduation students must also pass a comprehensive examination.

The required program of study is:

- REHB 400 Introduction to Rehabilitation
- REHB 521 Vocational Development and Placement
- REHB 501 Introduction to Interpersonal Skills Development in Rehabilitation Counseling
- REHB 513 Medical and Psychosocial Aspects of Disability
- REHB 519 Multicultural Counseling in Rehabilitation
- REHB 530 Assessment Procedures in Rehabilitation Counseling
- REHB 551 Rehabilitation Counseling: Theory and Practice
- REHB 575 Case Management in Rehabilitation Counseling
- REHB 589 Professional Seminar in Rehabilitation
- REHB 593 Research in Rehabilitation or
- REHB 593-A Research in Rehabilitation Counseling or
- REHB 599 Thesis
- REHB 594C Practicum in Rehabilitation Counseling
- REHB 595A, REHB 595B Internship in Rehabilitation

Practicum and Internship Requirements

Students in the Rehabilitation Counseling program are required to complete a total of four semester credit hours of practicum in Rehabilitation Counseling. All practicum and internship sites must be pre-approved by Rehabilitation Counseling faculty. Practicum involves the student's participation eight hours per week.
for the 16 weeks at the practicum site. The majority of the student's time in practicum must be spent in direct client counseling. Counseling sessions must be audio or video taped or have provision for direct supervision by the student's supervisor, such as through a two-way mirror. Students in practicum are required to meet with their faculty supervisor once per week during the 16 weeks of practicum in order to review tapes of counseling sessions. Rehabilitation Counseling students are also required to complete a total of eight semester credit hours of internship in Rehabilitation Counseling. Prerequisite to internship is successful completion of the Rehabilitation Counseling practicum. General Rehabilitation Counseling internship requirements include an internship of 40 hours per week for 16 weeks or 20 hours per week for 32 weeks at a site approved by the Rehabilitation Counseling faculty, and one hour per week of supervision, preferably by a Certified Rehabilitation Counselor. During internship at least 50 percent of the student's responsibilities must include direct experience in individual and/or group counseling of persons with emotional, social, behavioral or physical disability.

Students are also given the opportunity within their program of study to take electives. In addition to the required course of study for rehabilitation counseling, students may choose to specialize in a particular area by taking additional elective courses. Examples of possibilities of specialization are listed below.

Studies in Substance Use Disorders and Behavioral Addictions

A sequence of courses is offered within the rehabilitation counselor training program for students interested in specialized counseling skills for work in treatment and other settings as a substance use disorders and behavioral addictions counselor. Students are required to complete a specific sequence of courses in addition to an internship in an approved rehabilitation and treatment setting. These courses would be taken in addition to completion of the courses required for the master's degree in rehabilitation counseling. Successful completion of this course sequence and field work enables students to sit for the State of Illinois CADC (Certification for Alcohol and Other Drug Counselors).

Graduate students from other disciplines in the University are eligible to enroll in these courses to complete these certification requirements. The required courses are:

- REHB 461 Introduction to Substance Use Disorders and Behavioral Addictions
- REHB 471 Treatment, Recovery and Relapse Prevention
- REHB 558 Interventions for Substance Use Disorders and Behavioral Addictions in Special Populations
- REHB 566 Substance Use, Behavioral Addictions and the Family

Studies in the Substance Use Disorders and Behavioral Addictions program, within the Rehabilitation Counselor Training Program are accredited by the Illinois Alcohol and Other Drug Abuse Certification Association, Inc. (IAODAPCA), and qualify as Advanced Training for the purpose of certification in Illinois.

Certificate in Substance Use Disorders and Behavioral Addictions

The Certificate in Substance Use Disorders and Behavioral Addictions, housed in the Rehabilitation Counselor Training Program in the School of Health Sciences, is open to graduate students interested in developing specialized counseling skills for work in treatment and other settings as a substance use disorders and behavioral addictions counselor. Participation in these courses will allow the student to sit for the State of Illinois CADC (Certification for Alcohol and Other Drug Counselors). Students must complete 15 total credits of required coursework, and an academic discipline-based 500-hour internship (eight credits). Courses include REHB 461, REHB 471, REHB 558, REHB 566, and one approved elective.

Studies in the Substance Use Disorders and Behavioral Addictions Training Program are accredited by the Illinois Alcohol and Other Drug Abuse Certification Association, Inc. (IAODAPCA), and qualify as Advanced Training for the purpose of certification in Illinois.

Studies in Aging

This area of special study offered within the School of Health Sciences includes a sequence of three elective courses in aging in addition to those courses required for the general rehabilitation counseling curriculum, and an internship in an agency or facility which serves older adults. Students in other disciplines within the University are eligible to enroll in any of the three courses in aging; however, only rehabilitation students will be eligible for the internship.

Doctor of Philosophy Degree Program

The doctoral program in rehabilitation prepares students to function effectively as rehabilitation educators, researchers, or administrators. It does this by fostering the student's development and acquisition of relevant conceptual and experiential skills in evaluation and research methodologies, in rehabilitation service, in rehabilitation education practices, or in the management of service units.

Admission and Retention Standards

All applicable policies and procedures of the Graduate School with regard to the admission of doctoral students will be followed. Requirements for admission to the doctoral program in rehabilitation exceed those of the Graduate School. The admissions committee of the doctoral program will review all candidates carefully for their special strengths. The following will be considered for all candidates:

1. High academic achievement (normally indicated by a grade point average of 3.5 on a 4-point scale) in a master's program in rehabilitation or a closely related field at an accredited university.
2. Interest in conducting rehabilitation research.
3. Two years of successful performance equivalent to full-time paid employment (post-baccalaureate) in a rehabilitation or related professional position. This may include an approved internship experience at the master's level.
4. At least three letters of recommendation by professional persons familiar with the applicant's performance in academic, research, or service work settings.
5. GRE scores dating back no farther than five years.

Applicants will be considered for acceptance into the doctoral program at the beginning of either the fall or spring semester. Courses in which a grade below B is obtained will not be counted toward satisfying the hour requirements for the degree.

Doctoral Committee

The students shall select a chair who will serve as his/her major adviser. In consultation with the chair the student shall select a doctoral committee which is approved by the coordinator of doctoral studies and then shall be made a matter of record. Further, the doctoral committee shall serve as the student's dissertation committee.

Admission to Candidacy

Admission to candidacy is granted by the dean of the Graduate School upon the recommendation of the faculty responsible for the student's program after the student has fulfilled the Graduate School residency requirement for the doctoral degree and passed the preliminary examinations.

The written preliminary examinations are designed to assess the breadth and depth of the student's knowledge. They are prepared, administered, and evaluated by Rehabilitation Institute faculty committees appointed by the coordinator of doctoral studies. The preliminary examinations will ordinarily be taken in the fall of the second year of doctoral study.

Dissertation

After admission to candidacy, the student will prepare a dissertation based on original research conducted under the direct supervision of the dissertation chair and committee. The requirements of the Graduate School will govern the formation of the dissertation committee and the preparation and defense
of the dissertation. While the dissertation is in preparation, the student will register for no fewer than 24 semester hours in REHB 600, Dissertation. The dissertation should conform to the current edition of the Publication Manual of the American Psychological Association and the standards required by the Graduate School.

**Degree Requirements**

The doctoral program emphasizes mastery of skills in research methodology, knowledge of medical and psychosocial aspects of disability, and knowledge of public policy on disability, as well as competency in the area of rehabilitation counseling, behavior analysis and therapy, or communication disorders and sciences. The course of study requires a minimum of 96-post-baccalaureate semester hours, 24 of which are dissertation hours and 39 of which are fulfilled by required courses. All remaining coursework taken by the student will be electives, selected with the approval of the student's doctoral committee.

**Required Courses**

The student must have successfully completed the following courses no later than 24 months after entering the doctoral program:

- QUAN 506-4  Inferential Statistics
- QUAN 507-4  Multiple Regression

**Program of Study**

Each area of concentration (BAT, CDS, and RCT) has a specific program of study. While each area of concentration requires the same number of credits of: a) Research Development & Utilization (20 credits) and b) Professional Issues & Methods in Rehabilitation (12 credits), the specific required and elective courses available within these areas may vary.

Nine semester hours in REHB 592: Professional Supervision in Rehabilitation (teaching or research) must also be successfully completed during the student's tenure in the doctoral program.

The student's preparation at the master's level will be evaluated and up to 30 hours of didactic course work may be accepted toward the completion of the 96-hour minimum requirement for the doctorate. Graduate level didactic courses in rehabilitation counseling, behavior analysis and therapy, and communication disorders and sciences will usually be acceptable. Course work in related areas such as counseling, psychology, and social work may qualify.

The goal of the program is to develop high-quality professionals. Thus, the student must demonstrate competence in the areas of rehabilitation services. This is accomplished through the student's master's degree program, previous work experience, the required courses, supervised professional experiences, and electives. Ph.D. degree graduates should be well-prepared for leadership roles in the areas of rehabilitation administration, service, education, or research.

**Certificate in Gerontology**

The Rehabilitation program participates in the Certificate in Gerontology interdisciplinary program and offers a class, REHB 405 Introduction to Aging and Rehabilitation, which is a Certificate requirement. For more information on the Certificate program, please see the Post-Baccalaureate Certificate Programs tab on the Graduate Catalog homepage.

**Rehabilitation Administration and Services**

*Enrollment in Rehabilitation Administration and Services (MS) has been suspended.*

Students receive their degrees in Rehabilitation Administration and Services. Preference in admissions to the Administration concentration will be given to applicants having no fewer than two years of approved, acceptable rehabilitation or related work experience. All students must complete a minimum of 36 semester hours of graduate course work, which includes a research paper or thesis. Students applying for RA&S admission, but not meeting the professional experience criterion, may be considered for admission.
If admitted students will be required to complete a full-time internship (six semester hours). During the first semester of full-time study, or a comparable time for part-time students, the student must have a plan of study approved by the advisor and program coordinator. This plan of study normally includes rehabilitation administration core and professional course work, although specific plans may differ for students with varying backgrounds and career goals.

The Rehabilitation Administration requirements are as follows:

**Rehabilitation Core (24 hours)**

- **REHB 513-3 to 4 Medical and Psychosocial Aspects of Disability**
- **REHB 519-3 Multicultural Counseling in Rehabilitation**
- **REHB 593-6 Research in Rehabilitation, or**
- **REHB 593-3 Research in Rehabilitation**
- **REHB 599-3 Thesis and Rehabilitation**

**Administration Concentration (24 hours)**

- **REHB 570-3 Rehabilitation Administration**
- **REHB 573-3 Programming, Budgeting, and Community Resources**
- **REHB 576-3 Development and Supervision of Rehabilitation Employees**
- **REHB 578-3 Program Evaluation in Rehabilitation**
- **REHB 579-3 Advanced Fiscal Management in Rehabilitation**
- **REHB 580-3 Professional and Community Relations in Rehabilitation**
- **REHB 581-3 Professional Issues in Rehabilitation**
- **REHB 582-3 Seminar in Rehabilitation Services**

**Rehabilitation Services Concentration**

Students may opt for the Services program sequence (10 semester hours) as part of their Plan of Study. The Rehabilitation Services sequence includes:

- **REHB 521-3 Vocational Development and Placement**
- **REHB 530-3 Assessment Procedures**
- **REHB 575-4 Case Management, and**
- **REHB 595A, REHB 595B-6 Internship in Rehabilitation**

These may be taken in lieu of REHB 573, REHB 578, and REHB 579.

**Practicum and Internship Requirements**

Practicum and internships are not required for students admitted to the program with two years of approved, acceptable rehabilitation or related work experience. Students with minimal or no rehabilitation related work experiences will be expected to complete the required six semester hours of field experience.

**Requirements for Research Paper or Thesis and Comprehensive Examination**

All students are required to complete a scholarly research paper or thesis in a rehabilitation-related area and an oral comprehensive examination. The student completing a graduate thesis must orally defend it before a thesis committee.

**Rehabilitation Courses**

**REHB400 - Intro to Rehabilitation** 400-3 Introduction to Rehabilitation. An introduction to the broad field of rehabilitation, to include the processes (services), facilities and personnel involved.

**REHB401 - Disability Diversity Society** 401-3 Disability, Diversity and Society. This course will address the relationship between prevailing societal attitudes and environmental designs and the opportunity of persons with disabilities to participate fully in society. It will examine the physical, mental, gender and
cultural characteristics of persons with disabilities as determinants of their needs, values, aspiration and opportunities. How public policies can promote or limit inclusion and equal opportunities for persons with disabilities will also be addressed.

**REHB405 - Intro: Aging & Rehab** 405-3 Introduction to Aging and Rehabilitation. (Same as GRON 405) Introduction to the field of aging, including social, political, economic and legal issues pertinent to an aging society and rehabilitation.

**REHB445B - Psychiatric Rehab** 445B-3 Psychiatric Rehabilitation. This course will explore the history, philosophy, practice, current trends, and issues of psychiatric rehabilitation. Rehabilitation services that (A) develop an individual’s skills and (B) provide environmental support for people with chronic mental illness will be examined. Emphasis will be placed on reaching vocational goals and optimal independent functioning for people with psychiatric disabilities. Special approval needed from the instructor.

**REHB453 - Personal/Family Life Styling** 453-1 to 4 Personal and Family Life Styling. The academic and personal competencies that are characteristic of fully functioning, integrated persons within the context of our twentieth century environment will be systematically reviewed for adoption in everyday living as well as in professional functions. Participants will focus on and experience life styling theories, models, and skills for their own growth and development and learn to assess basic risk-factors in their rehabilitation clients and families prior to helping them program a more balanced, synergistic, and holistic approach to living. Special approval needed from the instructor.

**REHB461 - Intro to SUD** 461-3 Introduction to Substance Use Disorders and Behavioral Addictions. Introduction to the field of substance use and behavioral addictions counseling with an overview of foundation topics underlying professional practice. This course will focus primarily on substance use and behavioral addiction models, medical and psychological consequences, drug classification systems, legislation, and other clinical and public policy issues that may be relevant to the field.

**REHB466 - Addictions in Families** 466-3 Substance Use, Behavioral Addictions, and the Family. (Same as REHB 566) Explores the foundations of interdisciplinary treatment and prevention services for families experiencing challenges related to substance use disorders and behavioral addictions. Students will acquire skills in the use of strength based, systemic approaches in working with families in group and individual counseling. The course will include an exploration of the changing concepts associated with the definition of family and challenges associated with non-traditional families. Ethical issues will be examined in addition to interagency collaborative practices. Prerequisite: REHB 461 with a grade of B or better.

**REHB471 - SUD Treatment** 471-3 Treatment, Recovery and Relapse Prevention. A comprehensive examination of assessment, diagnosis, referral, and treatment processes for substance use disorders and behavioral addictions. The course will cover treatment provided in a variety of settings. Students will acquire skills to provide person-centered treatment, recovery and relapse prevention services, using evidence based practices. The ASAM and the DSM V will be featured as treatment tools. Students will utilize case formulations to gain experience in the treatment plan development and implementation process. Ethical practices will be emphasized. Prerequisite: REHB 461 with a minimum grade of B.

**REHB493 - Applied Research** 493-3 Applied Research in Professional Rehabilitation Practice. This course will provide students with the skills necessary to act as critical consumers of rehabilitation-related research. It will also provide students with the analytical skills necessary to apply the logic of research methodology to their work in implementing evidence based practices with consumers. Emphasis will be on developing student capacity to complete focused, topical reviews of the rehabilitation literature, effectively evaluate research methodology and practices and determine appropriateness of new approaches for application in the field. Prerequisites: REHB 205, REHB 407 with grades of C or better.

**REHB498 - Special Topics** 498-3 Special Topics in Rehabilitation Research and Practice. The topics in this course will be variable and will focus on current challenges in the rehabilitation field. Students will explore current research, evidence based practice and public policy as they pertain to the topic. Specific attention will be directed to how these topics may pose potential ethics/professional challenges and/or challenges for consumer advocacy or how the topic may represent new, innovative opportunities for the field.

**REHB501 - Interviewing and Skills** 501-3 Introduction to Interpersonal Skills Development in Rehabilitation Counseling. (Same as COUN 500) Focuses upon facilitative interpersonal communication
skills necessary in Rehabilitation Counseling Practices. The course provides theory and practice in facilitative interpersonal communication in counseling, behavior therapy, and administrative services. Included is pre-practicum orientation. Special approval needed from the instructor.

**REHB513 - Med/Psycho-Social: Disability** 513-1 to 4 Medical and Psycho-Social Aspects of Disability. A review of the impact of disease and trauma on the human system with special attention on the effects physical limitations and socio-emotional correlates have on human functioning and the rehabilitation process. Special approval needed from the department.

**REHB519 - Multicultural Counseling** 519-3 Multicultural Counseling in Rehabilitation. (Same as COUN 545, REHB 419) The major focus is on building multicultural competencies in working with the basic cultural, economic and psychosocial processes relative to the rehabilitation of people from diverse and underrepresented populations and societies.

**REHB520 - Clinical Supervision** 520-3 Clinical Supervision in Rehabilitation Seminar. This course is designed to prepare doctoral and advanced graduate students with an overview of theory, research, and methods of clinical supervision in Rehabilitation. Special approval needed from the instructor.

**REHB521 - Vocational Dev & Placement** 521-3 Vocational Development and Placement. (Same as COUN 542) Relates the psychosocial meaning of work, process of vocational development, theories of occupational choice and labor market trends to current and innovative methods of job development, selective placement and follow-up with individuals with disability. Special approval needed from the instructor.

**REHB530 - Assessment** 530-3 Assessment Procedures in Rehabilitation Counseling. (Same as COUN 544) Review of fundamental bases of measurement, criteria for evaluating tests, exposure to representative instruments in major categories, and use of test and work samples in assessing the functioning abilities and work potential of individuals with disabilities to seek and hold gainful employment. Special approval needed from the instructor.

**REHB533 - Vocational Appraisal** 533-3 Vocational Appraisal. An extensive exposure to instruments designed for use with vocational rehabilitation clients. Administration and interpretation of a wide variety of instruments used to gain information to be used in planning for vocational development. Both didactic and experiential to include consideration of information obtained from interviews, tests, and other diagnostic techniques. Special approval needed from the instructor.

**REHB551 - Counseling Theory & Practice** 551-3 Rehabilitation Counseling: Theory and Practice. (Same as COUN 541) A didactic and experiential analysis of the underlying theory and techniques of individual and group counseling of individuals with disabilities. Special approval needed from the instructor.

**REHB558 - SUD Special Populations** 558-3 Interventions for Substance Use Disorders and Behavioral Addictions in Special Populations. (Same as REHB 458) This course provides a broad understanding of issues and trends in substance use disorder and behavioral addiction treatment, in a multicultural and diverse society, with a specific focus on treatment methods that reflect the culture-specific values and treatment needs of clients. The course will include an analysis of current literature related to the cultural nuances of diverse client populations with substance use or addictive behavior disorders. Formal case presentations including diagnoses and issues of multiculturalism related to clinical work will be used to facilitate student learning. Prerequisite: REHB 461 with a grade of B or better.

**REHB560 - Private Sector Rehab** 560-3 Private Sector Rehabilitation. A comprehensive introduction to many of the unique characteristics of rehabilitation services offered within the private-for-profit sector which can be applied by practitioners on a national basis.

**REHB566 - SUD and the Family** 566-3 Substance Use, Behavioral Addictions, and the Family. (Same as REHB 466) Explores the foundations of interdisciplinary treatment and prevention services for families experiencing challenges related to substance use disorders and behavioral addictions. Students will acquire skills in the use of strength based, systemic approaches in working with families in group and individual counseling. The course will include an exploration of the changing concepts associated with the
definition of family and challenges associated with non-traditional families. Ethical issues will be examined in addition to interagency collaborative practices. Prerequisite: REHB 461 with a grade of B or better.

REHB570 - Rehab Administration 570-3 Rehabilitation Administration. Problem solving approach to current issues in organizational structure and management functions in public and voluntary rehabilitation agencies, decision making, leadership, program development and evaluation.

REHB571 - Adv Disability Seminar 571-3 Advanced Disability Seminar. Specifically, this seminar reviews the historical and philosophical bases of rehabilitation; the evolution of rehabilitation counselor roles and functions; disability models; rehabilitation service delivery models; vocational rehabilitation and career theorists; serving underserved persons, and facilitating acceptance of varying disabilities of those we serve. Restricted to doctoral students or consent of instructor.

REHB574 - Staff Training & Development 574-3 Staff Training and Development. This course prepares the student to design, implement, and supervise an institutional program to train staff in methods of direct service to the institution's clients. Each student will actually design and submit a program through simulation. Lecture/workshop format.

REHB575 - Case Management in Rehab Couns 575-4 Case Management in Rehabilitation Counseling. Basic procedures in providing and coordinating available human services based on individual need in the context of a professional-client relationship, and the basics of recording and reporting such services. Special approval needed from the instructor.

REHB578 - Program Eval in Rehab 578-3 Program Evaluation in Rehabilitation. An analysis of the development and utilization of a program evaluation system in rehabilitation settings with focus given to system design, monitoring techniques and service program development. Students will be trained in the advanced practice of program evaluation techniques and their application to rehabilitation settings. Special approval needed from the instructor.

REHB585A - Sem:Counsel/Coord Services 585A-1 to 4 Seminar in Counseling/Coordination Services-Guided Imagery. Consideration of special issues in counseling and delivery of services. Special approval needed from the instructor.

REHB585B - Group Counseling 585B-1 to 4 Seminar in Counseling/Coordination Services-Group Counseling in Rehabilitation. (Same as COUN 543) Consideration of special issues in counseling and delivery of services. Special approval needed from the instructor.

REHB586 - Sem:Job Develop/Placement 586-3 Seminar in Job Development and Placement. Consideration of special issues in job development and placement philosophy, techniques and research concerning individuals with disabilities. Special approval needed from the instructor.

REHB587 - Sem:Correlates Disability 587-3 Seminar in Correlates of Disability. A systematic analysis of the behavioral socio-cultural implication of disabling conditions. Emphasizes the rehabilitation process in remediation of debilitating conditions. Prerequisite: REHB 513 or consent of instructor.

REHB588 - Sem: Research in Rehab 588-3 Seminar in Research in Rehabilitation. Advanced seminar focusing upon specialized and advanced topics in research in rehabilitation. This course is designed to prepare doctoral students in rehabilitation with the special tools needed to carry out doctoral dissertation and other advanced research projects. Special approval needed from the instructor.

REHB589 - Profsnl Seminar in Rehab 589-1 to 18 (1 per semester) Professional Seminar in Rehabilitation. The course involves advanced level presentations focusing on current research, applied practices, and innovations in rehabilitation. Presentations are made by faculty, graduate students and guest experts. A minimum of four semester hours required for Doctor of Rehabilitation degree.

REHB590 - Coexisting Disability 590-3 Coexisting Disabilities: Alcohol, Drugs, and Disability. An intensive analysis of the impact of alcohol and other drug abuse (AODA) on the lives of persons with disabilities. Additional focus of the impact of AODA on case management and the rehabilitation service delivery system. Restricted to doctoral students in rehabilitation or consent of instructor.
REHB591 - Indpndt Projects in Rehab 591-1 to 18 Independent Projects in Rehabilitation. Systematic readings and development of individual projects in pertinent rehabilitation areas. No more than six hours may be counted toward the Master's degree. Special approval needed from the instructor.

REHB592 - Profsnl Supervision: Rehab 592-1 to 16 Professional Supervision in Rehabilitation. Experience provided in the supervision of research, teaching, and rehabilitation services. No more than four hours may be taken in any semester. Restricted to doctoral student in rehabilitation. Special approval needed from the instructor.

REHB593 - Research in Rehabilitation 593-1 to 18 Research in Rehabilitation. Systematic investigation of factors and procedures relevant to rehabilitation. No more than six hours may be counted toward the Master's degree. Special approval needed from the instructor.

REHB593A - Rehabilitation Research 593A-1 to 18 Research in Rehabilitation Counseling. (Same as COUN 547) Systematic investigation of factors and procedures relevant to rehabilitation. No more than six hours may be counted toward the Master's degree. To facilitate knowledge/skill acquisition for the rehabilitation professional in becoming a knowledgeable consumer of rehabilitation research. To facilitate the completion of the Master's project. Special approval needed from the instructor.

REHB594A - Practicum: Rehab Admin 594A-1 to 12 Practicum in Rehabilitation-Administration. Supervised experiences in agencies in rehabilitation. Rehabilitation facilities management/supervision, in planning, programming and evaluation. Restricted to admission to the specific degree program.

REHB594B - Prac:Behav Analysis&Ther 594B-1 to 12 Practicum in Rehabilitation-Behavior Analysis and Therapy. Supervised experiences in agencies in rehabilitation. Behavior analysis and therapy. Application of behavioral analysis/methods in human treatment and in management. Restricted to admission to the specific degree program.

REHB594C - Practicum: Rehab Counseling 594C-1 to 12 Practicum in Rehabilitation-Counseling. Supervised experiences in agencies in rehabilitation. Development of counseling skills with individuals and groups to include work related functions. Prerequisite: REHB 501, REHB 551, and REHB 589. Restricted to admission to the specific degree program.

REHB595A - Internship in Rehab 595A-1 to 12 Internship in Rehabilitation. Extended practice in rehabilitation settings cooperatively guided and supervised by agency staff and university faculty. Graded S/U only. Prerequisite: appropriate degree specific practicum. Special approval needed from the department.

REHB595B - Intern Rehab Counseling 595B-1 to 12 Internship in Rehabilitation-Counseling. Development of advanced counseling skills with individuals with disability and other work-related functions. Graded S/U only. Prerequisite: REHB 594C.

REHB599 - Thesis 599-1 to 6 Thesis. Special approval needed from the instructor.

REHB600 - Dissertation 600-1 to 30 (1 to 12 per semester) Dissertation. Minimum of 24 hours to be earned for the Doctor of Rehabilitation degree. Restricted to doctoral candidate in rehabilitation.

REHB601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

REHB699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Rehabilitation Faculty

Austin, Gary F., Professor, Emeritus, Ph.D., Northwestern University, 1973; 1984.

Bordieri, James E., Professor, Emeritus, Ph.D., Illinois Institute of Technology, 1980; 1986. Vocational evaluation, rehabilitation administration, job placement, rehabilitation management.

Boyer, Valerie, Associate Professor, Ph.D., SIUC, 2006; 2009. Child Language, animal-assisted therapy.

Crimando, William, Professor, Ph.D., Michigan State University, 1980; 1980. Job development and placement, computers in rehabilitation, adjustment services, staff training and development.

Franca, Maria Claudia, Associate Professor, Ph.D., Southern Illinois University Carbondale, 2006; 2008. Voice science and multicultural issues related to communication disorders and sciences.

Koch, D. Shane, Professor, Rh.D., Southern Illinois University, 1999; 2005. Rehabilitation counseling, alcohol, drugs, and disability.

Lehr, Robert P., Jr., Professor, Emeritus, Ph.D., Baylor University, 1971; 1973.

Nichols, Jane L., Assistant Professor, Ph.D., Michigan State University, 2007; 2012. Rehabilitation Counseling, challenges in communication, decision making, and addictive behaviors.

Simpson, Kenneth O., Associate Professor, Emeritus, Ph.D., University of Nebraska-Lincoln, 1995; 1994. Alternative/augmentative communication, motor speech disorders.

Upton, Thomas, Professor, Ph.D., The University of Iowa, 2000; 2000. Rehabilitation counseling, advances in rehabilitation, persons with brain injury, disability attitudes, and postsecondary educational accommodations.

---

**Social Work**

The School of Social Work offers graduate work leading to the Master of Social Work degree. The M.S.W. program is fully accredited by the Council on Social Work Education.

**Master of Social Work**

The Master of Social Work degree program offers preparation for professional social work practice. The organizing principle of the M.S.W. program is the improvement of the quality of individual life through the enhancement of social and economic justice and opportunity. Upon completion of the M.S.W. program, the student will have acquired knowledge, values, and skills consistent with the social work profession and be capable ultimately of engaging in autonomous social work practice. Graduates will be able to effectively deliver the social services needed to meet human needs in both urban and rural areas.

**Admission Requirements**

To be considered for admission to the regular two-year M.S.W. program applicants must:

1. Meet all admission requirements set forth by the Graduate School.
2. Have a GPA of at least 3.0 (on a 4.0 scale) in the last two years of undergraduate course work.
3. Show evidence of a broad liberal arts base with substantial preparation in the social and behavioral sciences and humanities.
5. International students must have a TOEFL score of 550 (paper); 213 (computer); 80 (internet) or above. The IELTS exam is also acceptable (a minimum score of 6.5).

Note: A standardized test score, such as the GRE, is not required for admission; however, students applying for a graduate assistantship will be required to have an official GRE score on file in the School of Social Work.

Entry is in the fall semester for the regular two-year program. To be considered for admission to the advanced standing M.S.W. program applicants must:

1. Have a B.S.W. degree from an accredited social work program.
2. Meet all requirements listed for the regular two-year program.

Entry is in the summer semester for the advanced-standing program.

Applications may be made at gradschool.siu.edu/apply.

Applications will be accepted up to April 1. Admissions Committee meets monthly from January to the April deadline, therefore, early applications have a better chance to receive their first choice in specialization. Applicants who complete their undergraduate degree requirements by December and have all application material submitted to the School of Social Work by October 1 may be considered for early admission and may take electives prior to entry into the summer or fall cohort.

Applicants admitted for either the regular two-year program or for advanced standing may be required to take additional courses as a condition of admission. Documented potential for the profession of social work is considered a part of the admission criteria, which may also include an interview prior to acceptance.

Each application will be individually reviewed; however, meeting all stated criteria will not automatically guarantee admission to the school.

Applicants must apply online, both to the Graduate School and the School of Social Work. However, official transcripts should be sent directly to the School of Social Work. Students accepted into the M.S.W. Program must register for the semester they are admitted.

This program requires a nonrefundable $65 application fee that must be submitted with the application for admission to graduate study in Social Work.

**Degree Requirements**

Students admitted to the regular two-year program are required to complete the first year foundation curriculum and the second year advanced curriculum. They are required to complete a minimum of 60 semester hours of graduate course work taken in the approved sequence. The foundation curriculum consists of 30 semester hours and includes the following courses:

- **Fall (15 semester hours)**
  - SOCW 500 Human Behavior and the Social Environment (3 hours)
  - SOCW 501 Generalist Practice (3 hours)
  - SOCW 510 Families, Groups and Organizations in Social Work (3 hours)
  - SOCW 541A Foundation Seminar I (2 hours)
  - SOCW 541B Foundation Practicum I (2 hours)
  - Elective (2 hours)

- **Spring (15 semester hours)**
  - SOCW 504 Ethnic Diversity in Social Work (2 hours)
  - SOCW 511 Social Work Research (3 hours)
  - SOCW 521 Social Work Policy Practice (3 hours)
  - SOCW 542A Foundation Seminar II (2 hours)
  - SOCW 542B Foundation Practicum II (2 hours)
  - Elective (2 hours)

**Reduced Load**

Students who are unable to attend full time can choose to attend part time under our Reduced Load Scheduling Agreement. The Reduced Load schedule includes:
• **Semester 1 – Fall (8 semester hours)**
  - SOCW 500-3  Human Behavior and the Social Environment in Social Work
  - SOCW 501-3  Generalist Practice
  - XXXX – 2  Elective

• **Semester II – Spring (8 semester hours)**
  - SOCW 504-2  Ethnic Diversity in Social Work
  - SOCW 521-3  Social Work Policy Practice
  - XXXX-3  Elective

• **Semester III – Fall (7 semester hours)**
  - SOCW 510-3  Families, Groups & Organizations in Social Work
  - SOCW 541A-2  Foundation Practicum Seminar I
  - SOCW 541B-2  Foundation Practicum I

• **Semester IV – Spring (7 semester hours)**
  - SOCW 511-3  Social Work Research
  - SOCW 542A-2  Foundation Practicum Seminar II
  - SOCW 542B-2  Foundation Practicum I

Students admitted to the advanced-standing program are required to complete nine semester hours of transition courses, with a grade of B or better in each course, and a minimum of 30 semester hours in the second-year graduate course curriculum in the approved sequence. The transition courses include the following:

**Summer Advanced Standing (9 semester hours)**

- SOCW 502  Perspectives on Human Behavior for Social Work Practice (3 hours)
- SOCW 512  Advanced Social Work Research (3 hours)
- SOCW 522  Advanced Social Work Policy Practice (3 hours)

The second-year curriculum is organized around the following areas of emphasis: health/mental health; and children, youth and families. The school also offers course work in preparation for a Professional Educator License in School Social Work by the Illinois State Board of Education. Applicants must indicate their preference of area of emphasis. Although we attempt to accommodate each applicant's first preference, we do not guarantee students will receive their first choice. The second-year curriculum includes the following courses in each area of emphasis:

**Health/Mental Health**

• **Fall (15 semester hours)**
  - SOCW 531  Psychosocial Disorders (3 hours)
  - SOCW 543-A  Advanced Practicum Seminar I (3 hours)
  - SOCW 543-B  Advanced Practicum I (3 hours)
  - SOCW 551  Advanced Social Work Practice I: H/MH (3 hours)
  - SOCW 555  Advanced Policy Analysis and Practice: H/MH (3 hours)

• **Spring (15 semester hours)**
  - SOCW 532  Program Evaluation for Social Work (3 hours)
  - SOCW 544A  Advanced Practicum Seminar II (3 hours)
  - SOCW 544B  Advanced Practicum II (3 hours)
  - SOCW 552  Advanced Social Work Practice II: H/MH (3 hours)
  - Elective (3 hours)

**Reduced Load Health/Mental Health Scheduling Agreement** is as follows:

• **Semester 1 – Fall (6 semester hours)**
  - SOCW 531-3  Psychosocial Disorders in Social Work Practice
  - SOCW 555-3  Advanced Policy analysis & Practice: H/MH

• **Semester 2 – Spring (6 semester hours)**
  - SOCW 532-3  Program Evaluation for Social Work
  - XXXX-3  Elective

• **Semester III – Fall (9 semester hours)**
  - SOCW 543A-3  Advanced Practicum Seminar I
  - SOCW 543B-3  Advanced Practicum I
SOCW 551-3  Advanced Social Work Practice I: Health & Mental Health

• **Semester IV – Spring (9 semester hours)**
  - SOCW 544A-3  Advanced Practicum Seminar II
  - SOCW 544B-3  Advanced Practicum II
  - SOCW 552-3  Advanced Social Work Practice II: Health & Mental Health

**Children, Youth and Families**

• **Fall (15 semester hours)**
  - SOCW 531  Psychosocial Disorders (3 hours)
  - SOCW 543-A  Advanced Practicum Seminar I (3 hours)
  - SOCW 543-B  Advanced Practicum I (3 hours)
  - SOCW 561  Advanced Social Work Practice I: CY&F (3 hours)
  - SOCW 565  Advanced Policy Analysis and Practice: CY&F (3 hours)

• **Spring (15 semester hours)**
  - SOCW 532  Program Evaluation for Social Work (3 hours)
  - SOCW 544A  Advanced Practicum Seminar II (3 hours)
  - SOCW 544B  Advanced Practicum II (3 hours)
  - SOCW 562  Advanced Social Work Practice II: CY&F (3 hours)
  - ELECTIVE (3 hours)

**Reduced Load Children, Youth & Families Scheduling Agreement** is as follows:

• **Semester I – Fall (6 semester hours)**
  - SOCW 531-3  Psychosocial Disorders in Social Work Practice
  - SOCW 565-3  Advanced Policy analysis and Practice: CYF

• **Semester II – Spring (6 semester hours)**
  - SOCW 532-3  Program Evaluation for Social Work
  - XXXX-3  Elective

• **Semester III – Fall (9 semester hours)**
  - SOCW 543A-3  Advanced Practicum Seminar I
  - SOCW 543B-3  Advanced Practicum I
  - SOCW 561-3  Social Work Practice I: CYF

• **Semester IV – Spring (9 semester hours)**
  - SOCW 544A-3  Advanced Practicum Seminar II
  - SOCW 544B-3  Advanced Practicum II
  - SOCW 562-3  Social Work Practice II: CYF

**Licensure in School Social Work**

* Endorsement in Professional Educator License (PEL) in School Social Work (Please refer to the Teacher Education Program (TEP) for the most current information on licensure requirements for School Social Work)

Those students who wish to qualify for endorsement in school social work need to:

1. Complete the **core courses** listed above under the children, youth and families emphasis.
2. Take the following courses (which will satisfy the elective requirements):
   b. SPED 408-3 OR SPED 420-3
   c. EDUC 319 AND EAHE 501-3 or EAHE 503-3 (A waiver may be available with permission of the School of Social Work).
3. The field placement (SOC 543B-3 and SOCW 544B-3) will be in a school setting for two consecutive semesters.
4. SPED 408-3 or SPED 420-3 is a prerequisite to field placement for students in the School Social Work Endorsement Program and must be completed before fall semester field placements (SOCW 543A, SOCW 543B).
5. Pass the ACT with a score of 22 or higher plus the writing section with a score of 6 or higher (9/10/16 or later) and the School Social Work Licensure Exam.
In each year of study, in addition to classroom work, students are required to complete field practicum. Applied learning through field practice is an integral component of social work education. Field instruction provides the student with the opportunity for applying social work theory and conceptual learning to realistic and practical situations. Students may not substitute current or past, paid or volunteer, social work experience for the field practicum requirements of the M.S.W. program. While the school takes into account the student's career goals in the selection of the field practicum assignment, we do not guarantee that students will receive their first preference of field assignment.

M.S.W. students must maintain an overall G.P.A. of 3.0 (on a 4.0 scale).

Within limits imposed by the policies of the Graduate School of the University, transfer credits will be permitted for up to 30 semester hours for applicants who wish to transfer from another accredited graduate program in social work.

Student Advisement

Upon admission to the Master of Social Work degree program, the student will be assigned a faculty adviser. The adviser is responsible for supervision of the student's progress and is available for career counseling as well as assisting in other matters which might arise in connect with the student's work.

Financial Aid

The program offers limited financial assistance through graduate assistantships. Other scholarships, grants-in-aid, etc., may be applied for throughout the Graduate School, Southern Illinois University Carbondale, Carbondale IL 62901-4716.

M.S.W./J.D. in Social Work and Law

A concurrent degree in social work and law is designed to educate practitioners in law and social work to effectively utilize the problem-solving strategies and techniques of both professions. Students prepared in this program will develop an understanding of the ethics, language, research, history, and processes of both professions. Individuals so trained will be uniquely prepared for careers which combine both legal and human service needs such as administration, supervision of the provision of services, legal aspects of services, public policy leadership roles, family practice and community planning and development. Accepted students could complete a concurrent program in as few as three years with full-time summer attendance. Students must meet the requirements of admission and be admitted separately to the School of Social Work and the School of Law. Students currently enrolled in social work or law programs must have a minimum GPA before they may enroll in the concurrent program. The minimum GPA for social work is 3.0 and for law is 2.5. Social work students interested in this program should consult with the School of Social Work Graduate Program Director.

Certificate in Gerontology

The School of Social Work participates in the Certificate in Gerontology interdisciplinary program and offers a class, SOCW 575, Policy and Program Issues of Aging, which is a Certificate requirement. For more information on the Certificate program, please see the Post-Baccalaureate Certificate Programs tab on the Graduate Catalog homepage.

Social Work Courses

SOCW478C - Intl Social Work India 478C-1 to 6 International Social Work: Generalist Policy and Practice-India. Provides an international perspective for the study of social work groups, organizations and communities. Focuses on the examination of assessment and problem solving interventions and cross-cultural comparisons of policy and practice.

SOCW496 - Independent Research in SW 496-1 to 3 Independent Research in Social Work. Provides opportunity for students to conduct independent research with the guidance of a faculty member. Topics of research are identified by the student and faculty member. Special approval needed from the instructor.

SOCW501 - Generalist Practice 501-3 Generalist Practice. This course emphasizes the development of advanced intervention skills related to generalist practice with individuals, families, groups, organizations and communities in multiple-service, community-based agencies characteristic of rural areas. Restricted to admission to the MSW Program.

SOCW502 - Advanced Human Behavior 502-3 Advanced Human Behavior for Social Work Practice. Selective examination of the theoretical basis of development and inter-relational aspects of individuals
and families throughout the life span. Normal development stages and impacts of social systems on the growth of individuals in diverse populations of rural areas is emphasized. Prerequisite: Must be taken concurrently with SOCW 512 and SOCW 522. Grade of B or better is required. Restricted to admission to the MSW Program with eligibility for Advanced Standing.

**SOCW504 - Human Diversity in SW** 504-2 Human Diversity in Social Work. Examination of issues involved in delivering social services to various ethnic, diverse and cultural groups. Sensitizes students to personal, familial, or community problems of ethnic or cultural origin. Implications for understanding social services to populations who have experienced discrimination are discussed. Restricted to admission to the MSW Program.

**SOCW510 - Families, Groups & Orgs** 510-3 Families, Groups and Organizations in Social Work. Examination of systems and advanced generalist practice theories within the context of rural, integrated and multiple-service social services delivery systems. Specific practice examples will be used to facilitate understanding of how theory guides practice with families, groups, organizations and communities. Restricted to admission to the MSW Program.

**SOCW511 - Social Work Research** 511-3 Social Work Research. This course emphasizes the importance of scientific inquiry within social work practice and covers the application of basic concepts of research methodology to social work including problem formulation, research design, sampling, measurement, and data analysis. Includes single-system methodology as it applies to social work practice in rural areas. Prepares students to conduct an individualized single-system project based on practice intervention with clients or systems in their practicum setting in the final semester of their studies. Prerequisite: an introduction to statistics course or concurrent enrollment allowed. Restricted to admission to the MSW Program.

**SOCW512 - Advanced SW Research** 512-3 Advanced Social Work Research. Selective examination of inductive and deductive methods in social work knowledge building. Includes research methodologies and group designs as applied to social work practices in rural areas. Prepares students to conduct an individualized single-system project based on practice intervention with clients or systems in their practicum setting in the final semester of their studies. Prerequisite: Must be taken concurrently with SOCW 502 and 522; Grade of B or better is required. Restricted to admission to the MSW Program with eligibility for Advanced Standing.

**SOCW521 - Social Work Policy Practice** 521-3 Social Work Policy Practice. Examines the historical development of social welfare and professional social work in Europe and the United States. The course introduces a systematic framework for policy analysis with particular attention paid to policies affecting diverse rural populations, women and minorities. Restricted to admission to the MSW Program.

**SOCW522 - Advanced SW Policy Practice** 522-3 Advanced Social Work Policy Practice. Selective examination of the historical development of social welfare and professional social work in Europe and the United States. Uses a systematic framework for policy analysis with particular attention paid to policies affecting women, low income, oppressed, and diverse rural populations. Prerequisite: Must be taken concurrently with SOCW 502 and 512; Grade of B or better is required. Restricted to admission to the MSW Program with eligibility for Advanced Standing.

**SOCW531 - Psychosocial Disorders** 531-3 Psychosocial Disorders in Social Work Practice. This course provides a basic knowledge of psychopathology and how it impacts individual functioning and family dynamics. Students become familiar with the theoretical basis and the basic structure of DSM-5 and models of interdisciplinary clinical practice in mental health. Prerequisite: Completion of transition courses (SOCW 502, 512, & 522) or foundation courses (SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Restricted to admission to the MSW Program.

**SOCW532 - Program Evaluation for SW** 532-3 Program Evaluation for Social Work. This course focuses on the application of research methods especially in evaluating programs or program components in the area of concentration and to the practicum experience. Includes content on self-evaluation in practice. Prerequisite: Grade of B or better in SOCW 511 or SOCW 512 and an introduction to statistics course. Restricted to admission to the MSW Program.

**SOCW533 - SW Practice in Schools** 533-2 Social Work Practice in the Schools. In-depth examination of the history and practice of social work in primary and secondary schools. Roles of school social workers...
and practice approaches are emphasized. Prerequisite: SPED 408 or SPED 420; Completion of transition courses (SOCW 502, 512, & 522) or foundation courses (SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Restricted to admission to the MSW Program and School Social Work Endorsement Program.

SOCW535 - Legal Aspects of SW Practice 535-3 Legal Aspects of Social Work Practice. Examination of law and legal procedures that relate directly to social work practice in general. Legal perspectives of a specific concentration field of practice are discussed in depth.

SOCW541A - Foundation Practicum Seminar I 541A-2 Foundation Practicum Seminar I. Seminar which is taken concurrently with Foundation Practicum I (SOCW 541B). The seminar emphasizes the relationship between the practicum experience, social work practice, policy, human behavior and the social environment (HBSE) and research curricula. Prerequisite: Concurrent enrollment with SOCW 541B. Restricted to admission to the MSW Program.

SOCW541B - Foundation Practicum I 541B-2 Foundation Practicum I. Field practicum which is taken concurrently with Foundation Practicum Seminar I (SOCW 541A) and is a structured and supervised on-site field practice in a selected agency. Practicum is equivalent to 12 hours per week for 15 weeks (a total of 360 hours) over two semesters. Graded S/U. Prerequisite: Concurrent enrollment with SOCW 541B. Restricted to admission to the MSW Program.

SOCW542A - Found Practicum Seminar II 542A-2 Foundation Practicum Seminar II. Seminar which is taken concurrently with Foundation Practicum Seminar I (SOCW 542B) and serves as a continuation of SOCW 541A. The seminar emphasizes that relationship between the practicum experience, social work practice, policy, human behavior and the social environment (HBSE) and research curricula. Prerequisite: SOCW 541A&B; Concurrent enrollment with SOCW 542B. Restricted to admission to the MSW Program.

SOCW542B - Foundation Practicum II 542B-2 Foundation Practicum II. Field practicum which is taken concurrently with Foundation Practicum Seminar II (SOCW 542A) and serves as a continuation of SOCW 541B, which is the second structured and supervised on-site field practice in a selected agency. Graded S/U. Prerequisite: SOCW 541A&B; Concurrent enrollment with SOCW 542A. Restricted to admission to the MSW Program.

SOCW543A - Adv Practicum Seminar I 543A-3 Advanced Practicum Seminar I. Concentration specific practicum seminar with concurrent field practicum (SOCW 543B). Practicum seminar focuses on the application of advanced generalist theory, knowledge and skills covered in the curriculum within the specific concentration area (Children, Youth and Families/School Social Work; Health/Mental Health). Prerequisite: Completion of transition courses (SOCW 502, 512, & 522) or foundation courses (SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Concurrent enrollment with SOCW 543B. Restricted to admission to the MSW Program.

SOCW543B - Advanced Practicum I 543B-3 Advanced Practicum I. On-site concentration specific field practice in an approved agency with appropriate supervision equivalent to 20 hours per week for 15 weeks (a total of 607 hours is required to be completed in two semesters) with a concurrent seminar. The practicum focuses on the application of advanced concentration theory, knowledge and skills covered in the curriculum. Graded S/U. Concurrent enrollment with SOCW 543B. Prerequisite: Completion of the transition courses (SOCW 502, 512, & 522) or foundation courses (SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Restricted to admission to the MSW Program.

SOCW544A - Adv Practicum Seminar II 544A-3 Advanced Practicum Seminar II. A continuation of the concentration specific practicum seminar concurrent field practicum SOCW 544B. Continuation of SOCW 543A. Prerequisite: Completion of SOCW 543A&B. Concurrent enrollment with SOCW 544B. Restricted to admission to the MSW Program.

SOCW544B - Advanced Practicum II 544B-3 Advanced Practicum II. A continuation of the concentration specific practicum of 20 hours per week in the field for 15 weeks with a concurrent seminar, SOCW 544A. Graded S/U. Continuation of SOCW 543B. Prerequisite: SOCW 543A&B; Concurrent enrollment with SOCW 544A. Restricted to admission to the MSW Program.
SOCW546A - Sel Topics: Counsel Individuals 546A-3 Selected Topics: Social Work Counseling with Individuals. (Same as SOCW 446A) (May be repeated with different sections).

SOCW546B - Sel Topics: Practice w/Groups 546B-3 Selected Topics: Social Work Practice with Groups. (Same as SOCW 446B) (May be repeated with different sections).

SOCW546C - Sel Topics: Intervention 546C-3 Selected Topics: Social Work Intervention with Traumatic Stress Events. (Same as SOCW 446C) (May be repeated with different sections).

SOCW546D - Sel Topics: Medical Social Work 546D-3 Selected Topics: Medical Social Work. (Same as SOCW 446D) (May be repeated with different sections).

SOCW546E - Sel Topics: Substnc Abuse & MH 546E-3 Selected Topics: Substance Abuse and Mental Health. (Same as SOCW 446E) (May be repeated with different sections).

SOCW546F - Selected Topics: Family Therapy 546F-3 Selected Topics: Social Work Family Therapy. (Same as SOCW 446F) (May be repeated with different sections).

SOCW546G - Sel Topics: Admin/Grant Writing 546G-3 Selected Topics: Administration and Grant Writing. (Same as SOCW 446G) (May be repeated with different sections).

SOCW546H - Selected Topics: Child Welfare 546H-3 Selected Topics: Child Welfare. (Same as SOCW 446H) (May be repeated with different sections).

SOCW546I - Selected Topics: Spirituality 546I-3 Selected Topics: Spirituality. (Same as SOCW 446I) (May be repeated with different sections).

SOCW546J - Selected Topics: Adoption 546J-3 Selected Topics: Adoption. (Same as SOCW 446J) (May be repeated with different sections). Restricted to junior standing or higher.

SOCW546K - Military Social Work 546K-3 Selected Topics: Military Social Work. (Same as SOCW 446K) (May be repeated with different sections). Restricted to junior standing or higher.

SOCW546L - Selected Topics: Other 546L-3 Selected Topics: Other. (Same as SOCW 446L) (May be repeated with different sections).

SOCW551 - Adv SW Practice I: H/MH 551-3 Advanced Social Work Practice I: Health and Mental Health. This is the first of a two-part course that emphasizes health and mental health delivery within systems theory and an advanced generalist practice skills framework. Includes case studies and exercise aimed at practice with diverse populations in rural areas. Prerequisite: Completion of transition courses (SOCW 502, 512, & 522) or foundation courses (SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Restricted to admission to the MSW Program.

SOCW555 - Adv Policy & Practice: H/MH 555-3 Advanced Policy Analysis and Practice: Health and Mental Health. This course applies a systematic analytical framework for a critical and in-depth analysis of federal, state and local policies that shape programs affecting health and mental health in rural settings. Examines how policy impacts practice with diverse populations. Prerequisite: Completion of transition courses (SOCW 502, 512, & 522) or foundation courses (SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Restricted to Admission to the MSW Program.

SOCW559 - Aging & Mental Health 559-3 Aging and Mental Health. (Same as GRON 559) Examination of the nature and etiology of mental health problems facing older Americans. Review of research reports to build a theoretical basis for mental disorders.

SOCW561 - SW Practice I: C, Y & F 561-3 Social Work Practice I: Children, Youth and Family. This is the first part of a two-part course that emphasizes family-centered practice (family preservation, integrated services) within systems theory and an advanced generalist practice skills framework. Includes case studies and exercises aimed at practice with diverse populations in rural areas. Prerequisite: completion of foundation or transition courses (SOCW 502, 512, & 522 or SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Restricted to Master of Social Work students only.

SOCW565 - Adv Policy & Practice: CYF 565-3 Advanced Policy Analysis and Practice: Children, Youth and Families. This course applies a systematic analytical framework for a critical and in-depth analysis of federal, state and local policies that shape programs affecting children, youth, and families in rural settings. Examines how policy impacts practice with diverse populations. Prerequisite: completion of foundation or transition courses (SOCW 502, 512, & 522 or SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B). Restricted to Master of Social Work students only.

SOCW565B - School SW Policy & Prog 565B-3 Advanced Policy Analysis: Children, Youth and Families. This course applies a systematic analytical framework for a critical and in-depth analysis of federal, state and local policies that shape programs affecting children, youth and families in rural settings. Examines how policy impacts practice with diverse populations. Prerequisite: completion of foundation transition courses.

SOCW570 - Gerontology & Social Work 570-3 Gerontology and Social Work. Examines the major psycho-social and ecological theories of human aging within the framework of social work practice. Extrapolations of those theories and application of them to social work practice and research are emphasized.

SOCW575 - Policy & Program Issues Aging 575-3 Policy and Program Issues of Aging. (Same as GRON 575) Examination of public policies that impact on the quality of life of the elderly. Major programs are identified and analyzed. Future policy issues are discussed.

SOCW576 - Selected Topics in Aging 576-1 to 6 Selected Topics in Aging Practice Issues. Examination of selected knowledge and skills useful for gerontological social work practice. In-depth study on specific topics will be conducted. Prerequisite: SOCW 570.

SOCW577 - Selected Topics: Research 577-1 to 4 Selected Topics in Research. Individualized advanced research projects related to student interest. Graded S/U. Prerequisite: completion of foundation or transition courses (SOCW 502, 512, & 522 or SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B).

SOCW578 - Intl Social Work - Germany 578-1 to 6 International Social Work - Germany. Critical examination of the nature and scope of social welfare programs in other nations including: personal social services, income maintenance, health care and social development programs.

SOCW598 - SW Research Paper 598-1 to 4 Social Work Research Paper. Preparation of a final research paper as partial requirement for the M.S.W. degree. Graded S/U only. Prerequisite: completion
of foundation or transition courses (SOCW 502, 512, & 522 or SOCW 500, 501, 504, 510, 511, 521, 541A&B, & 542A&B).

**SOCW601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs or who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

**Social Work Faculty**

**Buila, Sarah**, Associate Professor, Graduate Program Director, M.S.W. SIUC 2005; 1998. Ph.D., University of Illinois. Generalist practice, substance abuse, psycho-social disorders, health/mental health practice, social support and the management of chronic mental illness, cultural competency, food security, and social justice.

**Jurkowski, Elaine T.**, Professor, Ph.D., University of Illinois at Chicago, 1997; 1998. Social work theory, program evaluation and community social services and systems changes, research methods, health, public health, population health, community planning/counseling, gerontology, and media as an intervention.

**Kawewe, Saliwe**, Professor and Director, Ph.D., Saint Louis University, 1985; 1996. Advanced generalist practice, child welfare, policy, research, international social welfare policy, social development strategies in Third World communities, HIV/AIDS prevention and treatment, women and children, cultural diversity, and indigenous populations.

**Reese, Dona J.**, Professor, M.S.W 1979 and Ph.D. in Social Work 1994, University of Maryland, LCSW; 2008. Hospice social work, focusing on social work outcomes measurement, spirituality, and cultural competence. Active learning approach to social work education, with a focus on service learning and participatory action research.

**Reichert, Elisabeth**, Professor, M.S.W., Ph.D., University of Tennessee at Knoxville, 1989; 1994. Practice, policy, human behavior and the social environment, clinical social work with sexual abuse/incest survivors, battered women, crisis intervention, human rights policy and practice, and international social work.

**Soliman, Hussein**, Professor, Ph.D., University of Tennessee, 1993; 2004. Research methodology, generalist practice, practice evaluation, school social work, social policy, disasters and traumatic stress, international social work.

---

**Sociology**

The Department of Sociology offers graduate work leading to the M.A. and Ph.D. degrees. The M.A. degree program gives students an opportunity to acquire a general knowledge of sociology through lecture courses, seminars, and exposure to a variety of theoretical and methodological approaches.
The Ph.D. degree program centers around advanced offerings in the areas of theory, methods, social movements, gender, sexualities, religion, communities, and inequalities. A special concentration in criminology, deviance, and criminal justice allows interested students to pursue a substantial part of the doctoral studies in Criminology and Criminal Justice. Students may pursue a Women, Gender and Sexuality Studies graduate certificate at the same time as well.

The faculty of the department is research-oriented and encourages a similar orientation on the part of its students. The department maintains a small library and state-of-the-art computer facilities for qualitative and quantitative analyses.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Sociology. This must be paid by credit card at the time you submit the online application.

**Admission to Graduate Study in Sociology**

Applicants have a few options. Undergraduates who majored in sociology or a closely-related field (some sociology required, evaluated on a case-by-case basis) with a GPA of 3.0 may apply for the two-year M.A. degree program, or they may apply for direct entry into the Ph.D. program. Students with M.A. degrees in sociology or closely-related fields (evaluated on a case-by-case basis) with a graduate GPA of 3.25 may apply to the Ph.D. program. To apply to either program, the student must submit personal and research statements, three reference letters, a writing sample, a CV, and official transcripts of all undergraduate and graduate academic grades to the department for review by the graduate admissions committee. Scores from the Graduate Record Examination (GRE) are required for consideration for admission and University-wide fellowships.

Complete applications must be received by January 1. Admitted students begin the subsequent fall semester. Admission for the spring semester will be given only in exceptional circumstances. International students must achieve 550 or better on the paper-based TOEFL, 213 on the computer-based TOEFL, 80 on the internet-based TOEFL, and 6.5 on the IELTS.

Persons seeking more information should email the current Director of Graduate Studies as listed on our website. Students can access our department website (sociology.siu.edu). Here you can find more information about the department, faculty, students, and the link for applications. For more information about graduate fellowships, which have January/February deadlines, and about financial assistance programs, see the Graduate School Website (gradschool.siu.edu/cost-aid).

**Admission from SIU M.A. to Ph.D. Program**

M.A. students who wish to continue work towards a doctoral degree must submit a formal application including the departmental application form, a statement of purpose, two letters of recommendation, a writing sample, and transcripts (these can be pulled from student's file). Applications will be reviewed using the policies, procedures, and guidelines applicable to external Ph.D. applicants and will involve an assessment of performance in the M.A. program. Applications must be received by January 1 to receive full consideration for fellowships.

**Graduate Assistantships and Fellowships**

A limited number of assistantships for qualified students are available through the department on a competitive basis. Eligible applicants may be nominated for various fellowships awarded by the Graduate School in University-wide competition that have deadlines in January and February. Once funded, a student's continued funding is contingent on the student's satisfactory performance in the program, annual evaluations by faculty (on students' performance in classes & readings, work assignments, timely progress in the program, and professional service and activities), passing comprehensive exams in a timely manner, and on the availability of funds.

**Graduate Student Evaluation Criteria**

Acceptance into either degree program, continuation/retention in either degree program, and funding in the graduate program are at the discretion of the department. Students need to maintain a GPA of at least 3.0. If a GPA goes below 3.0, the student is placed on academic probation by the Graduate School. Any graduate student on academic probation whose grade point average remains below 3.0 for two consecutive semesters in which she or he is enrolled, excluding summer sessions, will be permanently
suspended from the Graduate School, and thus from our program. In other words, the student has one semester to bring the GPA back up to an average of 3.0. Decisions about admission, retention, and funding will be based on five criteria:

1. **Timely progress in the program.** Students are expected to make normal progress toward the degree, and failure to progress according to the Graduate Catalog for Sociology will diminish priority for funding (dependent on availability), admission, and continuation. M.A. Students are expected to complete all coursework and the master’s paper within two years. Residency in the Ph.D. program requires 24 credit hours of coursework (only 6 hours of SOC 600 count toward this 24) and must occur prior to advancing to candidacy. The doctoral examination is taken in January of the second year for students with an SIU Sociology M.A. The substantive comprehensive review paper must be completed within one year of the doctoral comprehensive examination, but it is highly recommended that it be completed within a few months. Students advance to candidacy after achieving residency, successfully completing all required courses, completing both examinations, and defending the dissertation prospectus. Students need 24 hours in SOC 600 to complete the Ph.D. (only six of which may occur prior to candidacy). Failure to make timely progress in the program will decrease the likelihood of departmental funding and may impact continuation in the program. Retention and funding in the Ph.D. program are also contingent on faculty evaluations that occur annually (see the Annual Review section for details and situations that likely lead to lowered priority for funding and/or dismissal from the program). For an SIU Sociology M.A. student, the Ph.D. program should be about four years and for those with an external M.A. about five years.

2. **Grades.** M.A. students need to maintain a GPA of 3.0. Student must earn an A or B for course credit. Courses cannot be re-taken due to the two-year rotation of scheduling courses. If an M.A. student earns a C in a course, the Graduate Studies Committee will review the case to determine if the student may remain in the program or if the student will be dismissed by the department. If a student is allowed to remain in the program with one grade of C, the Graduate Studies Committee may require the student to take an alternative course (earning an A or B) to assure that the relevant skills/knowledge are achieved. A grade lower than a C (or two C's or one C and a lower grade) will result in dismissal from the program. The Department of Sociology allows two years for the completion of the M.A. degree program; decisions regarding exceptions are made on a case-by-case basis. Failure to make timely progress lowers a student's priority for departmental funding or may result in dismissal from the program.

Ph.D. students need to maintain a GPA of 3.0. Students must earn an A or B for course credit. Courses cannot be re-taken due to the two-year rotation of scheduling courses. A grade of C or lower in a required/research tool course is grounds for immediate dismissal from the program. However, in the case of a C grade in a required course, exceptions and possible remedies will be considered by the Graduate Studies Committee on a case-by-case basis. If a student earns a grade of C in a non-research tool course (i.e., an elective), the course will not count toward the required credit hours and must be replaced with a grade of A or B in an additional course and the student must meet the terms of academic probation set by the Graduate School. A grade of D or F in an elective is grounds for immediate dismissal.

- Incompletes in coursework will diminish priority for funding.
- Students with incompletes in theory (SOC 501 & SOC 502) and methods/stats (SOC 526A & SOC 526B, SOC 512, SOC 514) will be ineligible to take the comprehensive examinations.
- Students with incompletes will have lower priority for acceptance into the Ph.D. program.
- Plagiarism is grounds for de-funding and dismissal from the program.

3. **Exams.** Successful completion of the doctoral and substantive exams increases priority for funding while failing decreases priority. Failing the doctoral comprehensive exam may preclude departmental funding; failing the substantive review paper is grounds for immediate dismissal (see exam section for information on grading and revisions).

4. **Prospectus and research.** Priority for funding and retention will decrease if a student has not made progress towards a prospectus committee by the end of the second year of Ph.D. work for those with an SIU Sociology M.A. and third year of Ph.D. work for others. The dissertation prospectus should be defended by the middle of the relevant subsequent year. Students will lose funding and may be dropped from the program if they do not defend a proposal by the end of their third year in the Ph.D. program (for students with an external M.A.); exceptions will be considered by the Graduate Studies Committee on a case-by-case basis. Additionally, students who present professional papers or published papers and who submit/publish papers will be given increased priority for departmental funding. Once the student advances to candidacy, he/she has five years
to complete the dissertation as evidenced by completed data collection, analyses, and chapters as relevant.

5. Teaching evaluations. Priority for teaching-related funding will also be tied to successful teaching as indicated by teaching evaluations and faculty oversight. Students with strong research skills (indicated by coursework and exam performance) will be given priority for research-related funding contingent on resources.

Master of Arts Degree

The Master of Arts degree in sociology requires a minimum of 30 semester hours of coursework and a research paper. Students are required to take the following three courses: SOC 501, Classical Sociological Theory (3 hours); SOC 526A, Statistical Data Analysis in Sociology I (4 hours); and SOC 512, Sociological Research Methods and Design (4 hours). Students must receive an A or B in all three classes. Students are required to enroll in four additional graduate seminars (12 hours) in sociology (one of which may be at the 400 level) or related discipline if granted permission by the Director of Graduate Studies, and in four credits of Individual Research for completion of the master's degree research paper (SOC 591). Students may take Independent Readings (SOC 596) as long as the above requirements are also fulfilled.

Credit Hours per semester

We require full-time students with full assistantships (i.e., ½ time assistantships) to enroll in a minimum of eight credit hours per semester. Students with graduate fellowships, Veteran's benefits, or SIU scholarships also must take at least nine credit hours as required by the Graduate School. GAs in their final semester of the M.A. program who have or will meet all requirements may seek departmental approval to take six hours in that final semester.

Master's Research Paper

The research paper is developed from a paper produced in a sociology course or through independent readings/research with a faculty member. Students will select an advisor for the Master's Research Paper (e.g., the person who taught the course or supervised the readings/research project). Students will enroll with this faculty member for four semester hours in SOC 591, Individual Research, for the completion of the research paper. These hours should be taken when the student will be doing the most work on the research paper and can be divided across two terms. The student alerts the Director of Graduate Studies when a chair and second reader are selected. In case of disagreement over the evaluation (pass/revision/fail) of the paper, the Graduate Studies Committee will appoint a third reader. The Master's Research Paper normally is 30 to 40 pages in length and uses the standard American Sociological Review reference style. In addition to submitting the paper per the Graduate School requirements, one suitably bound copy must be deposited in the department library.

Doctor of Philosophy Degree

Advisement

The responsibility for initial advisement rests with the Director of Graduate Studies. As soon as possible, the student, in consultation with the Director of Graduate Studies, will request an appropriate member of the department's graduate faculty to serve as the student's academic advisor. This advisor will help prepare a general plan of study and will be responsible for making sure that her/his student is enrolled in the correct hours each semester and fulfilling the tool, substantive seminar, and readings requirements. It is the student's responsibility to develop, in consultation with his/her advisor, a plan of study leading to timely completion of the comprehensive examinations and dissertation (a form is available on our website). This plan of study will be filed in the student's permanent file. Change of advisor should be filed with the Director of Graduate Studies.
Research Tool Requirement

Doctoral students must complete the following courses with grades of A or B: SOC 501, SOC 502, SOC 512, SOC 514, and SOC 526A, SOC 526B, and Teaching Sociology seminar SOC 518 (equaling 25 credit hours).

In addition to these courses, students must develop research skills that are appropriate and necessary for their dissertation research (see the next section and the time-lines for additional requirements and clarifications). It is the responsibility of the student's program advisor to supervise the student's development of these research skills.

Course work and Readings

While in the Ph.D. program, students must take at least four substantive, 500-level, seminars in sociology (15 credit hours; on a case-by-case basis, permission may be granted for courses in a related discipline) beyond the tool and M.A. seminar requirements. Ideally the seminars should be taken prior to the substantive examination. In addition to the regularly offered courses and seminars, the department provides supervised readings and research courses, depending upon the availability of faculty members. Supervised readings and research courses are not to be taken as substitutes for regularly-scheduled courses and seminars, and registration in them requires prior written approval by the readings faculty on the form granting permission for the course and general approval by the student's advisor. This form must be filed with the Administrative Assistant to the graduate program.

Credit Hours per Semester

We require full-time students with full assistantships (i.e., ½ time assistantships) to enroll in a minimum of eight credit hours per semester. Students with graduate fellowships, Veteran's benefits, or SIU scholarships also must take at least nine credit hours as required by the Graduate School.

Comprehensive Examinations

Ph.D. students must pass one written comprehensive exam and one written comprehensive review paper: the Doctoral Comprehensive Exam which is taken during the second weekend in January of the first year for students with an SIU M.A. and the second year for others, and the Substantive Comprehensive Review Paper on the student's research field which should be finished within one year (i.e., by the beginning of the spring semester in the student's second or third year as appropriate). Students should form the substantive review paper committee within three months after completion of the Doctoral Comprehensive Exam. Students are advised to complete this paper within a few months if possible.

Doctoral Comprehensive Exam

This examination will be geared towards the demonstration of sociological insights, and its results will be graded by any two faculty members who taught a graduate course or supervised graduate students in the preceding three semesters. Ph.D. students with an SIU M.A. take the exam after their first semester in the Ph.D. program and others after their third semester.

Using an article selected by the examination committee, students will discuss and provide written commentary and critique on key substantive concepts, theories, method analysis, and sociological insights or contributions in 15 double-spaced typed pages, 12 pt font. Students will be assessed on their ability to clearly and concisely summarize, discuss, and critique the article and provide alternative theoretical and/or methodological arguments. The examination committee will consist of two faculty members who have taught graduate courses and/or supervised graduate students in the previous three semesters. The examiners will be chosen by lottery conducted by the Director of Graduate Studies. The examiners will rotate every exam period. The two faculty members will select a sociological article for the exam at least two to three days before the exam. Faculty graders will have up to four full regular semester weeks to grade the comprehensive exams and will report their individual written results to the Director of Graduate Studies. Results will be Pass or Fail and the grade will be used as one aspect of evaluation for continuation in the program.
Annual Faculty Review

All Ph.D. students will compile dossiers that will be used in a full faculty review of on-campus Ph.D. graduate students (including ABDs), with special focus on graduate students in their second and third years of study. The review will occur in late spring. Materials are due February 1. Students must submit a CV, along with a statement of purpose for completing Ph.D. studies.

- Up-to-date curriculum vita: name, address, address, education, current position, assistantship and work history in department, courses taught, research-paper presentations and publications, professional memberships, and other scholarly activities.
- One-page statement of plans for remainder of the doctoral program with detailed timeline including information pertaining to research direction(s) with topics, doctoral and substantive comp exams' actual or proposed dates and grades, prospectus topic and date, proposed chair and committee members; if ABD, dissertation topic, date prospectus defended, and proposed date of dissertation completion; chair, committee members.
- For each student, at least one faculty member must agree to supervise the student through the completion of the Ph.D., and at least three other faculty members must agree to serve on the student's dissertation committee. This will be done in two separate blind ballots of the full faculty for each non-ABD student. The first ballot will assess willingness of faculty to serve as the student's dissertation chair, and the second will assess willingness of faculty to serve on the student's dissertation committee. If a student fails to achieve at least one vote on the first ballot, and at least four votes on the second ballot, they will be terminated from the program. For ABD students, the faculty will review your timely progress towards completion of your dissertation. Failure to make progress may preclude funding.

Substantive Comprehensive Review Paper

The substantive review paper will assess students’ ability to think and write critically about a subfield within sociology. Students should select the area on which they will write based on their expected dissertation topic. In so doing, the review paper functions to prepare the student for the dissertation and the review paper committee may function as the basis of the dissertation committee, to which additional members will be added later. Typically the chair of the review paper committee becomes the chair of the dissertation committee. In selecting an area and organizing the relevant literature, students should first identify the area they are interested in studying, clarifying their dissertation research topic, and investigate historical/developmental issues in that area, key theoretical perspectives, early and contemporary debates, and trends indicating the state of the field. Faculty may provide broad orienting questions to help the student engage the literature.

In consultation with the chair, a second faculty member will be identified and invited to join the committee. The student will develop a reading list under the guidance of the committee. Each committee member will have the opportunity to suggest changes to the reading list; however, this must be done in time to allow the student to complete the review paper as planned. A final approved reading list must be completed and given to each member of the committee at least one month prior to writing the review paper (the date of which should be agreed upon and deposited with the Director of Graduate Studies). An ideal time to begin constituting the committee and compiling the reading list is in the spring of the first or second year (after the Doctoral Comprehensive Exam). This process may take as long as the semester, but need not. Students should familiarize themselves with all relevant readings prior to the start of the review paper time period—once the student has read, he/she gives the start date for the writing period to the Director of Graduate Studies. The writing period is 30 days.

Students should write the review paper early enough in a semester to allow faculty four regular semester weeks to grade it before the end of term. Alternatively, students may write it over one month in the summer or winter break and the faculty committee will evaluate the review paper in the first month of the subsequent semester. The review paper should be approximately 40 written pages (exclusive of references). At the end of the month, the review paper should be turned in to the Director of Graduate Studies who will attach a cover sheet and distribute it to the committee. Completing the paper in the spring or by start of fall in the year after the doctoral exam is recommended. This timeline is designed to give the student ample time to write and defend a dissertation proposal so that they may be eligible for faculty nomination for the DRA (Dissertation Research Assistantship) in early spring.
The faculty committee will have up to four regular semester weeks to read, assess, and grade the review paper (faculty are not expected to grade review papers over breaks). The committee members will turn in comments to the Director of Graduate Studies, who will then give copies to the student. At the discretion of the grading faculty, the student may be asked to defend the review paper orally before a passing grade is awarded. Outcomes include: High Pass, Pass, Revisions, or Fail. A final copy of the approved review paper should be deposited with the Graduate Secretary before the end of the semester.

In the event that revisions are required, the student has one month to complete said revisions. If revisions are necessary, committee members will likely meet with the student to offer guidance. If committee members disagree on whether the student has completed a satisfactory paper, a third faculty will grade the review paper. An oral defense of the revised paper may also be required at the faculty's discretion. Students who fail the review paper will be dismissed from the program.

IMPORTANT: Students are also required to demonstrate their mastery of a second area through two or more of the following: taking seminars (e.g., earning a certificate and/or emphasis), teaching undergraduate courses, writing for a scholarly audience (presenting and especially publishing) and appropriate demonstration in the dissertation. The chair of the student's dissertation as well as at least one other faculty with expertise in that area may discuss student's competence in this area in a letter of reference.

**Dissertation**

The dissertation is the single most important requirement for the Ph.D. degree, and the student should start thinking about potential dissertation topics soon after admission. Information concerning Graduate School requirements regarding the dissertation is contained in the Graduate Catalog.

After completing both comprehensive examinations, in consultation with the Director of Graduate Studies, the student selects a dissertation chair. In consultation with the dissertation chair, the student selects a committee consisting of four additional graduate faculty members, including one from outside of the Department of Sociology. Students selecting the Criminology/Deviance/Criminal Justice option may have committee members from the Department of Criminology and Criminal Justice who serve as either inside or outside members. Exceptions to this committee membership will be granted in only limited circumstances. Normally, students are encouraged to use the two members of their substantive comprehensive examination committee as the initial members of the dissertation committee. The Director of Graduate Studies must submit the committee roster to the Graduate School for approval prior to the scheduling of the prospectus defense.

Students may change the composition of the committee if necessary. First, the student must find a dissertation chair, who must first agree to serve and who must also be a member of the Graduate Faculty. Second, the student must identify the remaining members of the committee. Five committee members are needed, and at least one must be from outside of the Department of Sociology. After discussion with current chair/members and new/potential members, students may reconstitute a dissertation committee prior to the dissertation defense. Notification of the new members and chair is needed in writing to the Director of Graduate Studies who must submit the new roster.

The student then prepares a detailed dissertation prospectus, showing clearly the purpose and scope of the research, its relation to the previous work in the field, its theoretical relevance and significance, and the research methods and techniques. The prospectus must contain a section documenting the student's training and abilities in using the proposed research methods and techniques. The dissertation committee will have at least two weeks to read the prospectus before the formal session. During summer months, students should consult with all committee members prior to arranging for any hearings. The prospectus must be approved by the dissertation committee in a formal session and filed in the graduate program office. A prospectus must be approved no later than the end of the full-time student's sixth semester in the Ph.D. program for students with an SIU Sociology M.A. and 8th semester for those with an external M.A. Failure to do so may preclude funding.

**Dissertation Defense**

The completed dissertation must be acceptable to the chair of the dissertation committee before being circulated among committee members for evaluation. After acceptance of the dissertation by the candidate's dissertation committee, an oral examination will be conducted by the committee in an open meeting, as specified by Graduate School regulations. This examination will be based upon the contents and implications of the dissertation. The examination should not be scheduled sooner than
four weeks after the completed dissertation has been distributed to the dissertation committee. A public announcement and a copy of the dissertation shall be made available to other faculty of the department at least one week before the examination. Upon satisfactory completion of the oral examination, the student must follow the Graduate School rules for submission and subsequently submit a suitably bound copy to the department library.

**Expectations**

1. Students will complete their Substantive Comprehensive Exam in the area of concentration.
2. Students' dissertations will be on a topic related to the area of concentration.

**Committees**

Students' substantive comprehensive exam committees will have at least one sociology faculty member. Students' dissertation committees will have at least two sociology faculty members who are members of the Graduate Faculty.

**Advising**

Prior to the appointment of the dissertation chair, faculty advisors for Ph.D. students should be sociology faculty members.

**Crime/Deviance/Criminal Justice Emphasis**

A student who has been admitted to the Ph.D. program in sociology, and whose major interest is in the area of crime, criminology, or criminal justice may want to incorporate the following courses, expectations, and committee guidelines into her/his program of study to form an emphasis in the field:

**Required Courses:**

- CCJ 500  Foundations of Criminal Justice
- CCJ 504 (Criminological Theory) or SOC 572 (Seminar in Criminology)

Two additional 500-level courses, from the following:

- SOC 562  Seminar in the Sociology of Deviance and Social Control
- SOC 530  Topical Seminar in Sociology (when topic is relevant)
- CCJ 540  Seminar in Theory and Practice of Crime Prevention
- CCJ 550  Seminar in Juvenile Justice and Delinquency
- CCJ 562  Law and Social Control
- CCJ 571  Seminar in Punishment and Corrections
- CCJ 576  Policy Analysis in CCJ
- CCJ 584  Administration and Management in Criminal Justice
- CCJ 587  Seminar in Policing
- CCJ 592  Advanced Seminar in Criminology and Criminal Justice

Note: ONE of the four courses required for the concentration must be a sociology course.

**Sociology as a Secondary Emphasis in Another Ph.D. Degree Program**

A student who is enrolled in another Ph.D. degree program and who wishes to declare sociology as a secondary area must submit to the Director of Graduate Studies a written request which includes the following: a plan of course work, a personal reading list, and an overall program statement indicating the relationship of the area in sociology to the student's total program.

**Interdisciplinary Ph.D. Degree Program in Sociology**

Students who have been admitted to the Ph.D. degree program in sociology, and who wish to develop an interdisciplinary program, should review the guidelines set forth by the Graduate School. The Dean of the Graduate School approves interdisciplinary Ph.D. degree programs only when they bear the endorsement
of a department that offers a Ph.D. degree program. A student who wishes to apply for an interdisciplinary program, in which sociology will be the sponsoring department, should understand that the program of study must include substantial involvement in sociology courses and seminars, and that the department may require the student to meet other requirements similar to those established for the Ph.D. degree program in sociology.

Certificate in Women, Gender and Sexuality Studies

A student interested in a certificate in Women, Gender and Sexuality Studies (WGSS) should contact the WGSS coordinator and/or cross-listed Sociology faculty for the required courses and guidelines. The Department encourages sociology of gender/sexuality students to pursue the certificate and doing so works well within the doctoral program, especially if one course is taken during the M.A. program.

See also: https://cola.siu.edu/wgss/_common/documents/graduate-certificate-worksheet.pdf

M.A. and Ph.D. students who wish to incorporate the certificate requirements into their program of study may do so.

Note: ONE of the courses required for the certificate must be a sociology course.

Sociology Courses

SOC406 - Social Change 406-3 Social Change. Theories and problems of social change; their application, with emphasis on the modern industrial period.

SOC407 - Sociology of Sexuality 407-3 Sociology of Sexuality. (Same as WGSS 407) Examines a range of social issues related to human sexuality and the interaction between sexuality and other social processes. Emphasis is on the relevant concepts, theories, and methods in the field of sexual studies, the social and historical construction of sexuality and the ways in which social characteristics shape sexual behaviors and desires, sexual variation, including its causes and consequences, how basic social institutions affect the rules governing sexuality, the major moral and political controversies that surround sexuality, and the "dark side" of sexual life.

SOC415 - Logic of the Social Sciences 415-3 Logic of the Social Sciences. (Same as PHIL 415) An examination of the theoretical structure and nature of the social sciences and their epistemological foundations. The relationship of social theory to social criticism; theory and praxis. Historical experience and social objectivity. Social theory as practical knowledge.

SOC423 - Sociology of Gender 423-3 Sociology of Gender. (Same as WGSS 442) Examines social science theory and research on gender issues and contemporary roles of men and women. The impact of gender on social life is examined on the micro level, in work and family roles, in social institutions, and at the global, cross-cultural level.

SOC424 - Social Movements 424-3 Social Movements and Collective Behavior. An analysis of social behavior in non-institutional settings such as crowds, disasters, riots, mass panics, crazes, cults, and social movements. Emphasis is on the cultural and structural factors leading to collective action and its impact on social change.

SOC435 - Social Inequality 435-3 Social Inequality. Discussion of theories and evidence pertaining to the socio-structural causes and consequences of inequality based on social class, prestige, power, gender, wealth and income.

SOC437 - Socio Globalztn & Developmnt 437-3 Sociology of Globalization and Development. Survey of sociological theories and research on globalization and development: modernization, dependency, world-system, and global economy. Problem areas include population growth and control, economic growth and underdevelopment, role of state, transnational corporations, financial institutions, and organizations, non-
governmental organizations, work, population, migration, social movements and resistance, gender, race-ethnic, class, and sexuality issues.

**SOC438 - Soc of Ethnic Relations** 438-3 Sociology of Ethnic Relations in World Perspective. Examines theories, concepts and research on the structure of ethnic relations and ethnic problems in contemporary societies in major world regions. Assimilationist, pluralist, secessionist, and militant types of ethnic and racial group relations are covered in selected societies. Designed for students with advanced interest in comparative ethnic relations. Prerequisite: SOC 215 is recommended.

**SOC455 - Racial Inequality** 455-3 Racial Inequality. This course is an introductory survey on the sociology of Racial Inequality. As such, the basic objective of this course is to give students a broad understanding of race and inequality issues in society. This course will require students to become familiar with the critical frameworks and concepts through which social scientists make sense of racial inequality; to come to terms with the ideological, political, and economic mechanisms that perpetuate racist structures; to study the past and present historical contexts within which racial inequality is given shape; and to explore potential venues for change.

**SOC460 - Sociology of Medicine** 460-3 Sociology of Medicine. Analyzes the social structures and issues involved in health, illness, and health-care delivery systems in the United States. Explores the economic and political influences on the role of medicine in society, as well as the organization of medical care and health institutions. Critically examines the social processes and factors that influence health and illness behavior.

**SOC461 - Women, Crime and Justice** 461-3 Women, Crime and Justice. (Same as CCJ 460 and WGSS 476) A study of women as offenders, as victims, and as workers in the criminal justice system.

**SOC462 - Victims of Crime** 462-3 Victims of Crime. (Same as CCJ 462) An examination of the extent and nature of victimization, theories about the causes of victimization, the effects of crime on victims and services available to deal with those effects, victims' experiences in the criminal justice system, the victims' rights movement, and alternative ways of defining and responding to victimization.

**SOC465 - Sociology of Aging** 465-3 Sociology of Aging. The adult life cycle from a sociological perspective, with emphasis on the later stages of adulthood. Special topics on aging include demographic aspects, family interaction, ethnicity, and cross-cultural trends.

**SOC471 - Intro to Social Demography** 471-3 Introduction to Social Demography. Survey of concepts, theories, and techniques of population analysis; contemporary trends and patterns in composition, growth, fertility, mortality, and migration. Emphasis is on relationship between population and social, economic, and political factors.

**SOC473 - Juvenile Delinquency** 473-3 Juvenile Delinquency. (Same as CCJ 473) An in-depth study of theories of delinquency, analytical skills useful in studying delinquent offenders, systematic assessment of efforts at prevention, and control and rehabilitation in light of theoretical perspectives. Six hours of social/behavioral science recommended.

**SOC475 - Political Sociology** 475-3 Political Sociology. (Same as POLS 419) An examination of the social bases of power and politics, including attention to global and societal political relations, as well as individual-level political beliefs and commitments; primary focus on American politics.

**SOC476 - Religion and Politics** 476-3 Religion and Politics. (Same as POLS 476) Examines the connection between religious beliefs and institutions and political beliefs and institutions. Comparative studies will focus on religious political movements in the United States and throughout the world.

**SOC490 - Special Topics in Sociology** 490-3 Special Topics in Sociology. Varying advanced sociological topics selected by the instructor for study in depth. May be repeated for a maximum of twelve semester hours provided registrations cover different topics. Topics announced in advance.

**SOC501 - Classic Sociology Theory** 501-3 Classical Sociological Theory. A systematic survey of sociological theory with the focus on 19th and early 20th-century sociological thought. An in-depth examination of a selected number of thinkers whose work laid the foundation for major schools of
contemporary sociology. Students are expected to be familiar with the fundamentals of sociological analysis.

**SOC502 - Contemporary Sociology Theory** 502-3 Contemporary Sociological Theory. A survey of major 20th-century theoretical orientations in sociology with emphasis on their differing modes of conceptualization and alternative research programs. Students are expected to be familiar with the classics of sociological thought.

**SOC506 - Sem-Contemp Soc Theory** 506-3 Seminar on Contemporary Sociological Theory. Recent trends in sociological theory; current approaches to the construction and application of theoretical models and their relations to empirical research. Prerequisite: SOC 501 or consent of instructor.

**SOC507 - Sociology of Sexuality** 507-3 Seminar in the Sociology of Sexuality. (Same as WGSS 507) Examines the emerging body of work in the fast-growing field of sexuality studies. While the course focuses on sociological research, it takes a few side trips into other disciplines. We begin by discussing the evolution of theory and methodology in the sexual sciences. After briefly considering the contributions of early sexologists and the work of Sigmund Freud, we will survey the sociology of sexuality from its beginnings in quantitative research, through classical sociological theory, social constructionism, and feminism. We'll then examine Foucault's radical rethink of sexuality and grapple with the challenges of queer theory. The second part of the course will take up several substantive areas in the sociology of sexuality, drawing on cutting edge quantitative and qualitative research.

**SOC512 - Research Methods** 512-4 Sociological Research Methods and Design. Focus on research process: identification of the role of theory, formulation of research questions, research design and quantitative, qualitative, and mixed method data collection techniques. Connections between theory, research design and measurement decisions, and interpretation (answering research questions) are emphasized throughout. Includes practical and ethical issues, e.g. informed consent.

**SOC514 - Qualitative Methodology** 514-4 Qualitative Methodology. Focus on research strategies involving the systematic exploration, documentation and analytic description of social settings, interactions, meanings, lifeworlds and texts. Includes discussion of field observation, depth interviewing, oral histories/narratives, case studies, biographies and life histories, focus group interviewing, content analysis of written and visual data, historical/archival investigations, among other approaches.

**SOC518 - Teaching Sociology** 518-3 Teaching Sociology. Emphasis is on the development of teaching skills and pedagogical knowledge for instructors in sociology.

**SOC521 - Seminar: Social Psychology** 521-3 Seminar in Social Psychology. In depth examination of specific theoretical systems or substantive problems in social psychology. Students wishing specific information on the topic of the seminar should consult with the instructor for more detail.

**SOC526A - Statistical Data Analysis I** 526A-4 Statistical Data Analysis in Sociology I. Provides a foundation in univariate and bivariate descriptive statistics, inferential statistics including hypothesis testing about population parameters and bivariate and multivariate relationships, and measures of association for nominal, ordinal, and interval-ratio variables, and an introduction to bivariate and multivariate correlation and linear regression (including concepts of causal modeling and control variables). Restricted to graduate standing.

**SOC526B - Statistical Data Analysis II** 526B-4 Statistical Data Analysis in Sociology II. Provides in-depth instruction in multiple regression including assumptions of linear model, diagnostics and corrections for violation, exploratory factor analysis, using categorical dependent variables (logistic and multi-nominal regression), nonlinear relationships, interactions, and extensions to advanced techniques as time allows. Prerequisite: SOC 526A (or successful pass of proficiency test).

**SOC530 - Topical Seminar in Soc** 530-2 to 12 (2 to 4 per topic) Topical Seminar in Sociology. Content varies with interests of instructor and students. Special approval needed from the instructor.

**SOC533 - Sem-Soc Stratification** 533-3 Seminar in Social Stratification. Comparative study of power, social class, and status; conceptions of social structure and measurement techniques; explanations of social and occupational mobility; institutions and differential life changes.
SOC534 - *Sem Global & Soc Change* 534-3 Seminar in Globalization and Social Change. Overview of prevailing theories, research, methods, and analysis in globalization and social change. These include socio-economic changes in capitalism and development, emergence of global social change agents: transnational corporations, financial institutions, and organizations, nongovernmental organizations; informalization of work, population, migration, social and revolutionary movements, gender, race-ethnic, class, and sexuality.

SOC539 - *Sem-Complex Organizations* 539-3 Seminar in Complex Organizations. Overview of theories, research, and prevailing issues of complex organizations. These will include the power structure of the business community, emergence and structure of the bureaucrative organization, bases of authority, systems of formal and informal relations, unanticipated consequences of organizational structure, labor relations, total institutions and social movements as organizations.

SOC542 - *Seminar on the Family* 542-3 Seminar on the Family. Overview of the theoretical approaches, substantive issues, and techniques of research and measurement in the study of American family life. Approaches include structural functionalism, conflict theory, and the feminist critique. Among the substantive topics are family roles and relationships, kinship, relationships of the family to other institutions and family change.

SOC544 - *Sociology of Gender* 544-3 Sociology of Gender. (Same as WGSS 544) Examines major theories, themes, and research methods on the intersection of gender, race, class, and sexuality. Topics may include: construction of gender, race, class and sexual identities; work; social movements; intersection of family and work; parenting and reproduction; historical and cross-national dimensions.

SOC545 - *Gender and Work* 545-3 Gender and Work. (Same as WGSS 545) This course is designed to investigate how gender structures the workplace, as well as how men and women both reproduce and negotiate gender at work. Focusing on select topics, we will develop an understanding of workplaces as gendered organizations and discuss sex segregation, wage inequality, the glass ceiling, the glass escalator, sex work, men and women in nontraditional occupations, the body at work, emotional labor, aesthetic labor, immigration and work, globalization, and unemployment and welfare. Also, this class will take an intersectional approach to analyzing and discussing issues of gender inequality at work; meaning, we will take seriously how gender intersects with race, ethnicity, class, and sexuality to shape both inequality and resistance at work.

SOC547 - *Gender and Social Change* 547-3 Gender and Social Change. (Same as WGSS 547) This graduate seminar is a sociology of gender course that focuses on changes in the subfield itself and in peoples’ lived experiences in terms of gender, gender relations, and gender stratification. Readings and discussions will trace the development of the sociology of gender over the last several decades. We will discuss how ideas and theories have changed over the years including changes in concepts and in how sociologists define, problematize, and theorize about sex and gender as traits, identities, relations, structures, and systems. We will also explore ‘objective’ or actual change (or lack of change) related to gender in individuals, groups, and societies.

SOC551 - *Sociology of Religion* 551-3 Sociology of Religion. Theoretical and empirical study of the origin, location and function of religious ideas and institutions in society.

SOC552 - *Seminar: Race & Ethnic Rels* 552-3 Seminar in Race and Ethnic Relations. Overview of theories, research and prevailing issues of race and ethnic relations in contemporary societies. Discussions will include world expansion during colonialism, political economy of minority groups, class and gender issues in the global development.

SOC555 - *Social Movements/Coll Actn* 555-3 Social Movements and Collective Action. A seminar designed to survey the major sociological approaches to social movements and collective action.
Emphasis will be on movement culture, social movement organizations and the social environment in which collective action occurs.

SOC557 - Revolutions 557-3 Revolutions and Radical Social Change. This course is designed to explore the ways in which revolutions have been theorized. It sets out to study Classical (Chinese, French, and Russian) and Modern (Cuban, Mexican, Iranian, and other Third World) historical cases, as well as contemporary popular uprisings. This course will require students to become familiar with the structural causes of revolution; the cultural and ideological roots of revolutionary mobilization; the emotional, gendered, and story-telling dimensions of revolution-making; and the relationship between globalization and more contemporary attempts at Radical Social Change.

SOC572 - Seminar in Criminology 572-3 Seminar in Criminology. A survey of classical and contemporary theoretical perspectives related to crime and justice.

SOC591 - Individual Research 591-1 to 4 Individual Research Supervised Research Projects. Open to graduate students with a major in sociology. Graded S/U only. Special approval needed from the instructor and departmental director of graduate studies.

SOC596 - Readings in Sociology 596-1 to 8 Readings in Sociology. Supervised readings in selected subjects. Graded S/U only. Special approval needed from the instructor and departmental director of graduate studies.

SOC600 - Dissertation 600-1 to 32 (1 to 16 per semester) Dissertation. Special approval needed from the chair.

SOC601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

SOC699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

---

**Special Education**

The School of Education offers programs leading to a Graduate Certificate in Special Education, Master's Degree in Education in Special Education, and a Doctor of Philosophy in Education with a Concentration in Special Education.

**Graduate Certificate in Special Education**

The faculty, staff and students in the special education program are committed to making a positive difference in the lives of their students with disabilities and their families by increasing their success in school, work, community, and living environments. The graduate certificate plan of study in special education is designed to enhance the applicant's experience and expertise through academic study, research, and clinical opportunities. Program completers with a current Professional Education License (PEL) in Illinois will be eligible for the Illinois State Board of Education endorsement for the Learning Behavior Specialist I (LBS I) in:

- K–Grade 3 (for educators who already hold an early childhood self-contained general education endorsement)
- Grade 1–6 (for educators who already hold an elementary education endorsement)
- Grade 6–12 (for educators who already hold a secondary education endorsement)

The LBS I endorsement also requires a passing score on the LBS I (155) test.

Applicants for the Graduate Certificate in Special Education must meet the criteria for admission to the Graduate School. In addition, candidates must submit a department application form, a letter of application, all undergraduate and graduate transcripts, and two letters of reference to the department.

The Special Education Graduate committee will evaluate the application materials and make appropriate recommendations for acceptance or rejection of admission to the program. It is the responsibility of the committee to exercise professional judgement related to the criteria that applicants must meet in order to be considered for admission to the program. Students will be informed in writing of the Special Education Graduate Committee's decision.

**Graduate Certificate Program Admission Criteria**

Admission to the Graduate Certificate Program in Special Education will be based upon the following criteria:

1. A baccalaureate degree in elementary education, secondary education or a related field such as social work or psychology.
2. Current Professional Education License (PEL) with endorsement in a teaching area in the state of Illinois.
3. Undergraduate grade point of 2.75 or higher on a 4.0 scale.
4. A minimum of two letters of recommendation, which on the whole, clearly attest to the professional dispositions of a special education professional as articulated in the CEC Code of Ethics and Standards for Professional Practice, and predict academic success at the graduate level.
5. A letter of application (approximately 400 words) in which the applicant summarizes his/her professional goals, career objectives, research interests, motivation for graduate work and other pertinent information.
6. Departmental application form.

All application requirements must be completed before consideration of an applicant for admission. The Graduate Committee evaluates the credentials of each applicant. When an application file is complete, it will be referred to the Graduate Committee to review at their next scheduled meeting.

Students may be required to complete an interview with the Special Education faculty.

Program Requirements

Coursework*

- SPED 411 Assessment in Special Education (3 credits)
- SPED 417 Behavior Management for Children and Youth with Disabilities (3 credits)
- SPED 418 Methods and Materials for Teaching a Functional Curriculum (3 credits)
- SPED 419 Academic Methods and Materials for Student with Disabilities (3 credits)
- SPED 420 Advanced Theories and Practices in Special Education (3 credits)
- SPED 423 General Procedures in Special Education (3 credits)
- ELECTIVE (Based on the applicant's current PEL restrictions) (3 credits)

Total credits: 21 hours

*Up to 15 hours of coursework for the Graduate Certificate program may count toward the 30-credit-hour requirement for completing the Master's of Education in Special Education degree described below.

Retention Criteria

For a student to be retained in the Graduate Certificate program, students must complete all coursework with a minimum grade of B and demonstrate acceptable professional behaviors which the faculty deem essential for competent and effective educators, and which are articulated in the Council for Exceptional Children (CEC) Code of Ethics and Standards for Professional Practice for Special Educators.

Application Procedures

Applicants must submit all of the following items to be considered for admission to the Graduate Certificate program in Special Education:

1. Graduate School Application.
2. Official Transcripts. Official transcripts of all previous undergraduate and graduate college work at institutions other than SIU should be sent directly to the Graduate Secretary, Department of Counseling, Quantitative Methods, and Special Education, Southern Illinois University at Carbondale, IL 62901-4618.
3. Department Application Form. This form includes pertinent biographical information and professional experience.
4. Letter of Application (approximately 400 words) in which the applicant summarizes professional goals, including career objectives, research interests, motivation for graduate work, and other pertinent information.
5. Copy of All Professional licenses or certificates.
6. Letters of Recommendation. Applicants must submit at least two letters of reference which attest to your professional competence, academic preparation, and potential for graduate work. Ideally one letter should be from a college or university professor who can discuss you academic abilities, and one should be from an administrator or colleague who can authoritatively describe your professional experience and potential.
Master of Science in Education in Special Education degree (with LBS-I Endorsement)

*Enrollments in Education in Special Education (M.S., Ph.D.) have been suspended indefinitely.

Applicants for the Master of Science in Education in special education degree must meet the criteria for admission to the Graduate School. In addition, candidates must submit a department application form, a letter of application, all undergraduate and graduate transcripts, and two letters of reference to the department. The Special Education Graduate Committee will evaluate the application materials and make appropriate recommendations for acceptance or rejection of admission to the program. It is the responsibility of the committee to exercise professional judgment related to the criteria that applicants must meet in order to be considered for admission to the program. Students will be informed in writing of the Special Education Graduate Committee's decision. Upon admission to the program, the student will be assigned an adviser with whom he/she will design a Graduate Degree Plan.

Master's Program Admission Criteria

Admission to the Masters Program in Special Education will be based upon the following criteria:

1. A baccalaureate degree in elementary education, secondary education or a related field such as social work or psychology.
2. Current Professional Education License (PEL) with endorsement in a teaching area in the state of Illinois.
3. Undergraduate grade point of 2.75 or higher on a 4.0 scale.
4. A minimum of two letters of recommendation, which on the whole, clearly attest to the professional dispositions of a special education professional as articulated in the CEC Code of Ethics and Standards for Professional Practice, and predict academic success at the graduate level.
5. A letter of application (approximately 400 words) in which the applicant summarizes his/her professional goals, career objectives, research interests, motivation for graduate work and other pertinent information.
6. Departmental application form.

All applications requirements must be completed before consideration of an applicant for admission. The Graduate Committee evaluates the credentials of each applicant. When an application file is complete, it will be referred to the Graduate Committee to review at their next scheduled meeting. Students may be required to complete an interview with the Special Education faculty.

Program Requirements

The Master of Science in Education degree in Special Education requires a minimum of 30 semester hours. Program requirements include the following courses:

Coursework

- SPED 411  Assessment in Special Education (3 credits)
- SPED 417  Behavior Management for Children and Youth with Disabilities (3 credits)
- SPED 418  Methods and Materials for Teaching a Functional Curriculum (3 credits)
- SPED 419  Academic Methods and Materials for Student with Disabilities (3 credits)
- SPED 420  Advanced Theories and Practices in Special Education (3 credits)
- SPED 423  General Procedures in Special Education (3 credits)
- ELECTIVE  (Based on the applicant's current PEL restrictions) (3 credits)
- SPED 500  Research Issues in Special Education (3 credits)
- SPED 578  Legal Framework for Special Education (3 credits)
- SPED 591  Independent Investigation (3 credits)

Total credits: 30 hours
Master of Science in Education in Special Education degree (No LBS-I Endorsement)

*Enrollments in Education in Special Education (M.S., Ph.D.) have been suspended indefinitely.

Applicants for the Master of Science in Education in special education degree who are not seeking the LBS-I endorsement must meet the criteria for admission to the Graduate School. In addition, candidates must submit a department application form, a letter of application, all undergraduate and graduate transcripts, and two letters of reference to the department. The Special Education Graduate Committee will evaluate the application materials and make appropriate recommendations for acceptance or rejection of admission to the program. It is the responsibility of the committee to exercise professional judgement related to the criteria that applicants must meet in order to be considered for admission to the program. Students will be informed in writing of the Special Education Graduate Committee's decision. Upon admission to the program, the student will be assigned an advisor with whom he/she will design a Graduate Degree Plan.

Master's Program Admission Criteria

Admission to the Masters Program in Special Education will be based upon the following criteria:

1. A baccalaureate degree in special education, elementary education, secondary education or a related field such as social work or psychology.
2. Undergraduate grade point of 2.75 or higher on a 4.0 scale.
3. A minimum of two letters of recommendation, which on the whole, clearly attest to the professional dispositions of a special education professional as articulated in the CEC Code of Ethics and Standards for Professional Practice, and predict academic success at the graduate level.
4. A letter of application (approximately 400 words) in which the applicant summarizes his/her professional goals, career objectives, research interests, motivation for graduate work and other pertinent information.
5. Departmental application form.

All application requirements must be complete before consideration of an applicant for admission. The Graduate Committee evaluates the credentials of each applicant. When an application file is complete, it will be referred to the Graduate Committee to review at their next scheduled meeting. Students may be required to complete an interview with the Special Education faculty.

Program Requirements

The Master of Science in Education degree in Special Education requires a minimum of 30 semester hours. Program requirements include the following courses:

Core Coursework

- SPED 500  Research Issues in Special Education (3 credits)
- SPED 515  Collaboration-Based Delivery Systems in Special Education (3 credits)
- SPED 550  Behavior Management of Exceptional Children and Youth (3 credits)
- SPED 578  Legal Framework for Special Education (3 credits)
- ELECTIVE (3 credits)
- ELECTIVE (3 credits)
- ELECTIVE (3 credits)
- SPED 591  Independent Investigation (3 credits)

Total credits: 30 hours

Doctor of Philosophy in Education

*Enrollments in Education in Special Education (M.S., Ph.D.) have been suspended indefinitely.
Special Education Courses

**SPED405 - Early Childhood Sped Methods** 405-3 Introduction to Early Childhood Special Education Methods: Infants, Toddlers, and Preschoolers with Special Needs. This course focuses on effective methods, materials and programs for infants, toddlers, and preschoolers with special needs, including IEPs, IFSPs, working with families, service delivery, case-management, transition planning, and curriculum methods and procedures. Prerequisite: SPED 412 or consent of instructor.

**SPED408 - C&M Teach Exceptional Child** 408-3 Characteristics and Methods for Teaching Exceptional Children. (Same as EDUC 308) For pre-service teachers who serve children and youth with disabilities. The course focuses on essential disability characteristics, data-based decision-making, scientifically-based academic and behavioral interventions and strategies to differentiate instruction and accommodate learners with disabilities in general education classrooms.

**SPED409 - Cross-Cultural Studies** 409-1 to 6 Cross-Cultural Studies. Seminar and/or directed independent study concerned with socio-cultural variables affecting the educational needs of children and youth with a disability. Prerequisite: SPED 300 or consent of instructor and department chair.

**SPED410 - Inst Plan Student-Disabilities** 410-3 Instructional Planning for Students with Disabilities. This course presents the learning characteristics of children and youth with learning disabilities, emotional/behavior disorders, intellectual disabilities and autism spectrum disorders. Instructional planning, classroom management and integration of related services will be examined. Prerequisite: SPED 300 or 420 or concurrent enrollment.

**SPED411 - Assessment in Special Ed** 411-3 Assessment in Special Education. Course covers general assessment information, norm reference testing, curriculum based assessment, adaptive behavior scales and issues relating to cultural diversity. Prerequisite: SPED 300 or 420, 410, or concurrent enrollment. Laboratory fee: $15.

**SPED412 - Intro Assessment: E.C.S.E** 412-3 Introduction to Assessment and Curriculum Methods in Early Childhood Special Education. This course presents an introduction to child and family assessment and the development of child and family goals in Early Childhood Special Education. Topics will include types of assessment commonly used, rationale for assessment, methods of assessment, reporting assessment results, writing child and family goals. A fee for testing materials is required. Prerequisite: SPED 300/420 or concurrent enrollment or consent of instructor. Fee: $15.

**SPED417 - Behvr Mgmt: Child/Youth Disabs** 417-3 Behavior Management for Children and Youth with Disabilities. This course focuses on the implementation of behavior management strategies and tactics to be used with students with disabilities in a variety of educational environments. Prerequisite: SPED 300 or 420, 410, 411, 423, and must be admitted to the TEP as a special education major, or consent of instructor.

**SPED418 - Methods Teach Functnl Curr** 418-3 Methods and Materials for Teaching a Functional Curriculum. This course covers the principles of curriculum construction, program development and evaluation, classroom organization, instructional approaches, strategies and materials for teaching a functional curriculum. Prerequisite: SPED 300 or 420, 410, 411, and 423, and must be admitted to the TEP as a special education major, or consent of instructor.

**SPED419 - Academic Methods** 419-3 Academic Methods and Materials for Student with Disabilities. This course covers the academic methods, materials and strategies used with students with disabilities receiving special education services in school and community settings. Prerequisite: SPED 300 or 420, 410, 411, 423 and must be admitted to the Teacher Education Program as a special education major.

**SPED420 - Advanced Theories & Practices** 420-3 Advanced Theories and Practices in Special Education. The course is an advanced survey of exceptional populations and addresses educational,
social, legal, cultural and community practices associated with individuals with disabilities, ages 0 - 21 years old.

**SPED423 - General Procedures Special Ed**
423-3 General Procedures in Special Education. Presents key provisions of Public Law 94-142 and subsequent amendments, including Individualized Education Programs (IEPs). Course content also includes principles of applied behavior analysis and effective instruction of students with disabilities. Prerequisite: SPED 300 or 420, 410, 411 or concurrent enrollment.

**SPED425 - Home-School Coordination SPED**
425-3 Home-School Coordination in Special Education. The course covers techniques used in parent interviews, conferences and referrals by school personnel; due process and procedural safeguards for parents and youth with disabilities. Prerequisite: SPED 300 or 420, 410, 411, 423 with grades of C or better or concurrent enrollment.

**SPED430 - Secondary Programming**
430-3 Secondary Programming for Students with Disabilities. Deals with modifications of and additions to school programs to ensure that they are appropriate to the needs of adolescents with disabilities. Content includes coverage of remedial and compensatory program models, transition programming, career and vocational education. Prerequisite: SPED 300 or 420, 410, 411, 423 with grades of C or better or concurrent enrollment.

**SPED431 - Work Stdy Adol Severely Disbld**
431-3 Work-Study Programs for Adolescents Labeled Severely Disabled. This course is designed to prepare educators and other human service professionals to assist adolescents and young adults with severe disabilities for community integrated employment options. Content will include community-referenced curriculum objectives, community-based instruction for employment and functional skill development.

**SPED494A - Practicum in SPED-Assessment**
494A-1 Practicum in Special Education-Assessment. This course includes clinical experiences in public school and community settings in the selection, administration and interpretation of norm-referenced and curriculum-based assessments, adaptive behavior scales, behavior rating scales and checklists and issues relating to cultural diversity. Prerequisite: SPED 300 or 420 and 410 with grades of C or better.

**SPED494B - Practicum-Functional Curriculum**
494B-1 Practicum in Special Education-Functional Curriculum. This course includes clinical experiences in public school and community settings in planning, implementing and instructing a functional curriculum. Prerequisite: SPED 300 or 420, 410, 411, 423 and must be admitted to Teacher Education Program.

**SPED495 - Internship-Special Education**
495-1 to 6 Internship in Special Education. An applied experience for students seeking certification in special education through alternative or subsequent certificate routes. Students will be required to complete a set of activities and prepare a number of products appropriate for the special education program and/or students with disabilities being served in the internship placement. Students will be expected to complete a portfolio of products to demonstrate professional competence. Special approval needed from the Program Coordinator.

**SPED500 - Res Issues in Special Educ**
500-3 Research Issues in Special Education. Students will study issues and research practices in special education and will learn how they both conduct research, translate research findings and develop practices in special education based on research outcomes. Special approval needed from the instructor.

**SPED501 - Methods: Severe Behv**
501-3 Methods and Materials for Persons with Severe Behavior Challenges. Deals with methods, materials and instructional management practices common to the instruction and management of student experiencing severe behavioral challenges in the schools and in residential settings.

**SPED505 - Organize Implement EC SPED**
505-3 Organizing and Implementing Early Childhood Special Education Programs. This course presents theoretical frameworks and current best practices involved in the development, implementation and evaluation of Early Childhood Special Education programs. Content will include discussion of models of teaming, ethical issues, interagency coordination, transition, mentoring and supervision. Prerequisite: SPED 300 or SPED 420, SPED 412 and SPED 405.

**SPED511A - Adv Inst Design & Mthds**
511A-3 Advanced Instructional Design and Methodology for Students with Disabilities. Advanced study of evidence-based practices related to the development
and delivery of effective educational programs for students with mild disabilities. Emphases will include instructional design, instructional strategies and techniques, include the use of technology to meet educational needs of students with mild disabilities.

**SPED511B - Curr Inst Remed Lrn Disblties** 511B-3 Curriculum for Instructional Remediation of Learners with Disabilities. Advanced study of curriculum and curricular approaches to meeting the educational needs of students with mild disabilities in special education and general education classrooms. Emphasis include academic and functional curriculum for basic skills and content areas, direct instruction and curriculum modifications and adaptations.

**SPED512 - Advanced ECSE** 512-3 Advanced Child and Family Assessment, Curriculum Methods and Evaluation in Early Childhood Special Education. This course presents advanced coursework and practical experiences in child and family assessment, selection of curricula, and evaluation in Early Childhood Special Education. Students will review current assessment and curriculum packages, conduct evaluations and write assessment reports. Practical experience will be an integral part of this course. Prerequisites: SPED 300 or 420, 405 and 412.

**SPED513 - Organz, Admintn & Superv** 513-3 Organization, Administration, and Supervision in Special Education. Emphasis upon the functions, underlying principles and cautions to be observed in the organization and administration of special education. The selecting and training of teachers, problems of supervision, special equipment, transportation, cooperating agencies and legal aspects of the problem. Prerequisite: SPED 300 or SPED 420. Special approval needed from program coordinator.

**SPED514 - Sim Admin Tasks in SPED** 514-3 Simulation of Administrative Tasks in Special Education. Development of skills required of special education administrators and supervisors through the use of simulation materials focusing on developing administrative skills. Prerequisite: SPED 300 or 420. Special approval needed from program coordinator.

**SPED515 - Collab-Based Delivery Systems** 515-3 Collaboration-Based Delivery Systems in Special Education. Designed to provide students with a thorough knowledge and skill base in the collaboration process including problem-solving processes, communication skills and conflict resolution skills. Collaboration-based approaches will be examined as alternative systems and methods of meeting the educational needs of students with disabilities within a continuum of special education services.

**SPED516 - Adv Assess Diverse Learners** 516-3 Advanced Assessment for Diverse Learners. Develop practitioner's knowledge and skills to develop and implement standardized and informal assessment systems to guide program planning and instructional decision-making for students with disabilities in regular and special education programs. Furthermore, practitioners will identify, utilize, and implement modifications and accommodations to facilitate students' performance on informal and standardized assessment tools. Prerequisite: SPED 411 or consent of instructor.

**SPED517 - System Care Exc Chld Yth** 517-3 Systems of Care for Exceptional Children and Youth. Survey and examination of social agencies and models of service delivery contributing to the welfare and care of exceptional children and youth. Emphasis will be given to models, services, and organization of system of care serving youth with disabilities.

**SPED550 - Behave Mgt Except Child Youth** 550-3 Behavior Management of Exceptional Children and Youth. This course deals with assessment, implementation, and monitoring procedures involved with the use of behavior change techniques in special education programming. Emphasis will be placed on the actual implementation of behavior change techniques with school aged students with disabilities. Special approval needed from the instructor.

**SPED578 - Legal Framework Services** 578-3 Legal Framework for Special Education Services. Covers state and federal statutes and regulations including IDEA, Section 504: The Rehabilitation Act of 1973, and No Child Left Behind Act, as well as current legislation and litigation with respect to provision of educational services for children and youth/young adults with disabilities. Prerequisite: SPED 300 or SPED 420, or consent of instructor.
SPED580 - Master Sem-Issues & Trends 580-3 Master’s Seminar: Issues and Trends in Special Education. Analysis of research, trends, and programs in the education of children with disabilities. Open to graduate students in special education or related field. Prerequisite: SPED 300 or 420.

SPED582 - P M Sem-Theory & Models 582-3 Post-Master’s Seminar: Theories and Models in Special Education. Critical discussion of eight major intervention models used historically and currently with handicapped children in educational settings. Special approval needed from the instructor.

SPED583 - P M Sem-Prog Coordination 583-3 Post-Master’s Seminar: Program Coordination in Special Education. Analysis of organizational principles and practices required for the creation and maintenance of programs to meet the needs of persons who are handicapped and require specialized educational programs within the school setting. Special approval needed from the instructor.

SPED584 - Issues in Intl’ Special Educ 584-3 Issues in International Special Education. This course is designed to examine major aspects of disability theory and issues in international special and inclusive education. It provides current knowledge on disability models, as well as on special education systems world-wide; it examines historical patterns, the international human rights law and country legislation, cultural issues and intervention practices related to special education; it reviews major concepts, issues and debates in the international field of special education.

SPED585 - Doctoral Sem-Evaluation 585-3 Doctoral Seminar: Evaluation in Special Education. An analysis of the purposes, approaches, design, methodology and applications of evaluative studies in special education. Prerequisite: SPED 582, SPED 583.

SPED586 - Proseminar in Special Educ 586-1 to 4 (1,1,1,1) Proseminar in Special Education. A topical seminar providing for the systematic discussion of current research in the field of special education. Specific content is determined by participating faculty and students, relative to current faculty research and dissertations in progress within the department. Doctoral students will register for a total of four credit hours, one per semester, after which they will audit the course during the pursuit of their dissertation.

Master's students admitted with special approval from the adviser and department chair.

SPED590 - Readings in SPED 590-1 to 6 Readings in Special Education. Study of a highly specific problem area in the education of exceptional children. Open only to graduate students. Graded S/U only. Prerequisite: SPED 300 or 420. Special approval needed from the instructor.

SPED591 - Independent Investigation 591-1 to 6 Independent Investigation. A field study for graduate students. Conducted in a school system where full cooperation is extended. The study will involve selection of a problem, surveying pertinent literature, development of experimental design and procedures, recording results and appropriate interpretations and summaries. Special approval needed from the instructor.

SPED594A - Practicum SPED Behav Intervnt 594A-1 to 6 Practicum in Special Education-Behavior Interventions. A capstone field-based experience for special educators seeking advanced preparation in the field of special education. Student will select the appropriate practicum experience as appropriate for his/her program of study or Learning Behavior Specialist II certification.

SPED594B - Practicum SPED Curr Adaptation 594B-1 to 6 Practicum in Special Education-Curriculum Adaptation. A capstone field-based experience for special educators seeking advanced preparation in the field of special education. Student will select the appropriate practicum experience as appropriate for his/her program of study or Learning Behavior Specialist II certification.

SPED594D - Practicum SPED-Early Child 594D-1 to 6 Practicum in Special Education-Early Childhood Special Education. A capstone field-based experience for special educators seeking advanced preparation in the field of special education. Student will select the appropriate practicum experience as appropriate for his/her program of study or Learning Behavior Specialist II certification.

SPED594E - Practicum SPED-Supervision 594E-1 to 6 Practicum in Special Education-Supervision. A capstone field-based experience for special educators seeking advanced preparation in the field of special education. Student will select the appropriate practicum experience as appropriate for his/her program of study or Learning Behavior Specialist II certification.
SPED595A - Intern-Res & Applied Studies 595A-1 to 12 (1 to 6) Internship-Research and Applied Studies. The doctoral internship is a required experience. Internship hours do not apply to minimum needed for graduation. Each student shall engage in specialized service areas within a school system, university, state office, federal office, or private agency. Interns will participate in regularly scheduled on-campus or on-site seminars with the university and field internship supervisors.

SPED595B - Internship-Evaluation 595B-1 to 12 (1 to 6) Internship-Evaluation. The doctoral internship is a required experience. Internship hours do not apply to minimum needed for graduation. Each student shall engage in specialized service areas within a school system, university, state office, federal office, or private agency. Interns will participate in regularly scheduled on-campus or on-site seminars with the university and field internship supervisors.

SPED595C - Internship-Administration 595C-1 to 12 (1 to 6) Internship-Administration. The doctoral internship is a required experience. Internship hours do not apply to minimum needed for graduation. Each student shall engage in specialized service areas within a school system, university, state office, federal office, or private agency. Interns will participate in regularly scheduled on-campus or on-site seminars with the university and field internship supervisors.

SPED595D - Internship-Univ Teaching 595D-1 to 12 (1 to 6) Internship-University Teaching. The doctoral internship is a required experience. Internship hours do not apply to minimum needed for graduation. Each student shall engage in specialized service areas within a school system, university, state office, federal office, or private agency. Interns will participate in regularly scheduled on-campus or on-site seminars with the university and field internship supervisors.

SPED595E - Intern-Prog Plan & Mgt 595E-1 to 12 (1 to 6) Internship-Program Planning and Management. The doctoral internship is a required experience. Internship hours do not apply to minimum needed for graduation. Each student shall engage in specialized service areas within a school system, university, state office, federal office, or private agency. Interns will participate in regularly scheduled on-campus or on-site seminars with the university and field internship supervisors.

SPED595F - Internship-Supervision 595F-1 to 12 (1 to 6) Internship-Supervision. The doctoral internship is a required experience. Internship hours do not apply to minimum needed for graduation. Each student shall engage in specialized service areas within a school system, university, state office, federal office, or private agency. Interns will participate in regularly scheduled on-campus or on-site seminars with the university and field internship supervisors.

SPED595G - Intern-Spec Delivery Systems 595G-1 to 12 (1 to 6) Internship-Specialized Delivery Systems. The doctoral internship is a required experience. Internship hours do not apply to minimum needed for graduation. Each student shall engage in specialized service areas within a school system, university, state office, federal office, or private agency. Interns will participate in regularly scheduled on-campus or on-site seminars with the university and field internship supervisors.

SPED599A - Thesis 599A-1 to 6 Thesis. Independent hours to be taken under the supervision of the student's Master's degree chair for the purpose of conducting and writing the Master's thesis. Graded S/U only. Special approval needed from the instructor.

SPED599B - Research Paper 599B-1 to 6 Research Paper. Independent hours to be taken under the supervision of the student's Master degree chair for the purpose of conducting and writing the Master's research paper. Graded S/U only. Special approval needed from the instructor.

SPED600 - Dissertation 600-1 to 32 (1 to 12 per semester) Dissertation. Special approval needed from the chair.

SPED601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

SPED699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

**Strategic Analytics**

The Master of Science in Strategic Analytics is a comprehensive program that prepares students for management and executive careers that use data-based decision making. This program applies leading-edge analytics techniques and artificial intelligence to solve business problems.

Students must complete 15 hours of coursework in core business courses including Managerial Accounting and Control Concepts, Financial Management, Managerial and Organizational Behavior, Marketing Management, and Database Design and Applications, 18 hours in core analytics courses including Strategic Data Mining, Foundations of Analytics for Managers, Data Science and Analytics for Managers, Advanced Analytics and Artificial Intelligence for Managers, Advanced Analytics and Visualization for Managers, Analytics Capstone, and three hours of a discipline-specific course in analytics.

Supply Chain Management and Engineering

Master of Science in Supply Chain Management and Engineering

The Master of Science in Supply Chain Management and Engineering Program is an online program oriented toward developing the technical and managerial knowledge of current and future supply chain professionals. The program emphasizes a holistic approach to designing and managing supply chains. The Program takes advantage of the resources and technology of the College of Business and the College of Engineering in a joint venture that produces graduates with technical skills that prepare them for supply chain leadership positions in industry and government.

Program Description

Collaborative supply networks are critical for purchasing, transferring, and distributing material in an increasingly global economy where outsourcing is an important strategic practice in today's firm. In addition, supply chain and logistics costs are a significant portion of operating expenses for today's production and service organizations. Consequently, organizations can seize a large opportunity to impact supply chains that take advantage of leading-edge technical developments in supply chain design, analytics and quality. The Master of Science in Supply Chain Management and Engineering's technical focus will allow uniquely qualified graduates to have immediate value in analyst, purchasing, operations, and consulting positions.

The College of Business and the College of Engineering offer state-of-the-art online programming. The faculty and staff in both colleges are uniquely positioned to deliver this curriculum, which will help today's engineers and managers gain a competitive advantage in today's employment market for supply chain and logistics managers. This online program has a focus on Supply Chain Management (Management) and Quality (Engineering) that is consistent with challenges and opportunities that managers will experience in organizations today.

Proposed Curriculum

The Master of Science in Supply Chain Management and Engineering Program requires 36 credit hours over four semesters, including a summer term. Semesters are divided into eight-week blocks. Students will take two three-credit courses the first eight-week block of each semester, and then take one three-credit course in the second eight-week block. The Program is delivered in an asynchronous online format.

Course Requirements

36 total semester hours (three hours/course) after satisfying the M.B.A. and Industrial Management and Applied Engineering foundation requirements with prerequisites.

Required Courses:

- BA 512 Supply Chain Cost Accounting
- BA 523 Innovation and Supply Chains
- BA 541 Analytic Methods for Supply Chain Management
- BA 544 Advanced Production Planning and Inventory Management
- BA 553 Supply Markets and Negotiation
- BA 565 Managing Supply Chain Information
- QEM 546 Project Management for Supply Chain Engineering
- QEM 560 Supply Chain Engineering
- QEM 562 Transportation and Logistics Systems
- QEM 564 Facilities and Location Planning
- QEM 583 Analysis of Statistical Quality Data
- QEM 585 Advanced Data Analysis & Design of Experiments

Admissions Requirements

Prospective degree candidates are expected to demonstrate a readiness for graduate study and an aptitude for successful performance in graduate level work. Admission to the program is based on the
applicant's undergraduate record, a satisfactory score on the Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE), and other evidence pertaining to ability to perform well in graduate work. Special circumstances and work experience may be considered if presented.

More specifically, the applicant must:

1. Meet all admission requirements set forth by the Graduate School. These requirements are outlined elsewhere in the catalog.
2. Complete the Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) and have the results of the test mailed directly to the Graduate Programs Office, College of Business. Information for the Graduate Management Admission Test (GMAT) can be found at: www.mba.com/. Information for the Graduate Record Examination (GRE) can be found at: ets.org/gre.

Academic Retention

In addition to the retention policies of the Graduate School, a student may earn no more than five hours of C or lower in graduate courses taken beyond the foundation requirements, or he/she will be suspended from the Master of Science in Supply Chain Management and Engineering program. A student who has three outstanding recorded grades of INC or DEF at the end of any semester or session, or for any reason, will be deemed to be not making normal progress and will be placed on probationary status. If the student has three outstanding grades of INC or DEF remaining on record at the end of the next semester or session, the student will be suspended from the program. The definitions of INC and DEF may be found in the Graduate Catalog. A student who is to receive a grade of INC in a course is to meet with the instructor to work out a time and conditions for completion of the course within policy guidelines. Typically, a Notification of Incomplete Grade Agreement form is completed and the student is provided with a copy.

Supply Chain Management and Engineering Courses

Supply Chain Management and Engineering Faculty

College of Business Graduate Faculty Members:
DeYong, Gregory D., Assistant Professor of Management, Ph.D., Indiana University, 2010; 2013. Inventory Management, Production Scheduling, and Supply Chain Management.
Goodale, John C., Associate Professor of Management. Ph.D., University of Utah, 1996; 2009. Workforce Scheduling and Service Supply Chains.
Lee, Jaehoon, Assistant Professor, Ph.D., University of Texas at San Antonio, 2011; 2014. Consumer behavior.
Mykytyn, Peter P., Jr., Professor and Chair, Ph.D. Arizona State University, 1985; 2001. Management information systems.

College of Engineering Graduate Faculty Members:

Theater

The Department of Theater is an accredited institutional member of the National Association of Schools of Theatre, 11250 Roger Bacon Drive, Suite 21, Reston, Virginia 20190.

The Department of Theater blends scholarship and practice in an academically based theater experience that provides students with broad based exposure to human experience and a sound foundation in the skills of theater craft. Class work in all areas of theater is complemented by a production program that reinforces both scholarship and practice, creating work that is as imaginative and highly polished as possible. Graduates will be able to apply their knowledge of performance, production, theater history, contemporary practice, literature and theory in a wide variety of theater venues. Graduates will also be able to demonstrate intrapersonal and interpersonal skills in the form of leadership qualities, self-discipline, creative expression, critical thinking, and the ability to work effectively as a part of a collaborative team. The development and guidance of talent and discipline, both characteristic of the artist/scholar, are the goals of the Department of Theater.

The Department of Theater maintains two theaters for public productions: the McLeod Theater, a proscenium stage seating approximately 500, and the Christian H. Moe Laboratory Theater, a flexible stage seating up to 110. The playbill typically encompasses a balance of contemporary, classic, and original works, and offers seven productions including a musical and an opera during the academic year (the latter co-produced with the School of Music). The summer season, McLeod Summer Playhouse, consists of three productions operating as a professional summer stock company, offering stipends and/or graduate credit.

The Department of Theater offers a graduate program of study leading to a Master of Fine Arts degree in theater. An interdisciplinary doctoral study in theater is sponsored by the Department of Communication Studies.

Admissions

To apply, students must fill out the online application for Admission to Graduate Study in Theater (gradschool.siu.edu). Applicants for graduate studies in theater must satisfy the minimum requirements of the Graduate School before being admitted to the department. The application includes a statement of purpose, transcripts from all undergraduate and graduate coursework together with three (3) letters of recommendation from former teachers or supervisors. There is a $65 nonrefundable application fee payable online.

There are additional requirements established by each of the areas of study in the M.F.A. Program. Applicants in the directing area are required to submit materials that are representative of their previous theater work and/or indicate an aptitude for stage direction (including promptbooks, programs, reviews, photos, video tapes or casebooks from previous directing efforts). Prospective directing students are also required to attend an on-campus interview and audition. At this time, each applicant will work with actors on a directing scene to demonstrate their ability to analyze the scene and work with actors. Applicants in the costume, lighting, scene design and technical direction areas are required to submit portfolio samples of their work. Applicants in the playwriting area must submit approximately two to two-an-a-half hours of written material consisting of one full-length play and/or several significant short pieces. These materials should be sent directly to the Director of Graduate Studies at the address below.

Although an undergraduate major in theater is not essential for admission to a graduate degree program in theater, the director of graduate studies may require that certain course deficiencies in undergraduate subject areas be remedied. These requirements are stated in writing on the admissions approval form.

More detailed information about these requirements is obtainable from: Director of Graduate Studies, Department of Theater, Mail Code 6608, Southern Illinois University Carbondale, Carbondale, IL 62901, 618-453-5741.
Financial Assistance

There are several kinds of financial assistance available to graduate students in the Department of Theater. First, there are graduate fellowships awarded on the basis of superior scholarship. Second, special fellowships are offered annually to students who show promise of success in graduate studies although their academic records have been only average due to economic disadvantages. The fellowships have no service requirements. Third, graduate assistantships with competitive stipends are available to students employed in various academic support positions, such as teaching, research, and production, such as teaching, research, and production. All fellowships and assistantships include a waiver of tuition (both in-state and out-of-state). Applications for financial assistance may be obtained by contacting the director of graduate studies.

The Master of Fine Arts Degree Program

The Master of Fine Arts degree program in theater emphasizes practical expertise in one of the following areas: directing, playwriting, costume design, lighting design, scene design and technical direction. The department encourages interdisciplinary study in related fields including performance studies, dramatic literature, dramaturgy, musical theater and opera. In most instances, a three-year residency is required of all M.F.A. students.

By March of their first year of study, each student will undergo a review of his/her progress in the program. The criteria by which each area will make its evaluations are to be found described in detail in the Theater MFA handbook, in the appropriate section dealing with the area's specific requirements. The faculty can elect from the following actions: 1. Suggest areas the student needs to work on before he/she is allowed to proceed to the Qualifier/Thesis project. 2. Move the student along to the Qualifier/Thesis project. 3. Require the student to attend a 2nd Year Review. 4. Dismiss the student from the M.F.A. program.

All M.F.A. students must complete a minimum of 60 semester hours of course work, including the M.F.A. degree core requirements, and with a minimum of 30 hours at the 500 level:

- THEA 500 Theater Research Methods, 3 hours
- THEA 501 Contemporary Developments, 3 hours
- THEA 599 Thesis, 6 hours

**Total M.F.A. Core: 12 hours

In addition, each area of study has specific area and elective requirements, which are as follows.

Directing

- M.F.A. core, 12 hours
- THEA 401A Stage Management, 2 hours
- THEA 401B Stage Management Lab, 1 hour
- THEA 402 Directing Studio, 3 hours
- THEA 417 Advanced Acting, 3 hours
- THEA 502 Advanced Directing Studio, 9 hours
- THEA 504A Drama, Theories & Conventions, 3 hours
- THEA 504B Drama, Theories & Conventions, 3 hours
- THEA 511A Playwriting I, 3 hours
- THEA 520A Period Style for Theater I, 3 hours
- THEA 520B Period Style for Theater II, 3 hours
- Design Classes (select 2 of 3), 6 hours
  - THEA 407 Scene Design
  - THEA 414 Costume Design
  - THEA 418 Lighting Design
- Electives (by advisement), 9 hours

**Total: 60 hours
Costume Design

- M.F.A. core, 12 hours
- THEA 414  Costume Design, 3 hours
- Design & Production Classes (select 2 of 3), 6 hours
  # THEA 407  Scene Design
  # THEA 418  Lighting Design
  # THEA 419  Technical Direction
- THEA 510  Production Design Seminar, 6 hours (to be taken every semester in residence)
- THEA 516  Advanced Theater Design & Production, 2-8 hours
- THEA 412  Patterning & Draping for the Theater, 2 hours
- THEA 413  Drafting for the Theater, 3 hours
- THEA 415A/THEA 415B  Costume Crafts I & II, 2-4 hours (each section may be taken twice)
- THEA 512  Advanced Costume Construction, 2-8 hours (may be taken 4 times)
- THEA 520A  Period Style for Theater I, 3 hours
- THEA 520B  Period Style for Theater II, 3 hours
- Electives (by advisement), 8 hours

Total: 60 hours

Lighting Design

- M.F.A. core, 12 hours
- THEA 418  Lighting Design, 3 hours
- Design & Production Classes (select 2 of 3), 6 hours
  # THEA 407  Scene Design
  # THEA 414  Costume Design
  # THEA 419  Technical Direction
- THEA 510  Production Design Seminar, 6 hours (to be taken every semester in residence)
- THEA 516  Advanced Theater Design & Production, 2-8 hours (may be taken 4 semesters)
- THEA 520A  Period Style for Theater I, 3 hours
- THEA 520B  Period Style for Theater II, 3 hours
- Electives (by advisement), 19 hours

Total: 60 hours

Scene Design

- M.F.A. core, 12 hours
- THEA 418  Lighting Design, 3 hours
- Design & Production Classes (select 2 of 3), 6 hours
  # THEA 407  Scene Design
  # THEA 414  Costume Design
  # THEA 419  Technical Direction
- THEA 510  Production Design Seminar, 6 hours (to be taken every semester in residence)
- THEA 516  Advanced Theater Design & Production, 2-8 hours (may be taken 4 semesters)
- THEA 520A  Period Style for Theater I, 3 hours
- THEA 520B  Period Style for Theater II, 3 hours
- Electives (by advisement), 19 hours

Total: 60 hours

Technical Direction

- M.F.A. core, 12 hours
- THEA 419  Technical Direction, 3 hours
- Design & Production Classes (select 2 of 3), 6 hours
  # THEA 407  Scene Design
  # THEA 414  Costume Design
  # THEA 418  Lighting Design
• THEA 510  Production Design Seminar, 6 hours (to be taken every semester in residence)
• THEA 516  Advanced Theater Design & Production, 2-8 hours (may be taken 4 semesters)
• THEA 520A  Period Style for Theater I (3 hours)
• THEA 510B  Period Style for Theater II (3 hours)
• Electives (by advisement), 19 hours

Total: 60 hours

Playwriting

• M.F.A. core, 12 hours
• 400- or 500-level Theater History courses by advisement, 6 hours
• THEA 500  Theater Research Methods, 3 hours
• THEA 501  Contemporary Developments, 3 hours
• THEA 503  The New Play Workshop, 18 hours
• THEA 504A  Drama Theories and Conventions, 3 hours
• THEA 504B  Drama Theories and Conventions, 3 hours
• THEA 511A  Playwriting I, 3 hours
• THEA 511B  Playwriting II, 3 hours
• THEA 599  Thesis, 6 hours
• Electives (by advisements), 12 hours

Total: 60 hours

Projects: Collaborative Short Play Evenings/Workshop Production of full length in Festival/Thesis

*Any two of these Theater History courses must be taken in year 1 or 2 by advisement:

• THEA 450  Topical Seminar
• THEA 454  American Theater
• THEA 460  Black Theater
• THEA 525  Contemporary Experiments in Drama
• THEA 550  Topical Seminar may apply depending on the topic (may be repeated)

Certain other Theater, English or Communication Studies courses may apply with permission.

**THEA 402 (Directing Studio) must be taken in the first two years unless playwrights already have
directing experience.

Suggested Electives:

• THEA 455  Dramaturgy
• THEA 502  Advanced Directing Studio
• ENGL 492A  Creative Writing Fiction
• ENGL 492B  Creative Writing Poetry
• ENGL 492C  Creative Writing Literary Non-Fiction
• ENGL 592  Creative Writing Seminar
• Dramatic writing not already taken to satisfy requirements (film, TV, performance studies)
• Theater History courses not already taken to satisfy requirements

Besides the core requirements, the students will propose and successfully complete a project to qualify
for further study in their chosen area. This project will include a research component in conjunction with a
realized practical project.

Thesis requirements vary for each area of study; however, they include a research component as well
as a description and evaluation of the student’s creative project. In concert with the student's committee,
the candidate may choose to separate the two, submitting an approved research paper during the first
academic year and a creative thesis after completion of the M.F.A. final project.

The Department of Theater requires an oral examination, conducted by the student's thesis committee,
for each M.F.A. candidate. The examination covers the thesis or dissertation, and may include questions
designed to ascertain the student’s general competence in theater.
Doctor of Philosophy Degree

The Department of Theater offers a program of study in Theater History and Playwriting under the administration of the Department of Communication Studies leading to a Doctor of Philosophy Degree in Communication Studies.

Admission

To apply student must fill out the online application for Admission to Graduate Study in Communication Studies (gradshool.siu.edu). Applicants for graduate studies in theater must satisfy the minimum requirements of the Graduate School before being admitted to the department. The application includes a statement of purpose, transcripts from all undergraduate and graduate coursework together with three (3) letters of recommendation from former teachers or supervisors.

There is a $65 nonrefundable application fee payable on-line or by check made out to SIU.

Additionally, prospective students must submit materials that are representative of their previous theater work and/or indicate an aptitude for work in their chosen field of study. Applicants to Theater History must include several critical research essays. Applicants to the playwriting area must submit approximately two- to two-and-a-half hours of written material consisting of one full-length play and/or several significant short pieces. All prospective students should include a sample of their research writing. Video tapes/DVDs or websites are acceptable digital materials.

More information for prospective and current students is available at the Department of Theater website (theater.siu.edu) and the Department of Communication Studies (communicationstudies.siu.edu).

A student must take 51 semester credit hours of course work beyond the master's degree, 24 hours of which must be in Theater, 18 hours in Communication Studies, and nine hours methodology (tool) courses. In addition 24 semester credit hours of dissertation work are required for the Ph.D. degree. Course work outside the department must be germane to one of the departmental curriculum areas for the purposes of examination and dissertation research. Throughout the program of study, the student must maintain a 3.00 grade point average in all work taken. If the grade point average drops below the minimum, the student is placed on academic warning for the following two semesters. During the last half of the second semester of course work, the student's progress shall be reviewed by the advisory committee to determine continuation, change, or termination of the program. The advisory committee for each student shall be responsible for assembling the necessary information (grades, recommendations, progress in curriculum areas, etc.) for consideration in reaching the above decision.

Advisory Committee

A three (3) person advisory committee shall be established no later than the beginning of the second semester of graduate study to plan the program of study with each student. The chair of the committee shall act as the primary adviser and sign the graduate course request form. This advisory committee is responsible for certifying to the graduate director that the student has met all departmental requirements for admission to candidacy and has passed the Ph.D. preliminary examination.

Students selecting Theater as a curriculum concentration must take the following:

- Communication Studies Theater Concentration, 18 hours (must include):
  - CMST 501 Introduction to Communication Research, 3 hours
  - CMST 510 Rhetoric Theory Seminar, 3 hours

- Theater 24 hours (must include):
  - THEA 501 Contemporary Developments, 3 hours
  - THEA 504A Drama Theories and Conventions, 3 hours
  - THEA 504B Drama Theories and Conventions, 3 hours

- Dissertation, 24 hours

Total 75 hours
Preliminary Examination

The student must pass a preliminary examination on his/her program of study. The preparation and administration of the examination are determined by the advisory committee in consultation with the student. The examination is taken at the end of the course work.

Dissertation

Each student must register for at least 24 semester hours of dissertation credit in THEA 600. The dissertation director shall, upon consultation with the student, be responsible for setting up a dissertation committee, supervising the dissertation, and administering the final oral examination. The dissertation committee shall approve the dissertation prospectus and pass upon the completed dissertation and oral examination.

The Graduate School requires students who have not completed their dissertation to enroll in THEA 601 Continuing Enrollment until they complete the dissertation or withdraw from the program. Students who do not register for this class will be charged for all semesters before they may graduate.

Students are required to submit an electronic copy of the dissertation to the Graduate School and one bound copy to the Department of Theater.

Theater Courses

THEA400 - Production 400-1 to 6 (1 to 2 per semester) Production. Practicum for support of major department productions in all areas. Roles in department productions may fulfill requirement.

THEA401A - Stage Management 401A-2 Stage Management. Study of the theories and skills required to successfully stage manage a theater production. Prerequisite: THEA 217, THEA 218A, concurrent enrollment in THEA 401B.

THEA401B - Stage Management Lab 401B-1 Stage Management Lab. Practical application of the theories and skills learned in the 401A course and applied on a department of theater production. Prerequisite: THEA 217, THEA 218A, concurrent enrollment in THEA 401A.

THEA402 - Directing Studio 402-3 to 6 Directing Studio. Introduction to the art of directing through examination of various genres. An exploration of the fundamentals of directing culminating in scene work and studio presentation. Advanced students will approach the directing process from play selection through dramaturgy to production and through the context of contemporary directing styles. Prerequisites: THEA 217 and THEA 311A with grades of C or better.

THEA403A - Advanced Movement for the Actor 403A-3 Advanced Movement for the Actor. Advanced studies in stage movement with special attention to period styles. Prerequisite: THEA 303A, THEA 317A, THEA 317B.

THEA403B - Advanced Voice for the Actor 403B-3 Advanced Voice for the Actor. Advanced studies in voice with special attention to stage dialects and advanced vocal techniques. Prerequisite: THEA 303B, THEA 317A.

THEA404 - Theater Management 404-3 Theater Management. Discussion of legal and financial aspects concerning the professional and community theaters of the United States. Consideration of and practice in managerial activities of an educational theater including administration, purchasing, and accounting practices, direct sales, publicity, promotion and public relations.

THEA406 - Properties Studio 406-9 (3,3,3,) Properties Studio. Beginning and advanced studio work in traditional and non-traditional crafts for theatrical events, including mask work, puppetry, stage furniture construction, upholstery, weaponry, armor, and special effects. Repeatable. Prerequisite: THEA 218A with a grade of C or better. Studio Fee: $60.
THEA407 - Scene Design 407-3 Scene Design. Technical and artistic aspects of scene design. Theory and practice. Prerequisite: THEA 218A, THEA 413 with a grade of C or better.

THEA409 - Scene Painting Studio 409-6 (2,2,2) Scene Painting Studio. Studio work in basic and advanced scene painting techniques and materials. Projects include wood, drapery, foliage, marble, transparencies, scrim painting, dye painting, faux finishes, metal reflections, and murals. Repeatable. Prerequisite: THEA 218A. Studio fee: $65.

THEA410 - Children's Theater 410-9 Children's Theater. Theory and practice in performing theater for children. Class activities include lectures on various aspects of production as well as producing a touring children's play for local area schools. Special approval needed from the instructor.

THEA412 - Patterning & Draping 412-2 Patterning and Draping for the Theater. This course introduces the theatrical costume design and technical student to the basics of pattern development and construction techniques used to develop a 3-dimensional theatrical costume, with focus on giving the student a working knowledge of costume production, flat patterning, and draping techniques. Prerequisite: THEA 218C with a minimum grade of C. Studio fee: $25.

THEA413 - Drafting for the Theater 413-6 (3,3) Drafting for the Theater. Development of the student's skill in scenographic techniques including ground plans, sections, elevations, and detail construction drawings. Prerequisite: THEA 218A with a minimum grade of C.

THEA414 - Costume Design 414-3 Costume Design. Technical and artistic aspects of costume design. Development of the design process, understanding and use of color theory and fabric, and practice of costume drawing techniques. Prerequisite: THEA 218A with a minimum grade of C.

THEA415A - Costume Crafts I 415A-2 to 4 Costume Crafts I. This course focuses on advanced skills in costume technology, including but not limited to, dyeing, fabric modification, millinery, wig styling, armor, jewelry making, armor, corsetry and period accessories. Topics covered vary by semester. Prerequisite: THEA 218C with a grade of B or better. Craft fee: $35.

THEA415B - Costume Crafts II 415B-2 to 4 Costume Crafts II. This course focuses on advanced skills in costume technology, including but not limited to, dyeing, fabric modification, millinery, wig styling, armor, jewelry making, armor, corsetry and period accessories. Topics covered vary by semester. Prerequisite: THEA 218C with a grade of B or better. Craft fee: $35.

THEA416A - Structural Design Stage I 416A-3 Structural Design for the Stage Part I. An in-depth study of the art and practice of structural design for the stage including forces, stresses, strains, load analysis, geometric properties of materials and simple beam design. Prerequisite: THEA 218A with a minimum grade of C.

THEA416B - Structural Design Stage II 416B-3 Structural Design for the Stage Part II. Continued study of the art and practice of structural design for the stage including beam design, column and tension member design and combined loading design for sawn lumber and steel materials. Prerequisite: THEA 218A and 416A with minimum grades of C or special approval needed from the instructor.

THEA417 - Advanced Acting 417-3 to 6 (3,3) Advanced Acting. Utilization of the actor's process in the performance of various theories and styles of acting. May be repeated once for credit. Prerequisite: THEA 317B.

THEA418 - Lighting Design 418-3 Lighting Design. Investigation of stage lighting design, theory and professional practice. Special attention to color theory and its application to stage lighting. Lecture/Laboratory. Prerequisite: THEA 218B and THEA 413 with grades of C or better.

THEA419 - Technical Direction 419-3 Technical Direction. Advanced study of principles and procedures of scenic construction and stage rigging. Includes scene shop organization, materials, and specialized stage equipment; preparation for professional technical direction. Lecture and laboratory to be arranged. Prerequisite: THEA 218A and THEA 413 with grades of C or better.

THEA425 - Metal Fabrication 425-3 Metal Fabrication for Theater. A study of the knowledge and practice of various welding processes and fabrication techniques for the stage as well as an
understanding of the theater practitioner's responsibility to the quality and safety of their products. Prerequisite: THEA 218A with a grade of C or better. Studio fee: $40.

**THEA450 - Topical Seminar**  
450-1 to 9 Topical Seminar. An intensive examination and application of selected areas of interest. Topics will vary and may include such areas as stage management, audition and interview, current political theater.

**THEA454 - American Theater**  
454-3 American Theater. The development of American theater from colonial times to the present. Includes a study of the American musical theater from preminstrels through contemporary music-drama.

**THEA455 - Dramaturgy**  
455-3 Dramaturgy. An introduction to the theory and practice of dramaturgy, including a survey of contemporary critical theories as they apply to the pre-production work of the dramaturg. The student will apply methodologies studies to plays from the classical repertory and to the works of new playwrights. Prerequisite: THEA 311A with a minimum grade of C.

**THEA460 - Black Theater**  
460-3 Black Theater: Intersections of Culture and Performance. (Same as AFR 420) This course will freely examine the intersections between African and African American Theater. It will study the origins, form and agenda of Black Theater by tracing the commonalities of culture and Performance between African and African American Theaters. Students will be exposed to seminal essays, topical plays and performances while they hone their own critical and creative skills.

**THEA500 - Research Methods**  
500-1 Theater Research Methods. An introduction to the principles and methods of research and writing in theater with a focus on selected areas of specialization within the various degree programs. Required of all Masters Theater students. Restricted to Theater Majors. Special approval needed from the instructor.

**THEA501 - Avant Garde & Performance**  
501-3 The Historical Avant Garde & Performance. A survey of the historical avant garde throughout the 19th and 20th centuries through the study of documentary material, critical works, and plays. Individual reports, in class exercises, performance opportunities, and lectures provide focus on selected areas. Required reading encompasses a broad spectrum of subjects in order to demonstrate the political and aesthetic importance of a variety of the theatrical avant garde.

**THEA502 - Advanced Directing Studio**  
502-3-12 (3,3,3,3) Advanced Directing Studio. Emphasis on practical directing problems and concerns of individual students through research, rehearsal and performance. Includes survey of directing theories and practices with laboratory application of directing techniques. Special approval needed from the instructor.

**THEA503 - New Play Development**  
503-1 to 3 New Play Development. This is an interdisciplinary course meant for designers, directors, dramaturgs, and playwrights that prepares students for a prominent feature of the U.S. theatre landscape: the new play workshop. This ensconced entity, somewhere between a production and a casual reading, is an economic and artistic powerhouse, not just for playwrights, but for all theatre artists. This class imitates the methods and environments of the most prominent new play workshops in order to demystify a process that can be both artistically satisfying and lucrative for all theatre artists. Prerequisite: THEA 511A with a grade of C or better or concurrent enrollment allowed.

**THEA504A - Performing Justice/Theory**  
504A-3 Performing Justice/Theory. Performance is more prevalent in society than ever before. Performance, in this class means: theatre, mass media, social media, entertainment, digital humanities, and everyday life. This course considers questions such as: How can performance help gender equality? How does literary, media, and performance theory relate to struggles for social justice? What does it mean to live in a “dramatized society”? Students will gain an understanding of the economic, psychological, and political strategies behind performance and theory that seeks to intervene in unjust social structures. Restricted to graduate standing or special approval from the instructor.

**THEA504B - Performing Resistance**  
504B-3 Performing and Producing Resistance. Beginning with Aristotle and the earliest foundations of Western performance, this course considers questions such as: How have artists resisted earlier performance theory? How have artists redefined performance in order to promote social justice? How have artists moved beyond performance onstage with actors in order to empower spectators? Students will gain an understanding of classical performance theory and
subsequent resistant performance theories. Restricted to graduate standing or special approval from the instructor.

**THEA506 - The Collaborative Process** 506-2 to 4 The Collaborative Process. The theory and practice of the collaborative processes involved in play production; how designers, technicians, directors and playwrights interact with and communicate to each other to work as a creative team. Activities involve both hypothetical and fully realized productions when appropriate. May be taken for up to 4 hours.

**THEA510 - Production Design Seminar** 510-6 (1,1,1,1,1,1) Production Design Seminar. Exploratory workshop experience in rendering techniques, creative problem solving, design aesthetics, and production philosophies. To be taken by graduate production design students in residence, each semester, with exceptions by consent of instructor.

**THEA511A - Playwriting I** 511A-3 Playwriting I. This course assumes basic writing knowledge. It advances techniques of structure and dialogue in playwriting. Written exercises are submitted and discussed to identify dramatic events. Students will self-produce several short plays in collaborative performances. Students will initiate development of a full-length play. Special approval needed from the instructor.

**THEA511B - Playwriting II** 511B-3 Playwriting II. This course continues to develop advanced techniques of structure and dialogue in playwriting. Students will examine canonical plays to understand the tools used by the playwrights. Students will write short plays and self-produce several short plays in collaborative performances. Students will write a full-length play. Prerequisite: THEA 511A. Special approval needed from the instructor.

**THEA512 - Adv Costume Construction** 512-2 to 8 Advanced Costume Construction. This course focuses on advanced skills in the areas of cutting and draping for the theater. A variety of techniques will be taught, including but not limited to, flat pattering, bias draping, tailoring, and historical construction techniques. Prerequisite: THEA 218C, THEA 412 or special approval needed from the instructor.

**THEA516 - Advanced Theater Design & Prod** 516-2-12 Advanced Theater Design and Production. An advanced studio-based study of the theories and practices of modern production and design with particular emphasis on the interaction of the sub-disciplines of scenic, costume, light, sound design, and technical production as well as the collaborative nature of theatrical production. Special approval needed from the instructor.

**THEA520A - Period Style Theater I** 520A-3 Period Style for Theater I. A survey of the costumes, architecture, furniture, decorative styles and motifs of major periods and countries relating to western culture and theater. Egyptian to the Renaissance.

**THEA520B - Period Style II** 520B-3 Period Style for Theater II. A survey of the costumes, architecture, furniture, decorative styles and motifs of major periods and countries relating to western culture and theater. Late Renaissance to 20th Century. Prerequisite: THEA 520A or special approval needed from the instructor.

**THEA522 - SIU Summer Theater** 522-1 to 12 SIU Summer Theater. Practical experience in summer stock play production. Performance or technical work in SIU Summer Theater only. Maximum of six hours per summer. Special approval needed from the instructor.

**THEA525 - Contemp Experiment Drama** 525-3 Contemporary Experiments in Drama. By studying contemporary literary theory and applying these critical tenets to new American plays, students develop tools to use in reading, understanding and writing plays in unconventional, non-traditional styles. Course work includes extensive reading of both essays and plays, discussing these matters, preparing reports and writing a play. Special approval needed from the instructor.

**THEA530 - Independent Study** 530-1 to 12 Independent Study. Independent research on selected problems. A maximum of three credit hours may be taken for a single project. Special approval needed from the instructor.

**THEA550 - Topical Seminar** 550-2 to 6 (2 per topic) Topical Seminar. In-depth studies of topics of special interest to advanced students concerning individual or groups of playwrights, directors, designers,
and their techniques and theories. Topic is determined in advance. Special approval needed from the instructor.

**THEA560 - Professional Work Experience** 560-1 to 21 Professional Work Experience. Credit may be granted for professional work experience prior to acceptance into the program. Special approval needed from the instructor. Graded S/U only.

**THEA561 - Theater Internship** 561-1 to 12 Theater Internship. After completion of the M.F.A. core curriculum and basic courses in student's specialization, credit may be granted for internship at professional theaters, training programs, or studios. Special approval needed from the instructor. Graded S/U only.

**THEA599 - Thesis** 599-1 to 6 Thesis. Minimum of three hours to be counted toward a Master's degree.

**THEA600 - Dissertation** 600-1 to 36 (1 to 16 per semester) Dissertation. Minimum of 24 hours to be earned for the Doctor of Philosophy degree.

**THEA601 - Continuing Enrollment** 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

### Theater Faculty

- **Ojewuyi, Olusegun**, Professor and Chair, M.F.A., Yale University, 1998; 2004. Acting, Directing.
- **Juntunen, Jacob**, Associate Professor and Director of Graduate Studies, Ph.D., Northwestern University, 2007.
- **Bogumil, Mary L.**, Associate Professor, Ph.D., University of South Florida, 1988; Dramatic Literature.
- **Clark, Darryl**, Assistant Professor, M.F.A. in Dance, State University of New York College at Brockport, 2005.
- **Fagerholm, Thomas**, Assistant Professor, M.F.A., Minnesota State University, Mankato, 2012; Technical Direction.
- **Fletcher, Anne**, Professor, Ph.D., Tufts University, 1992; 2001. Theater history, 20th century American political theater.
- **Moe, Christian H.**, Professor, Emeritus, Ph.D., Cornell University, 1958; 1958.
- **Patrick-Benson, Susan**, Associate Professor and Director of Undergraduate Studies, M.F.A., Rutgers University, 1995; 2006. Voice specialist.
- **Zea, Wendi**, Associate Professor, M.F.A., Kent State University, 2006; 2009. Costume Design.

### Women, Gender, and Sexuality Studies

There is no graduate program in Women, Gender, and Sexuality Studies. Four-hundred-level courses may be taken for graduate credit unless otherwise indicated in the course description.
Certificate in Women, Gender, and Sexuality Studies

The purpose of the graduate certificate in Women, Gender, and Sexuality Studies is to meet the demand for formal recognition of graduate level credentials in WGSS, and to enhance and broaden the perspectives of graduate students from various related fields. The program requires 18 hours of coursework. 12 hours must be at the 500-level, which includes WGSS 596 and WGSS 597. Six hours must be taken outside the student's major discipline. The student must be currently enrolled in a graduate degree program at SIU or an individual holding a bachelor's degree and admitted to the Graduate School (non-declared).

The following graduate programs work closely as partners with WGSS Graduate Certificates:

**School of Education:**
- Education Administration and Higher Education
- Workforce Education and Development

**College of Liberal Arts:**
- Communication Studies
- History
- Political Science
- School of Management and Marketing
- School of Psychological and Behavioral Sciences
- Sociology

**School of Law:**

Women, Gender, and Sexuality Studies Courses

**WGSS401 - Contemporary Feminisms** 401-3 Contemporary Feminisms in Global Contexts. This course discusses theories and practices of third wave feminism from a national and global perspective. We will discuss ways third wave feminism is being talked about and understood by others and ourselves. The selected readings offer a range of voices and articulation of third wave feminism including United States, post-colonial, transnational, queer, multicultural, theoretical, and practical. The course is heavy on reading. By the end of this course students should be able to express their understanding of third wave feminism.

**WGSS406A - Gender/Family/Sex Pre-Mod Eur** 406A-3 Gender, Family and Sexuality in Pre-Modern Europe. (Same as HIST 406A) A discussion of the history of the family, creation of gender roles and importance of sexuality from medieval times to the French Revolution.

**WGSS406B - Gender/Family/Sex Mod Eur** 406B-3 Gender, Family and Sexuality in Modern Europe. (Same as HIST 406B) From the French Revolution. A discussion of the history of family, creation of gender roles, and importance of sexuality from the French Revolution to the present. Fulfills the CoLA Writing-Across-the-Curriculum (WAC) requirement.

**WGSS407 - Sociology of Sexuality** 407-3 Sociology of Sexuality. (Same as SOC 407) Examines a range of social issues related to human sexuality and the interaction between sexuality and other social processes. Emphasis is on the relevant concepts, theories and methods in the field of sexual studies, the social and historical construction of sexuality and the ways in which social characteristics shape sexual behaviors and desires, sexual variation, including its causes and consequences, how basic social
institutions affect the rules governing sexuality, the major moral and political controversies that surround sexuality, and the "dark side" of sexual life.

WGSS410 - Transcending Gender 410-3 Transcending Gender. (Same as ANTH 410L) How do humans become male and female in different societies? Can men become women and women become men? What other gender possibilities exist? Is male dominance universal? What are the sources of male and female power and resistance? Do women have a separate culture? What are the relationships between gender, militarism and war? These and other questions will be examined in cross-cultural perspective.

WGSS411 - Human Sexuality 411-3 Human Sexuality. (Same as PH 410) Provides detailed information on dimensions of sexuality; characteristics of healthy sexuality; anatomy and physiology; gender roles; relationships; sexually transmitted infections/diseases; contraceptive issues and concerns; sexual victimizations; and sexuality through the life cycle.

WGSS415 - Gender, Sexuality & Comm 415-6 (3,3) Topics in Gender, Sexuality, and Communication. (Same as CMST 415) An exploration of advanced theories and research in gender and sexuality from communication perspectives. Course may be repeated when topics vary.

WGSS416 - Black Feminist Thought 416-3 Black Feminist Thought as Theory and Praxis. (Same as AFR 416, CMST 416) Explore the roots, contemporary manifestations, and current embodiments of black feminist thought. Explore the works of black women to engage in critical thinking and thoughtful dialogue that positions the valuable knowledge, experiences and perspectives of women of color at the center of inquiry while simultaneously discovering spaces for multicultural alliances. Prerequisite: CMST 301I or CMST 341 or consent of instructor.

WGSS426 - Gender, Culture, Language 426-3 Gender, Culture and Language. (Same as ANTH 426 and LING 426) This course is designed for students who have had some exposure to gender studies. It will focus on readings in language and gender in the fields of anthropological and socio-linguistics. Issues to be addressed are the differences between language use by men/boys and women/girls, how these differences are embedded in other cultural practices, and the various methodologies and theories that have been used to study gendered communication.

WGSS437 - Lesbian and Gay History 437-3 Lesbian and Gay History in the Modern United States. (Same as HIST 437) This course explores the social, political, and cultural history of lesbians, gay men, and other sexual and gender minorities in the United States from the turn of the twentieth century to the present. Themes to be taken up in the class include: the emergence of heterosexuality and homosexuality as distinct categories of identity; the intersection between sexual identity and identities of race, class, gender, and ethnicity; the relationship between homosexuality and transgenderness; the movement for gay liberation; the creation of lesbian and gay urban and rural subcultures; representations of homosexuality in popular culture; anti-gay backlash; and AIDS.

WGSS438 - Women and the Law 438-3 Women and the Law. (Same as POLS 438) The course is an advanced seminar in public law with a focus on gender, law and society. The course will engage with issues in feminist legal practice and the development of legal theories regarding gender. We will interrogate the relationship between theory and practice and the ways in which feminist jurisprudence has taken shape in the dynamics of this relationship. POLS 114 and 230 recommended prerequisites.

WGSS440 - Queer Visual Culture 440-3 Queer Visual Culture. (Same as CP 469) Course discusses aspects of the aesthetics, history, theory and politics of media representations of gender and sexuality. Cultural texts from one or a combination of media forms, genres, historical periods, and platforms will inform the historical and theoretical consideration of media representations of gender and sexual variation with a special interest on their bearings upon the present moment. May be repeated if topics vary.

WGSS442 - Sociology of Gender 442-3 Sociology of Gender. (Same as SOC 423) Examines social science theory and research on gender issues and contemporary roles of men and women. The impact of gender on social life is examined on the micro level, in work and family roles, in social institutions, and at the global, cross-cultural level.

WGSS446 - Gender & Global Politics 446-3 Gender and Global Politics. (Same as POLS 456) An advance course examining gender systems and women's situations across cultures and countries. This
course also studies the impact globalization has had on gender issues by looking at women's activism at international and transnational levels. Topics covered include women's political representation, gender and culture, women's social movements, gender and development, and gendered policy issues.

WGSS448 - Gender/Family Modern US Hist 448-3 Gender and Family in Modern US History. (Same as HIST 448) This course explores the history of gender and the family in the United States from the late 19th century to the present. Themes to be explored include: the family and the state, motherhood, race and family life, and the role of the “family” in national politics.

WGSS449 - Advanced Human Sexuality 449-3 Advanced Human Sexuality. (Same as PHSL 450) Advanced, comprehensive course intended to supplement and expand the critical examination of topics covered in PHSL 320. Reproduction and Sexuality. The objectives of this class are to examine the physiological and behavioral basis of human reproduction and sexuality. Examining how humans reproduce from a physiological perspective including all aberrations and clinically relevant dysfunctions, as well as, the spectrum of human sexual behaviors including typical and atypical sexual behavior, paraphilias and diversity of human relationships. Prerequisite: PHSL 320.

WGSS450A - Women in Music 450A-3 Women in Music. (Same as MUS 450A) Explores the creative contributions of women in music, examining women's participation across a range of genres, cultural/geographic areas, and time periods. Restricted to junior/senior/graduate music major or consent of instructor.

WGSS452A - Traditions Uppity Wmn's Blues 452A-3 Traditions of Uppity Women's Blues. (Same as AFR 452A and MUS 452A) Examines the tradition of "uppity" women's blues from the so-called "classic" blues singers of the 19th century (Gertrude "Ma" Rainey, Bessie Smith, Ida Cox, etc.) to the contemporary blues of Saffire, Denise LaSalle and others. Explores ways blues women challenge conventions of gender and sexuality, racism, sexism, classism and homophobia. Restricted to junior/senior/graduate music major or consent of instructor.

WGSS456A - Feminist Philosophy 456A-3 Feminist Philosophy. (Same as PHIL 446A) A general survey of feminist theory and philosophical perspectives.

WGSS456B - Special Topics Fem Philosophy 456B-3 Special Topics in Feminist Philosophy. (Same as PHIL 446B) A special area in feminist philosophy explored in depth, such as Feminist Ethics, French Feminism, Feminist Philosophy of Science, etc.

WGSS456C - Women Philosophers 456C-3 Women Philosophers. (Same as PHIL 446C) Explores the work of one or more specific women philosophers, for example Hannah Arendt, Simone DeBeauvoir, etc.

WGSS464 - Audio Documentary & Diversity 464-3 Audio Documentary & Diversity. (Same as RTD 464) The purpose of this course is the creation of short and long form audio documentaries by students, regardless of production background. It will introduce students to basic production techniques and diversity considerations during the making of a documentary. This course uses qualitative methods to investigate an issue or document an event, with an emphasis on observation and interview techniques. Topics will explore the role of gender, race, ethnicity and class during the planning, gathering and production stages of the documentary. Course open to non-majors. Lab fee: $55.

WGSS465 - History of Sexuality 465-3 History of Sexuality. (Same as HIST 465) Comprehensive survey of sexuality from the early modern period to the present. Examines social trends, politics, and cultural debates over various forms of sexuality. Students will engage in discussion, research, and writing. Emphasis varies by instructor.

WGSS470 - College Student Sexuality 470-3 College Student Sexuality. (Same as EAHE 470) Seminar designed to provide students with a strong grounding in the field of college student sexuality and sexual identity, covering the lived experiences of U.S. college students, the construction of sexualized collegiate identities through U.S. history, and how institutions of higher education have attempted to regulate, control, and (intentionally as well as inadvertently) effect college student sexuality.

WGSS476 - Women, Crime, and Justice 476-3 Women, Crime, and Justice. (Same as CCJ 460 and SOC 461) A study of women as offenders, as victims, and as workers in the criminal justice system.
WGSS489 - Women State Religion-Mid East 489-3 Women, State and Religion in the Middle East. (Same as HIST 489) Following an introduction to the question of women in Islamic law and Islamic History, this course will examine the changing status and experiences of women in a number of Middle Eastern countries in the 20th century, focusing on Egypt, Iran, and Turkey. Major themes will include legal, social and political rights, participation in social and economic life, cultural and literary production, and recent secular and Islamist women's movements.

WGSS493 - Individual Research 493-2 to 6 Individual Research. Exploration of a research project under the supervision of a faculty member having graduate faculty status. The project must result in a written research report, which is filed with the Director of Women, Gender and Sexuality Studies. Restricted to senior standing. Special approval needed from the instructor and Director of Women, Gender and Sexuality Studies.

WGSS494 - Practicum 494-1 to 6 Practicum. Supervised practical experience in situations centering on women's issues, organizations, services, etc. The setting may be in one's own field of study or in general content areas recognized in the Women, Gender and Sexuality Studies program. Special approval needed from the instructor and Director of Women, Gender and Sexuality Studies.

WGSS496 - Adv Special Topics in SDS 496-3 Advanced Special Topics in Sexual Diversity Studies. Advanced consideration of a topic of interest in Sexual Diversity Studies not offered through regular course listings.

WGSS497 - Independent Study in SDS 497-3 Independent Study in Sexual Diversity. Supervised readings in selected content areas in Sexual Diversity Studies. This is a capstone, synthesizing experience for students in sexual diversity studies. Prerequisites: WGSS 201, 203. Special approval needed from the instructor.

WGSS507 - Sociology of Sexuality 507-3 Seminar in the Sociology of Sexuality. (Same as SOC 507) Examines the emerging body of work in the fast-growing field of sexuality studies. While the course focuses on sociological research, it takes a few side trips into other disciplines. We begin by discussing the evolution of theory and methodology in the sexual sciences. After briefly considering the contributions of early sexologists and the work of Sigmund Freud, we will survey the sociology of sexuality from its beginnings in quantitative research, through classical sociological theory, social constructionism, and feminism. We'll then examine Foucault's radical rethinking of sexuality and grapple with the challenges of queer theory. The second part of the course will take up several substantive areas in the sociology of sexuality, drawing on cutting edge quantitative and qualitative research.

WGSS515 - Studies Gender Sexuality Comm 515-3 to 9 (3,3,3) Studies in Gender, Sexuality, and Communication. (Same as CMST 515) How communicative activity creates and sustains human beings as gendered. Emphasis on gaining familiarity with contemporary research on gendering from a particular perspective (e.g., ethnography, performance, phenomenology, quantitative methods, rhetorical criticism). May be repeated when perspective varies. Perspective announced prior to each offering.

WGSS525 - Theorizing the Body 525-3 Theorizing the Body. (Same as ANTH 525) This seminar explores a broad range of theoretical readings centering on the human body. Once the province of medical science and certain schools of philosophy, recent research in the social sciences and the humanities position "the body" as a primary site of socialization, gendering, social control.

WGSS535 - Seminar: Gender in Higher Ed 535-3 Seminar: Gender in Higher Education. (Same as EAHE 5351) A seminar for specialized study of administrative practice and policy in gender in higher education.

WGSS544 - Sociology of Gender 544-3 Sociology of Gender. (Same as SOC 544) Examines major theories, themes, and research methods on the intersection of gender, race, class and sexuality. Topics may include: construction of gender, race, class and sexual identities; work; social movement; intersection of family and work; parenting and reproduction; historical and cross-national dimensions.

WGSS545 - Gender and Work 545-3 Gender and Work. (Same as SOC 545) This course is designed to investigate how gender structures the workplace, as well as how men and women both reproduce and negotiate gender at work. Focusing on select topics, we will develop an understanding of workplaces as gendered organizations and discuss sex segregation, wage inequality, the glass ceiling, the glass
escalator, sex work, men and women in nontraditional occupations, the body at work, emotional labor, aesthetic labor, immigration and work, globalization, and unemployment and welfare. Also, this class will take an intersectional approach to analyzing and discussing issues of gender inequality at work; meaning, we will take seriously how gender intersects with race, ethnicity, class, and sexuality to shape both inequality and resistance at work.

WGSS546 - Language, Gender, Sexuality 546-3 Language, Gender and Sexuality: Anthropological Approaches. (Same as ANTH 546, LING 545) This course examines the study of language in society with a particular focus on how linguistic practices are part of the construction of gender and sexuality identities, ideologies, social categories and discourses. Anthropological theories applied to the study of language, gender and sexuality will be covered along with a variety of methodological approaches.

WGSS547 - Gender and Social Change 547-3 Gender and Social Change. (Same as SOC 547) This graduate seminar is a sociology of gender course that focuses on changes in the subfield itself and in peoples' lived experiences in terms of gender, gender relations, and gender stratification. Readings and discussions will trace the development of the sociology of gender over the last several decades. We will discuss how ideas and theories have changed over the years including changes in concepts and in how sociologists define, problematize, and theorize about sex and gender as traits, identities, relations, structures, and systems. We will also explore ‘objective’ or actual change (or lack of change) related to gender in individuals, groups, and societies.

WGSS550 - Psych Construction Gender 550-3 The Psychological Construction of Gender. (Same as PSYC 550) This course will focus on the psychology of gender within a feminist perspective and using a feminist approach. The term feminism, as used here, primarily implies that we will consider information and ideas for more diverse than simple empirical data. In our reading and discussion, we will consider politics, discrimination, the history of science, the history of patriarchy, the development of theory and ideas in general and the development of feminism in particular, and objective versus subjective views of science, and within these contexts, we will consider and study the psychology of gender.

WGSS5550 - Gender and Sport 550-3 Gender and Sport: Sociological and Psychological Perspectives. (Same as KIN 560) This course explores psychological and sociological dimensions underlying the concept of gender and critically examines how gender relates to sport and physical activity. Students will be introduced to non-traditional as well as traditional research that addresses the issue of gender in various physical activity contexts.

WGSS565 - Continental Feminist Philosophy 565-3 Continental Feminist Philosophy. (Same as PHIL 565) An examination of major figures and problems in continental feminism, focusing on metaphysical, ethical, political, and aesthetic theories in the works of Beauvoir, Kristeva, Irigaray, Butler, and Kofman.

WGSS575 - Women in Higher Education 575-3 Women in Higher Education. (Same as EAHE 575) The goal of this course is to provide an overview of women in higher education. Topics that will be considered are: feminism’s impact of women in higher education; the division of labor for women (including faculty and professional staff positions); historical and sociological perspectives of access to higher education including curriculum and pedagogy.

WGSS576 - College Men/Masculinities 576-3 College Men and Masculinities. (Same as EAHE 576) This course is a readings-based seminar covering concepts of masculinity as demonstrated by collegiate men in the United States. The readings in this course cover cultural as well as identity elements of what being a “college man” means (and how that definition has changed over time and contexts). The readings consist of historical, contemporary and theoretical scholarship concerning collegiate masculinity.

WGSS590 - Readings 590-1 to 3 Readings. Supervised readings in selected advanced subjects. Special approval needed from the instructor and the Director of Women, Gender and Sexuality Studies.

WGSS591 - Special Topics 591-1 to 3 Special Topics. Concentration on a topic of interest not offered through the regular course listings. Special approval needed from the instructor and the Director of Women, Gender and Sexuality Studies.
WGSS592 - Women and Religion 592-3 Women and Religion. This course will heighten and strengthen student's awareness of the roles and responsibilities of women as outlined in the sacred writings and scriptures of various world religions and as carried out in various cultures around the world.

WGSS593 - Masculinity in the U.S. 593-3 Masculinity in the United States. This course is a readings-based seminar covering concepts of masculinity in the United States. The readings cover cultural as well as identity elements of what being a "man" means (and how that definition has changed over time and contexts), historical as well as contemporary understandings of masculinity.

WGSS595 - Practicum in WGSS 595-1 to 3 Practicum in Educational Women, Gender and Sexuality Studies. This course provides students with supervision in their work toward course development in Women, Gender and Sexuality Studies. The instructor of record will meet with practicum members on a regular basis, and, together, they will work towards the research and syllabus construction necessary for a WGSS course. Pedagogical strategies will also be covered. Must have consent of the Director of Women, Gender and Sexuality Studies. Graded by S/U only.

WGSS596 - Feminist Theories 596-3 Advanced Feminist Theories. This course introduces students to the past, present, and potential future of feminism and its various permutations. Readings are designed to stress historical, intellectual, and contemporary issues in order to inspire in-class discussion and to provide foundations for written assignments. Emphasis varies by instructor.

WGSS597 - Pro-Seminar 597-3 Graduate Pro-Seminar in Women's Gender and Sexuality Studies. This prosemear introduces graduate students to the field of Women, Gender, and Sexuality Studies (WGSS). The approach is both interdisciplinary as well as multidisciplinary. The course guides students through a process by which they build a detailed map of the intersection between their course of study and the field of WGSS. Emphasis varies by instructor.

Workforce Education and Development

The School of Education offers programs of study leading to the Master of Science in Education and Doctor of Philosophy degrees. Information about either program may be obtained by contacting the Office of Graduate Programs in Workforce Education and Development at 618-453-3321.

This program requires a nonrefundable $65 application fee that must be submitted with the application for Admissions to Graduate Study in Workforce Education and Development. Applicants may pay this fee by credit card, by personal check, cashier's check, or money order made out to SIU, and payable to a U.S. Bank.

Master of Science in Education Degree

The master's degree with a major in Workforce Education and Development is designed to accommodate a broad range of individuals preparing for training, instructional, and administrative roles in career and technical education, human resources, business, industry, government, and other fields. Admission requirements are as follows:

- A 2.7 GPA of a completed Bachelor's degree.
• A career goal consistent with the mission of the Department.
• Relevant professional or technical experience (at least two years is recommended).

For students with a background in training or education, the major consists of a minimum of 32 semester hours of course work for the thesis option and 36 semester hours for the non-thesis option. For students with backgrounds in fields other than education, two foundation courses (WED 486 and WED 466) are required. These two courses are not counted as part of the required hours for the thesis or non-thesis program. A grade of B or higher is required for each course. Program requirements are organized into professional core requirements and specialty area courses. A grade of B or higher is required for each professional core course, and a 3.0 GPA is required for the specialty area courses. At least 50% of the courses taken to complete the Master of Science in Education Program must be 500-level.

Professional Core Requirements

For the thesis option, the core consists of four courses (14 hours): WED 560, WED 561, WED 566, and WED 593.

Specialty Area Courses

The component consists of 18 hours (thesis option) or 24 hours (non-thesis option) of course work relevant to a student's career goals. Technical courses, professional courses, and internships may be included. Courses may be taken within the department or in other units of the college or University.

Thesis

In accordance with Graduate School requirements, students in the thesis option must complete a thesis (WED 599) showing evidence of the student's knowledge of research techniques. Upon completion of the thesis, a final oral examination of the research is conducted by the student's advisory committee.

The program of study is individually tailored based upon the student's background, interests, and career goals. Program graduates are employed in career and technical education at the secondary and postsecondary levels and in training positions in such fields as aviation management, business, automotive technology, family and consumer science, industrial management and applied engineering, agricultural education, and career development. In business environments, graduates work in employee/industrial/management training, health care administration, and human resource environments. Graduates also work in various levels of government in such fields as education, military service, and personnel training.

Doctor of Philosophy Degree in Education

Advanced studies leading to the Doctor of Philosophy degree in education with a concentration in workforce education and development is offered through the Department of Workforce Education and Development. The concentration is a broad, general leadership and professional development degree that serves professionals having knowledge, experience, and interests in the fields of: (a) career and technical education; (b) career education; and (c) employment and training, or related fields.

Persons seeking admission to the program must meet all requirements for admission established by: (a) the Graduate School of the University; (b) the College of Education and Human Services; and (c) the Department of Workforce Education and Development. It is required that applicants possess a background of academic and professional experience which will provide a basis for advanced study and research. More specifically, the program is designed for individuals with a background in teaching, program administration, or training and development. Admission to the concentration is determined by a vote of the graduate faculty of the Department of Workforce Education and Development. The Department of Workforce Education and Development will only accept fall admissions applications for the doctoral program.

The program of study consists of 64 hours beyond the master's degree and includes a 6-hour professional seminar sequence in the College of Education and Human Services, at least 9 hours of approved research tools, a 15-hour departmental core, 10 hours of supportive studies, and 24 hours of dissertation credit.
Workforce Education and Development Courses

WED403 - Managing Tech for WED 403-3 Integrating and Managing Technology Applications for Workforce Education & Training. Design of workforce training applications integrating professional advanced features of computer software, communication technologies and multimedia features, including management of educational LAN systems. Restricted to WED majors or consent of department.

WED404 - Apps Technology for WED 404-3 Technology Applications in Workforce Education and Training. Analyses of technology used and demonstration of skill level needed to train others in secondary/postsecondary education and business training environments on technological administrative processes, data management, and curriculum integration. Students will learn advanced computing concepts and applications using integrated software. Prerequisite: WED 403 or equivalent. Restricted to WED majors or consent of department.

WED405 - Multimedia-based Instruction 405-3 Multimedia-based Instruction for Workforce Education. Acquisition of skills to produce multimedia "assets" (web page, audio/sound bytes) and application of instructional design techniques to computer-based instruction in workforce education. Impact of multimedia on workplaces and workforce training and utilization of course management systems to deliver instruction will be analyzed. Prerequisite: WED 404. Restricted to WED majors or consent of department.

WED407 - Admin Commun & Technology 407-3 Administrative Communications and Technology. Application of communication theory, human relations concepts, and information technology to workplace situations. The process of organizational information for productivity will be stressed. Students will acquire skills to make sound decisions of how to best communicate in work-based situations. Students will learn computerized procedures for communication. Prerequisite: WED 404 or equivalent. Restricted to WED majors or consent of department.

WED413 - Org & Dir Instr-CTE 413-3 Organizing and Directing Instruction in Secondary Career and Technical Programs. Techniques and procedures applicable to effective teaching including planning for instruction, instructional design technology and general teaching strategies for the secondary career and technical classroom. This course will study pedagogy and utilize various techniques and technology to help students master the skills needed in their respective careers. Students will learn about and practice various teaching methods including demonstrations, cooperative learning, service learning, integration of academics and technology into the workplace-oriented class, project-based learning, and contextual learning. A laboratory section will be required. Limited to Workforce Education and Development students admitted to the teacher education program or one of the career and technical education alternative certification programs in workforce education. Restricted to WED majors or consent of department.

WED416A - Inst Methods-Business 416A-3 Instructional Methods in Career and Technical Education. Specific methods, techniques and materials to deliver instruction in (a) Business-accounting, basic business, economics, personal finance, marketing, entrepreneurship. This course requires an additional laboratory meeting time. Prerequisite: WED 413 or WED 462. Restricted to WED majors or consent of department.

WED416B - Inst Mthds-Busi Comp Sys, Etc. 416B-3 Instructional Methods in Career and Technical Education. Specific methods, techniques and materials to deliver instruction in (b)-Business-business computer systems, information processing, keyboarding. This course requires an additional laboratory meeting time. Prerequisite: WED 413 or WED 462. Restricted to WED majors or consent of department.

WED416C - Inst Mthds-Family/Consumer Sci 416C-3 Instructional Methods in Career and Technical Education. Specific methods, techniques and materials to deliver instruction in (c) Family & Consumer
Sciences—nutrition, wellness, and hospitality. This course requires an additional laboratory meeting time. Prerequisite: WED 413 or WED 462. Restricted to WED majors or consent of department.

**WED416D - Inst Mthds-F/C Sci-Liv Env/App** 416D-3 Instructional Methods in Career and Technical Education. Specific methods, techniques and materials to deliver instruction in (d) Family & Consumer Sciences—living environments, apparel, and textiles. This course requires an additional laboratory meeting time. Prerequisite: WED 413 or WED 462. Restricted to WED majors or consent of department.

**WED416E - Inst Mthds-Health Careers** 416E-3 Instructional Methods in Career and Technical Education. Specific methods, techniques and materials to deliver instruction in (e) Health Careers. This course requires an additional laboratory meeting time. Prerequisite: WED 413 or WED 462. Restricted to WED majors or consent of department.

**WED416F - Inst Mthds-Technology Educ** 416F-3 Instructional Methods in Career and Technical Education. Specific methods, techniques and materials to deliver instruction in (f) Technology Education. This course requires an additional laboratory meeting time. Prerequisite: WED 413 or WED 462. Restricted to WED majors or consent of department.

**WED420 - FCS Profession** 420-3 Family and Consumer Sciences Profession. A social, psychological, and philosophical interpretation of family and consumer sciences in today's world. Examination of the profession's history, theory and foundation. Overview of career areas and identification of goals and competencies which serve as a basis for decisions to prepare for a wide variety of business, education, and human services-related careers.

**WED426 - Living Environ/Facility Plan** 426-3 Living Environment and Facility Planning. This course is designed to provide students with resources, activities, and experiences to learn and prepare to teach principles and elements of design as applied to interior design of residential, commercial, and public space environments including textiles, furnishings, and color. Emphasis is on creating a more knowledgeable consumer with focus on project-based implementation and recognition of design principles.

**WED427 - Resource Mgmt/Consumer Econ** 427-3 Resource Management and Consumer Economics for Work and Life. Focus on utilizing resources and consumer information to address the diverse needs and goals of individuals in areas such as resource management, home ownership, and financial literacy.

**WED460 - Occ Analysis & Curr Dev** 460-3 Occupational Analysis and Curriculum Development. System approach to curriculum development. Includes analyzing occupations, specifying objectives and developing curriculum. Restricted to WED majors or consent of department.

**WED461 - Workforce Educ Needs Assess** 461-3 Workforce Education Needs Assessment Overview of needs assessment and analysis procedures used in workforce education environments. Learners will design and develop needs assessment instruments, collect and diagnose data to identify those workplace performance issues requiring training solutions, and develop a formal report detailing needs assessment findings and training solution recommendations. Restricted to WED majors or consent of department.

**WED462 - Instruct Methods & Materials** 462-3 Instructional Methods and Materials. Instructional methods in occupational training program. Restricted to WED majors or consent of department.

**WED463 - Assess Learner Performance** 463-3 Assessment of Learner Performance. Development and use of evaluation instruments to assess student performance in training classrooms and laboratories. Criterion- and norm-referenced objectives, applications of taxonomies in development of written tests, performance tests and attitude measure. Restricted to WED majors or consent of department.

**WED465 - The Human Resource Specialist** 465-3 The Human Resource Specialist. This course provides an overview of the theoretical frameworks and practices related to human resource management and development. Examines the strategic alignment of human resource functions with organizational goals. Restricted to WED majors or consent of department.

**WED466 - Foundations of Workforce Educ** 466-3 Foundations of Workforce Education. Examination of the historical, social, economic and psychological foundations of workforce education. Nature and role of
education and training in preparing people for the world of work. Restricted to WED majors or consent of department.

WED467 - Theory and Practice of HRD 467-3 Theory and Practice of HRD. Students will examine different factors that influence, direct and shape the functions of human resource development (HRD) in organizations. Topics include models, theoretical foundations, and philosophical perspectives with HRD, an overview of the HRD functions within organizations, and the various roles HRD can play within organizations. Restricted to WED majors or consent of department.

WED468 - Educ/Labor Force Linkages 468-3 Education/Labor Force Linkages. Attention given to the following areas: overcoming barriers to the linkage process; developing effective lines of communication; resource sharing; conducting joint problem solving with other agencies and individuals within the community; and jointly developing and providing programs and services. Restricted to WED majors or consent of department.

WED469 - Training Systems Management 469-3 Training Systems Management. Insight and understanding of administration and management of organizational training. Principles and techniques of managing training organizations. Process of planning, organizing, marketing, programming, staffing, budgeting and evaluating a training organization. Restricted to WED majors or consent of department.

WED470 - Quality Systems Mgmt in Educ 470-3 Trends and Issues in Quality Systems Management in Education. This course provides an overview of the economic basis of and trends and issues relevant to Quality Systems Management in Education. The course examines compliance models and criteria models for quality systems. Concentration will be on ISO 9000:2000 series model requirements with specific emphasis on internal audits, documentation, implementation and registration. Restricted to WED majors or consent of department.

WED473 - Coordinating Cooperative Educ 473-3 Coordinating Cooperative Education. Competencies required for coordination of cooperative education programs. Selection and maintenance of training stations, student placement, related instruction and program management. Fulfills the remaining three semester hours required for State of Illinois Certification. Restricted to WED majors or consent of department.

WED474 - Prepare Instructional Mtrls 474-3 Preparing Instructional Materials. Preparation of instructional materials needed by a student to attain a learning objective. Includes writing and developing various types of instruction sheets, presentation guides, knowledge tests and demonstration, practice and performance evaluation materials. Prerequisite: WED 460 completed with a grade of C or better or consent of the instructor.

WED486 - Adult Learning 486-3 Adult Learning. Course focus is on adult development and learning principles. Adult learning styles and motivation to learn are discussed in the context of designing effective instructional strategies appropriate in various workforce education venues. Restricted to WED majors or consent of department.

WED490 - Readings 490-1 to 4 Readings. Supervised reading for qualified students in Workforce Education and Development. Restricted to WED majors or consent of department. Special approval needed from the instructor.

WED491 - Advanced Occupational Skills 491-1 to 5 Advanced Occupational Skills. Modern occupational practice in selected fields for experienced professionals seeking advanced techniques. Restricted to WED majors or consent of department. Special approval needed from the instructor.

WED494 - Workshop 494-1 to 4 Workshop. Current workforce education issues for teachers, supervisors, and administrators. Emphasis of each workshop will be identified in workshop announcements. Restricted to WED majors or consent of department.
WED497 - Practicum 497-1 to 6 Practicum. Applications of work education skills and knowledge. Cooperative arrangements with corporations and professional agencies to study under specialist. Prerequisite: twenty hours in specialty. Restricted to WED majors or consent of department.

WED498 - Special Problems 498-1 to 6 Special Problems. Investigation of problems in workforce education and development. Restricted to WED majors and consent of department. Special approval needed from the instructor.

WED504 - Multimedia Prod for WED 504-3 Multimedia Production Technologies in Workforce Education. Application of multimedia technologies—graphics, text, video, audio, on-screen buttons and other event triggers—into workforce education delivery systems. Students will work as a team in designing, developing, editing, and delivering interactive multimedia instructional training products. Prerequisite: WED 405. Restricted to WED majors or consent of department.

WED505 - Multimedia Delivery by Dist Ed 505-3 Multimedia Delivery of Workforce Education by Distance Learning. Focuses on the use of distance learning and multimedia technologies in the delivery of instruction of workforce education and development settings. Course participants will design and deliver instruction for the distance education environment-individually and in groups. Advanced video conference technologies are emphasized. Prerequisite: WED 404 or equivalent. Restricted to WED majors or consent of department.

WED511 - Inst Trends in WED Programs 511-3 Instructional Trends in Workforce Education Programs. Examination of research relating to instructional emphases and strategies unique to career and technical training programs, corporate training programs, and adult education. Restricted to WED majors or consent of department.

WED551 - Employment Law in HRD 551-3 Employment Law in Human Resource Development. Examines current and practical information in the area of employment law as it relates to human resource development in organizations. Focus is on helping organizations avoid liability through HRD interventions. Restricted to Workforce Education and Development majors or consent of department.

WED552 - Talent Acqstn & Total Reward 552-3 Talent Acquisition and Total Reward System. Overview of the theoretical frameworks and practice related to recruitment, selection and compensation. Examines impact of these HR theories and practice on human resource development in organizations. Prerequisite: WED 405, The Human Resource Specialist. Restricted to WED majors.

WED553 - Emerging Trends in HRD 553-3 Emerging Trends in HRD. Examination of current topics and research issues in the field of Human Resource Development not covered in other regularly scheduled courses. Emphasis will be on recent and present issues in the field, with topics and discussions focused on links between research and practice. Prerequisite: WED 465, The Human Resource Specialist. Restricted to WED majors or consent of department.

WED560 - Intro to WED Research 560-3 Introduction to Workforce Development Research. This course provides an exploration of the scope, values, and purposes of research in workforce development. Focus is on (a) identifying how theory and research are practical tools to solve workforce development challenges that practitioners face on a daily basis; (b) analyzing research articles, and (c) developing academic writing skills. Restricted to WED majors or consent of department.

WED561 - Research Methods 561-3 Research Methods. Basic research methods and techniques in the design, investigation and reporting of research studies relating to education for work. Prerequisite WED 560. Restricted to WED majors or consent of department.

WED563 - Training Measuremnt/Evaluation 563-3 Training Measurement and Evaluation. Evaluation systems and activities for evaluating training programs. Application of research methods and data analysis in the human resource development process, with concentration on assessing trainee reaction and planned action, learning, skill, business impact and return on training investment. Prerequisite: WED 463. Restricted to WED majors or consent of department.

WED564 - Program Eval for WED 564-3 Program Evaluation for Work Education. Evaluation systems and activities for evaluating national, state, and local work education programs. Systems include programmatic accreditation and state agency evaluations. Activities include personnel, facilities, access
and equity, community resources and community needs evaluations. Restricted to WED majors or consent of department.

**WED566 - Administration & Supervision** 566-3 Administration and Supervision. Nature, function, and techniques of administration and supervision of education for work programs at all levels. Restricted to WED majors or consent of department.

**WED574 - Occupational Information** 574-3 Occupational Information. The role of instructional and supervisory personnel in the total occupational information system. Kindergarten to adult. Restricted to WED majors or consent of department.

**WED576A - Policy Implement & Supervise** 576A-3 Policy Implementation and Supervision-Objective Program Planning, Leadership, Communications. Planning, implementing, and controlling local education agency components of state and federal occupational programs. Restricted to WED majors or consent of department.

**WED576B - Policy Implement & Supervise** 576B-3 Policy Implementation and Supervision-Management Information Systems, Financial Decisions, Staffing Patterns. Planning, implementing, and controlling local education agency components of state and federal occupational programs. Restricted to WED majors or consent of department.

**WED581 - Workforce Diversity** 581-3 Workforce Diversity. Foundational information concerning a diverse/multicultural society. Importance of understanding cultural and demographic similarities/differences and how this information relates to the workplace and to education/training environments. Social diversity issues of current importance to workforce preparation and development of diversity training are included. Restricted to WED majors or consent of department.

**WED584 - Curriculum Found for Work Educ** 584-3 Curriculum Foundations for Work Education. Acquaints students with different factors that influence, direct, and shape curriculum as it pertains to the work-oriented aspects of school and society. Topics include law and the curriculum, philosophies and organizational models, differing approaches by grade level and setting, and the development of work-related curriculum. Restricted to WED majors or consent of department.

**WED585A - Seminar in WED-Fac Div Initvs** 585A-3 Seminar in Workforce Education and Development-Facilitating Diversity Initiatives. A series of seminars for scholarly inquiry into significant aspects of Workforce Education and Development. Students will have opportunity to discuss issues in facilitating diversity initiatives. Restricted to WED majors or consent of department.

**WED585B - Seminar in WED-Resrch-Practice** 585B-3 Seminar in Workforce Education and Development-Workforce Education Research to Practice. A series of seminars for scholarly inquiry into significant aspects of Workforce Education and Development. Students will have opportunity to discuss issues in Workforce Education research to practice. Restricted to WED majors or consent of department.

**WED585C - Seminar-WED-Discuss Tch/Train** 585C-3 Seminar in Workforce Education and Development-Discussion as a Method of Teaching and Training Adults. A series of seminars for scholarly inquiry into significant aspects of Workforce Education and Development. Students will have opportunity to discuss issues in discussion as a method of teaching and training adults. Restricted to WED majors or consent of department.

**WED585D - Seminar in WED-Job Stress** 585D-3 Seminar in Workforce Education and Development-Job Stress. A series of seminars for scholarly inquiry into significant aspects of Workforce Education and Development. Students will have opportunity to discuss issues in job stress. Restricted to WED majors or consent of department.

**WED585E - Seminar in WED-Work Motivation** 585E-3 Seminar in Workforce Education and Development-Work Motivation. A series of seminars for scholarly inquiry into significant aspects of Workforce Education and Development. Students will have opportunity to discuss issues in work motivation. Restricted to WED majors or consent of department.

**WED586 - Dev Prgm for Adult Learners** 586-3 Developing Program for Adult Learners. Overview of current organizational patterns of adult programs and analysis of program delivery systems. Students
will develop advanced skills in planning and designing programs for adults in workforce education environments. Prerequisite: WED 486. Restricted to WED majors or consent of department.

**WED590 - Readings** 590-1 to 9 Readings. Supervised readings in selected advanced subjects. Restricted to WED majors or consent of department. Special approval needed from the instructor.

**WED591 - New Developments** 591-1 to 9 New Developments. Recent developments and trends in various aspects of education for work. Instruction provided by recognized authorities. Restricted to WED majors or consent of department.

**WED592 - Current Issues & Research** 592-3 Current Issues and Research. Examination of broad topics, issues, and research not covered in other regularly scheduled courses. Emphasis will be on recent and present issues, which are in the process of evolving. Content will be selected from three primary professional fields: (a) Vocational/technical education, (b) Employment and training, and (c) Career education. Required of all Ph.D. students. Restricted to WED majors or consent of department.

**WED593 - Individual Research** 593-3 Individual Research. The selection and investigation of a research topic culminating in a paper satisfying the research requirement for a Master of Science in Education degree. Prerequisite: WED 561. Restricted to Workforce Education and Development majors or consent of department.

**WED594 - Advanced Research Methods** 594-3 Advanced Research Methods. Development of research competencies and preparation of proposal for thesis or dissertation research. Familiarity with research in various foundation areas of education for work. Prerequisite: WED 592. Restricted to WED majors or consent of department.

**WED595 - Professional Internship** 595-1 to 16 Professional Internship. Supervised professional experience in appropriate educational settings. May be done on- or off-campus. Restricted to WED majors or consent of department.

**WED597A - Doctoral Seminar** 597A-1 Doctoral Seminar in Workforce Education-Orientation to Doctoral Study. Designed to provide doctoral students the opportunity to discuss and practice major professional roles in workforce education and development. Requirements of teaching, research, publication, and service are defined. Students will accomplish identified professional expectations in orientation to doctoral study. Restricted to admission to the Ph.D. in education program. Restricted to WED majors or consent of department.

**WED597B - Doctoral Seminar** 597B-1 Doctoral Seminar in Workforce Education-Research Publications and Presentations. Designed to provide doctoral students the opportunity to discuss and practice major professional roles in workforce education and development. Requirements of teaching, research, publication, and service are defined. Students will accomplish identified professional expectations in Research Publications and Presentations. Restricted to admission to the Ph.D. in education program. Restricted to WED majors or consent of department.

**WED597C - Doctoral Seminar** 597C-1 Doctoral Seminar in Workforce Education-Grantmanship. Designed to provide doctoral students the opportunity to discuss and practice major professional roles in workforce education and development. Requirements of teaching, research, publication, and service are defined. Students will accomplish identified professional expectations in grantmanship. Restricted to admission to the Ph.D. in education program. Restricted to WED majors or consent of department.

**WED598 - Special Investigations** 598-1 to 6 Special Investigations. Selection and investigation of a problem: use of relevant sources and techniques; collection and analysis, evaluation, interpretation of data, and the writing of a report of the investigation for students whose particular needs are not met by existing classes. Restricted to WED majors or consent of department. Special approval needed from the instructor.

**WED599 - Thesis** 599-1 to 6 Thesis. Prerequisite: WED 561. Restricted to WED majors or consent of department.

**WED600 - Dissertation** 600-1 to 36 (1 to 12 per semester) Dissertation. Restricted to WED majors or consent of department.
WED601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only. Restricted to WED majors or consent of department.

WED699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Workforce Education and Development Faculty

Bortz, Richard F., Professor, Emeritus, Ph.D., University of Minnesota, 1967; 1977.
Buila, Theodore, Associate Professor, Emeritus, Ph.D., Cornell University, Ithaca, NY, 1968; 1968.
Hagler, Barbara, Professor, Emerita, Ph.D., Arizona State University, 1991; 1987.
Putnam, Alvin R., Associate Professor, Emeritus, Ed.D., Oklahoma State University, 1978; 1997.
Ridley, Samantha Sue, Assistant Professor, Emerita, M.S., Southern Illinois University Carbondale, 1959; 1964.
Rosenbarger, Maxine, Associate Professor, Emerita, Ph.D., Southern Illinois University Carbondale, 1970; 1973.
Shields, Bill, Assistant Professor, Emeritus, M.S., Southern Illinois University, 1962. 1962.
Stitt, Thomas R., Professor, Emeritus, Ph.D., Ohio State University, 1967; 1967.
Zhong, Lin, Assistant Professor, Ph.D., University of Southern Mississippi, 2015; 2016. Instructional technology; instructional design; multimedia platforms; digital leadership; digital technology.

Zoology

The School of Biological Sciences offers graduate programs in Zoology leading to the Professional Science Masters, Master of Science, and Doctor of Philosophy degrees. The Professional Science Masters is awarded on the basis of demonstrated scholarship, with emphasis on basic ecological knowledge, managing habitat for wildlife, and constituent consensus building. The Master of Science and Doctor of Philosophy degrees are awarded on the basis of demonstrated scholarship, with an emphasis on the ability to organize, conduct, and report original research. The department's graduate program is organized around five disciplinary areas: ecology & ecosystem studies; environmental toxicology; evolution, genetics, and population biology; fisheries biology & aquaculture; and wildlife ecology & management. These research groups draw heavily upon the expertise of faculty members affiliated with SIU’s Center for Fisheries, Aquaculture, and Aquatic Sciences, Cooperative Wildlife Research Laboratory, and Center for Ecology. Graduate research in Zoology is facilitated by SIU’s geographic location, notably its proximity to extensive national forests, wildlife refuges, state parks, and other natural areas of diverse physiography.
Admission

Application forms can be obtained via the departmental webpage (zoology.siu.edu/graduate/apply/). A completed departmental application includes: the form, transcripts of all previous college credits, an official score report for the Graduate Record Examination (GRE) General Test, and three letters of evaluation that address the applicant's academic abilities. A nonrefundable application fee must be submitted with the departmental application form. Applicants pay this fee when applying electronically to the Graduate School. Students who wish to be considered for a University fellowship must have a complete application on file by December 1. There are no other application deadlines, but early contact with the department is encouraged.

Applicants for P.S.M., M.S. and Ph.D. programs must fulfill all admissions requirements of the Graduate School. Inquiries about Zoology graduate programs should be made to the Director of Graduate Studies in Zoology. More information is available on the department's website (zoology.siu.edu/graduate/index.php). Prospective applicants are strongly encouraged to make contact with faculty members in their area of research interest prior to submitting an application.

Applicants to the P.S.M. program must possess the following academic background: 24 semester hours (or equivalent) in courses covering the basic principles of zoology (including animal diversity, ecology, and evolution); 9 credit hours of physical sciences (physics, chemistry, soil science, geology — at least 2 disciplines must be represented); one year of college mathematics including college algebra and trigonometry (calculus and statistics are also desirable); be within 6 credit hours of meeting class requirements for a Certified Wildlife Biologist (details can be found on The Wildlife Society web page (wildlife.org/) after completion of program course requirements; an undergraduate grade point average of at least 3.0 (A=4.0). Applicants that do not meet these requirements will be considered on individual merit.

Applicants to the master's program must possess the following academic background: 24 semester hours (or equivalent) in courses covering the basic principles of zoology (including animal diversity, genetics, ecology, and evolution); one year of college chemistry (organic and biochemistry are also desirable); one year of college mathematics including college algebra and trigonometry (calculus and statistics are also desirable); an undergraduate grade point average of at least 2.70 (A=4.0). Applicants with a GPA less than 2.70 will be considered on individual merit.

Applicants for the doctoral degree must have a solid background in biological science, hold a master's degree, and have a grade point average in graduate work of 3.25 or above. Applicants with a graduate GPA less than 3.25 will be considered on individual merit. Direct entry to the doctoral program for students with only a bachelor's degree, or accelerated entry from the master's program, is possible for students demonstrating exceptional potential.

Advisement and Progress Toward Degree

During the admission process and prior to registration, a student should consult with faculty members representing his or her area of interest to identify an advisor. Advisors will be assigned formally by the Director of Graduate Studies upon admission. A change in advisor later in the program must be coordinated and approved by the Director of Graduate Studies.

Each M.S. student, in consultation with the advisor, must assemble an advisory committee to be approved by the Director of Graduate Studies before the end of the first semester of enrollment. For the M.S. degree, the committee shall consist of at least three graduate faculty members, one of whom may be from outside the department, with the advisor serving as chair. For the doctoral degree, the advisory committee shall consist of five graduate faculty members, one of whom must be from outside the department, with the advisor serving as chair. A program of study must be approved by the advisory committee and submitted to the Director of Graduate Studies no later than second semester of enrollment. A research proposal must be approved by the advisory committee and submitted to the Director of Graduate Studies no later than the third semester. Students may not register for ZOOL 599 or ZOOL 600 before their proposal is approved.
Professional Science Masters

All requirements of the Graduate School must be satisfied. At least 30 hours of graduate credit (13 hours at the 500 level) is required beyond the bachelor's degree, including 24 hours of graded courses required by the program. A grade point average of 3.2 in graduate coursework must be maintained. Failure to meet this requirement will result in academic probation.

A capstone project consisting of a grant proposal presented to the agency providing the summer internship and approved by the Program Director must be completed prior to graduation.

Master of Science Degree

All requirements of the Graduate School must be satisfied. At least 30 hours of graduate credit (15 hours at the 500-level) is required beyond the bachelor's degree, including 21 hours of graded coursework, two hours of ZOOL 589, six hours of ZOOL 599, and two or more courses in a specific area representing the research tool. A grade point average of 3.00 in graduate coursework must be maintained. Failure to meet this requirement will result in academic probation and loss of financial support from the department.

Thesis

Students must prepare and defend a thesis based on the results of original research. the nature of the research is developed by the student in consultation with the advisor and advisory committee. The thesis is evaluated by the advisory committee and must be successfully defended before graduation. The defense consists of a presentation of thesis results in public seminar, followed by a closed session of oral evaluation by the advisory committee. A final version of the thesis must be approved by the advisory committee, the Director of Graduate Studies, the Department Chair, and the Graduate School. M.S. candidates must follow all Graduate School procedures in applying for graduation and deposit one bound copy of their thesis with the department.

Doctor of Philosophy Degree

All requirements of the Graduate School must be satisfied. Students entering the doctoral program are expected to have taken courses in the broad areas of animal diversity & evolution, ecology, and cell biology & genetics. Admission to the Ph.D. program requires two courses in two of these areas and three courses in the third. Students may be admitted with deficiencies, but must acquire the necessary coursework as part of their doctoral studies.

There is no minimum credit-hour requirement beyond the Graduate School's residency and dissertation requirements. A student, in consultation with his or her advisory committee, prepares a program of study that includes courses (including two semesters of ZOOL 589), seminars, and research. A research tool, consisting of at least two courses in a specific subject area, is required. A 3.25 grade point average in graduate coursework must be maintained. Failure to meet this requirement will result in loss of financial support from the department.

Preliminary Examinations

Written and oral examinations are taken after the tool requirement and major portion of any other formal coursework are completed, usually at the end of the second year of graduate study. The examinations focus on the student's area of research expertise as defined by the student, the advisor, and the advisory committee, and approved by the Director of Graduate Studies and the Department Chair. Administration and evaluation of these examinations is governed by the department's Preliminary Examination Policy. Students must pass both preliminary examinations to advance to candidacy.

Dissertation

Students must prepare and defend a dissertation based on the results of original research. The nature of the research is developed by the student in consultation with the advisor and advisory committee.
Students must register for at least 24 hours of ZOOL 600 Research and Dissertation (only six hours are permitted prior to candidacy). The dissertation is evaluated by the advisory committee.

**Final Examination**

With the approval of the advisory committee, the candidate requests the Director of Graduate Studies to schedule a dissertation defense. The defense consists of a presentation of dissertation results in a public seminar, followed by a closed session of oral evaluation of the student's dissertation research by the advisory committee. A final version of the dissertation must be approved by the advisory committee, the Director of Graduate Studies, the Department Chair, and the Graduate School.

**Graduation**

Ph.D. candidates must follow all Graduate School procedures in applying for graduation and deposit one bound copy of their dissertation with the department.

**Concentration in Ecology**

Students opting to declare Ecology as a concentration shall follow the same program as students in the Zoology Ph.D. degree program that do not declare a concentration subject to the following: The Seminar in Ecology (PLB 589A) or equivalent (equivalent agreed upon by the student's committee) must be taken once each year until a student achieves candidacy. The research tool shall be statistics. The student's advisory committee shall consist of at least two members from outside the Department of Zoology.

**Zoology Courses**

**ZOOL405 - Systematic Biology** 405-3 Systematic Biology. Estimation, analysis, and interpretation of phylogenetic trees; concepts, delimitation, and description of species; biological taxonomy and systems of classification; application of phylogenetics to the study of evolution. Prerequisites: BIOL 304; MATH 106 or 108 with grades of C or better.

**ZOOL407 - Parasitology** 407-4 Parasitology. Principles, collection, identification, morphology, life histories, and control measures. Two lectures and two 2-hour laboratories per week. Prerequisite: ZOOL 220 with a grade of C or better. Laboratory/Field Trip fee: $15.

**ZOOL408 - Herpetology** 408-3 Herpetology. Taxonomic groups, identification, morphology, and natural history of amphibians and reptiles. Two lectures and one 2-hour laboratory per week. Prerequisite: ZOOL 220 with a grade of C or better. Laboratory/Field Trip fee: $15.

**ZOOL409 - Vertebrate Histology** 409-4 Vertebrate Histology. Microscopic structure of organs and tissues with emphasis on mammalian material. Two lectures and two 2-hour labs per week. Prerequisite: ZOOL 220A,B or ZOOL 220. Laboratory/Field Trip fee: $15.

**ZOOL410 - Conservation Biology** 410-3 Conservation Biology. An introduction to patterns of global biodiversity and threats to that diversity. Course emphasizes how principles from numerous biological disciplines are involved in conserving and managing biodiversity, and how social, economic, and political factors affect conservation strategies. Prerequisites: BIOL 307 and MATH 106 or 108 with grades of C or better.

**ZOOL411 - Environmental Risk Assessment** 411-3 Environmental Risk Assessment. Risk assessment can be defined as the process of assigning magnitudes and probabilities to the adverse effects of human activities or natural catastrophes. Prerequisites: BIOL 307 and CHEM 340 with grades of C or better.

**ZOOL413 - The Invertebrates** 413-4 The Invertebrates. Structure, phylogeny, distinguishing features and habitats of the invertebrates. Two lectures and two 2-hour laboratories per week. Prerequisite: ZOOL 220A or ZOOL 220. Laboratory/Field Trip fee: $15.
ZOOL414 - Freshwater Invertebrates 414-4 Freshwater Invertebrates. Taxonomic groups, identification, distribution, and habitats of the North American freshwater invertebrate fauna. Two lectures, two 2-hour laboratories per week. Prerequisite: ZOOL 220A or ZOOL 220. Laboratory/Field Trip fee: $15.

ZOOL415 - Limnology 415-3 Limnology. (Same as PLB 416) Lakes and inland waters; the organisms living in them, and the factors affecting these organisms. Two lectures and one 4-hour laboratory alternate weeks. Prerequisite: BIOL 307 with a grade of C or better. Laboratory/Field Trip fee: $15.

ZOOL418 - Vertebrate Anatomy Lab 418-3 Vertebrate Anatomy Laboratory. Comparative anatomy and dissection of representative vertebrate specimens. Three 2-hour laboratories per week. Prerequisite: ZOOL 220 with a grade of C or better. Prior or concurrent registration in ZOOL 320 recommended. Laboratory fee: $50.

ZOOL425 - Invertebrate Paleo & Paleoecol 425-3 Invertebrate Paleontology and Paleoecology. (Same as GEOL 425) Concepts of paleontology and paleoecology. Emphasis on functional morphology, lifestyles and habitats of fossil invertebrates and algae. The nature and evolution of marine and coastal paleocommunities. The effects of extinction events on paleocommunities and biodiversity. Laboratory. Field trips required. Prerequisite: GEOL 325 or ZOOL 220 with grade of C or better. Expense will vary in proportion to distance traveled and locations visited and will be determined before each semester. Field trip fee not to exceed $199.

ZOOL426 - Comparative Endocrinology 426-3 Comparative Endocrinology. (Same as ANS 426, PHSL 426) Comparison of mechanisms influencing hormone release, hormone biosynthesis, and the effects of hormones on target tissues, including mechanisms of transport, receptor kinetics, and signal transduction. Prerequisites: ANS 331 or ZOOL 220 or PHSL 310 with a grade of C. Laboratory/Field Trip fee: $15.

ZOOL432 - Principles of Toxicology 432-3 Principles of Toxicology. This course will introduce students to the main topics in the field of toxicology. The emphasis will be on understanding physiological, biochemical, and molecular mechanisms of toxicity. Prerequisites: BIOL 200A and BIOL 200B; or BIOL 211, BIOL 212, and BIOL 213; with grades of C or better.

ZOOL433 - Comparative Animal Physiology 433-3 Comparative Animal Physiology. (Same as PHSL 433) Variations of physiological processes in animal phyla, comparison with human physiology, and physiological adaptation to environmental variation. Review of basic physiological principles and comparative aspects of mechanism and function. Prerequisites: BIOL 200A or BIOL 211; BIOL 200B or BIOL 213, or PHSL 310; with grades of C or better.

ZOOL434 - Environmental Physiology 434-3 Environmental Physiology. Physiological adaptations to environmental conditions in animals and humans. Lab/lecture course explores molecular, hormonal, immunological, developmental, and phenotypic processes mediating responses to factors such as stress, disease, contaminants, nutrition, and life history trade-offs. Prerequisite: BIOL 307 or PHSL 310 or ZOOL 433 with a grade of C or better. Laboratory/field trip fee: $20.

ZOOL435 - Pollination Ecology 435-3 Pollination Ecology. (Same as PLB 435) This course will be an evolutionary and ecological examination of the interactions between plants and pollinators. Topics include pollination syndromes, plant breeding systems, pollinator foraging, learning, and behavior, specialized vs. generalized relationships, coevolution/cospeciation, chemical ecology, honey beekeeping & agricultural pollination, and conservation implications of pollinator relationships. Labs will provide hands-on experience in methods of investigating plant breeding systems, plant reproductive ecology, pollinator behavior and efficacy, pollen analysis, floral scent chemistry, and floral phenology. Prerequisite: BIOL 307 (General Ecology) or equivalent with a grade of C or better. For graduate students and senior undergraduates. Lab fee: $75.

ZOOL438 - Molecular Genetics Lab 438-3 Plant and Animal Molecular Genetics Laboratory. (Same as PLB 438, PSAS 438, AGSE 438, CSEM 438) Arabidopsis and Drosophila model organisms, training in laboratory safety, reagent preparation, phenotype analysis, genetics, DNA and RNA analysis, PCR, cDNA construction, cloning and sequencing. Includes plant and bacterial transformation, and population level analysis of genetic variation using RAPD markers in grasses and Alu insertion in humans. Two 2-hr labs and one 1-hr lecture per week. Prerequisite: BIOL 305 or equivalent or consent of instructor. Lab fee: $30.
ZOOL440 - Wildlife Nutritional Ecology  440-3 Wildlife Nutritional Ecology. This course will provide an understanding of basic nutritional principles (including foraging, digestion, absorption, metabolism, and requirements), demonstrate their application to ecological relationships of wild terrestrial vertebrates with their environment, and stimulate students to critically evaluate published literature in this field of study. Prerequisite: BIOL 307.

ZOOL443 - Restoration Ecology  443-3 Restoration Ecology. (Same as PLB 443) Ecological restoration tests current understanding of ecosystem assembly and function. This course applies ecological theory to restoration, with an emphasis on factors influencing plant community assembly and evaluating restoration success. Two lectures a week and one four-hour lab alternate weeks. Prerequisite: BIOL 307 or equivalent.

ZOOL444 - Ecological Analysis Communities  444-4 Ecological Analysis of Communities. (Same as PLB 444) Includes concepts and methods pertaining to the analysis of ecological data. Approaches will include a variety of methods for analyzing multivariate ecology, diversity, pattern, and spatial data. Laboratory will include the computer application of these concepts and methods to field situations. Two lectures and one 4 hour lab per week. Prerequisite: PLB/ZOOL 360, BIOL 307. Lab fee: $15.

ZOOL445 - Wetland Ecology & Mgmt  445-3 Wetland Ecology and Management. (Same as PLB 445) This course provides students with experience in wetland ecology and management with an emphasis on wetland functioning, field sampling, and identification of common wetland plants. Prerequisite: either BIOL 200B or BIOL 213 or PLB 200; and BIOL 307; or consent of instructor. Two lectures and one 4-hour lab per week. Lab fee: $25.

ZOOL450 - Molecular Evolution  450-3 Molecular Evolution. This course introduces the diversity of genomes and the evolutionary forces shaping them. Molecular evolution from the level of single nucleotides to whole genomes will be covered. Prerequisites: BIOL 304 and BIOL 305 with grades of C or better.

ZOOL458 - Multiple Stressors in Ecology  458-3 Multiple Stressors in Ecology. In this class, students will use a step-by-step approach to evaluate an environmental issue or human concern compounded by climate change. The evaluation will begin with a conceptual model of the problem, followed by planned management strategies based on collaborative decision making. The class is designed to foster quantitative reasoning, include that reasoning in research, and articulate findings in terms that foster collaborative management and outreach. Examples of potential projects include climate change impacts in concert with disease propagation, habitat quality and quantity, pollutant uptake in ectotherms, coral bleaching, changing human coastal communities, or fire incidence.

ZOOL461 - Mammalogy  461-3 Mammalogy. Taxonomic characteristics, identification, and natural history of mammals. Two 1-hour lectures and one 2-hour laboratory per week. Prerequisite: ZOOL 220B or ZOOL 220. Laboratory/Field Trip fee: $10.

ZOOL462A - Waterfowl Ecology  462A-2 Waterfowl Ecology and Management (Lecture). This class will explore the pertinence of basic life history theory and ecological principles to waterfowl management. Lecture topics include but are not limited to waterfowl life histories (i.e., productivity and mortality), foraging ecology, nutrition, habitat use, habitat management, migration, and the influence of harvest. Prerequisites: ZOOL 220, BIOL 307 with minimum grades of C. Co-requisite: ZOOL 462B.

ZOOL462B - Waterfowl Laboratory  462B-1 Waterfowl Ecology and Management (Laboratory). This laboratory will meet 1 day/week for 2 hours. The primary objective will be waterfowl identification with a secondary emphasis on wetland plant identification and field techniques in waterfowl research and management. There will be 2-3 Saturday field trips. Prerequisites: none. Laboratory/field trip fee: $20.

ZOOL464 - Wildlife Admin & Policy  464-3 Wildlife Administration and Policy. Responsibilities of private, state, and federal natural resources management agencies. Legal and political processes in areas of wildlife and natural resources. Three lectures per week. Special approval needed from the instructor.

ZOOL465 - Ichthyology  465-3 Ichthyology. Anatomy, physiology, sensory biology, behavior, taxonomy, evolution, zoogeography, and ecology of fishes. Two lectures and one 2-hour laboratory per week. Prerequisite: ZOOL 220 with a grade of C or better. Laboratory/Field Trip fee: $10.
ZOOL466 - Fish Management 466-3 Fish Management. Sampling, age and growth, dynamics, habitat improvement, manipulation of fish populations, and management of freshwater and marine fish stocks. Two lectures per week and one 4-hour laboratory alternate weeks. Offered Fall term. Prerequisite: 10 hours of biological science or consent of instructor.

ZOOL467 - Ornithology 467-3 Ornithology. Classification and recognition of birds and the study of their songs, nests, migratory habits, and other behavior. One lecture and one four-hour laboratory per week. Prerequisite: ZOOL 220B or ZOOL 220. Laboratory/Field Trip fee: $10.

ZOOL469 - Wildlife Techniques 469-3 Wildlife Techniques. Field-oriented course with instruction in techniques for management of wild species and their habitat. One 1 1/2-hour lecture and one 3-hour laboratory per week, two of which may be field trips on Saturdays. Prerequisite: ZOOL 220A,B or ZOOL 220. Laboratory/Field Trip fee: $30.

ZOOL471 - Entomology 471-4 Entomology. Structure, classification, and life histories of insects. Two lectures and two 2-hour laboratories per week. Prerequisite: ZOOL 220A or ZOOL 220. Laboratory/Field Trip fee: $10.

ZOOL472 - Intro Systems Biology 472-3 Introduction to Systems Biology. (Same as PLB 471) The experimental and bioinformatics analysis of large genomic and post-genomic data sets. The goal is integration of gene regulation, protein interaction, metabolite and hormonal signaling molecules into an understanding of basic cellular circuitry networks. Examine redundancy, robustness and decision making in biological systems. Prerequisite: BIOL 305 or CS 330. Lab fee: $15.

ZOOL477 - Aquaculture 477-3 Aquaculture. (Same as ANS 477) Production of food, game, and bait fishes. Design of facilities, chemical and biological variables, spawning techniques, diseases and nutrition. Two lectures per week and one four-hour laboratory on alternate weeks. Prerequisites: BIOL 200A or BIOL 211 or ZOOL 118 or ANS 121 with grade of C or better.

ZOOL478 - Animal Behavior 478-3 Animal Behavior. Biological basis of the behavior of animals. Two lectures and one 2-hour laboratory per week. Prerequisite: One year of biological science or permission of instructor.

ZOOL485 - Special Topics in Zoology 485-2 to 4 Special Topics in Zoology. Examination of topics of special interest not available in other departmental courses. Offered in response to student need and faculty availability. Special approval needed.

ZOOL490 - Food Webs and Ecosystems 490-3 Energetics, Food Webs, and Ecosystems. (Same as PLB 490) This course places conservation of particular species into the context of community and ecosystem management. Approaches to quantifying energy needs of individual species will be extended to models of trophic networks among multiple species. Food web structure and function, species interactions, and resilience to species loss species invasions, and environmental changes will be examined in light of landscape processes. Prerequisite: BIOL 305 or consent of instructor.

ZOOL505 - Wildlife Admin & Mgmt 505-2 Wildlife Administration and Management Constituencies. This class will explore what motivates individuals to pursue outdoor activities, why individual user groups are often extremely passionate about their individual outdoor activity, how outdoor activities impact wildlife populations and habitat, outdoor ethics, how to safely interact with individuals who are often in possession of firearms or other potentially dangerous tools that are used for hunting, and how to resolve conflicts between user groups.

ZOOL510 - Evolutionary Biology 510-3 Evolutionary Biology. An introductory survey of evolutionary biology at the graduate level, emphasizing conceptual issues in evolutionary genetics, adaptation, systematics, and macroevolution. Prerequisite: BIOL 305 or equivalent.
ZOOL521 - Stream Ecology 521-3 Stream Ecology. The physical, chemical, and biological factors affecting organisms in streams. Two lectures per week and one four-hour laboratory alternate weeks. Prerequisite: ZOOL 415. Special approval needed from the instructor.

ZOOL530 - Wildlife Diseases 530-3 Wildlife Diseases. Introduction to the causes and nature of diseases of wildlife with emphasis on wild mammals and birds. The relationship of disease to the population ecology of species will be emphasized further. Two lectures and one two-hour laboratory per week. Offered Spring term. Special approval needed from the instructor.

ZOOL532 - Wildlife Toxicology 532-3 Wildlife Toxicology. Fate and effects of environmental toxicants in wildlife. Review of descriptive and mechanistic toxicology for environmental contaminants. Investigation of the relationship between individual and community responses to toxicant exposure. Examination of current hazard assessment protocols and associated regulatory agencies. Prerequisite: ZOOL 468 or consent of instructor.

ZOOL533 - Aquatic Toxicology 533-4 Aquatic Toxicology. This course will provide an overview of concepts and methodology for conducting tests in the field of aquatic toxicology. Specific topics to be covered include: acute and chronic bioassays, bioaccumulation tests including biotransformation processes and toxicokinetics, and modeling techniques using Quantitative Structure Activity Relationships and fugacity modeling. This class is recommended for students interested in learning about the applied methodology used in the rapidly evolving field of aquatic toxicology. Prerequisite: BIOL 307 and CHEM 340 or equivalent, or instructor's permission.

ZOOL534 - Wildlife Habitat Analysis 534-3 Wildlife Habitat Analysis. Physical, biological and behavioral factors that influence habitat use and selection by wild vertebrate populations. Landscape level analysis of wildlife habitats. Modeling habitat suitability, environmental impact and wildlife population dynamics with habitat data. Application and use of remote sensing and geographic information systems in natural resource management and habitat evaluation. One two-hour lecture and one two-hour laboratory per week. Special approval needed from the instructor.

ZOOL535 - Quantitative Zoogeography 535-3 Quantitative Zoogeography. This course focuses on spatial analyses from the perspective of the organism (or a group of organisms) and the role of the environment in shaping its distribution. The course will cover topics associated with species distribution modeling, biodiversity quantification, landscape genetics, animal movement analyses, home range quantification, and landscape conservation prioritization from the perspective of conserving a single species. Prerequisite: familiarity with GIS and consent of instructor.

ZOOL536 - Spatial Analysis in Ecology 536-3 Spatial Analysis in Ecology. This course provides the ecological, GIS and statistical foundations needed to perform spatial analyses of ecological data at the landscape level. The course will cover the conceptual basis and practical application of GIS-based techniques for accounting for spatial autocorrelation, data reduction, batch processing of analyses (in Python, ArcGIS and R), spatial interpolation of spatial data, and building mixed predictive models aimed at assessing landscape level processes. Prerequisite: familiarity with GIS and consent of instructor.

ZOOL540 - Stable Isotope Ecology 540-3 Stable Isotopes in Ecology. This course will introduce students to fundamentals of stable isotope biogeochemistry, analytical techniques, and interpretation and analysis of stable isotope data. Students will become acquainted with a diverse array of applications of stable isotopes in ecological research in terrestrial and aquatic systems. Two lectures or discussions per week. Prerequisite: 6 hours of chemistry, 10 hours of biological science. Special approval needed from the instructor.

ZOOL545 - Ecosystem Ecology 545-3 Ecosystem Ecology. (Same as PLB 545) Fundamentals of and human modification to atmospheric chemistry and cycling of major nutrients in terrestrial ecosystems are covered in the context of global change. Laboratory exercises provide methodology and analytical approaches to studying ecosystem structure and function. Two lectures a week and one four-hour lab alternate weeks.

ZOOL550 - Vertebrate Populations 550-3 Analysis of Vertebrate Populations. This course provides instruction in the estimation of demographic parameters including but not limited to occurrence, abundance, mortality, birth, growth, philopatry, emigration, and immigration. Students will be introduced
to and provided detailed instruction in the use of Program MARK to analyze data from individually marked organisms. Prerequisite: a course in statistics.

**ZOOL556 - Phylogenetics** 556-3 Phylogenetics. (Same as ANTH 556, MBMB 556, and PLB 556)
An advanced introduction to modern methods of phylogenetic inference, emphasizing both theoretical background concepts and numerical approaches to data analysis. Topics include properties of morphological and molecular characters, models of character evolution, tree estimation procedures, and tree-based testing of evolutionary hypotheses. Special approval needed from the instructor.

**ZOOL557 - Biostatistics** 557-4 Biostatistics. (Same as PLB 557) Basic biostatistics procedures used by researchers in life sciences and related fields. Topics include descriptive statistics, probability and distributions, statistical models, likelihood methods, experimental design, analysis of variance, regression, correlation, and the use of statistical software.

**ZOOL558 - Advanced Biostatistics** 558-4 Advanced Biostatistics. (Same as PLB 558) Advanced biostatistical procedures used by researchers in life sciences and related fields. Topics include multiple and logistic regression, randomization tests, jackknife and bootstrap, Mantel tests, BACI designs, MANOVA, repeated measures analysis and the use of statistical software. Prerequisite: ZOOL 557, PLB 557 or equivalent.

**ZOOL559 - Analytical Toxicology** 559-4 Analytical Techniques in Toxicology. This is an advanced class for graduate students interested in the analytical tools used in the field of Environmental Toxicology. Prerequisite: CHEM 340 with C or better.

**ZOOL564 - Aquaculture Techniques** 564-1 to 2 Aquaculture Techniques. (Same as ANS 564) Practical experience in aquaculture techniques. Course consists of modules which require student participation in hands-on experience, (e.g., spawning, induction of spawning, production of fry, operation and grading, diagnosis and treatment of parasites and diseases, and transporting of fish). One credit for completion of two modules. Register any semester, one year to complete elected number of modules. Written report and examination required for each module. Cost incurred by student varies with modules selected. Prerequisite: ZOOL 477 or ANS 477 or consent of instructor.

**ZOOL565 - Environment Physiology of Fish** 565-3 Environmental Physiology of Fish. Synthesis of effects of pollutants on physiological processes of fish. Course begins with an overview of fish physiology. Topics include: concepts, methods, and measurements in aquatic toxicology; histopathological, physiological, and behavioral responses to pollutants; and toxicity of heavy metals, organics, particulates and other pollutants. Three lectures per week. Prerequisite: ZOOL 465 or consent of instructor.

**ZOOL566 - Fish Stock Assessment** 566-2 Fish Stock Assessment. Methods of characterizing fish populations including mortality rates, age growth analysis, population sampling, yield models, habitat evaluation procedures and creel survey techniques. Two one-hour meetings per week. Prerequisite: ZOOL 466 or consent of instructor.

**ZOOL569 - Advanced Fisheries Mgmt** 569-3 Advanced Fisheries Management. Advanced topics related to the management of fisheries including urban fisheries, native American fisheries, freshwater commercial fisheries, Great Lakes fisheries, impact of power generating plants on fishes, and in-depth consideration of indices of community structure and current topics in fish management. Three lectures per week. Prerequisite: ZOOL 466 or consent of instructor.

**ZOOL570 - Advanced Aquaculture** 570-3 Advanced Aquaculture. (Same as ANS 570) Special topics in aquaculture and practical methods for the production of coldwater, coolwater, warmwater, and tropical aquatic species. Prerequisite: ZOOL 477 or ANS 477 or equivalent with a grade of C or better.

**ZOOL571 - Fish Reproduction & Breeding** 571-3 Fish Reproduction and Breeding. (Same as ANS 571) Principles of finfish reproductive strategies, reproductive physiology and captive breeding. The role of genetics and the use of biotechnology and various breeding techniques in breeding programs will also be emphasized. The purpose of this course is to develop an understanding of fish reproduction and breeding techniques and to gain an appreciation of the complexity involved in managing a hatchery breeding program. Two lectures a week and one four-hour lab alternate weeks. Prerequisite: ZOOL 477 or ANS 477 or equivalent with a grade of C or better.
ZOOL573 - Physiological Ecology 573-3 Physiological Ecology. The role of physiological, morphological, and behavioral adaptations and adjustments in the ecology of vertebrate organisms with special emphasis on examining the energy balance and environment as it influences vertebrate ecology. Two hours of lecture and one two-hour laboratory. Prerequisite: BIOL 307 or equivalent. Special approval needed from the instructor.

ZOOL574 - Internship in Wildlife 574-1 to 6 Internship in Wildlife Administration and Management. A minimum 2-month full-time internship will be conducted at a Fish and Wildlife Refuge, National Forest, State Wildlife Area, or other private of publicly held land trust. During the time of the internship, daily activities of the students will be supervised by agency personnel. In collaboration with agency personnel, students will be required to write and submit a land improvement proposal to an appropriate funding agency. Internships must be approved by the Director of the Professional Science Master's program in Zoology. Grading will be based on a rubric outlining student performance during the day to day activities internship and the final land improvement proposal.

ZOOL575 - Topics Amphibian Biology 575-3 Topics in Amphibian Biology. Readings, discussions, and student presentations on current research in the biology of amphibians.

ZOOL576 - Seminar in Ecology 576-1-12 hours; 1 per semester Seminar in Ecology. (Same as PLB 589A) Discussions of current and historical research and literature in various subject areas of ecology.

ZOOL577 - Population Ecology 577-3 Population Ecology. Principles of population dynamics as related to animals, with application to management and conservation of animal populations. Areas of emphasis include (A) an introduction to mathematical models and graphical theory of population dynamics, (B) application of theory to population management & conservation, and (C) empirical approaches to studying population persistence and regulation. Prerequisite: BIOL 307 or consent of instructor.

ZOOL578 - Population Genetics 578-3 Population Genetics. (Same as PLB 578) Genetic structure of populations, factors causing changes and principles governing rate and direction of change. Three lectures per week. Prerequisite: BIOL 304 or equivalent, and BIOL 305 or equivalent.

ZOOL579 - Molecular Genetics Techniques 579-3 Molecular Genetics Techniques. Practical experience in molecular genetics techniques currently used in zoology for population genetic analysis and for molecular systematics. Emphasis will be on methods for allozyme, mtDNA and nuclear DNA analysis. Class projects will focus on experimental design, data collection and analysis. Special approval needed from the instructor.

ZOOL580 - Topics in Evolution 580-1 Current Topics in Evolution. (Same as ANTH 580, MBMB 580) The Evolution Discussion Group meets weekly throughout the year to discuss current evolutionary literature and the research of participants. All students and faculty with an interest in evolutionary biology are welcomed to participate.

ZOOL581 - Zoological Literature 581-2 Zoological Literature. Diversity and functions of zoological literatures, scientific writing and the publication process. Two lectures per week. Restricted to graduate status in a biological science.

ZOOL582 - Graduate Zoology Seminar 582-1 to 4 (1,1,1,1) Graduate Zoology Seminar. Special topics in zoology. Consult department for each semester's topic. One meeting per week. Special approval needed from the instructor and department.

ZOOL584 - Conservation Genetics 584-3 Conservation Genetics. Application of principles from evolutionary and ecological genetics to conservation biology, fishery management, wildlife management, and aquaculture. Includes an overview of classical, molecular, population and quantitative genetics leading to an understanding of how managers can conserve genetic diversity and evolutionary potential of natural and captive populations. Prerequisite: BIOL 305 or consent of instructor.

ZOOL585G - Seminar in Parasitology 585G-3 per topic Seminar in Parasitology. Advanced study of special topics in zoology.
ZOOL585Z - Seminar in Selected Topics 585Z-3 per topic Seminar in Selected Topics. Advanced study of special topics in zoology. Special approval needed from the instructor or department.

ZOOL586 - Fisheries Seminar 586-1 Fisheries Seminar. Contemporary topics, literature, and oral and written communication in fisheries science. Enrollment required for zoology graduate students specializing in fisheries science for all fall and spring semesters until degree requirements are completed, unless exempted by the student's academic advisor. Only one 586 credit hour, however, may be used to satisfy degree requirements. One meeting per week.

ZOOL588 - Wildlife Seminar 588-1 to 4 (1,1,1,1) Wildlife Seminar. Contemporary topics, literature, and oral and written communication in wildlife ecology. Enrollment required for zoology graduate students specializing in wildlife ecology for all Fall and Spring semesters until degree requirements are completed. Only four 588 credit hours, however, may be used to satisfy degree requirements. One meeting per week.

ZOOL589 - Zoology Colloquium 589-1 to 2 (1,1) Zoology Colloquium. Regularly scheduled presentations by invited seminar speakers on topics of current research interest in Zoology. Graded S/U. Only two credits of 589 may be used to satisfy degree requirements. Restricted to graduate status in Zoology.

ZOOL593 - Individual Research 593-1 to 12 Individual Research. Investigation in zoology other than those for theses. Only three hours may be credited toward a degree. Some costs may be borne by the student.

ZOOL596 - Research 596-1 to 66 (1 to 12 per semester) Research. Graded S/U only. Credit may not be used toward a degree in Zoology. Special approval needed from the instructor.

ZOOL597 - Advanced Zoological Techniques 597-1 to 12 Advanced Zoological Techniques. Individualized techniques or experimental procedures to prepare for dissertation research. May be taken at another university. Number of credits determined by committee. Graded on S/U basis following final report submitted to major adviser. Restricted to admission to Ph.D. degree program in Zoology. Special approval needed from the major adviser.

ZOOL598 - Research Paper 598-1 to 6 Research Paper. Research paper for Master of Science degree for Biological Sciences major. Some cost may be borne by the student. Graded S/U only. Special approval needed from the instructor.

ZOOL599 - Research & Thesis 599-1 to 36 (1 to 12 per semester) Research and Thesis. Thesis for Master of Science degree. Only six hours may count toward the degree. Some cost may be borne by student. Graded S/U only. Special approval needed from the instructor.

ZOOL600 - Research & Dissertation 600-1 to 32 (1 to 16 per semester) Research and Dissertation. Research and dissertation for Doctor of Philosophy degree. Some cost may be borne by student. Graded S/U only. Special approval needed from the instructor.

ZOOL601 - Continuing Enrollment 601-1 per semester Continuing Enrollment. For those graduate students who have not finished their degree programs and who are in the process of working on their dissertation, thesis, or research paper. The student must have completed a minimum of 24 hours of dissertation research, or the minimum thesis, or research hours before being eligible to register for this course. Concurrent enrollment in any other course is not permitted. Graded S/U or DEF only.

ZOOL699 - Postdoctoral Research 699-1 Postdoctoral Research. Must be a Postdoctoral Fellow. Concurrent enrollment in any other course is not permitted.

Zoology Faculty

**Anderson, Frank E.**., Associate Professor, Ph.D., University of California, Santa Cruz, 1998; 1999. Invertebrates; molecular systematics, molecular evolution.

**Anthoney, Terence R.**, Associate Professor, Emeritus, M.D., University of Chicago, 1968; and Ph.D., University of Chicago, 1975; 1971.

2020-2021 Academic Catalog
Boyles, Justin G., Assistant Professor, Ph.D., Indiana State University, 2009; 2011. Conservation physiology.

Brandon, Ronald A., Professor, Emeritus, Ph.D., University of Illinois, 1962; 1963.

Brooks, Marjorie, Associate Professor, Ph.D., University of Wyoming, 2003; 2009. Limnology; biogeochemistry; toxicology.

Brown, Jason L., Assistant Professor, Ph.D., East Carolina University, 2009; 2016. Integrated ecological, evolutionary, genetic, and geospatial analysis.

Catenazzi, Alessandro, Assistant Professor, Ph.D., Florida International University, 2006; 2012. Amphibian conservation.

Chen, Da., Assistant Professor, Ph.D., College of William and Mary, 2009; 2011. Wildlife toxicology.

Eichholz, Michael W., Associate Professor, Ph.D., University of Alaska, 1998; 2002. Waterfowl, wetland ecology.

Englert, DuWayne C., Professor, Emeritus, Ph.D., Purdue University, 1964; 1963.

Feldhamer, George A., Professor, Emeritus, Ph.D., Oregon State University, 1977; 1984.

Garvey, James E., Professor, Ph.D., Ohio State University, 1997; 2000. Fisheries biology.

Halbrook, Richard S., Associate Professor, Emeritus, Ph.D., Virginia Polytechnic Institute and State University, 1990; 1993.

Heist, Edward J., Professor, Ph.D., College of William and Mary, 1994; 1998. Population genetics; conservation genetics; fishery management.

Ibrahim, Kamal, Associate Professor and Director of Graduate Studies, Ph.D., Cambridge University, 1989; 2001. Population genetics.

Jimenez-Ruiz, F. Agustin, Associate Professor, Ph.D, University of Nebraska-Lincoln, 2004; 2009. Parasitology.

King, David G., Associate Professor, Emeritus, Ph.D., University of California, San Diego, 1975; 1977.

Kohler, Christopher C., Professor, Emeritus, Ph.D., Virginia Polytechnic Institute, 1980; 1981.

Krajewski, Carey, Professor and Chair, Ph.D., University of Wisconsin-Madison, 1988; 1990. Vertebrate molecular systematics.

LeFebvre, Eugene A., Associate Professor, Emeritus, Ph.D., University of Minnesota, 1962; 1966.

Lovvorn, James R., Professor, Ph.D, University of Wisconsin-Madison, 1987; 2009. Waterbird ecology; food webs.

Lydy, Michael J., Professor, Ph.D., Ohio State University, 2001. Aquatic toxicology.

McPherson, John E., Jr., Professor, Emeritus, Ph.D., Michigan State University, 1968; 1969.

Muhlach, William L., Associate Professor, Emeritus, Ph.D., University of Illinois at Chicago, 1986; 1987.

Nielsen, Clay, Adjunct Professor, Ph.D., Southern Illinois University Carbondale, 2001; 2003. Wildlife ecology and management.

Reeve, John, Associate Professor, Ph.D., University of California Santa Barbara, 1985; 2000. Quantitative ecology.

Shepherd, Benjamin A., Professor, Emeritus, Ph.D., Kansas State University, 1970; 1969.

Sparling, Donald W., Associate Professor, Emeritus, Ph.D, University of North Dakota, 1979; 2004.

Stahl, John B., Associate Professor, Emeritus, Ph.D., Indiana University, 1958; 1966.

Waring, George H., Professor, Emeritus, Ph.D., Colorado State University, 1966; 1966.

Warne, Robin W., Assistant Professor, Ph.D., University of New Mexico, 2008; 2011. Physiological ecology.

Whiles, Matt R., Professor, Ph.D., University of Georgia, 1995; 1999. Stream ecology; freshwater invertebrates; entomology.
Whitledge, Gregory, Associate Professor, Ph.D., University of Missouri, 2001; 2995. Fish ecology and management.

Other Graduate Courses

The 400- and 500-level courses listed below are offered by Southern Illinois University for graduate credit.

Africana Studies Courses

410H - African Expressive Culture 410H-3 African Expressive Culture. (Same as ANTH 410H) This course examines aspects of African expressive culture including the visual arts, music, dance, orature, cinema, drama, and ceremony from an anthropological perspective. Particular attention is given to analysis of African expressive culture in social context and the role of the arts in the practice of politics, religion, medicine, and other aspects of African life. Many of the expressive genres examined deal with historical representation and political resistance. Therefore, this course provides insights into African history and politics through the creation of African artists.

416 - Black Feminist Thought 416-3 Black Feminist Thought as Theory and Praxis. (Same as CMST 416 and WGSS 416) Explore the roots, contemporary manifestations, and current embodiments of Black feminist thought. Explore the works of Black women to engage in critical thinking and thoughtful dialogue that positions the valuable knowledge, experiences and perspectives of women of color at the center of inquiry while simultaneously discovering spaces for multicultural alliances.

420 - Themes in Africana Drama 420-3 Themes in Africana Drama. (Same as THEA 460) Explores significant themes in African and African American drama, with special attention to performance styles and cultural issues.

447 - Comm Race and Ethnicity 447-3 Communicating Race and Ethnicity. (Same as CMST 447) Via intercultural theories and methods, this course explores histories, relationships, interactions and recent events by positioning racial and ethnic perspectives at the center of inquiry. The course critically examines the complexities of race, racism and ethnicity by focusing on how people communicate across racial and ethnic differences in different contexts.

452A - Uppity Women's Blues 452A-3 Traditions of Uppity Women's Blues. (Same as MUS 452A, WGSS 452A) Examines the tradition of "uppity" women's blues from the so-called "classic" blues singers of the 19th century (Gertrude "Ma" Rainey, Bessie Smith, Ida Cox, etc.) to the contemporary blues of Saffire, Denise LaSalle and others. Explores ways blues women challenge conventions of gender and sexuality, racism, sexism, classism, and homophobia. Restricted to junior/senior/graduate music major or consent of instructor.

452B - Blues-BW Piano Styles 452B-3 Blues and Boogie Woogie Piano Styles. (Same as MUS 452B) Traces the history, culture, and stylistic developments of blues and boogie woogie piano. Explores socio-cultural contexts and examines key players, pieces, and musical styles. Restricted to junior/senior/graduate music major or consent of instructor.

458 - Bantu Diasporas 458-3 Bantu Diasporas in Africa & the Atlantic World. (Same as HIST 458) This course examines the origins and development of Bantu language and culture groups in Africa and the Atlantic World from the first dispersal of Bantu-speaking people thousands of years ago through the end of slavery in the Americas. Additionally, the course explores the multiple methods and disciplines used to construct histories of Bantu language and culture groups.

460 - Slavery & The Old South 460-3 Slavery and The Old South. (Same as HIST 460) This course examines slavery and southern distinctiveness from the colonial period to 1861. Discussion topics include the plantation system, race relations, women and slavery, and southern nationalism.
461 - Black Ams on Western Frontier 461-3 Black Americans on the Western Frontier. (Same as HIST 461) This course examines the history of African Americans in the American West. Taking both a chronological and thematic approach, it begins with a discussion of early black explorers in the age of encounter, and ends with a focus on black western towns established in the United States by the 1880's.

465 - Govt & Politics Sub-Sahara Afr 465-3 Governments and Politics of Sub-Saharan Africa. An examination of the impact of western colonial rule on the societies and politics of Africa, the method by which these colonial areas became sovereign states in the post-World War II era, the role of domestic political institutions, African political thought and behavior, and the development of foreign policies regarding relations with other African states, continental and international organizations, and international organizations, and non-African states.

472 - Psychology of Race and Racism 472-3 Psychology of Race and Racism. (Same as PSYC 470) A review of the history and evolution of the construct of race as a psychological phenomenon. The persuasiveness of race in every sphere of life will be studied, from a multidisciplinary perspective.

473 - Comparative Slavery 473-3 Comparative Slavery. (Same as HIST 473) A comparative study of slavery from antiquity to its abolition in the 19th century with the differing socio-cultural, political and economic contexts; organized chronologically, regionally, and thematically.

475 - Education & Black America 475-3 Education and Black America. This course uses the best scholarship of cultural anthropology and social studies to look at the history of education in the African American community; how public education affects African American families; how school shape cultural change and how racial, ethnic peer group, and gender issues help determine curriculum issues. For graduate credit.

478 - Southern Africa, 1650-1994 478-3 Southern Africa, 1650-1994. (Same as HIST 478) An examination of Southern African history with emphasis on South Africa from 1652 to 1994. Topics to be covered include conflicts and wars, migrations and state formations, the economics of minerals, industrialization and the Anglo-Boer War, intertwined histories of race relations, the politics of exclusion and apartheid, and the making of modern South Africa.

491 - Indep Reads Africana Studies 491-3 to 6 Independent Readings in Africana Studies. Special topics, focused on research needs of students who are regularly enrolled in upper-division courses, especially graduate students doing research in Africana related topics in other departments and programs. May be repeated for up to six credit hours. Special approval needed from the director of the AFR program.

494 - Methodology Seminar 494-3 Methodology Seminar in Africana Studies. This course provides the theoretical framework for research in the field of Africana Studies. Students will investigate the foundations of the field of Black Studies, from the arguments of Maulena Karenga and Molefi Asante, to the challenges of scholars such as Manning Marable, James Turner and other recent scholars. Students will pursue individual research projects appropriate to various academic disciplines which constitute the field of Africana Studies. May be taken for graduate credit.

495 - African Cultural Continuities 495-3 to 9 African Cultural Continuities: Study Abroad. Study abroad 4-6 week program is designed to introduce similarities in culture (food, dance, music, family traditions, religion) of people in Ghana and in the cultures of people in the African diaspora. Class begins on the SIUC campus and will relocate to Elmina and Cape Coast, Ghana, during the first year of a three-year sequence. Other years will locate in areas of the West Indies, Caribbean & Central America. May be taken for graduate credit. Special approval needed from the instructor.

496 - Slave Narratives 496-3 Slave Narratives. Using compilations of the 19th and early 20th century body of work known as "Slave Narratives", students will organize research projects that discover selected major themes of Africana Studies. The course will be useful to students from various academic disciplines (such as Psychology; Music; Sociology; History; Philosophy; Education; Literature; and Theology, among others) as they place Slave Narratives in the center of Africana and American Studies scholarship. May be taken for graduate credit.

497 - Civil Rights Movement 497-3 The U.S. Civil Rights Movement. (Same as HIST 487) This course provides an overview of the history of the Civil Rights Movement while engaging major debates in the field
of Black Freedom Studies. Central themes will include the impact of the Cold War, the roles of women, and the relationship of civil rights to black power. We will also discuss the difference between popular memory and historical scholarship as well as the meaning of such discussions for contemporary issues of racial and economic justice.

499 - Special Tpcs Africana Studies 499-3 to 9 (3 per topic) Special Topics in Africana Studies. Topics vary and are announced in advance. May be repeated as the topic varies. No prerequisites.

499B - Philosophy of Race 499B-3 Philosophy of Race. (Same as PHIL 455) A survey of critical examination of a range of theories on the nature and meaning of "race", the intersection of race with class and gender, and the promotion of racial progress. Such theories include racial realism and idealism, racial biologism, cultural race theory, social constructivist theory, integrationism, separatism, racial eliminativism, cosmopolitanism, and especially critical race theory.

Agriculture Courses

550 - Research Teaching Comm 550-3 Research and Teaching Communications. This course is designed to teach graduate students how to communicate successfully their proposed and completed research and to teach college-level courses in the Agricultural Sciences.

581 - Seminar 581-1-4 (1,1,1) Seminar. Oral presentations by individual graduate students. Each Ph.D. student in Agricultural Sciences is required to present their proposed dissertation research project as a seminar and the findings of their dissertation as a seminar. All Agricultural Science Ph.D. students must register for at least two credits of seminar.

582A - Colloquium-Biological Sciences 582A-1-3 Colloquium in Agricultural Science-Biological Sciences. Recent developments in Agricultural Sciences will be discussed in a classroom setting.

582B - Colloquium-Social Sciences 582B-1-3 Colloquium in Agricultural Science-Social Sciences. Recent developments in Agricultural Sciences will be discussed in a classroom setting.

582C - Colloquium-Physical Sciences 582C-1-3 Colloquium in Agricultural Science-Physical Sciences. Recent developments in Agricultural Sciences will be discussed in a classroom setting.

590 - Readings 590-1-4 Graduate Readings in Agricultural Science. Journal articles, chapters and books relevant to a Ph.D. student's research will be read and discussed with their major professor.

592 - Special Problems 592-1-4 Special Problems in Agricultural Science. Directed study of specialized areas of Agricultural Science, depending on the program of the student.

595 - Instruction in Ag Sciences 595-1 to 6 Instruction in Agricultural Sciences. Acquaints the student with different teaching environments and styles. Students will be expected to participate in instruction of agricultural sciences courses. Special approved needed by the instructor.

600 - Dissertation 600-1-36 (1 to 12 per semester) Dissertation. This course is to be taken during the research and writing of the dissertation. A minimum of 24 hours must be earned for the Doctor of Philosophy degree.

601 - Continuing Enrollment 601-1 Continuing Enrollment. For those Doctoral students who have not finished their degree programs and who are in the process of working on their dissertation. The student
must have completed a minimum of 24 hours of dissertation research before being eligible to register for this course. Concurrent enrollment in any course is not permitted.

Army Military Science

404 - U.S. Military History 404-3 U.S. Military History. This course provides a historical perspective to decisions made by American military leaders; emphasizing solutions to challenges future Army officers might face: battlefield complexity, resource limitations, teamwork deficiencies, etc. The student will learn how former military leaders confronted and coped with similar issues, using their experiences and approaches to arm students with the ability to create their own solutions. Commissioning requirement for Army ROTC cadets. Course not restricted to ROTC cadets.

Aviation

551 - Aviation Policy Law & Reg 551-3 Aviation Policy, Law, and Regulation. (Same as POLS 551) Examination of the history of American aviation policy, law and regulation. The course focuses primarily on the development, implementation and enforcement of aviation policies and regulations at the federal level. Special attention is paid to the interaction of various government agencies and constituency groups, such as the aircraft industry, airport authorities, airlines, private pilots and passengers. In addition to the historical survey, students will analyze current policy and regulatory trends and identify future problems and opportunities for American aviation policy. Restricted to enrollment in MPAA graduate program or consent of instructor.

552 - Adv Airport Administration 552-3 Advanced Airport Administration. (Same as POLS 552) This course will address the role and function of the airport administrator, especially related to the tasks of developing, operating and maintaining various airport services to meet the needs of key airport users. This course will study key airport administration cases at primary, commercial service, reliever and general aviation airports. Meeting key airport regulations concerning operations and security will be a focus of the course. Restricted to enrollment in MPAA graduate program or consent of instructor.

553 - Adv Airport Safety Admin 553-3 Advanced Airport Safety Administration. (Same as POLS 553) The Aviation Safety Administrator's job function and responsibility for safety and accident prevention within an aviation organization is examined using the case study method. The relevant theory, concepts, procedures and techniques of resource allocation, organizational design, decision modeling, task assignment, delegation of authority and responsibility, establishment of organizational goals and priorities and risk management as they relate to Aviation Safety are included. The job functions of an Aircraft Accident Investigation Team and of an Aviation Safety Inspector will be studied. Aviation safety administration literature will be reviewed. Restricted to enrollment in MPAA graduate program or consent of instructor.

554 - Aviation Planning 554-3 Aviation Planning. (Same as POLS 554) Examination of aviation planning at the international, federal, state and local levels. The course focuses primarily on federal aviation planning, but considerable attention is paid to the interdependent relationship between the various levels of planning. Special attention is paid to the planning process and the role of various agencies and client groups within the aviation community. Restricted to enrollment in MPAA graduate program or consent of instructor.

Biochemistry

451A - Biochemistry 451A-3 Biochemistry. (Same as CHEM 451A and MBMB 451A) First half of the 451A,B two semester course. Must be taken in A,B sequence. Three lectures per week. Introduction to biomolecules, biochemical techniques, expression of genetic information, basic thermodynamics, ligand binding, aqueous solutions, protein structure, hemoglobin, spectroscopy. Prerequisites: CHEM 340 and CHEM 342 or 442, or equivalents.

451B - Biochemistry 451B-3 Biochemistry. (Same as CHEM 451B and MBMB 451B) Second half of 451A,B two semester course. Must be taken in A,B sequence. Basic kinetics, enzyme kinetics, enzyme inhibitors, regulation of enzymes, oxidation-reduction, high energy bonds, transport across membranes,
intermediary metabolism, hormonal control of metabolism. Prerequisites: MBMB 451A or BCHM 451A or CHEM 451A or equivalent.

456 - Biophysical Chemistry 456-3 Biophysical Chemistry. (Same as CHEM 456 and MBMB 456)
A one-semester course in Biophysical Chemistry intended for biochemists and molecular biologists. Emphasis will be on solution thermodynamics, kinetics and spectroscopy applied to biological systems. Prerequisites: CHEM 340 and CHEM 342 or 442, MATH 141 or 150, MBMB 451A or BCHM 451A or CHEM 451A, or equivalents.

Electrical Engineering Technology

403A - Electronic Circuit Analysis 403A-4 Electronic Circuit Analysis. This course studies fundamental solid-state electronic concepts, the application and design of transistor amplifiers, and operational amplifier circuits. Course topics include the ideal operational amplifier, diodes, rectifiers, analysis and design of bipolar transistor (BJT) amplifiers, and the analysis and design of field effect transistor (FET) amplifiers. A laboratory emphasizes electronics circuit design and analysis. Prerequisite: EET 304B. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

403B - Electronic App & Design 403B-4 Electronics Application and Design. This course focuses on system-level design and application of electronics circuits. Circuits include linear integrated circuits, quasi-linear circuits, integrated digital circuits, and pulse waveform generating and timing circuits. Topics include power amplifiers, Schmitt triggers, comparators, timers, and active filters. A design laboratory allows students to implement several design projects with increasing complexity. Prerequisite: EET 403A. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

437A - Telecomm Systems Fundamentals 437A-4 Telecommunication Systems Fundamentals. This course is a study of the fundamental concepts of analog and digital communication systems in addition to a survey of the state of the art of current and emerging communication technologies. Topics include modulation, signal encoding, transmission media, multiplexing, cellular, bluetooth, Wi-Fi, WiMAX and LTE-Advanced. Associated labs reinforce the concepts introduced and allow students to simulate and build real systems. (Lecture + Lab). Prerequisite: EET 304B with a minimum grade of C. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

437B - Data & Computer Communication 437B-4 Data and Computer Communication. This course is a study of data and computer networks. Students are introduced to communication protocols, networking technologies and the various computer networks topologies. The OSI (Open Systems Interconnection) model is used as a guide in introducing the purpose and underlying principles of the existing communication protocol standards. The course concludes with an overview of emerging communication standards and technologies. Topics include LAN, WAN, TCP/IP, Routing, and Data Link layer. Associated labs reinforce the concepts introduced and allow students to simulate and build real systems. Lecture + Lab. Prerequisite: EET 437A with a minimum grade of C. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

438A - Automatic Cntrl Systems Tech 438A-4 Automatic Control Systems Technology. The mathematical concepts and tools used to model and design automatic control systems. The mathematical models for electric, hydraulic, mechanical and thermal processes found in industry. The course uses Laplace transforms, transfer functions, block diagrams and signal flow graphs to represent systems, determine system response and design control systems. A laboratory demonstrates applications. Prerequisites: EET 304B with a C or better, or consent of instructor; and EET 332A.

438B - Seq Digital Control & DAQ 438B-4 Sequential Digital Control and Data Acquisition. Concepts and components used in data acquisition and sequential control systems. The course covers sensors, signal conditioning, analog-to-digital/digital-to-analog conversion devices, relay logic design and programmable logic controllers. A laboratory demonstrates lecture topics and gives students experience with data acquisition and control languages and ladder logic programming within a design team. Prerequisites: CS 202 or ENGR 222 or ECE 222 with a C or better; EET 438A with a C or better, or consent of instructor.
439 - **MCU Application & Design** 439-4 Microcontroller Application and Design. This course introduces embedded systems design and microcontroller programming. Students study microcontroller architectures and design applications. The course emphasizes interfacing microcontrollers with sensors and actuators. Software tools like Matlab and Simulink aid in visualization and Model-Based Design. Prerequisites: EET 238 with a C or better; CS 202 or ENGR 222 or ECE 222 with a C or better; or consent of instructor.

445 - **Computer Integrated Mfg** 445-3 Computer-Integrated Manufacturing. (Same as IMAE 445) Introduction to the use of computers in the manufacturing of products. Includes the study of direct and computer numerical control of machine tools as well as interaction with process planning, inventory control and quality control. Prerequisite: IMAE 208. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

455 - **Industrial Robotics** 455-3 Industrial Robotics. (Same as IMAE 455) Study of robotics within a wide variety of application areas. Topics covered include classification of robots, sensor technology, machine vision; control systems, including programmable logic controllers (PLCs); robot safety and maintenance; and economic justification of robotic systems. Prerequisite: None. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

**Fashion Design and Merchandising**

431 - **Ethnic Dress** 431-3 Ethnic Dress. The study of ethnic dress in non-western cultures, with attention to aesthetics, symbolism and uses of ethnic dress. Cultures studied may vary with each offering. May be repeated for credit.

432 - **Historic Clothing: Western** 432-3 Historic Clothing: Western Cultures. Development of clothing in Western civilization to 1850. Consideration of social, economic, aesthetic factors and technical innovations influencing clothing.

433 - **Hist West Costume 1860-Present** 433-3 History of Western Costume, 1860 to Present. Evolution of Western costume from 1860 through the present time. Emphasis on the interrelationship between costume, social, political, economic, and technical changes.

441 - **Fashion Product Analysis** 441-3 Fashion Product Analysis. Examines how quality and value of apparel products are visually evaluated by industry and consumers. Prerequisite: FDM 101, 241.

**Fermentation Sciences**

460 - **Sensory Analysis** 460-4 Sensory Analysis. The course covers the science of the human senses as applied to alcoholic beverages. The physiological and neurological basis of human sensing are covered from the perspective of detecting and identifying both desirable traits and perceived flaws in products. The concepts of experimental design and statistical analysis are covered, as well as practical aspects of designing and maintaining sensory panels. Two hours lecture and three hours laboratory per week. Prerequisite: CHEM 181 or HORT 333 with a grade of C or better or consent of instructor. Age Restricted: Students must be 21 years of age prior to first lab meeting. Lab fee: $45.

462 - **Yeast Science & Technology** 462-4 Yeast Science and Technology. An in-depth look at yeast from the perspective of fermentation science, with an emphasis on brewing science and enology. The effects of genetics will be examined with respect to how various strains and genetic mutations affect the fermentation process and the quality of the final product. The course will emphasize yeast metabolism and the various parameters and conditions that affect fermentation processes. The techniques dealing with yeast collection, storage and culturing will be covered from both theoretical and practical perspectives. Lectures will be supplemented with hands-on laboratory experiments. Two hours lecture and four hours laboratory per week. Prerequisite: MICR 301 with a grade of C or better or consent of instructor. Lab fee: $60.

480 - **Advanced Brewing Science** 480-4 Advanced Brewing Science and Analysis. An advanced coverage of concepts in brewing, providing in-depth coverage of beer, brewing and quality control processes. Students will gain an understanding of the raw materials used in the production of beer. Specific coverage will be given to the processing and effects of raw materials, technical and scientific
aspects of the brewing process, and the various processes that occur during fermentation, conditioning and packaging. In addition, the concept of beer quality and methods of ensuring quality control will be covered in detail, including the various methods of analysis that are used in the brewing industry. Two hours lecture and four hours laboratory per week. Age Restricted: Students must be 21 years of age prior to the first class meeting. Prerequisite: CHEM 180, CHEM 181, FERM 100 and CHEM 330 all with grades of C or better or consent of instructor. Lab fee: $60.

489 - Brewing and Distilling 489-3 Brewing and Distilling Technology. The primary focus of this course is to introduce basic facilities planning for operations of the brewing and distilling industry, and to gain management and technology insight in brewing/distilling production. Prerequisite: FERM 480 with a grade of C or better. Restricted to Junior/Senior standing in Ag Systems Technology or Fermentation Science and instructor approval.

Industrial Management and Applied Engineering

405 - Applied Robotics & Control 405-4 Applied Robotics and Control Lab. Laboratory experiments to familiarize the student with writing robotic programs for performing specific tasks, developing and debugging PLC code, integrating robotic programming and PLC programming in the control of a robotics cell, developing basic programming skills using computer simulation packages; milling and lathing applications of CNC machining. Prerequisite: IMAE 445 or ET 445 and IMAE 455 or concurrent enrollment in both. Restricted to Junior/Senior standing.Restricted to College of Engineering students or departmental approval required.

430 - Health/Injury:Work Setting 430-3 Health and Injury Control in a Work Setting. (Same as PH 430) Assesses the health and injury control programs present in a work setting. Emphasis given to employee programs in health, wellness, and injury control that are effective. Field trips to work sites are included. Restricted to College of Engineering students or departmental approval required.

440 - Manufacturing Policy 440-3 Manufacturing Policy. Review of all areas covered by the industrial technology program. Includes problems which simulate existing conditions in industry. Students present their solutions to the class and to the instructor in a formal manner. Restricted to College of Engineering students or departmental approval required.

445 - Computer Integrated Mfg 445-3 Computer Integrated Manufacturing. (Same as EET 445) Introduction to the use of computers in the manufacturing of products. Includes the study of direct and computer numerical control of machine tools as well as interaction with process planning, inventory control and quality control. Prerequisite: IMAE 208. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

450 - Project Management 450-3 Project Management. This course is designed to provide students with an overview of the project management process followed by an in-depth examination of the activities needed to successfully initiate, plan, schedule, and control the time and cost factors of the project. Prerequisite: none. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

455 - Industrial Robotics 455-3 Industrial Robotics. (Same as EET 455) Study of robotics within a wide variety of application areas. Topics covered include classification of robots, sensor technology, machine vision; control systems, including programmable logic controllers (PLCs); robot safety and maintenance; and economic justification of robotic systems. Prerequisite: None. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

465 - Lean Manufacturing 465-3 Lean Manufacturing. This course will cover the principles and techniques of lean manufacturing. Major topics covered include lean principles, 5S, value stream mapping, total productive maintenance, manufacturing/office cells, setup reduction/quick changeover, pull system/Kanbans, continuous improvement/Kaizen, lean six sigma, lean simulation, and other modern lean manufacturing techniques and issues. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

470A - Six Sigma Green Belt 470A-3 Six Sigma Green Belt. Study the knowledge areas of Six Sigma Green Belt. Topics include six sigma goals, lean principles, theory of constraints, design for six sigma, quality function deployment, failure mode and effects analysis, process management, team dynamics,
project management basics, data and process analysis, probability and statistics, measurement system analysis, and process capability. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

470B - Six Sigma Green Belt II 470B-3 Six Sigma Green Belt II. The objective of this course is to provide the student with a complete coverage of the statistical and analytical tools used and applied in the "Six Sigma" methodology at the green-belt level. Topics include: discrete probability distributions, continuous probability distributions, statistical process control tools, quality control charts, process capability analysis, gauge and measurement capability studies, cumulative sum control charts and exponentially-weighted moving average control charts. Prerequisite: IMAE 307 or MATH 140 or MATH 150, IMAE 470A or consent of instructor. Restricted to Junior/Senior standing. Restricted to College of Engineering students or departmental approval required.

475 - Quality Control 475-3 Quality Control. Study the principles and techniques of modern quality control practices. Topics include total quality management, fundamentals of statistics, control charts for variables and other quality related issues and techniques. Restricted to senior standing. Restricted to College of Engineering students or departmental approval required.

485 - Quality Control II 485-3 Quality Control II. Study the principles and techniques of modern quality control practices. Topics include fundamentals of probability, control charts for attributes, acceptance sampling systems, reliability and other quality related issues and techniques. Restricted to senior standing. Restricted to College of Engineering students or departmental approval required.

490 - Six Sigma 490-3 Six Sigma. Six Sigma is a data-driven management system with near-perfect-performance objectives that has been employed by leading corporations. Its name is derived from the statistical target of operating with no more than 3.4 defects per one million chances, but its principles can be applied in business of all types to routinely reduce costs and improve productivity. This overview describes what Six Sigma is, and what is techniques and tools are. Prerequisite: IMAE 475. Restricted to College of Engineering students or departmental approval required.

Medical Education Preparation

503B - Medical Pharmacology 503B-1 to 3 Medical Pharmacology. Content may be supplemental (to concurrent biological science courses), additional (permitting acceleration), or preparational for the MCAT/DAT. Restricted to MEDPREP students enrolled in Master's level program.

503E - Medical Immunology 503E-1 to 3 MEDPREP Medical Immunology. Content may be supplemental (to concurrent biological science courses), additional (permitting acceleration), or preparational for the MCAT/DAT. Restricted to MEDPREP students enrolled in Master's level program.

504E - Biochemistry 504E-1 to 3 Biochemistry. Content may be supplemental (to concurrent biological science courses), additional (permitting acceleration), or preparational for the MCAT/DAT. Restricted to MEDPREP students enrolled in Master's level program.

Microbiology

403 - Medical Microbiology 403-3 Medical Microbiology Lecture. (Same as MBMB 403) A survey of the more common bacterial, mycotic and viral infections of humans with particular emphasis on the distinctive properties, pathogenic mechanisms, epidemiology, immunology, diagnosis and control of disease-causing microorganisms. Three hours lecture. Spring semester. Prerequisite: MICR 301, or consent of instructor.

405 - Clinical Microbiology 405-3 Clinical Microbiology. (Same as MBMB 405) This course will be offered in Springfield only. A comprehensive course for health science professionals covering the biology, virulence mechanisms, and identification of infectious agents important in human disease and host-defense mechanisms. Clinical applications emphasized. Three hours lecture. Prerequisite: MICR 301, or consent of instructor.

421 - Biotechnology 421-3 Biotechnology. (Same as MBMB 421) Topics covered will include the genetic basis of the revolution in biotechnology, medical applications including genetic screening and therapeutic
agents, industrial biotechnology and fermentation, and agricultural applications. Three hours lecture. Fall semester. Prerequisite: MICR 302, or consent of instructor.

423 - Geomicrobiology 423-3 Geomicrobiology. (Same as MBMB 423 and GEOL 423) The course will focus on the role that microorganisms play in fundamental geological processes. Topics will include an outline of the present understanding of microbial involvement of weathering of rocks, formation and transformation of soils and sediments, and genesis and degradation of minerals. Elemental cycles will also be covered with emphasis on the interrelationships between the various geochemical cycles and the microbial trophic groups involved. Prerequisite: MICR 301 and CHEM 210 and 211. Recommended: GEOL 220, 221 or 222.

441 - Viruses and Disease 441-3 Viruses and Disease. (Same as MBMB 441) An intensive, lecture-based course in virology which will emphasize principles of molecular virology, the ubiquity of viruses in nature, evolutionary relationships between viruses, co-evolution between virus and host, and the pathogenic consequences of some viral infections (e.g., AIDS, hepatitis, cancer, etc.). Prerequisites: MICR 460 or MBMB 460 or consent of instructor.

453 - Immunology Lecture 453-3 Immunology Lecture. (Same as MBMB 453) Principles of molecular and cellular immunology. Particular emphasis is given to molecular mechanisms involved in activation and maintenance of the immune response at the basic science level. The role of the immune system in medical diagnostic procedures and in human health is also discussed. Spring semester. Prerequisite: MICR 403, or consent of instructor.

454 - Soil Microbiology 454-4 Soil Microbiology. (Same as CSEM 454, PSAS 454) A study of microbial numbers, characteristics, and biochemical activities of soil microorganisms with emphasis on transformation of organic matter, minerals, and nitrogen in soil. Prerequisite: MICR 301 or CSEM 240. Lab fee: $15.

455 - Medical Immunology 455-2 Medical Immunology. (Same as MBMB 455) This course will be offered in Springfield only. A survey of the components of the immune system and how they interact with each other to produce responses that are important in the control or mediation of human disease. Two hours lecture. Prerequisite: MICR 301 or consent of instructor.

460 - Bacterial & Viral Genetics 460-3 Bacterial and Viral Genetics. (Same as MBMB 460) The genetic mechanisms and regulatory events that control gene transfer, lambda phage infection, recombination, and metabolic pathways including a brief introduction to bioinformatics, genome analysis and global regulatory functions. Three hours lecture. Fall semester. Prerequisite: MICR 301 and 302, or consent of instructor.

470 - Prokaryotic Diversity 470-3 Prokaryotic Diversity Lecture. (Same as MBMB 470) A consideration of the major groups of prokaryotes with special emphasis on their comparative physiology and ecology. Three hours lecture. Spring semester. Prerequisite: MICR 301 or consent of instructor.

477 - Microbial Ecology 477-3 Microbial Ecology. (Same as MBMB 477) Concepts of ecology applied to microorganisms; methods in microbial ecology; interactions of microbes with their living and non-living environment; microbial habitats and functions. Roles and regulation of microbes in natural and man-made environments, from cellular to community level. Prerequisite: MICR 301 or instructor's consent (based on proven background in both microbiology and ecology).

480 - Molecular Biology of Micro Lab 480-4 Molecular Biology of Microorganisms Laboratory. (Same as MBMB 480) Genetic and biochemical analyses of microorganisms using a variety of techniques in molecular biology, molecular genetics and biotechnology. Six hours laboratory per week plus two hours of supervised unstructured laboratory work in most weeks. Fall semester. Prerequisite: MICR 301 and 302 with a C grade or better and two (or concurrent enrollment in two) of the following: MICR 421, 423, 425 or 460. Lab fee: $60.

481 - Diagnostic & Applied Micr Lab 481-4 Diagnostic and Applied Microbiology Laboratory. (Same as MBMB 481) Enrichment and isolation of prokaryotes from natural samples, diagnostic methods for the identification of pathogenic bacteria, and the nature of the immune response. Six hours laboratory per week plus two hours supervised unstructured laboratory work in most weeks. Spring semester.
Prerequisite: MICR 301 and 302 with a C grade or better and two (or concurrent enrollment in two) of the following: MICR 403, 453 or 470. Lab fee: $60.

Science

500 - Sci Information Sources 500-2 Science Information Sources. Methods and procedures to efficiently exploit the scientific literature are discussed. The two-hour class discussion will be supplemented by practical exercises in library usage. Special approval needed from the instructor.

503A - Science for Elem Ed Teacher 503A-1 to 3 Science for Elementary School Teachers. In-depth studies of selected basic concepts in general science for teachers of upper-level elementary grades. Topics include cells and simple organisms, characteristics of vertebrates, plate tectonics, solar system, nature of matter and magnetism. Prerequisite: currently teaching in an elementary school.

503B - Science for Elem Ed Teach 503B-1 to 3 Science for Elementary School Teachers. In-depth studies of selected basic concepts in general science for teachers of upper-level elementary grades. Topics include human biology, characteristics of high plants, Earth's building blocks, the atmosphere, forces and simple machines. Prerequisite: currently teaching in an elementary school.

504A - Selected Topics 504A-9 (1 to 3 per topic) Selected Topics in Science for Teachers-Basic Stream Ecology. The course consists of selected basic concepts in general science for practicing teachers. Within a given semester a broad area is selected within either the biological sciences or the physical/earth sciences. Other topics may be added as deemed necessary. This course may not be used for graduate credit by College of Science majors. Prerequisite: currently teaching in an elementary school.

504B - Selected Topics 504B-9 (1 to 3 per topic) Selected Topics in Science for Teachers-Biological Assessment of Polluted Streams. The course consists of selected basic concepts in general science for practicing teachers. Within a given semester a broad area is selected within either the biological sciences or the physical/earth sciences. Other topics may be added as deemed necessary. This course may not be used for graduate credit by College of Science majors. Prerequisite: currently teaching in an elementary school.

504C - Selected Topics 504C-9 (1 to 3 per topic) Selected Topics in Science for Teachers-Wetland Ecosystems. The course consists of selected basic concepts in general science for practicing teachers. Within a given semester a broad area is selected within either the biological sciences or the physical/earth sciences. Other topics may be added as deemed necessary. This course may not be used for graduate credit by College of Science majors. Prerequisite: currently teaching in an elementary school.
Catalog Year Statement:
Students starting their collegiate training during the period of time covered by this catalog (see bottom of this page) are subject to the curricular requirements as specified herein. The requirements herein will extend for a seven calendar-year period from the date of entry for baccalaureate programs and three years for associate programs. Should the University change the course requirements contained herein subsequently, students are assured that necessary adjustments will be made so that no additional time is required of them.
